The government of the city is almoſt entirely in the hands of the patricians. The biſhop, however, has certain powers and prerogatives in it. The revenue of the city is very conſiderable, and its garriſon conſiſts of three hundred men. In the counſel-houſe are ſome very noble halls, which, with the other apartments, are adorned with fine pictures, ſculptures, ſtatues, gilding, &c. Among others, the moſt beautiful fountains are thoſe of Auguſtus and Hercules. Betwixt the gates of Gogging and Klenker is a very curious wicket, for admitting proper perſons in the night-time. In the cathedral are fourteen chapels, and the arms of all the countries poſſeſſed by Charles V. who here depoſited his ſword, ſtandard, ſceptre, and crown, when he bid adieu to this world, and retired to a convent. The above-mentioned wicket is ſo curious a contrivance, that certain engineers and architects, who were ſent by the magiſtrates of Nuremberg to examine it, with a view to have ſuch another made there, declared, that without pulling down the walls, and all the maſonry, it was not in the power of man to find out how it was contrived, or to make one like it in one thouſand years. In the library belonging to the gymnaſium are ſome curious books and manuſcripts. The abbot of the Benedictine abbey of St. Ulrich and Afra, in this city, has a ſeat among the prelates of the Rhine, and pays the uſual taxes to the empire. The revenue of the abbey is computed at above fifty thouſand crowns. It is ſaid to be a privileged place for debtors and criminals for three days, but no longer, without the abbot's permiſſion. In the convent of the Carmelites is a remarkable ſun-dial, being a madona, whoſe hand holds a ſceptre, marking the hours, and whoſe head is adorned with rays, ſtars, and all the ſigns of the zodiac. The public granaries of this city contain great quantities of corn. In one of the arſenals is an old battering ram of braſs, ſtill preſerved entire.

As an imperial city, Augſburg has a ſeat and vote in the diets of the empire and circle. All orders and degrees of perſons here are diſtinguiſhed by their proper dreſſes, ſome of which are very odd and uncommon: prints of them all, done on paſteboard, are ſold in the town. The hoſpital of the Holy Ghoſt is a very noble one, and patients of both religions are admitted into it. The inn, called the Three Kings, is ſaid to be the moſt ſuperb in Europe. Neither Jews nor Calviniſts have a toleration for their worſhip here.

Conſtance, which is a biſhopric, takes its name from the city of Conſtance, though the biſhop himſelf reſides uſually on the other ſide of the lake at Marſburg. The chapter conſiſts of twenty canons, and four expectants; but the Proteſtant religion prevails in moſt parts of the dioceſe. The principal places are, Riechenau, a Benedictine abbey on an iſland of the ſame name, in the Zellerzee; Marſburg, a pretty town; and Ochumgen, containing an opulent abbey.

Ewangen, which is a priory on the borders of Franconia, gives its prior the title of prince of the empire, and grand marſhal to the empreſs; and there is a market-town called Gronenbach on part of the abbey lands.

The principal dominion of the circle of Swabia is the duchy of Wurtemberg, which is nearly ſquare, being upwards of ſixty miles each way. One diviſion of it is into the Unter or Under-land, the Middle-land, and the Upper-land; the laſt of which makes a part of the mountainous tract called the Alb, and Black Foreſt. It is alſo divided into the land above and below the Steig, which is the name of a ridge of mountains near Stutgard. This duchy is bounded, on the north, by Franconia and the archbiſhopric of Mentz; on the ſouth, by the principalities of Hohenzollern, Furſtenburgh, and the Danube; on the weſt, by the Black Foreſt, the marquiſate of Baden, and part of the palatinate on the Rhine; and, on the eaſt, by Oettigen, Burgau, Ulm, &c. It not only abounds in grain, of moſt ſorts, but alſo in flax, hemp, and good wine, commonly called Neckar wine; and fruit, eſpecially pears and apples; inſomuch that cyder and perry are the common drink of the peaſants, when wine happens to be dear. In this country are alſo mines of ſilver, copper, and iron; woods of fir, oak, beech, birch, and pine: ſome ſalt-ſprings; abundance of ſheep, game, and cattle; coal and turf; cobalt, ſulphur, terra ſigillata; fine clays for porcelain and earthen ware; ſeveral ſorts of marble, black amber, alabaſter, mill-ſtones, mineral ſprings, and baths. Silk is alſo cultivated in it.

This country is well watered by the Neckar, the Ens, Nagold, Vils, and Rems. The number of inhabitants amount to five hundred thouſand; that of the cities and towns to ſixty-eight thouſand; and that of the boroughs, market-towns, and villages, to about twelve hundred. On important occaſions, diets are called and held at Stutgard, conſiſting of the Lutheran prelates and abbots, and the repreſentatives of the towns. The eſtabliſhed religion is Lutheraniſm; and the dukes, who are now Roman catholics, have engaged not to attempt any innovations in point of religion, but to ſuffer every thing to remain on a former footing. Before the Reformation, there were about a dozen very rich convents in this country, whoſe revenues are now chiefly applied to the maintenance of churches, ſchools, and the clergy. Beſides Lutherans, here are ſome Calviniſts, Waldenſes, and Jews. The Waldenſes are allowed the public exerciſe of their religion, but the others only in private. The principal manufactures of the country are porcelain, earthen ware, linens, woollens, printed cottons, hats, ſtockings, ſilks, glaſs, paper, &c.

The dignity of duke of Wurtemberg was firſt conferred upon Eberhard I. in the year 1495, by the emperor Maximilian; and the right of primogeniture was eſtabliſhed in the family in the year 1473; the princes had formerly only the title of counts. There is a branch of this houſe ſettled in Sileſia, which, from the duchy of Oels, has the title of duke of Wurtemberg Oels. The duke's title at preſent is, "Duke of Wurtemberg and Teck, count of Mompelgard, lord of Heydenheim and Juſtingen." He is hereditary ſtandard-bearer of the empire, and grand huntſman; in alluſion to the laſt of which, the order of hunting was founded here in 1702. The enſign of that order is a gold croſs, enamelled red, appended to a broad-watered ſcarlet ribbon, paſſing from the left ſhoulder to the right ſide. On the left breaſt of the coat is a ſilver ſtar embroidered. Their grand feſtival is on St. Hubert's day. As a prince of the empire, the duke has a ſeat and voice in the empire and imperial chamber, and is ſummoning prince and director of this circle. Cauſes are determined here in the laſt reſort, no appeal lying from the court-judicature to the aulic council, or any foreign tribunal. The revenues of the duchy are ſaid to amount to two millions of guilders per annum; and the troops, in time of peace, to four thouſand men, including the contingent of the circle, which is one thouſand eight hundred.

The duke has a great number of hunting-ſeats. So numerous are the deer and wild boars, that Mr. Keyſler ſays, above twenty thouſand head periſhed in the winters of 1731 and 1732, by the ſeverity of the weather; and no wonder that they multiply faſt, as no perſon, on pain of death, dare offer to kill or wound them, unleſs at the duke's hunting-matches; ſo that the poor peaſants, near the foreſts, are obliged, in ſummer, to keep a conſtant look out, and be continually watching their flocks and corn fields.

The town of Stutgard, the capital of the duchy, is thirty-eight miles eaſt of Baden. Some derive the name from its being antiently a ſtud for breeding horſes; and the arms of the city are a colt. It ſtands in a fruitful plain, has ſeveral fine gardens and vineyards all about it, and encompaſſed with very high hills and vallies. It has three ſuburbs, five gates, three churches, and is divided into two parts by the Neckar, over which it has a bridge. It is a pretty large city, but moſt of the houſes are low, and ill-built of wood; and the ſtreets broad and lightſome, but dirty; yet the town is very gay, it being much frequented, becauſe of its natural hot baths, which are for many diſeaſes. The duke's caſtle, or palace, is a noble, old, free-ſtone fabric, well fortified, compoſed of four piles of buildings, flanked at each angle by a tower, and adorned with elegant groves and gardens, an orangery which is ſcarce to be paralleled, curious labyrinths, grottoes, and water-works, and as ſtately a pleaſure-houſe as any in the empire: but the walls of the caſtle are waſhed by ditches, which give it the air of a priſon. There are, however, ſeveral grand rooms in it, one particularly, where the duke's gentlemen dine, and where tables are ſometimes ſpread for two or three hundred foreigners, &c. There is a bridge over its moat to the duke's gardens, and near it an aviary, with all manner of birds: in the moat there is not only plenty of fiſh, but ſwans, and other water fowl; and in that part of it which is dry, facing the gardens, harbour ſeveral deer. Near the

gardens there is a theatre well lighted, and beyond that a large court, covered with ſand, for tilting on horſeback, and running off the ring. Before the entrance to the caſtle there is a grand building alſo, which is the duke's chancery, or ſecretary's office. The duke has a tolerable collection of antiques, buſts, and bas-relievos; but the piece that moſt deſerves attention is the Jupiter Dolichenus, brought hither from Marſeilles by the celebrated antiquary Patin; it being a repreſentation of that deity in armor, ſtanding on the crupper of an ox, juſt in the ſame attitude as he is copied from the original in the antiquities of Montfaucon. Here are abundance of urns, lamps, little vaſes, and antient coins, both of ſilver and gold, with ſhells, petrifactions, foſſils, the caprices of nature, both in wood and ſtone; exotic plants, monſtrous productions, the exuviæ of animals, &c. beſides the dreſſes and weapons uſed in the moſt remote countries. The hall is deſcribed as one of the moſt ſpacious rooms to be ſeen in any palace: it is finely adorned, in freſco, with repreſentations of various huntings, in each of which pieces the duke of Wurtemburg may be diſtinguiſhed, with the princes and princeſſes of his family, in whoſe time they were performed. There is an arſenal, in which appears a ſucceſſion of the dukes of Wurtemberg on barbed horſes, richly armed, and accoutred after the faſhion of the age in which they lived, as large as the life, and the name and qualities of every one ſet forth on the oppoſite wall, which is graced alſo with ſtandards, and other trophies, gained by the dukes in their ſeveral actions; particularly the ſkin of a favourite horſe, killed under that duke, who commanded under prince Eugene and the duke of Marlborough, at the battle of Hochſtet: and on the ceiling of this arſenal are ſome noble repreſentations of battles, wherein ſome of the antient dukes of Wurtemberg, during the reigns of the Saxon and Swabian emperors, loſt their lives in the ſervice of their country.

About three miles from Stutgard is the city of Ludwigſbourg, which is the ſeat of a palace built by the duke of Eberhard-Lewis, at the perſuaſion of his miſtreſs, in a place remote from any river, great roads, or foreſts. It is ſo contrived, that it looks more like an orangery than the palace of a ſovereign, the apartments being too ſmall and inconvenient, as well as irregular; yet no coſt has been ſpared to adorn them with carving, gilding, and painting, though with more profuſion than judgment. The furniture alſo is rich, but as abſurd as the fabric. The beſt thing in the whole palace is the chapel, which would, by the beſt judges, be reckoned a fine noble ſtructure. The town is as irregular as the palace, and in no reſpect very agreeable; for the ſituation of it is upon uneven ground, and moſt of the houſes are of timber, and ſlightly built, they having been run up, ſeemingly with an ill-will, either out of neceſſity, or to pleaſe the then duke, who, by this change of his reſidence, almoſt ruined Stutgard. In the gardens there are ſeveral terraces, which, riſing one above another, entirely bound the proſpect of the palace, which is encompaſſed by buttreſſes that alſo cramp the apartments.

The town of Tubingen, which is the ſecond of the duchy, lies on the Neckar, and has a caſtle near it on a hill. Here is held the high court, in which all cauſes are determined in this laſt reſort. At this place alſo is an univerſity, with a noble college, the ſtudents of which muſt be all princes or counts: here are alſo a Latin ſchool and a woollen manufacture. There is a medicinal bath in the neighbourhood.

3. On the Neckar is ſituated Cranſtadt, which has in its neighbourhood, an excellent mineral, and ſeveral ſalt ſprings. Near it alſo, in a hill, are found great quantities of bones, both of great and ſmall animals. There is a cotton printing-houſe in the town; and, in a village hard by, a ſilk manufactory. Not far from hence is the antient family ſeat of Wurtemberg, which gave name to the duchy; the antient counts held their courts in the open air in its neighbourhood.

4. The little town of Urach, on the Alb, near the river Erms, contains a ducal ſeat, with a linen manufactory, and formerly gave name to a county. In the neighbourhood are mills for lead, iron, and paper; and in the diſtrict to which it gaves name, are ſome fine ſtuds of horſes, a beautiful white earth, and the Holzrutſche, which is a large iron pipe, into which the wood felled on the Alb being put, is conveyed, in an inſtant, from the top of a mountain, into the river Erms, and by that brought into the Neckar, which brings it to Berg, near Stutgard. By this means there are yearly conveyed to that town upwards of nine thouſand cords of wood.

New Ravenſburg, which is a lordſhip on the Argen, belongs to the abbey of St. Gall, in Swiſſerland, though it pays taxes to the circle. The Benedictine abbey of Ottobeuren is the richeſt in all Swabia. The Roman catholic imperial towns of Offenburg, on the river Kenzing; of Gengenbach, on the ſame river; and of Zell-Am-Hammerſbach, about four miles from the latter, are in league with each other mutually, to ſupport the privileges they enjoy in common.

We ſhall here give an account of thoſe Imperial towns which pay taxes to the empire; though the religion of the inhabitants is different; which are as follow: 1. Buchau, ſituated on the Federſee, and is of a mixed religion. 2. Bopfingen, on the Eger, Lutherans. 3. Aalen, on the Rocher, Calviniſts. 4. Buchhorn, on the lake Conſtance, Lutherans. 5. P. Fuffendorff, on the Hegau river, Roman catholics. 6. Grengen, on the Bronz, Lutherans. 7. Wimpferm, on the Neckar, mixed. 8. Leutkirch, on the Eſchach, mixed. 9. Iſni, Lutherans. 10. Wangen, on the Argen, Roman catholics. 11. Wiel, on the Wwun, mixed. 12. Kauffbeuren, on the Wertach, mixed. 13. Ravenſberg, on the Schuſs, mixed. 14. Bibenach, mixed. 15. Dinkelſbuhl, on the Wernitz, mixed. 16. Lindau, on the lake Conſtance, Lutherans. 17. Heibron, on the river Neckar, Calviniſts. 18. Heberlingen, on the lake Conſtance, Roman catholics. 19. Noidlingen, on the Eger, Lutherans. 20. Reutlingen, on the Neckar, mixed. 21. Eſslingen, on the Neckar, mixed.

Mimmingen, an imperial town, ſtands on the Aach, a ſmall river between the Iler and the Danube, twenty miles north of Kempten. The magiſtracy is Lutheran; but the inhabitants are partly Lutherans, and partly Roman catholics. Here are ſeveral religious houſes. This was an imperial city ſo early as the days of Frederick I. and now enjoys great privileges; in particular, an exemption from the juriſdiction of the tribunal of Rothweil. A good trade is alſo carried on by it with Swiſſerland, Italy, and other countries adjacent, in hops, Bavarian ſalt, grain, cotton ſtuffs and paper. Storks are ſaid to be common here, on the tops of houſes, as in Holland. In its diſtrict, which is conſiderable, are manufactories of braſs, pewter, wire, and porcelain, together with a warm bath, a chalybeate ſpring, and a free hunting-ground, in which the ſeveral neighbouring lordſhips enjoy an unlimited privilege of hunting; but the juriſdiction thereof belongs to the town of Mimmingen: the terra ſigillata is found here. The town is pretty well fortified, and almoſt as large as Ulm, but not ſo populous, or well built.

The town of Gemund, twenty-five miles eaſt of Stutgard, and thirty-two north-weſt of Ulm, ſtands on the frontiers of the county of Hohenrechberg, and is the capital of the county of Rechberg. It has its name from the conflux of a great many brooks here into the river Rems; and the neighbourhood is called Remſtahl, or the Valley of Rems. This river falls into the Neckar five miles below Stutgard. The town was of note formerly for tournaments held here by the nobility of Swabia, and was ſubject to its dukes, one of whom cauſed it to be encompaſſed with a wall. Frederick I. made it imperial in 1186, and the emperors Conrade III. and Frederick Barbaroſſa, enlarged and granted it many privileges. It is a Roman catholic town, with five churches, two chapels, and ſeveral convents; and the principal trade of it is in beads, which they ſend abroad. It was formerly governed by perſons of quality, but now the power is in the burghers. M. Villars encamped here in 1707, with the French army, and raiſed contributions far and near.

The town of Halle ſtands among ſteep rocks and mountains, on the river Kocher, in the county of Oetingen, and on the frontiers of Franconia, fifteen miles ſouth-eaſt of Hohenlce, twenty-five from Rottenburg, twenty-eight eaſt from Hailbron, and thirty-three north-eaſt of Stutgard. It depended formerly on the dukes of Wurtemberg, but was made imperial by Charles IV. in 1360. This town, which is placed by the matricula in the circle of Franconia, has plenty of freſh water, but owes its riſe to its ſprings of ſalt, which, though not ſo white or piquant as other ſalt, is carried to Nuremberg. There is a bridge here over the river to its ſuburb. Though its antient records were loſt in a fire that happened here in 1376, yet enough were left to ſhew that its building was chiefly owing to ſome gentlemen who came to ſettle here, and erected ſeven towers, whereof ſome part is ſtill to be ſeen; particularly, one near St. Michael's church, ſince turned into a nunnery; and that the town was from hence called Sieben Burgen, i. e. Seven Forts. The magiſtracy conſiſts now of twenty-four council, and two burgomaſters; but

tho

the emperor has a preteur here, who has almoſt the whole power, and preſides in all their meetings. They are all proteſtants, as are, for the moſt part, the inhabitants. This town, being ſituated on the frontiers of ſeveral counties, is often named in hiſtory, becauſe its territory has been the theatre where the nobility uſed to decide their quarrels by duels.

Rotweil is a ſmall imperial city on the ſame river, ten miles from the head of it, as many north-eaſt from Villengen, fourteen eaſt of Briſack, nineteen ſouth-weſt from Hohenzollern, fifteen north from Furſtemburg, and twenty ſouth from Tubingen. It is the ſeat of a chamber, or court of juſtice, for the whole duchy, firſt erected anno 1147, by Conrade III. duke of Swabia, who made it a free city. It was taken by the French in 1643, when they were in alliance with the proteſtants of the empire, but reſtored at the treaty of Munſter. It was again ſeized by the French under M. Villars, in 1703, after he had paſſed the Black Foreſt, at the end of which it ſtands; but they were ſoon obliged to quit it. It is in the territory of Hegow, and the head of a county called Hohenberg, under the protection of the houſe of Auſtria: but it is in league with the Switzers, it being but five miles from Schaffhauſen, and not far from the Danube. It is fortified after the antient manner, and encompaſſed with broad deep ditches. In 1338, this town was almoſt burnt down by lightning. The neighbouring ſoil being very fruitful in wheat, the people apply much to agriculture.

The lordſhips of Eglingen, Eglof, Inſtringen, Fugger, Mindelheim; the counties of Hohen-Geroldſec, Bondorf, Hoheneimbs, Eberſtein, and Schwabeck; together with the territories of the counts of Konigſegg; the counties and lordſhips of the noble family of the Truchefs; the lordſhip of Tetnaug; the commanderies belonging to the Teutonic order; the abbeys of Peterhauſen, Marchthal, Zwifalten, Gengenbach, Heggbach, Rothminſter, Gutenzell, and Baindt, all give voices and ſeats in the diets of the empire and circle to their reſpective proprietors.

The imperial city of Ulm, which is ſuppoſed to derive its name from the grove of elms near it, is ſituated ſeventeen miles weſt of Burgaw, and eighty ſouth of Wurtzburg: it ſtands on the weſt ſide of the Danube, which here begins to be navigable, after having received the united ſtreams of the Lauter and Blaw, oppoſite to the mouth of the Iler, and forms ſeveral little iſlands before the town. This city is governed by forty-one echevins, or aldermen, moſt of which are of the nobleſſe, and the reſt tradeſmen; and they chuſe two bailiffs annually out of the former, who preſide in their council: here are four burgomaſters, who enter on their offices every year alternately: ſeven of the oldeſt members conſtitute the ſecret council, and execute the laws. All the magiſtrates, as well as moſt of the inhabitants, are Lutherans, the proteſtant having been the prevailing religion here ever ſince 1531. The Roman catholics have but two churches, and are excluded from the public offices, as well as their privy-council.

This is a great and very populous city, with regular fortifications, and wide deep ditches, filled by the waters of the Danube and the Blaw; but it is ſo ſituated, that it would not be able to ſuſtain a long ſiege: it has a bridge of ſtone of four arches over the Danube, the entrance of which is defended by fortifications, and there is a little ſuburb of pleaſure-houſes, and large gardens. There are in the city two ſquares, in the biggeſt of which is the town-houſe, a ſtately building, where the ſenate meets. At the end of the town there is an arſenal, from which the French carried off all the arms, &c. that were of any value, before the battle of Hochſtet. The Blaw turns mills for ſeveral occupations, here being a great number of hands employed in the manufactures of ſtuffs, linen, cotton, and fuſtians; in dreſſing leather; and in the iron and other manufactures, as well as clock-work, by which this is become one of the richeſt cities in Germany. In 1702 it was baſely ſurpriſed by the elector of Bavaria for the French, who kept it till after the battle of Hochſtet, when it ſurrendered to the Imperialiſts. It was a very neceſſary place for him to ſecure his dominions on that ſide, and to facilitate the paſſage of the French to join his army.

Here is a noble ſtructure, called the Cathedral of our Lady, which now belongs to the Lutherans: it is three hundred and ſixty-five feet in length, and is reckoned the higheſt, longeſt, and beſt built in the country; and, by ſome, the fineſt in the empire. This church has five ſtately ſpires, one of them one hundred and two feet high, and ſupported by thirty-ſix large pillars: it has a large ſquare tower, with a watch always at the top of it, to give notice to the city of any approaching danger from the country. The organ, which was completed in 1599, after a labour of thirty-ſix years, is ninety-three feet high, twenty-eight broad, has ſixteen pair of bellows, with one hundred and twenty-five pounds of lead on each, and above three thouſand pipes of pure Engliſh tin, the largeſt above forty inches round, and thirteen in diameter; yet Dr. Nicholſon thought it inferior to ours at Exeter. The tabernacle, which formerly contained the holy ſacrament, is ſaid to have coſt one hundred thouſand florins to its donor, whoſe ſtatue is repreſented kneeling againſt a pillar on the ſide of it: it is a very fine, though gothic piece of work, of a very ſingular kind of marble, and ornamented with abundance of ſtatues. They keep to this day the picture of the laſt ſupper, which was put up above the great altar before the reformation. The benches in the choir are loaded with hiſtorical paſſages of the bible in ſculpture. Beſides this the Lutherans have two other churches.

This place may boaſt of giving birth to Freinſheim, ſo much reſpected for his great learning by the whole world, and particularly by Chriſtina, queen of Sweden, that ſhe made him her librarian and hiſtoriographer. Its territory is near as large as that of Nuremberg, being ſix German leagues in length, and four in breadth; it is almoſt environed with the duchy of Wurtemberg, except on the ſouth and eaſt ſides, where it is bounded by the Danube, and is divided into forty bailiwics and lordſhips, of which that of Geiſſlengen comprehends the greateſt part of the county of Helfenſtein, which, with other counties and towns, were purchaſed by this city ſoon after it was made imperial. The garriſon lives here in little houſes ſet apart for it: in time of war it is maintained by the empire; and this city furniſhes a quota equal to that of Augſburg. There was a great Franciſcan monaſtery here, the revenues of which were appropriated, at the reformation, to a college, where they have profeſſors in all arts and ſciences.

A judicious French writer obſerves, that Ulm is ſituated in one of the moſt fertile plains in Swabia, but that it is ſcarce half as big as Augſburg, though more populous; and that it has been almoſt ruined by the frequent wars in this country, the French and Bavarians having, at the time above-mentioned, made them pay twenty-thouſand German florins entrance-money, beſides the ſums they ſqueezed out of them while they ſtaid. The houſes are, for moſt part, of timber and plaiſter, and have but an indifferent appearance. Their ſtreets are neither handſome, nor wide, and the ſquares mean and very irregular: it is reckoned near ſix miles and an half in circumference: its ditches, which are well fortified, are almoſt every where double; and on one ſide of the town the Danube runs through them with great rapidity: the other is kept full of freſh water by ſluices. A market-boat goes weekly from hence to Vienna, which likewiſe takes in paſſengers at the rate of a penny for four miles. This city was once ſo rich, that it paſſed for one of the wealthieſt in the empire; and the Germans had a proverb, that the ready caſh of Ulm, the neatneſs of Augſburg, the induſtry of Nuremberg, and the arſenal of Straſburg, where the four wonders of Germany. The archives of all the free cities of the circles of Swabia, are kept at Ulm, where their meetings are alſo held by turns with the city of Spires. Though all the county from hence to Augſburg is even, yet it is tireſome to travellers, becauſe of the payment of the cauſeways. M. Pollnitz ſays, few of the gentry live here, except the patricians, who are not more ſociable than thoſe of Nuremberg; and that the burghers, and the women in particular, go dreſſed like thoſe at Augſburg; ſo that to ſee them go to, or come from church, he thought was next kin to ſeeing a maſquerade.

The principality of Lichenſtein and princely landgravate of Kletgau, together with the imperial abbies of Schuſſenreid, Weiſſenau, Roth, Raggerburg, Kayſerſheim, Urſperg. Yrſee, Elchingen, Ochſenhauſen, and Salmanſweil, intitle their abbots or proprietors to voices and ſeats in the diets of the empire and circle.

The fine country of Baaden, or Baden, is ſituated along the eaſtern banks of the Rhine. It is divided between two princes of the ſame family, who receive titles from their reſpective capitals, the one being ſtiled the margrave of Baaden-Baſden, and the other of Baaden-Dourlach. The ſhare of the former, as lying ſouth of the other, is diſtinguiſhed by the name of the Upper, and that of the latter by the name of the Lower Margravate, or Marquiſate. The right of primogenitorſhip hath been long introduced into both theſe branches.

The whole country is ſaid to be near ſixty miles long, and twenty broad, and lies between the duchy of Wurtemberg and Briſgau. It is fruitful in corn, wine, hemp, flax,

flax, and wood, abounding in particular with chefnut trees. There are alſo many quarries of marble and free-ſtone in it, large herds of ſwine, plenty of fiſh, fowl, and veniſon; and the baths and mineral ſprings are ſo common, that the chief towns of both marquiſates have their names from them. Both princes exerciſe an abſolute authority in their dominions, excepting ſo far as it is limited by the laws of the empire, and lay taxes on their ſubjects without aſſembling any ſtates.

The Upper Margravate, or that of Baaden-Baſden, is bounded by the Rhine, the Lower Margravate, the duchy of Wurtemberg, the county of Eberſtein, a conſiderable part of the county of Sponheim, two manors in the lordſhip of Graffenſtein, and one in the duchy of Luxemberg, with ſeveral baronies in Bohemia. He has a vote in the college of princes, and in the diets of the empire and circle. His annual revenue is ſaid to amount to four hundred thouſand florins. The margrave and his ſubjects are Roman catholics.

The principal places in the country are the following: 1. Raſtadt, where the princes reſide in a magnificent caſtle, in which were ſettled the preliminaries of the peace concluded at Baden betwixt the emperor and France, in 1714. The town, which is not large, and belonged formerly to the counts of Eberſtein, ſtands in a fine plain on the river Murg, which a little below falls into the Rhine. 2. Baaden, which is pleaſantly ſituated among vineyards, and contains a palace of the margrave's. 3. Steinbach, which gives name to a diſtrict. 4. Stolhoffen, five miles ſouth-weſt of Baaden; near the town is a Benedictine abbey. 5. Beinheim, in Lower Alſace, belongs, with the diſtrict, to the margrave. 6. Kehl, a village, which partly belongs to the margrave, gives name to a diſtrict.

Baden Dourlach, or Deurlach, which is the lower marquiſate of Baden, ſo called with regard to the courſe of the Rhine, is contiguous to the marquiſate of Baden, on the north-eaſt; has the duchy of Wurtemburg, on the eaſt; the Rhine, which ſeparates it from Alſace, on the weſt; and part of the Lower Palatinate, and the biſhopric of Spire, on the north: the places of note here are, Durlach, in Latin, Dorlachum, its capital, a pretty large town, two leagues eaſt from the Rhine, twenty-one miles north-eaſt from Baden, eight miles ſouth-eaſt from Philipſburg, and twenty ſouth from Heidelburg. The French write it without an h, and the Germans leave out the o. It lies on the banks of the Pfintz, or Phints, at the foot of a mountain, on the top of which there is a ſtrong tower, with a conſtant guard. The marquis has a magnificent palace here, far exceeding that of Baden, and fit for the greateſt monarch in Europe, with a good library, and a fine collection of antient coins and medals. The ſtreets are ſtrait and fair, and the houſes ſtately and uniform: here is alſo a gymnaſium, with profeſſors of the ſeveral faculties. The town and palace ſuffered much, in the late wars, by the French, who in 1689 burnt them; ſo that the Proteſtant cantons thought fit to aſſiſt its prince, who was a Lutheran, with contributions for repairing the Proteſtant churches, which the French ruined in this country: and he himſelf gave large immunities to ſuch foreign Proteſtants as would ſettle in his capital.

The city of Carlſruhe, with a caſtle or palace, were both built by the late marquis Charles William, who gave it the name, ſignifying Charles's reſt; and, indeed, here he was quite retired and tranquil, bating the entertainments of operas, muſic, parties of hunting, &c. According to the deſcription of it by the baron de Polnitz, nothing is ſo pretty as the diſpoſition of the whole: "imagine the margrave's houſe, ſays he, to be at the entrance of a great foreſt, in the centre of a ſtar, formed by thirty-two walks, the chief of which, behind the palace, is three German leagues in length: two large wings advance from the main body of the houſe, which, deviating from each other in proportion as they lengthen, the whole together looks like a theatre. Behind the principal building there is a very high octagon tower, which commands all the walks: beyond the court, between the two wings, are the gardens and parterres, at the end of which there is a ſemicircle of houſes of an equal height, built archwiſe, between which there run five ſtreets, the middlemoſt whereof fronts the palace: at the end of the three chief ſtreets oppoſite to the palace are three churches, one belonging to the Lutherans, another to the Calviniſts, and a third to the Roman catholics; to which three prevailing religions of the empire the late margrave gave equal liberty of conſcience, when he founded the new town.

"The chief part of the town (adds the baron) lies behind the houſes that front the palace: this, properly ſpeaking, conſiſts but of one ſtreet, which is of a prodigious length: all theſe houſes, as well as the margrave's, are of timber: yet the contrivance and diſtribution of the whole, taken together, is really wonderful.

"The Pheaſant-walk, which joins to the caſtle, is the prettieſt thing in the world: it is a very large incloſure, diſpoſed in various walks, planted with fir trees, cut in ſhape of a fan: there is a great baſon in the centre, always full of wild ducks, which is encompaſſed with four pavillions, made in the form of Turkiſh tents: two of them are aviaries, and the other two ſummer-houſes, with ſofas and couches in them, after the manner of the eaſtern countries: here, M. Polnitz ſays, the late margrave uſed to divert himſelf, by playing in concerts with ſome young ladies, whom he taught muſic. He had no leſs than ſixty waiting women to attend him, though but eight waited upon one day; and theſe, when he went abroad, attended him on horſeback, dreſſed like huſſars. The generality of theſe damſels, who had all lodgings in the palace, underſtood both muſic and dancing; and not only performed operas at the theatre of the palace, but were muſicians of the chapel."

The prince of Hohenzollern's territories are thirty-four miles long, ten broad, and are tolerably fertile, being watered by the Danube, Eyach, Starzell, &c. The prince is hereditary chamberlain of the holy Roman empire. There is not any remarkable town in this place.

The prince of Theugen, the abbeſs of Lindau, and the abbeſs of Buchau, have ſeats and voices in the diets of the empire and circle.

Eaſtward of the duchy of Wurtemberg lies the county of Oettingen: it is in the north corner of the circle, and extends about eighteen miles in length, and twelve in breadth. The lords of this country are divided into three lines, viz. that of Oettingen-Spielberg, who are princes of the empire, but have no ſeat or vote in the college of princes thereof; and thoſe of Oettingen-Wallerſtein, and Oettingen-Karzenſtein-Baldern. In the diets of the empire, they belong to the college of Swabian counts; but in that of the circle, the princely line has a ſeat and vote on the bench of lay-princes, and the others on the bench of counts and barons. The ſubjects of theſe princes are partly Roman catholic, and partly Lutheran, but the princes themſelves are all Roman catholics. The only place in the country worth mentioning is Oettingen, a town on the Wernitz, whence the county takes its name, and where the prince of Oettingen-Spielberg reſides. Here is alſo a commandery of the Teutonic order, a large college, and a ſociety for the improvement of arts and ſciences. The bailiwic, to which the town gives name, with four others, belong to the ſame prince. The principal river in this country is the Wernitz.

SECT. X.

Treating of the Perſons, Manners, Cuſtoms, &c. of the GERMANS; their Skill in the polite Arts, Manufactures, Commerce, &c.

THE people inhabiting this extenſive continent, are for the moſt part of a good ſtature and ſhape, with fair complexions, and agreeable features; but there is a remarkable difference amongſt them with reſpect to their character, temper, and manner of life; which is an evident proof of their conſiſting of ſeveral diſtinct nations. They are, however, in general, very remarkable for their honeſty and fairneſs in their dealings. Both the ancient and the preſent Germans have been long diſtinguiſhed for their hoſpitality. Julius Cæſar obſerves, that in his time their houſes were open to all men, who were welcome to ſuch entertainment as they found provided. That they eſteemed it a piece of injuſtice to affront a traveller, and thought it a neceſſary act of religion to protect thoſe who came under their roof. The preſent Germans have not degenerated from their anceſtors, and a ſtranger is ſure to be every where well entertained. The courage and bravery both of the ancient and preſent Germans was never diſputed. The Germans have alſo the honour of having almoſt all the kingdoms in Europe owe to German blood their crowned heads, particularly Great-Britain and Ireland, Denmark and Norway, Sweden, Poland, Ruſſia, Hungary, Pruſſia, and Bohemia.

In learning, the Germans are not inferior to any other nations; for not only their natural fondneſs for imitation, but the variety of governments, their mutual emulation, and the freedom Proteſtants enjoy of living and writing according

according to their own judgment, have procured the greateſt improvement in the ſciences. The pleaſure they take in reading is ſo great and general, eſpecially among the Proteſtants, that it is thought unbecoming, even in the female ſex, and perſons of any rank, not to be converſant in books; nor is there any place in the world where more books are written and printed, among which they have a great number of excellent works; and the genius and abilities of the German authors are at this time very juſtly admired.

With reſpect to their vices, we muſt obſerve, that though they have been cenſured for their drunkenneſs, yet they do not ſeem to be more guilty of this than their northern neighbours, or indeed than the Engliſh.

They commonly drink beer and wine, but they have the latter upon much eaſier terms than the Engliſh: they have thoſe of Hungary, France, and Italy, which lie contiguous to them, where the beſt wines are produced: beſides Moſelle, Rheniſh, and other wines of their own growth.

The uſual diet of the Germans is beef, mutton, fowls, &c. which are generally more boiled and roaſted than in England. They have alſo one diſh, which was eſteemed a delicious one by the antient Romans, as it is by them, and this is ſnails, which are dreſſed in various manners, and eaten at the tables of the quality as a great rarity. There is ſcarce a nobleman's garden that has not a place ſet apart for breeding and fattening them; and being fed for eating, they grow to an extraordinary ſize.

They not only ſleep on a feather-bed, as we do, but, inſtead of blankets, have a light feather-bed covering too, which is placed upon the upper ſheet, and is covered with a counterpane. Inſtead of the cheerful fire-ſide, which enlivens our winter evenings, they heat their rooms with ſtoves.

The gentry, in winter, take great pleaſure in riding through the ſtreets on the ſnow, on ſledges drawn by horſes richly accoutred, and adorned with bells and feathers; and, among the diverſions practiſed by the great, is hunting wild boars, bears, wolves, tigers, and other ferocious animals.

The Germans have particularly diſtinguiſhed themſelves by their knowledge in the civil law, natural hiſtory, and the various branches of philoſophy. There are in Germany thirty-ſix univerſities, ſeventeen of which belong to the Proteſtants, and the ſame number to the Roman catholics; with two other mixed ones, thoſe of Erfurth and Heidelberg. They have alſo a number of academies for the ſciences, and many colleges and ſchools.

The reputation of excelling in the polite arts was formerly given to the French; but at preſent they are nearly equalled by the Germans, who excel in muſic, and boaſt the works of Teleman, Handel, Gran, Bach, and Haſſe. Some of their poets have excelled moſt of the European nations in the ſublimity of their thoughts, and the mingled ſtrength and ſweetneſs of their language. With reſpect to painting, they claim the firſt place after the Italians, and juſtly boaſt their Peter Paul Rubens, John Calker, and ſeveral others. In the thirteenth century, Barthod Schwartz diſcovered at Cologne how gunpowder might be made ſerviceable in the art of war. The firſt copper-plate engraving appeared in Germany; Albert Durer alſo etched in copper before the Italians; and the art of making mezzotintos was diſcovered by Von Sichem, an Heſſian lieutenant, in 1648, or, as others ſay, by prince Rupert: wooden cuts were alſo the invention of a German; nor can the firſt diſcovery of the art of printing be with juſtice refuſed the Germans.

They at preſent make velvets, beautiful ſilks, rich ſtuffs, and half ſilks, with a variety of woollen ſtuffs, and all manner of cloths, ribbons, lace, very large quantities of linen, fuſtian, embroidered work, fine hats, and tapeſtry; they alſo print cotton in a beautiful manner; make Spaniſh rough and ſmooth leather; and are well ſkilled in the art of dyeing. They work all ſorts of metals for ornaments, veſſels, tools, wire, &c. in the beſt manner; and Augſburg in particular is famous for its performances in ſilver. They are well-ſkilled in the working of braſs and arms. They make glaſs, and beautiful mirrors of all ſizes; fine works in lacquer, and a variety of porcelane, among which the Miſnian is ſaid to be the fineſt in the world. Nuremburg is famous for a variety of ingenious works in wood, ivory, metal, ſtone, glaſs, &c. which they export to foreign parts.

Germany enjoys every advantage for commerce; for, being ſituated in the heart of Europe, it can commodiouſly export the ſuperfluity in its home commodities and manufactures, and receive thoſe of foreign countries; beſides, it not only borders on the German ocean, the Baltic, and the gulf of Venice, but is watered by many navigable rivers.

Hamburg is the moſt important trading town in all Germany, and is chiefly indebted to navigation for its fame, as being the moſt reſorted to by the Engliſh and Dutch, of all the towns in Germany. About the middle of the thirteenth century many trading towns in Germany, as well as in other countries, lying on the German ocean and the Baltic, entered into a mutual league with each other for the promotion of trade and navigation, and were thence called Hanſe-towns. Though their trade fell to decay in the fifteenth century, and the name of the league in that time ceaſed, yet the trading towns of Hamburg, Lubec, and Bremen, are ſtill called Hanſe-towns, and have a league actually ſubſiſting between them, under the name of which they conclude treaties of commerce with foreign powers.

From Germany they export into the neighbouring and remote countries the following goods, viz. corn, wine, particularly the Rheniſh and Moſelle, tobacco, horſes, lean cattle, butter, cheeſe, honey, ſyrup, linen, woollen ſtuffs, yarn, ribbon, ſilk and cotton ſtuffs, wool, Nuremberg wares, wood of various ſorts, particularly timber fit for ſhip-building, iron plates and ſtoves, cannon, ball, bombs, granades, tin plates, ſteel work, copper, braſs wire, porcelane, earthen ware, mirrors, glaſſes, hogs briſtles, tartar, ſmalt, zaffer, Pruſſian blue, printers ink, types, Brunſwic mum, beer, &c.

As to the German coins, we muſt obſerve, that the emperor, with the electors, the chief part of the princes of the empire, ſeveral prelates, abbeſſes, counts, barons, ſome of the gentry, and the imperial cities, enjoy the privilege of coining money; but with this diſtinction, that ſome are intitled to coin only ſmall money, others to coin alſo a larger ſpecies, and that either of the ſilver alone, or of gold alſo; yet many ſtates of the empire, in order to ſave expences, ſeldom make uſe of this privilege. One or two days are appointed every year in each circle, to be held by the mint-maſters for the examination of the coin, and the emperor has engaged that they ſhall be regularly held in every circle. All the money in the empire ought likewiſe to be coined of the ſame ſtandard, and to be of one weight and intrinſic value: at preſent, by virtue of a reſolution of the diet of 1737, this ſtandard ought to be that of Leipſic; but they have not been able to prevent the debaſement of the coinage, notwithſtanding this and other regulations of the empire concerning it.

They reckon by marks, ſhillings, and pfennings, in the towns of Hamburg and Lubec: one mark, which is one ſhilling and ſix-pence ſterling, makes ſixteen German ſhillings; one German ſhilling, twelve pfennings; but this pfenning is no real coin: forty-eight ſhillings, or three marks, make one rix-dollar.

The whole circle of Weſtphalia, Brunſwic, and many other places in Lower Saxony, reckon by rix-dollars, marien-groſchen; and alſo by gut-groſchen, and pfennings; one rix-dollar makes twenty-four gut-groſchen, thirty-ſix marien-groſchen, or two hundred and eighty-eight pfennings; one marien-groſche contains eight pfennings, which is equal to two mattiers.

Rix-dollars, albuſes, and hellers, are uſed at Cologne on the Rhine; where they alſo reckon in eſſes and pfennings Flemiſh: one rix-dollar current makes one imperial florin and a half, four head-pieces and a half, forty-eight Brabant ſtivers, fifty-eight and a half Cleve ſtivers, ſeventy-eight albuſes, and one hundred and ſeventeen ſetmanger. It is obſervable, that the rix-dollar, which at Hamburg, Altena, Lubec, Bremen, &c. is worth 4s. 6d. goes for no more than 3s. 6d. in moſt parts of Germany.

In all the electoral countries of Saxony, as alſo in Leipſic, Naumburg, Berlin, Magdeburg, and Francfort on the Oder, they reckon by rix-dollars, gut-groſchen, and pfennings; that is, one rix-dollar, which is there an imaginary coin, contains one imperial florin and a half, or twenty-four gut-groſchen, and one gut-groſchen, twelve pfennings. Sixteen gut-groſchen make an imperial florin; eight groſchen, a one-third piece; and four gut-groſchen, a one ſixth-piece.

They reckon by imperial gulders, or florins, kreutzers, and pfennings, at Nuremberg, Augſburg, Vienna, Prague, &c. one imperial florin, or two-third piece makes fifteen batze, twenty imperial groſches, or two hundred and forty pfennings, or ſixty kreutzers.

Rix-dollars, ſilver groſchen, and pfennings, are uſed in

Breſlau, and all Sileſia: one rix-dollar contains thirty imperial or ſilver groſches or bohms, forty-five white groſches, ninety kreutzers, one hundred and twenty groſches, one hundred and eighty dreyers, and three hundred and ſixty pfennings.

SECT. XI.

Containing a ſuccinct Account of the antient and modern Hiſtory of the GERMANS, from the Conqueſt of their Country by the Romans to the Acceſſion of the preſent reigning Monarch.

IN the early ages of the world, the Germans were divided into many petty nations and principalities, ſome governed by kings whoſe power was limited, and others were abſolute; ſome of their princes were elective, and others hereditary; and ſome ariſtocratical and democratical governments were alſo found among them. Many of theſe ſtates and kingdoms frequently united under one head or general, both in their offenſive and defenſive wars. This was the ſtate of the Germans before they were conquered by the Romans. At that time the children went naked, and the men hung the ſkin of ſome wild beaſt upon their ſhoulders, faſtening it with a thong; and perſons of the beſt quality wore only a little woollen mantle or coat without ſleeves. Their uſual bed was the ground, a little ſtraw, or the ſkins of wolves or bears. Their food was bread, fleſh-meat, butter, and fruit, as at preſent, and their drink water, milk, and beer; for, in thoſe early ages they were ſtrangers to the uſe of wine. They were uſually very merry at their entertainments, ſitting in a ſemi-circle, with the maſter of the family in the middle, and the reſt on the right and left, according to their quality; but to theſe feaſts no women were admitted, nor a ſon, till he had attained his twentieth year.

The antient Germans expreſſed an extraordinary regard for morality, and were very ſtrict in divine worſhip, chooſing their prieſts out of the nobility, who were not intirely ignorant of moral philoſophy and phyſics, and were uſually called to councils of ſtate. Women were likewiſe admitted to the prieſtly office, and both the one and the other were treated with the moſt profound reſpect by the laity. The doctrine of tranſmigration then prevailed in Germany; they believed that departed ſouls, when they had left theſe bodies, animated other creatures; and, according as they behaved in this life, were happy or miſerable. Cluverius obſerves, that they worſhipped the ſun with ſuch devotion, that they ſeemed to acknowledge that planet as the Supreme God, and to it dedicated the firſt day of the week. They alſo worſhipped Woden, or Godan, after whom the fourth day of the week was called Wedneſday. It is ſaid that this word, Godan, becoming afterwards contracted into God, the Germans and Engliſh gave that name to the Deity. They alſo worſhipped the god Faranes, the ſame with the Daniſh Thor, the thunderer, from whom our Thurſday has its name. Tuiſco, the ſame with Mars, gave name to Tueſday; and the goddeſs Freia, or Venus, gave name to Friday.

They performed their ſacrifices, like the ancient Britons, in groves, the oak being uſually choſen for an altar; and, inſtead of a temple, they erected an arbour made of the boughs of the oak and beech. The prieſts, as well as the ſacrifice, were always crowned with wreaths of oak, or of ſome other ſacred tree. They ſacrificed not only beaſts, but men; and theſe human ſacrifices were taken from among their ſlaves or malefactors. Their belief that their ſouls ſhould animate other bodies after death, it is ſaid, made them fearleſs of danger, and upon extraordinary occaſions they made no ſcruple of diſpatching themſelves into the other world. They burnt their dead bodies, and having gathered up the bones and aſhes of the funeral pile, buried them together; and at the funerals of the great were tiltings and ſongs, ſung in memory of the heroic actions of the deceaſed perſon.

Such were the manners of the Germans before they were ſubdued by the Romans, who met with ſuch reſiſtance, that they were contented with making the Rhine and the Danube the boundaries of their conqueſts; and accordingly built fortreſſes, and planted garriſons on the banks of both thoſe rivers, to prevent the incurſions of what they termed the barbarous nations; but within about a hundred years after Conſtantine the Great, the Franks, Burgundians, Alemans, and other German nations, broke through thoſe boundaries, paſſed the Rhine, and diſpoſſeſſed the Romans of all Gaul, Rhætia, and Noricum, which they ſhared among them; but the Franks, prevailing over the reſt, at length eſtabliſhed their empire over all Modern Germany, France, and Italy, under the conduct of Charlemagne, or Charles the Great.

Antiently the conquered German nations had hereditary dukes of their own, and were governed by their own laws: but Charles put an end to the former, and governed the countries by counts and royal miſſionaries. However, the antient diets were ſtill retained. In the year 800, Charles revived the dignity of the Roman emperor, and conferred it upon himſelf and family: but his ſon Lewis divided the empire among his ſons; upon which great troubles aroſe, which, in 843, were adjuſted by an accommodation; by which Lewis the German obtained all Germany as far as the Rhine, with the three towns of Spires, Worms, and Mentz; and thus Germany became an independent kingdom. In 870, Lewis reduced half of the Lotharingian kingdom under his ſubjection, and nine years afterwards the other was reduced by his ſon, Lewis the younger.

This prince, ſharing his paternal kingdom with both his brothers, Carlman became king of Bavaria; Lewis of Eaſt Franconia; and Charles the Fat of Alemannia; the laſt, ſurviving his brothers, not only inherited their kingdoms, but obtained the imperial dignity, together with all Italy and France; yet governed in ſo weak a manner, that in 887 he was depoſed by the German ſtates, who conſtituted Arnulph, Carlman's natural ſon, king of Germany. This prince beat the Normans, who had made great devaſtations in Germany: and, by the aſſiſtance of the Huns, ſubdued the Bohemians. But afterwards, by the death of his ſon Lewis the Child, his family became extinct. Germany was, at that time, an hereditary kingdom, but the power of its monarchs was limited by the diets. The ſeveral territories belonging to it were governed under the king by counts, among whom the margraves defended the borders againſt the attacks of their enemies.

At this period the German ſtates raiſed a Frankiſh lord, named Conrad, to the throne, he being deſcended from the daughter of Lewis I. Conrad was ſucceeded by his enemy Henry duke of Saxony, whom he recommended to the ſtates, on his death-bed.

In the year 1024, the male race of the Saxon kings and emperors ended; during which time, Germany continued an hereditary kingdom. The ſtates afterwards aſſembling at Trifus in the open fields, on the banks of the Rhine, elected Conrad II. for their king, who being alſo acknowledged by the ſtates of Italy, he likewiſe obtained the imperial dignity. He annexed, by means of his ſon, the kingdom of Burgundy to the empire, rendered Poland ſubject to his dominion; and the Eider was appointed the boundary of the German empire, in conſequence of a treaty with Denmark.

Three popes, who had ſet up againſt each other, were depoſed by Henry III. who appointed a fourth in their ſtead; ſince which time the vacancy of the papal chair has always been intimated to the emperor, who ſends a perſon to Rome, to deſire that a new pope may be elected to that dignity.

However, Henry IV. his ſon, was put under the ban by the pope, whereupon the ſtates depoſed him.

The next ſucceſſor was Henry V. ſon of the former; but he was obliged to renounce all pretenſions to the inveſtiture of biſhoprics, which had been claimed by his anceſtors; and in him the male line of the Frankiſh emperors became extinct.

The pope, hereupon, cauſed Lotharius, duke of Saxony, to be elected; but he was not acknowledged by all Germany for their ſovereign, till after a ten years war. After him, Conrad of Hohenſtawſen ſucceeded to the crown. The emperor Frederic I. effectually exerciſed his ſovereignty over the ſee of Rome, by virtue of his coronation at Arles, reſerving alſo his dominion over that kingdom, and obliging Poland to pay him tribute, and take an oath of allegiance: Henry VI. attempted in vain to render the crown hereditary in his family. Philip, the brother of Henry, ſucceeded him; but, refuſing to acknowledge the pope's ſupremacy, was excommunicated, and Otho, duke of Brunſwic, ſet up againſt him by the pope and the electors. The whole empire was engaged by this diſpute, in a bloody war, till Philip, being treacherouſly aſſaſſinated in his bed, Otho became poſſeſſed of the whole empire; but he had not reigned four years, before he was depoſed by the pope and the electors, who choſe Frederic, king of Sicily, in his room.

This prince, ſtiled Frederic II. whom hiſtorians extol for his learning, wiſdom, and reſolution, was five times excommunicated by three popes; but prevailed ſo far againſt pope Gregory IX. as to depoſe him from the papal chair,

chair. These continual contests between him and the popes gave rise to the two famous factions of the Guelphs and Gibellines, the former adhering to the papal see, and the latter to the emperor. Frederic, having reigned thirty-eight years, died, as some say, by poison, in Italy; after which the empire remained in great confusion for upwards of twenty years, there being no less than six competitors for the crown.

In 1273 Germany began to recover from its distracted state, when count Rodolphus of Hapsburg, was advanced to the imperial dignity, the other electors leaving the choice to the palsgrave Lewis; and from him descended the house of Austria.

At this time, count Adolphus of Nassau, was also, by virtue of a compromise, created emperor by the elector of Mentz; but he so disgusted the electors of the empire, that they made choice of Albert, the son of Rodolphus, for their sovereign, who defeated Adolphus in a pitched battle, and slew him with his own hand. Albert's coronation was confirmed by the pope; but his nephew and three assassins afterwards murdered him.

Henry, count of Lutzelburg, was created emperor on the death of Albert, in 1308: he was famed for his wisdom, temper, and courage; but was poisoned by a Franciscan friar, with the consecrated elements. The emperor no sooner perceived what was done, than he generously advised the villain to make his escape; but he, neglecting to perform it, was taken, and flayed alive for the fact.

After an interregnum of some years, Ludowic, or Lewis of Bavaria, was chosen emperor, by a majority of electors, in 1318; but Frederic, duke of Austria, son of the late emperor, was set up by a contrary faction. Frederic's forces were defeated, and Lewis remained sole emperor. After his death, Charles IV. was unanimously elected emperor, and distinguished himself by drawing up the golden bull, or those regulations for the election of an emperor, which are still observed. Charles lived to see his son Wenzel, or Wenceslaus, elected king of the Romans. This prince, who was the fourth son of Charles, succeeded to the empire, at his father's demise; but after he had reigned twenty-two years, was deposed, for his dissolute and cruel behaviour. Charles was succeeded by three other princes, whose reign were short; and at length, in 1411,

Sigismund was unanimously chosen emperor, who, in 1414, proclaimed a general council to be held at Constance, in which three popes were deposed, and a new one set up. At this council those reformers Jerom of Prague and John Huss, were condemned, and burnt, though this emperor had granted them a passport, and was engaged, in honour and conscience, for their safe return to their country; which so exasperated the Hussites of Bohemia, that they raised a formidable army, and, under the conduct of Zisca, their general, defeated his forces in fourteen battles. Frederic, duke of Austria, son-in-law to the emperor Sigismund, was chosen emperor upon the death of his father-in-law, and reigned fifty-three years. His son Maximilian was chosen king of the Romans during his father's life-time, and afterwards obtained from the pope the imperial crown: the empire was divided into ten circles during his reign.

In 1519, Charles V. surnamed the Great, son of Philip, king of Spain, and grandson to Maximilian, was elected emperor. He caused Luther's doctrine to be condemned; and in his reign the disciples of that reformer obtained the name of Protestants, from their protesting against a decree of the imperial diet in favour of the catholics. He is said to have been victorious in seventy battles: he had the pope and French king prisoners at the same time, and carried his arms into Africa, where he conquered the kingdom of Tunis. He drove the Turks from the siege of Vienna; made war on the protestant princes, and took the elector of Saxony and the prince of Hesse prisoners; but he resigned his empire to his brother Ferdinand, and retired into a convent in Spain, after he had reigned thirty-eight years.

Charles was succeeded by Ferdinand I. who distinguished himself by establishing the aulic council of the empire; he was a peaceful prince, and used to assign a part of the day to hear the complaints of his people. Maximilian II. and his son Rodolphus II. were both successively elected king of the Romans, but the latter could not be prevailed upon to allow a successor to be chosen in his life time. He was succeeded by his brother Matthias, in whose capitulation it was for the first time inserted, that the electors should, for the future, even against the will of his father, be at liberty to elect a king of the Romans.

A war of thirty years continuance broke out in the reign of Ferdinand II. who endeavoured to destroy the protestants. This bloody contest was put an end to by his son Ferdinand III. in the year 1648, by the peace of Westphalia, by which the protestants were secured in their civil and religious liberties and privileges. This emperor conferred on duke Ernest Augustus, of Brunswic Lunenburg, the ninth electoral dignity, and was succeeded by his son Joseph, king of the Romans. This last was followed by his brother Charles VI. who, in 1713, published the ordinance called the Pragmatic Sanction, to secure his hereditary dominions to his family; and died in 1740, without male heirs. In 1742, Charles VII. of Bavaria, was chosen emperor, by the suspension of the vote of Bohemia; but after an unhappy reign, in which he was continually at war, he died in 1745, and was succeeded by Francis I. grand duke of Tuscany, and duke of Lorrain, who had married the queen of Bohemia, the daughter of Charles VI. Joseph II. emperor of Germany, was crowned king of the Romans, April 3, 1764.

The empress-queen of Hungary and Bohemia, dying November 29th, 1780, aged sixty-three, the present emperor of Germany became heir to her dominions. In the beginning of the year 1782, this monarch issued an edict for abolishing many of the popish convents, and has thereby also freed the nuns and friars from their vows. By abolishing the religious orders contained in the edict, his imperial majesty has obtained possession of several millions of money, which is to be appropriated for the establishment of an universal foundling hospital and workhouse for the poor. He has also granted a general toleration to the protestants in the empire, though he himself strictly adheres to the Roman catholic religion. In short, by these and many other excellent regulations made by this great prince, he not only displays the liberal sentiments with which his mind is endued, but also renders himself the object of the affections of the people he governs, while the surrounding nations view him with equal veneration and respect.

SECT. XII.

Containing an Account of the Election and Coronation of the Emperor of GERMANY; his Power and the Privileges of the States of the Empire and Diet; also of the Forces, Taxes, Courts of Justice, Laws, and Religion of the GERMANS.

THE empire of Germany is elective, and every new king of the Romans is obliged solemnly to renounce all attempts of rendering it hereditary in his family. The laws of the empire make no limitation with respect to religion, nation, state, or age. This choice is settled by the majority of the electors, and declared by the elector of Mentz, within a month after an account is received of the former emperor's death, by means of envoys and public rescripts to each elector. The ceremony of election is performed at Frankfort on the Maine; where the electors appear, either in person, or send two or three envoys who must be provided with sufficient powers. After settling the deliberations, as well relating to the capitulation of election, as to other matters proposed by the states, foreign envoys, and others, all the foreigners who do not belong to the retinue of the electors, or their envoys, are ordered to leave the town before the day of election; after which all the electors present, with the first envoys of such as are absent, march in their electoral habits in procession on horseback, the three ecclesiastical electors wearing scarlet robes, with caps lined with ermine, and the robes of the secular electors of crimson velvet lined also with ermine, each with his hereditary marshal carrying a sword in a scabbard before him; but this honour is not paid to the deputies of the absent electors.

In this manner they proceed from the council-house to St. Bartholomew's church, where alighting at the gate, they go to their respective seats in the choir, followed by several princes and counts of the empire, the several sword-bearers standing before their respective electors, with their swords drawn and laid on their shoulders. The service begins with veni creator, and the protestant electors withdraw till mass is over; after which they return, and they all solemnly take an oath before the altar, to elect the fittest person to be emperor, and then shut themselves up in the chapel of election, which is a small vaulted gallery, to which there is an entrance from the choir. When they have once more sworn to stand to a plurality of votes, these votes are collected by the elector of Mentz, according to the rank of the electors; and then the elector of Mentz is asked by the elector of Saxony for his vote. Whoever has

above

above half the voices of the college is elected, and an elector may even vote for himself.

When the election is over, the person elected, or his proxy, must immediately swear and subscribe to the capitulation of election, which being done, he receives the congratulations of the electors, and the choice is made public in the church. If the elected king of the Romans be not present in person, he must give a counter-bond that he will maintain the capitulation of election, and, before his coronation, must swear to it in person; and, till this is done, he cannot assume the government, but must leave it to the vicars of the empire. An authentic copy of the capitulation of election, subscribed by the person elected, or his envoy, and confirmed by his seal, is delivered to each of the electors; and, on the other hand, the electoral college causes to be delivered to the person elected an instrument of his election, which, when he is absent, is carried to him by a prince, with a writing of notification. Upon this he appoints a day for his coronation, which ought to be performed at Aix la Chapelle, but at present is always held in the town where the election happens to be.

Some of the jewels of the empire are kept at Aix, and the rest at Nuremburg. Most of them belonged to Charlemagne, and are solemnly delivered up at the place of coronation. Exclusive of several kinds of vestments, there are a crown and sceptre, with two rings, one imperial monde, two broad swords, one small one, a book of the gospels, and other requisites.

The temporal electors, or their ambassadors, attend the person elected from his palace to the church, in the following order; the elector palatine with the crown, the elector of Bavaria with the monde, or globe, and the elector of Brandenburg with the sceptre, march first, abreast; the elector of Saxony carries the sword, and the elector of Hanover the standard. At the door of the church he is received by the three ecclesiastical electors in their robes, who attend him to the altar; and having taken a general oath as a ruler, and also promised due veneration to the pope and the church, the archbishop who officiates, anoints his head, and between his shoulders, his neck, breast, and right arm; then being clothed in the ancient imperial robes, he is brought to another altar, and once more sworn; he is then crowned, and afterwards conducted to the throne, where the archbishop bids him receive and keep the pledge which was designed for him by providence. Te Deum is then sung, and the trumpets and other music proclaim the general joy. After which he dubs some knights, is made a canon of the collegiate church of St. Mary at Aix la Chapelle, and is then conducted on foot, in solemn procession, to the council-house to a table, at which the hereditary officers attend.

The emperors, till the reign of Charles V. suffered themselves to be crowned at Rome by the pope, and then stiled themselves Roman emperors. The emperor, immediately on his entering on the government, shews his veneration to the pope by an embassy. The style of king of Italy and Lombardy, is merely titular, if we except twenty-one fiefs of the empire, that lie in the ecclesiastical state.

The title of the emperor runs thus: "F. by the grace of "God, elected a Roman emperor, and at all times augmen-"ter of the empire of Germany." Next follow the titles of the hereditary imperial dominions. The states of the empire give the emperor the title of the most illustrious, most powerful, and most invincible Roman emperor; but the electors omit the last. The arms of the emperor and empire are a black spread eagle with two heads, hovering with expanded wings in a field of gold, and over the head of the eagle is seen the imperial crown. To these are annexed the arms of the several hereditary countries.

The emperor's prerogatives consist partly in his being looked upon by all other crowned heads and states in Europe as the first European potentate, and consequently has precedence given him and his ambassadors. With respect to the German empire, he is its supreme head, and as such enjoys many privileges: yet his power in the administration of the German empire is limited both by the capitulation of election, the other laws of the empire, by treaties, and by the customs of the empire. Those privileges which he has the right of exercising without the advice of the states, are called his reservata; but his greatest power does not consist in these, which are far from being repugnant to the liberties of the states of Germany.

With respect to ecclesiastical affairs, his rights consist in little more than confirming ecclesiastical elections, and sending commissaries to the elections of archbishops, bishops, and abbots, that they may be performed in due order; but the commissary is never personally present at these elections.

Respecting temporal affairs, the emperor has the right of bestowing personal dignities; as for instance, the creating of noblemen, as lords, barons, and counts, who enjoy the dignity of princes, and of knights and gentry; as also that of raising countries and territories to a higher rank; of bestowing coats of arms, as also the enlarging, improving, and altering them. He has the power of establishing universities, and enabling them to confer academical degrees; of granting a right of holding fairs and markets, and of erecting any place into a sanctuary. He has likewise the power of bestowing letters of respite, of securing a debtor against his creditor, and of conferring majority on minors. He can put children who are born out of wedlock upon the footing of such as are legitimate; can confirm the contracts and stipulations of the members of the empire; and so far remit the oaths extorted from them, that they may commence an action at law against another, on account of the very thing for which the oath was administered. But the emperor has no right, without the consent of the collective state of the empire, to put one of those states under the ban, to exclude a state of the empire from a seat and voice in its colleges, to interfere in the laws of the empire, to conclude treaties in affairs relating to the empire, to involve it in a war, to raise levies, or to conclude a peace in which the empire is concerned, to appoint taxes in it, to regulate the coinage, to build forts in the empire, or to determine disputes concerning religion.

The electors frequently chuse the successor in the administration, during the life of the emperor; and the person so chosen is stiled King of the Romans. He is elected and crowned in the very same manner as the emperor, and is actually a crowned head, though he has no kingdom; is saluted with the title of majesty, and enjoys the title of perpetual augmenter of the empire, and king of Germany. He takes precedence before all the other kings of Christendom, and bears a spread eagle with one head in his arms.

The emperor has, for his assistants in the court and chancery, the arch-officers, who are also electors, of the empire.

There are nine electors, of which three are spiritual, and the rest temporal. Of the former, is the elector of Mentz, who is arch-chancellor of the holy Roman empire, and director of the electoral college: this prince, besides the offices he enjoys at the coronation, as already taken notice of, has the general direction, and is not to be controuled by the emperor; he lays before that body the grievances of the separate states. Before him, or his envoys, all those of the states of the empire, as well as of foreign powers, legitimate themselves. He nominates the vice-chancellor of the empire, who must take an oath to him as well as the emperor. He has the inspection of the archives of the empire, appoints all officers for the chancery, and has supreme jurisdiction over them.

The second spiritual elector is that of Treves, who is the arch-chancellor of the holy Roman empire in Gaul and the kingdom of Arles; but this is at present no more than a mere title. He constantly precedes the elector of Cologne, and has the first voice at the election of a king of the Romans.

The third spiritual elector is the archbishop of Cologne, who is arch-chancellor of the holy Roman empire, in Italy. When the emperor is crowned at Aix la Chapelle, and in the archbishopric of Cologne, he has the right of performing the coronation alone; but if it happens in a third place, that is neither in his archbishopric nor that of Mentz, he exchanges therein with the latter.

The king of Bohemia, the elector of Bavaria, the elector of Saxony, the elector of Brandenburg, the elector Palatine, and the elector of Hanover, are the temporal electors. The former of these is arch cup-bearer of the holy Roman empire, and, as such, presents to the emperor the chalice, filled with wine and water, and hands the first liquor to the table in a silver cup, which weighs twelve marks, or about ninety six ounces English, which afterwards, together with his horse, becomes the property of his vicar. His other prerogatives are, his preceding all other temporal electors, walking in procession immediately after the emperor, followed by the empress and the electors of Mentz and Cologne; and he has the third voice in the electoral college.

The office of arch-sewer of the holy Roman empire is vested in the elector of Bavaria. At the coronation, he carries the monde before the emperor, ranks next to Bohemia, and at the imperial coronation serves up the first course,

courſe, and places four diſhes, weighing twelve marks, on the emperor's table.

The office of arch-marſhal of the holy Roman empire belongs to the elector of Saxony, who at the diets, and on other ſolemn occaſions, carries the ſword of ſtate before the emperor; and at the coronation rides into a heap of oats, and fills a meaſure with them. At the diets, he appoints quarters for the electors, or their envoys, and during the holding of the diets, has juriſdiction over all the electoral and other imperial officers.

The office of arch-chamberlain of the empire is veſted in the elector of Brandenburg, who carries the ſceptre before the emperor, and preſents him with water in a ſilver baſon, to waſh his hands in.

The office of arch-treaſurer belongs to the elector palatine, who can raiſe nobles and gentlemen to the degree of counts: he is protector of the order of St. John throughout all Germany. When the elector of Bavaria was put under the ban of the empire, and the palatine obtained the office of arch-ſewer, the elector of Brunſwic Lunenburg alſo obtained the office of arch-treaſurer. He enjoys the alternate ſucceſſion of the biſhopric of Oſnaburg, with ſome other rites and privileges; and his electoral juriſdiction extends both to the territories of Hanover and Zell.

The emperor Leopold raiſed the illuſtrious houſe of Hanover, on account of the extraordinary ſervices both he and the empire had received from it, to the electoral dignity, ſo early as the year 1692; but it was not till the year 1708 that thoſe electors obtained a ſeat and voice in the electoral college.

The princes of the empire follow next in rank after thoſe above-mentioned: they are partly ſpiritual, and partly temporal; partly old, and partly new, or firſt raiſed to that dignity ſince the reign of Ferdinand II. The ſpiritual princes are either archbiſhops, biſhops, or princely abbots; and to them likewiſe belong the Teutonic maſters, together with the maſterſhip of the order of St. John. Among the temporal princes is an archduke, and the reſt are either dukes, palſgraves, margraves, landgraves, burgraves, princes, or princely counts. In the college, or council of the princes of the empire, are three benches: on what is called the ſpiritual bench, ſit the ſpiritual princes, with the arch-duke of Auſtria, and that of Burgundy, but in ſuch a manner, that Auſtria daily exchanges the firſt place with Saltzburg; the other temporal princes ſit on the temporal bench; and the biſhops of Lubec and Oſnaburg, when the latter happens to be a Lutheran, on the croſs bench.

The emperor ſummons the diet, which conſiſts, beſides himſelf, of all the ſtates, or their envoys or plenipotentiaries: after conſulting with the electors, his imperial majeſty appoints the time and place where it ſhall meet (which muſt be in ſome part of the German dominions), in order to form ſuch reſolutions, and tranſact ſuch buſineſs as concern the whole empire. The emperor either aſſiſts at the diet in perſon, or has a principal commiſſary, who is generally an old imperial aulic counſellor, and a perſon of learning raiſed to the dignity of a baron. The ſummons for their meeting conſiſts of printed patents ſubſcribed by the emperor, and is ſent in the form of a letter to each ſtate of the empire, briefly declaring the occaſion of their aſſembling, and the moſt important matters to be laid before them.

The ſtates compoſing this aſſembly may either appear themſelves, or by their envoys, or charge another ſtate, or its envoys, with their voice. On the ſide of the ſtates, the elector of Mentz, or his envoys, has the general direction, and theſe envoys ſhew their credentials to the elector of Mentz, or his envoys, and to the principal commiſſary of the empire.

The reſpective ſtates, in their conſultations, divide into three colleges, namely, the electoral, the princely, and the college of the imperial cities; each of the two firſt, which are called the higher colleges of the empire, has a principal and by-chamber of its own; but all the three colleges meet to hear the imperial propoſals; and in the hall of correlatives, on exchanging the concluſions of both the higher colleges againſt the imperial cities.

It may not be improper to obſerve here, that the eccleſiaſtical and ſecular princes of the empire, and all prelates who have princely dignities annexed to their functions, with the maſter of the Teutonic order, have each one ſingle voice; but the reſt, who have no temporal principality, give their voices by companies, of which kind are the two benches of the Rhine and Swabia. The repreſentatives, or the deputies of the imperial cities, form the laſt and third rank of members in the diet, and are alſo divided into the Rheniſh and Swabian benches. On the firſt ſit the repreſentatives of Lubec, the free cities upon the Rhine, which amount to fifteen; and on the other the repreſentatives of the thirty-ſeven free cities in Swabia and Franconia. The repreſentatives of the city where the diet is held ſit at a table by themſelves, and take an account of the voices of the other deputies, which are regiſtered by the two regiſters of Ulm and Spire, one of them repreſenting the cities in the circle of Swabia, and the other the cities in the circle of the Rhine.

The reſolutions in each college are formed by a majority of voices; but when affairs relating to religion are diſcuſſed, or when all the catholics are of one opinion, and all the proteſtants of another, it does not turn on a majority of voices. If the three colleges be unanimous, a judgment of the empire is formed for the uſe of the emperor, or his principal commiſſary; but if only two of the colleges are unanimous, their reſolution, with the particular concluſion of the third, is delivered in to the imperial commiſſion. When the emperor approves either of the judgment of the empire, or the concluſion of two colleges, an obligatory concluſion of the empire ariſes out of it, and it is immediately put into execution.

With reſpect to taxes and other impoſts, theſe can no otherwiſe be laid on the empire in general by the emperor, than with the advice, privity, and conſent of the electors, princes, and ſtates, at the general diets. Theſe taxes are partly ordinary, and partly extraordinary: the former, which are ſtyled the chamber-terms, are what each ſtate of the empire is annually to contribute for maintaining the chamber-judicatory of the emperor and empire; and the proportion paid by each ſtate is expreſſed in the matricula of the chamber. But theſe chamber-terms are ſo ill paid, that in 1753 the empire was indebted to the chamber-judicature ſix hundred and fifty-four thouſand and thirteen rix-dollars. Indeed many complaints have been made, that the matricula is imperfect, and the ſtates rated in an unequitable proportion.

The taxes, which are of an extraordinary nature, are ſuch as are frequently granted, in caſe of neceſſity, by the ſtates, for the ſupport of the emperor or the army of the empire; for the maintenance or building of its forts; and for a war, particularly againſt the Turks. Theſe are granted according to what is called in Germany Roman months; a denomination which took its riſe from this circumſtance: in antient times the emperors, in order to receive the papal coronation, took a journey to Rome, and the German ſtates of the empire were bound to eſcort them with a certain number of horſe and foot for ſix months, at their own expence; or to pay twelve florins monthly for a horſeman, and four for a footman; which money obtained the name of Roman months, computed at fifty-eight thouſand two hundred and eighty florins value each. This foot, or ſtandard, was afterwards retained, and the rate of each ſtate, either in men or money, is ſettled in what is termed the matricula of the empire.

The conſent of the electors, princes, and ſtates, muſt be firſt obtained in an open diet, before the emperor can commence a war. But when the empire reſolves upon a was, the generality of the conſtituents, with the field-marſhal at their head, and alſo the directors and the counſellors of the military council, are to be nominated by the emperor and the whole body of the ſtates; and thoſe of an equal number of both religions, who, together with the whole army, are ſubject to the emperor and empire. The war muſt alſo be carried on agreeably to the ordinances of the empire; and the oldeſt field-marſhal, without diſtinction of religion, muſt command the army. But at preſent no directors of the military council are any longer called in, and the emperor and his aulic military council generally carry on the war.

The following calculation has been made of the forces which the ſeveral princes of the empire are able to maintain and pay, viz. the elector of Mentz can maintain ſix thouſand; the elector of Triers, ſix thouſand; the elector of Cologne, ſix thouſand; the biſhops of Munſter and Liege, and the archbiſhop of Saltzburg, eight thouſand each; the biſhop of Wurtzburg, two thouſand; the biſhop of Bamburg, five thouſand; the biſhop of Paderborn, three thouſand; the biſhop of Oſnaburg, two thouſand five hundred; the abbot of Fulda, ſix thouſand; the other biſhoprics of the empire, ſix thouſand; the abbies and provoſtſhips of the empire, eight thouſand; ſo that the total amount of the forces of the eccleſiaſtical princes, is ſeventy-four thouſand five hundred.

The forces of the ſecular princes are as follow: the emperor for Hungary, thirty thouſand; for Bohemia, Sile-

ſia, and Moravia, thirty thouſand; for Auſtria and his other dominions, thirty thouſand; the king of Pruſſia, as elector of Brandenburg, forty thouſand; the elector of Saxony, twenty-five thouſand; the elector palatine, fifteen thouſand; the duke of Wirtemberg, fifteen thouſand; the landgrave of Heſſe-Caſſel, fifteen thouſand; the prince of Baden, ten thouſand; the elector of Hanover, thirty thouſand; the duke of Holſtein, twelve thouſand; the duke of Mecklenburg, fifteen thouſand; the princes of Anhalt, ſix thouſand; the prince of Lawenburg, ſix thouſand; the elector of Bavaria, thirty thouſand; the dukes of Saxony, ten thouſand; the princes of Naſſau, ten thouſand; the other princes and imperial towns, fifty thouſand; the whole amount of which is three hundred and ſeventy-nine thouſand; which added to ſeventy-four thouſand five hundred, the quota of the eccleſiaſtical princes, make the whole of the imperial forces to amount to four hundred and fifty-three thouſand five hundred.

Of the body of men which the empire unanimouſly agree to ſend, and promiſe to ſupply, one half ſeldom actually appear in the field, in time of war.

The chief of the courts of juſtice, is the imperial aulic council, which is held at the imperial court, and ſolely depends on the emperor, who is ſupreme head and judge, to whom in all matters of importance a judgment is exhibited by the imperial aulic council. This judicatory conſiſts of a preſident, the imperial aulic vice-chancellor, a vice-preſident, and a number of imperial aulic counſellors, ſix of whom are always to be Lutherans; beſides theſe are two ſecretaries, and a fiſcal of the empire.

The agents of the imperial aulic council, who give in the writings, urge the reſolutions, &c. alſo belong to this claſs.

With reſpect to the imperial and chamber judicatory of the empire, which is filled by the emperor and ſtates of the empire at the ſame time, but maintained only by the latter, it is at preſent held in the imperial city of Wetzlar. This judicatory conſiſts of a chamber judge, two preſidents of the chamber judicatory, one of whom is a Roman, and the other a Lutheran; as alſo of ſeventeen aſſeſſors, eight of whom are Lutheran, and nine catholic. To this court alſo belong a general and advocate fiſcal, with thirty procurators, and a number of advocates. The chamber judicatory has alſo a chancery of its own, and a treaſury, and has the direction of the chamber-terms of payment. The other judicatories are called peculiar or lower, and to theſe belong the imperial judicatory in Upper and Lower Swabia, held in the three imperial cities of Ravenſburg, Wangen, and Iſny, and in the borough of Altdorf, together with the imperial land judicatory of the burgraviate of Nuremburg, which belongs to the margrave of Brandenburg, and is held at Anſpach, and many others, particularly the imperial aulic judicatory of Rotweil, which ſolely depends on the emperor, and is the principal of the lower judicatories.

In all courts of the empire, the civil law is generally obſerved, and to this are added ſome decrees, to which an equal regard is paid; as firſt, the golden bull, already mentioned, which has only about twenty-four leaves, and was publiſhed by Charles IV. with the approbation of moſt of the princes, counts, barons, and other ſtates of the empire, and contains all the fundamental laws relating to the election of the emperor, and the privileges of the electors: the ſeal annexed to this decree being of gold, it obtained the name of the Golden Bull, or edict, and is eſteemed irrevocable. Another conſiderable part of the municipal laws of the empire is the Capitulatio Cæſarea, which is a collection of forty or fifty articles between the electors and the emperor; who, at his coronation, ſwears to maintain the privileges of the electors, princes, and other ſubjects of the empire; that he will not alienate or diminiſh the revenues of the crown, or bring foreign troops into the empire, without the conſent of the ſtates. The third kind of laws by which the Germans are governed, are, the acts of their general diets. Theſe laws indeed relate chiefly to the great, whoſe privileges they aſcertain and ſecure; but every diſtinct ſtate is governed by its prince or ſovereign, either at his arbitrary pleaſure, or according to a ſet of laws formed by him or his anceſtors.

In treating of the ſtate of religion among the modern Germans, it may be neceſſary to obſerve, that they became acquainted with ſome principles of the Chriſtian religion towards the cloſe of the ſeventh century, by the Iriſh biſhop Kilian, Suidbert, and Ewald, who were Engliſhmen, and Rupretcht of Worms, who ſettled at Saltzburg; and in the eighth century, Winifred of England, preaching among the Thuringians, Heſſians, and Saxons, was ordained biſhop of the Germans beyond the Rhine, by the name of Bonifacius; he was afterwards made archbiſhop of Germany, when, under the ſpecious pretence of propagating the doctrines of Chriſtianity, he exerted himſelf with great zeal in promoting obedience to the church of Rome, and even employed the ſecular power againſt ſuch biſhops and prieſts as refuſed to ſubmit to the Romiſh yoke and ceremonies of worſhip. Charlemagne propagated Chriſtianity among the Saxons by fire and ſword; and the Chriſtian religion was introduced ſome time after among the Bohemians and Moravians.

About the year 1517 the Reformation began in Germany; for the archbiſhop of Mentz being unable to pay the large ſums the pope expected from him, procured leave of his holineſs to ſell his pardons and indulgencies in all the great towns of Germany. Dr. Martin Luther hearing of this, proteſted againſt the proceeding, and openly diſputed at Wittemberg and Leipſic againſt thoſe who aſſerted the power of the pope to grant pardons and indulgencies, notwithſtanding his being threatened with excommunication, and with being condemned as an heretic; but the elector of Saxony approving of his doctrines, he boldly propagated them in other parts of Germany, where the dukes of Brunſwic and Lunenburg, Wirtemberg, Mecklenburg, Pomerania, the marquis of Brandenburg, the landgrave of Heſſe, and the inhabitants of moſt of the Imperial cities, became his diſciples, and, in 1529, proteſted againſt the concluſion of the diet at Spire, by which all innovations in religion, till the decree of a future council ſhould be obtained, were declared unlawful; and from this proteſt they received the names of Proteſtants; and from their confeſſion of faith, which the following year they ſolemnly delivered to the diet at Augſburg, they obtained the name of Adherers to the Augſburg Confeſſion.

They took no part in the council of Trent; but the year before, that is in 1537, at an aſſembly at Smalkald, they ſet forth the ſubſtance of their doctrine in certain articles, in order to deliver them to the aſſembled biſhops. Afterwards refuſing to recede from the opinions they had profeſſed, the emperor Charles V. endeavoured to reduce them by force; but after a long war, which broke out in the year 1546, he granted them a toleration at Paſſaw in 1553, which was afterwards confirmed to them at Augſburg in 1555, during the receſs of the diet of the empire. By this peace all the adherents to the Augſburg confeſſion were confirmed in their full religious liberty, till a final agreement concerning both religions ſhould be brought about, and in caſe that ſhould not be effected, for ever. To the maintaining of this important law of the empire, the emperors and popiſh powers have frequently bound themſelves by new obligations; and the former in particular have always confirmed it by oath in their capitulation of election; and the doubts that aroſe upon it were removed by the treaty of Weſtphalia, in the year 1648. By virtue of this renewed and confirmed religious peace, no other religion, but that of the Roman, Lutheran, and Reformed, is to be tolerated in the empire: yet there are ſects that adhere to neither of theſe three religions, and yet in ſome places enjoy the free exerciſe of their own.

The determination whether a perſon be a member of this or that church, belongs only to that very church; and each ſovereign, or lord, is bound to allow his own vaſſals and ſubjects who are of another religion, not only the public and private exerciſe of theirs, but every thing belonging to it, churches, ſchools, ſpiritualities, incomes, conſiſtories, &c. in the ſame manner as they ſtood on the firſt of January, 1624: but in a country where there are ſubjects who adhere to one religion, which in that year was neither publicly nor privately obſerved, it lies in the ſovereign's breaſt whether he ſhall ſuffer them in the country or not. If he enters into a ſtipulation with them, and promiſes them a toleration, it muſt be maintained, not only by him, but by his ſucceſſors; for the rights of ſuch ſubjects muſt not be infringed. But if he will grant no toleration; he muſt allow thoſe who at the time of the treaty of Weſtphalia were already ſettled in his country, five years at leaſt; and thoſe who afterward came to ſettle therein, or have made any change in their religion, at leaſt three years. However, theſe regulations have been repeatedly infringed in later times.

Proteſtant ſtates may make what regulations and changes they pleaſe within their own juriſdictions in matters relating to the churches or ſchools. Hence the external forms differ greatly in the Proteſtant countries of the empire. The ſovereign commonly decides all important affairs, ſettles and eſtabliſhes, removes, promotes, caſhiers, or otherwiſe puniſhes ſuch as ſerve either in the church or ſchools: he forms eccleſiaſtical regulations, appoints feaſts

and faſts, and erects colleges, which in his name ſuperintend the other affairs of the church. Conſiſtories are alſo generally appointed by the proteſtant ſtates, which for the moſt part conſiſt of lay and eccleſiaſtical counſellors; but in ſome places more, and in others fewer things fall under their notice. In many places alſo peculiar ſynods and a church council are held. Thoſe that ſerve the church and ſchools are either appointed by the ſovereign of the country, or the conſiſtory, the elders of the church or its members. Theſe alſo appoint inſpectors, provoſts, or ſuperintendents; and over theſe, general ſuperintendents are frequently placed.

The ſame power is poſſeſſed by the Proteſtant ſtates over their catholic ſubjects, as the catholic ſtates exerciſe over their Proteſtant ſubjects. In favour of thoſe who, in the year 1624, enjoyed the public exerciſe of their religion, it is provided, that the catholic biſhops to whoſe diſtrict they belong, ſhall retain the ſame ſpiritual juriſdiction over them as far as in that period: conſequently ſuch as were merely tolerated out of grace or favour, are alſo wholly left in this particular to the ſupreme juriſdiction of the lord of the country; but with this limitation, that he can require nothing of them which is contrary to the principles of their church. On the other hand, no cloiſter ſituated in the territory of any Proteſtant ſuperior, or lord, muſt be converted into any other order, unleſs the former order be wholly extinct; and even in that caſe, the cloiſter is to be ſupplied only with ſuch regulars as had a being as an order, prior to the religious diſſenſions. In ſhort, the Proteſtant body has mutually agreed, that whenever for the future a Lutheran lord of a country ſhall turn to the reformed church, or obtain a country whoſe inhabitants are of that communion, and vice verſa, he ſhall leave his ſubjects the free exerciſe of their religion, their whole form of church and ſchool diſcipline, and all their other privileges. But if a church ſhall of itſelf turn to that of the lord of the country, the public exerciſe of religion ſhall be permitted the people; but at their own expence, and without prejudice to the others. The religion that prevailed in the country at the concluſion of the treaty of Weſtphalia, is to be that of the conſiſtorial counſellor and ſuperintendents of divinity and philoſophy. What further remains to be ſaid on this head, our readers will find in the accounts and deſcriptions already given of the reſpective countries and provinces which compoſe this great empire.

CHAP. X.

THE NEW HISTORY AND DESCRIPTION OF

BOHEMIA.

SECT. I.

Containing a general Account of the Kingdom of BOHEMIA, its Boundaries and Diviſions, with a geographical Deſcription of the Country; the various Circles it contains; their Towns and Places; alſo of the Inhabitants of Bohemia Proper, their Perſons, Manners, Language, Religion, &c. the Conſtitution of Bohemia, its Manufactures, Revenues, &c.

THE name of this country is derived from the Bemi, or Bojemi, its antient inhabitants, who were the deſcendants of the Boii, or Gallic nation, that retired into the Hercynian foreſt, (which runs through this country) in order to avoid the perſecutions of the Romans. This kingdom once comprehended Luſatia, till the houſe of Auſtria granted that country to the electorate of Saxony. It is bounded, on the eaſt, by Poland; on the weſt, by the palatinate of Bavaria, with part of Saxony; on the north, by Luſatia; and, on the ſouth, by Auſtria. It is about three hundred miles in length from north to ſouth, and two hundred and fifty from eaſt to weſt.

This kingdom is divided into two parts; namely, 1. The kingdom of Bohemia Proper. 2. The marquiſate of Moravia. We ſhall deſcribe theſe ſeparately, as each of them has ſomething peculiar to itſelf, either in the produce of the country, or with reſpect to its inhabitants, &c.

Bohemia Proper, is one of the beſt countries in the Auſtrian dominions: and is bounded, on the eaſt, by Moravia and Sileſia; on the weſt, by Bavaria; on the north, by Luſatia; and by Auſtria, on the ſouth. It is almoſt one hundred and ſeventy miles in length, from eaſt to weſt; and one hundred and forty in breadth, from north to ſouth. It is almoſt ſurrounded with mountains and woods, in the former of which are mines of gold, ſilver, copper, tin, iron, lead, ſulphur, and nitre. Here are likewiſe abundance of carbuncles, emeralds, amethyſts, jaſpers, ſapphire, cryſtals, and other precious ſtones, moſt of which are purchaſed by the Jews, who export them into foreign countries.

Though the large thick woods, with which Bohemia abounds, are ſuppoſed to render the climate very unwholſome; yet the ſoil is, in general, tolerably fertile, being well-watered with rivers, particularly the Elbe, the Moldau, the Egra, Oder, Viſtula, Teyn, and Igla. Corn and millet are produced here in great plenty; as alſo abundance of hops, ſaffron, ginger, red wines, flax, wood, and timber. They have excellent paſturage, and, beſides cattle and ſheep, breed great numbers of fine horſes, which are chiefly purchaſed for the uſe of the French. In the woods are ſeveral ſorts of wild beaſts, the moſt remarkable of which are bears, lynxes, wolves, foxes, martens, badgers, beavers, and otters; with various kinds of game.

The rivers afford ſeveral kinds of excellent fiſh; and, in ſome of them is found gold duſt. Here were formerly great numbers of ſalt pits; but the working of them not anſwering the expence, they have been ſome time neglected, and the country is ſupplied with ſalt from Miſnia and other other places. Here are mineral waters and hot baths in this country, which alſo produces terra ſigillata, or ſealed earth, Moſcovy-glaſs, ſtone or pit coal, alum, vitriolic water, and marble.

Geographers uſually divide Bohemia into twelve circles or provinces, excluſive of Prague, and the territory of Egra, or Eger. But as the city of Prague is not only the principal place in this diviſion, but alſo the capital of the whole kingdom of Bohemia, it will be neceſſary to give a particular deſcription of that celebrated city; before we take notice of the towns in the other circles.

When the Bohemians firſt ſettled in Prague, they called it Boihoheim, as being the capital of the kingdom; it was afterwards called, by the Sclavonians, Prague, which name hath been given it ever ſince. It is ſituated in fourteen degrees forty minutes eaſt longitude, and fifty degrees five minutes north latitude. It ſtands one hundred and twenty miles north-eaſt of Ratiſbon, one hundred and forty-three eaſt of Nuremberg, ſeventy-four ſouth of Dreſden, one hundred and forty-ſeven north-eaſt of Munich, one hundred and fifty ſouth of Berlin, and one hundred and forty north-weſt of Vienna. The city ſtands in a pleaſant and fruitful country, in the midſt of gardens and fine fields; and is ſurrounded with magnificent palaces, belonging to the nobility and gentry. The houſes are chiefly built of ſtone; and conſiſt, for the moſt part, of three ſtories. Here are near one hundred churches and chapels, and about forty cloiſters, beſides nine ſynagogues for the Jews. The Chriſtian inhabitants are computed to be about ſeventy thouſand, and the Jews about twelve thouſand. The city is about twelve miles in circumference, and is watered by the river Moldau, which runs through the principal part of it.

The city of Prague is divided into three parts, by the name of the Old, New, and Leſſer Town. The Old Town, which is as big as the other two, has ſtreets that are

are narrow and darkſome; but is very populous, and full of fair, though old-faſhioned houſes. Here ſtands the univerſity, the only one in Bohemia, and one of the moſt famous in Europe, founded by the Emperor Charles IV. in the year 1358, where is ſtill a great number of ſtudents, though not comparable to the number in 1409, when John Huſs, the then rector, is ſaid to have had no leſs than forty-four thouſand. And when the emperor Charles V. would have retrenched their privileges, twenty-four thouſand are ſaid to have left it in one week, and ſixteen thouſand more ſoon after. Here are alſo ſeveral monaſteries and colleges, of which there is a very magnificent one belonging to the Jeſuits near the bridge; from the belfry of whoſe church there is the beſt view of the city. It was founded by the emperor Ferdinand for a hundred of that order; and it is ſaid, that in and about this city there are not leſs than two thouſand. Great numbers of Jews live in this quarter, from whence it has the name of Judenſtadt, or Jews town. Mr. Pollnitz was aſſured, when he was here about 1729, that there were no leſs than eighty thouſand. They have the trade of this city all in their own hands, deal in all ſorts of commodities, eſpecially in the precious ſtones found in the Bohemian mines, and by receiving all old-faſhioned things in payment, quite ruin the Chriſtian handicraftſmen: but on giving intimation that ſeveral of them correſponded with the enemy, and helped them in the laſt reduction of it, they have been ordered by the court of Vienna to depart both this city and kingdom by a time limited; and muſt obey it, if the interceſſion made for them, by the maritime powers of Great Britain and Holland, does not prevail. Dr. Brown ſays, the Bohemians ſtill keep models in remembrance of John Huſs, and Jerom of Prague; and it is obſerved by others, that on one of Huſs's medals there is engraven his prophecy at the ſtake, in theſe words: "Centum revolutis annis, Deo reſpondebitis et mihi." That is, "A hundred years hence ye ſhall anſwer for this to God and me;" which was reckoned to be fulfilled upon the church of Rome by Luther's Reformation.

The ſecond diviſion of this city, called the New Town, (which is the beſt built quarter of the three, with ſpacious beautiful ſtreets, and takes up more ground than the old one, by reaſon of its gardens and vineyards,) was formerly ſeparated from the old one by a wall, but now only by a ditch, into which they can let the river. Here are the ruins of the palace of their antient kings, the walls of which are ſo ſtrongly cemented, that they can ſcarce be demoliſhed by any engine. The Jeſuits have built a church and college here, much more ſtately than that in the Old Town; and over its gate there are thirteen ſtatues of men as big as the life, of a ſtone which reſembles braſs. A citadel has lately been built for defence of this part, which is well furniſhed with cannon, as are alſo the other caſtle, and the ramparts.

The Leſſer Town is on the weſt ſide of the Moldau, and is much pleaſanter and better built than the old one, to which it is joined by a bridge, one of the longeſt and moſt ſubſtantial in Europe, it having twenty-four arches, being in all one thouſand ſeven hundred feet long, and thirty-five broad, with two high gates, under two large towers at each end, and the ſtatues of ſeveral ſaints on both ſides, and a great crucifix of copper gilt, which the Jews were compelled to ſet up in this place as an atonement for ſome crime they had committed. Part of this town lies on a riſing ground, and at the top of it, called Ratſchin Hill, is Upper Prague, where moſt of the nobility have houſes, and the emperor a very magnificent palace, with a ſummer-houſe affording one of the moſt beautiful proſpects in the world. Here are ſeveral great halls, galleries, and a multitude of other apartments adorned with noble pictures; and adjoining to it is a large ſtable, where are ſixty fine led horſes, generally belonging to the burgrave of the city. Here is alſo the cathedral of St. Veit, with many antient monuments, and magnificent tombs of great perſons. This metropolitan church was burnt down by the Swedes in 1648, and is only rebuilt in part. Its magnificence and beauty conſiſts in the thickneſs of its walls and arches, and its architecture ſeems to be more Gothic than that of the Goths themſelves. The roof of this cathedral is adorned with the ſtandards taken from Frederic the elector palatine in the battle above mentioned. In this cathedral the king and queen of Bohemia are conſecrated, when the biſhop of Prague performs the unction of both; but the abbeſs of St. George, an abbey upon Ratſchin Hill, places the crown upon the head of the queen, in which function ſhe is aſſiſted by the ladies of the great officers of the crown.

Among other bodies, here are preſerved, with great veneration, thoſe of a couple of ſaints extremely dear to the Bohemians, viz. St. Wenceſlaus (the founder of this church, who was king of Bohemia) and his wife's confeſſor, St. John de Nepomucene, who, becauſe he would not diſcover her confeſſions to her jealous huſband, was, by his order, thrown from the bridge into the Moldau, where being drowned, he was canonized at Rome by pope Benedict XIII. in 1721, at the requeſt and expence of the empreſs, and of the ſtates of the kingdom. There is a vaſt concourſe of people from all parts to his ſhrine; and his tomb, which was adorned by the late empreſs with a rich canopy, is ſo loaded with precious gifts, that it bids fair, if it continues much longer, to be as rich as the lady's at Loretto: In ſhort, he is the only ſaint in vogue here, there being no church where he has not a chapel, no bridge without his effigy, and ſcarce any ſoul without his picture hanging like the badge of an order to a ſtraw-coloured ribband. The ſtatue of him in braſs, as big as the life, is erected on the bridge from whence he was caſt into the river. The great hall of the palace, where the coronation feaſt is kept, is the largeſt of the kind next to that at Weſtminſter. There is another large one for comedies, ſupported by pillars that are plaiſtered, in imitation of marble.

Count Coloredo's palace and gardens are reckoned the neateſt here, but Count Wallenſtein's the largeſt and moſt magnificent, above one hundred houſes being pulled down to make room for it: the hall is lofty and ſpacious, and the gardens large and beautiful, after the model of prince Doria's at Genoa, on one ſide of which is a fine aviary, beautified with trees; and, on the other, his large ſtables of curious architecture for thirty-ſix horſes, with a marble pillar betwixt each horſe, ſteel racks, and marble mangers; and over all, the picture of each horſe as big as the life. The town-houſe, which is a fine ſtructure in a large ſquare, has a noble clock, with many motions, like that at Lyons; and is adorned with the pictures of the emperors of Germany, and the kings of Bohemia.

In the market-place, which is one long ſtreet, where is a market, or rather fair, held every day, there is a great ſtone column, with the ſtatue of the virgin on the top, of gilt braſs, and four angels at the corners, holding four devils in chains: near it is an old ſtately fountain of curious workmanſhip, having twelve fronts: the baſon is of red marble; and in the middle there is a figure on a pedeſtal, with twelve ſigns of the Zodiac engraven round it.

The caſtle on the hill, half a mile above the town, called Ratſchin, or the White Mountain, is very ſtrong, and always provided with a good garriſon; and near it ſtands a pyramid which was ſet up in remembrance, that in 1618, the ſtates of the kingdom then aſſembled here threw the emperor's deputies out at the windows, becauſe they had deprived them of their privileges, and that though they fell from ſuch a height, they were not killed, nor indeed very much hurt. On the above-mentioned mountain ſtands alſo the archiepiſcopal palace.

The ſhops in Prague are very meanly furniſhed, and the inhabitants in general are exceedingly poor; notwithſtanding which, it is ſaid, there are few cities where the nobility and gentry are more wealthy, and live in greater ſtate. Aſſemblies are held every night in the houſes of perſons of quality; here are alſo very ſplendid balls, with an Italian opera; gaming, maſquerading, and feaſting, are alſo very common in this city.

With reſpect to their traffic, it conſiſts chiefly in luſtres and looking-glaſſes, which are made of Bohemian cryſtal, and ſo generally eſteemed, that they are exported to moſt parts of Europe. Theſe cryſtals are alſo poliſhed by the Jews, who turn them to good account, by ſetting them in rings, ear-pendants, ſhirt buttons, &c.

All public buſineſs relative to the kingdom is executed by the tribunals of the regency, who meet at the emperor's palace. The chief of theſe tribunals conſiſts of twelve ſtadtholders, who are of the emperor's privy-council, repreſent his perſon, and are moſt of them great officers of the crown, at the head of whom is the great burgrave, governor of the kingdom and cities, and the chancery of Bohemia; the firſt of theſe is immediately under the emperor.

Many antient privileges are enjoyed by the inhabitants of Prague, which were granted them by their anceſtors. Among the charters, by which theſe are held, there is a remarkable one preſerved in one of its churches, which was granted it by Alexander the Great, and it being one of the oldeſt records in Europe, we thought the tranſlation worth inſerting here, viz. "We Alexander the Great, "ſon of king Philip, founder of the Grecian empire, go-"vernor of the Perſians, Medes, &c. and of the whole "world

" world from eaſt to weſt; and from north to ſouth, ſon " of great Jupiter, by, &c. ſo called; to you the noble " ſtock of Sclavonians, and to your lineage, becauſe you " have been unto us a help, true in faith, and valiant in " war, We confirm all that tract of earth from the north " to the ſouth of Italy, from us, and our ſucceſſors, to " you, and your poſterity for ever: and if any other na- " tion be found there, let them be your ſlaves. Dated " at Alexandria the twelfth of the Goddeſs Minerva. " Witneſs Ethra and the eleven princes, whom we appoint " our ſucceſſors."

During the laſt century, it has ſuffered the greateſt cruelty which a city can poſſibly undergo in time of war, having been often beſieged and taken in that period, and ſeveral times plundered. The archduke Leopold biſhop of Paſſaw plundered the Leſſer Town, as he would have done the whole, if it had not been timely relieved by the emperor Matthias, king of Hungary. Nine years after this, it was again plundered by thoſe who were moſt concerned to preſerve it, viz. the Imperialiſts, who entered the city, and carried off an ineſtimable booty, after that famous battle of Weiſſenberg, or the White Hill, near this city, on the eighth of November, 1620, when Frederic V. elector palatine, was totally defeated by the forces of the emperor Ferdinand, under Maximilian duke of Bavaria, and thereby loſt the Bohemian crown, and his German electorate. It was no better uſed in 1631, by the elector of Saxony, after he made himſelf maſter of Bohemia; the great Walſtein, who recovered this country from the Saxons the next year, took this city by ſtorm. In 1641, the Swediſh general Coningſmark, ſurpriſed and plundered that part of it called the Leſſer Town, with only three thouſand ſoldiers, and took a vaſt booty; but the inhabitants of the Old Town, aſſiſted by the ſcholars of the univerſity, repulſed him, and eſcaped being plundered. The twenty-ſixth of November, 1741, the French and Saxons, after a very ſhort ſiege, ſtormed and took it, with two thouſand ſeven hundred and eighty men in garriſon, one hundred and twelve cannon, beſides a great quantity of ammunition and proviſion; and the next month the late elector of Bavaria was there proclaimed and crowned king of Bohemia. But in 1742, the Auſtrians having for ſome months blockaded and beſieged it, the marſhal Belleiſle (that very general who was in December, 1744, arreſted, together with the chevalier, his brother, in the electorate of Hanover, and was afterwars priſoner of war at his majeſty's caſtle of Windſor) collected all the proviſions, &c. that he could carry with him, marched out of the city the beginning of December, 1742, with ſeveral thouſand foot and horſe, to Egra; and the ſame month the reſt of the garriſon capitulated to the Auſtrian general, prince Lobkowitz, and marched out to the number of four thouſand men, leaving two thouſand ſick behind them; not long after which the queen of Hungary was here cowned queen of Bohemia. In 1744, the king of Pruſſia came before it with an army, which having with its bombs deſtroyed almoſt the Old and New Towns, and the Jews Town, the Auſtrian garriſon ſurrendered priſoners of war in ſix days after the opening of the trenches; the bombs and red-hot bullets having ſet ſo many houſes on fire in ſeveral quarters, that the citizens being to the laſt degree diſtreſſed and diſcouraged, ſo intimidated the militia, that the regular troops could not make them do their duty. But the city was ſoon again in the hands of its ſovereign the queen of Hungary; for in November, 1744, on the approach of prince Charles with the Auſtrian army, the Pruſſian garriſon evacuated the town after nailing up the cannon, breaking twenty thouſand pieces of all ſorts of arms, and throwing the powder, and other warlike ſtores, into the river Moldau. In 1757, another attempt was made on it by the king of Pruſſia, which miſcarried, that monarch being repulſed by the garriſon with great loſs.

This city ſtands in a pleaſant and fruitful country, in the midſt of gardens and fine fields, ſurrounded with palaces and pleaſure-houſes, in form of an amphitheatre. It is as well fortified with ramparts, &c. as a place of that extent can be, and commanded by ſeveral hills, which it is impoſſible to level. It is divided by the river Moldau into two parts. Æneas Sylvius compares it to Florence, though it is certainly much larger and more populous. Martiniere ſays, its ſituation is much like that of Lyons, being partly on a hill, and partly on a plain; which is, however, incloſed likewiſe by hills that are on the other ſide of the Moldau.

Egra, or Eger, receives its name from the capital, which is ſituated ninety miles weſt of Prague, and is the only place of note throughout the whole diſtrict. The city is tolerably large, and built on the declivity of a rock, at the foot of the mountains which incloſe Bohemia on the weſt, and near the river Eger, from whence both it and the territory have their names. This place is well fortified, with a double wall next the river, and in other parts with a triple one, beſides which, it hath a very ſtrong caſtle.

In 1179, Frederic I. made it an imperial city, for its fidelity to him againſt the duke of Bavaria. In conſequence of this, it has the privilege of coining money; and there lies no appeal, but to the ſovereign, from the judicial ſentences of its council.

There are ſeveral antient and elegant buildings in this city, among which are three cloiſters, with courts of judicature, hoſpitals, baths, and ſtore houſes for corn. At a ſmall diſtance from the city is an acid ſpring, whoſe waters are purgative, and remarkable for removing diſorders in the eyes, ears, and other parts of the head. Mines of gold and ſilver are alſo in its neighbourhood, but they have for ſeveral years paſt been entirely neglected.

The Eger is a very broad river; and ſo deep, as to admit veſſels of very conſiderable burden, which is of the utmoſt utility to the inhabitants of the city, as the great variety of excellent fiſh contained in it, affords them a plentiful ſupply of food.

Bohemia Proper, excluſive of Prague and the territory of Egra, contains the twelve following circles or provinces; namely, 1. Beraun-Podbrad; 2. Rakawnitz; 3. Leutmeritz; 4. Saaz; 5. Pilſen; 6. Prachin; 7. Brechin; 8. Kaurzim; 9. Tchaſlau; 10. Chrudim; 11. Konigingratz; and, 12. Bunzlaw; which we ſhall now proceed to give a deſcription of.

I. The circle of Beraun-Podbrad comprehends Moldau, which was united to it in 1714, and contains one hundred and fifty ſeigniories.

The principal places and buildings in this circle, are, 1. Beraun, a royal borough on the river Meis, near which in 1744, the Pruſſians were defeated by the Auſtrians. 2. Pezebram, a royal mine-town. 3. Old Knen, a ſmall town belonging to the order of the croſs with a red ſtar. 4. The Holy Berg, a very handſome college. 5. St. John-under-the-rock, a cloiſter of Benedictines, whither the inhabitants of Prague make pilgrimages, and the abbot of which belongs to the ſtates of the country. 6. Oſtrow, a Benedictine cloiſter, in an iſland on the river Moldau. 7. Koniglſaal, or Zrabaſlaw, a royal foundation, and cloiſter of Ciſtercians, the abbot of which is alſo a member of the ſtates of the country.

II. The circle of Rakownitz comprehends that of Slan, or Slanſko, which was united to it in 1714. It contains one hundred and ſix ſeigniories, ſtates, and ſeats. It is in ſome parts mountainous and woody, and in others very fruitful, producing a great plenty of corn, and other articles.

The moſt remarkable places in this circle are: 1. Rakonitz, or Rakownitz, which gives name to the circle, but is otherwiſe very inconſiderable. 2. Doxan, a cloiſter of nuns of the order of Præmonſtratenſes, the provoſt of which is a member of the Bohemian ſtates. 3. Plaſs, a cloiſter of Ciſtercians, whoſe abbot is alſo a member of the ſtates. 4. Raudnice, a ſmall town, where there is a cloiſter of regular canons of the order of St. Auguſtine. 5. Krziwoklad, another ſmall town.

III. The circle of Leutmeritz, ſo called from its moſt diſtinguiſhed town, which is the capital of the province. It is ſituated on the Elbe, thirty-five miles north-weſt of Prague. It is a rich, well-built, and populous town, a royal borough, and biſhop's ſee, the prelate of which is a ſuffragan to the archbiſhop of Prague. Here is a handſome college, which formerly belonged to the jeſuits, and conſiſted of eleven prieſts, four maſters, and ſeven co-adjutors. The other remarkable places in this circle are the following, viz.

1. The ſmall but pleaſant town of Toplvi, remarkable for containing ſeveral warm baths, the ſprings of which were diſcovered ſo early as the year 762. 2. Auſti, or Auſſig, a royal borough on the Elbe. 3. Dieczin, Tetzen, or Titchen, a neat town, ſituated on the Elbe, and in it is a fine citadel built on a rock. 4. Bæneſſew, Benſen, or Penſen, remarkable for the beſt paper made in it, of any other place throughout the Bohemian dominions. 5. Lippey, a ſmall town, remarkable for producing fine potters earth, cloth, and poliſhed glaſs. 6. Krupka, or Krauppen. In this town is an image of the virgin Mary, to which pilgrimages are made from various parts of the kingdom: there are tin-works in its neighbourhood, and a college that formerly belonged to the jeſuits. 7. Belin, a ſmall town, in which is a fine citadel, and a ſpring of excellent

excellent water. 8. Loworice, another ſmall town, near which a warm battle was fought between the Pruſſians and Auſtrians in 1756.

IV. The circle of Saaz is very fertile, being watered by the Moldau, which runs almoſt through the centre of it. This province is remarkable for producing great quantities of hops, and ſeveral ſorts of excellent grain.

The following are the principal places in this circle, viz. 1. Wary, or Carlſbad, that is, Charles's bath, a royal borough, celebrated for its baths and medicinal waters: theſe baths are of two ſorts, differing both in heat and ſtrength; the one being boiling hot, and the other little more than lukewarm. The ſource of them is in the middle of a river, formed by torrents from the neighbouring mountains, whoſe waters are exceeding cold, notwithſtanding which, thoſe of the mineral ſprings, eſpecially of the hotteſt, are ſeen to ſmoke in the river. Theſe waters are beneficial in the cure of various diſorders, particularly the gravel; and their virtues have been particularly deſcribed by Hoffman, and other phyſicians. The town itſelf is but a dirty place, inhabited chiefly by armourers, and other artificers in iron. 2. Elnbozen, or Loket, the capital of a territory which was annexed to this circle in the year 1714, and a royal borough. It is ſeated on a high ſteep rock, near the river Eger, ſeventy-two miles from Prague, and, being a frontier town ſtrongly fortified, it is called the Bohemian key to the German dominions. The German language is ſpoken by the inhabitants.

The other places chiefly deſerving notice, are, 3. Zotee, or Saaz, a royal borough, and the capital of the circle. 4. Launy, a royal borough, on the river Eger. 5. Kadan, ſituated alſo on the ſame river, and noted for producing excellent beer. 6. Pons, or Brux, a royal borough on the little river Bila. It is a well-built town, and contains three cloiſters, with a commandery of the knights of the order of the Croſs, with a red ſtar. 7. Chomutow, a royal borough, in which is a handſome college that formerly belonged to the Jeſuits. The neighbourhood of this town is famous for producing great quantities of allum. 8. Folkerow ſtands on the river Eger, and produces vitriol, ſulphur, and allum. 9. Dreyhaokin is a ſmall neat town, and in its neighbourhood is a mine that produces excellent copper. 10. Chlum, or Culm, is a ſmall town belonging to the order of the Holy Croſs. It is remarkable for a celebrated image of the Virgin Mary, to which pilgrimages from all parts of the circle are frequently made. 11. Joachimothal is alſo a ſmall town. In the beginning of the ſixteenth century ſeveral ſilver mines were firſt diſcovered in its neighbourhood.

V. The circle of Pilſen abounds in excellent paſturage, on which account great numbers of ſheep are bred in it, and this country produces the beſt cheeſe in the whole kingdom.

The chief places of note in this circle, are, 1. Pilſen, which gives name to the circle, and is a large, well-built town, ſituated between the rivers Miza and Radbuza, about forty-four miles ſouth-weſt of Prague. It has two large churches; and near the centre of it is a ſpacious market-place, well ſupplied with moſt kinds of proviſions. The weſt and ſouth ſides of it are defended by a bulwark and a large ditch, within which are ſtrong walls, with towers and baſtions. This city hath greatly ſuffered in the reſpective wars of Bohemia, it having been ſeveral times taken, retaken, and burnt.

There are contained, beſides, in this circle, 1. Klatta, a royal borough, well-fortified with walls and ramparts. The only remarkable building here is a handſome college, which formerly belonged to the Jeſuits. 2, 3. Domazlice, and Kokyczany, both royal boroughs, in the latter of which is a cloiſter of regular canons of the order of St. Auguſtine. 4. Nepomuck, a ſmall town, and noted only for giving birth to the ſaint of that name, who is ſo much venerated by the Bohemians.

VI. The circle of Prachin contains in it a conſiderable quantity of precious ſtones, with ſome ſilver and gold.

The principal towns are, 1. Wadnary, a royal borough, ſituated on the river Blanice. 2. Berg-Ruickenſtein, a royal mine-town, in the neighbourhood of which is found ſilver. 3, 4. Piſck and Schuttenhoſen, two royal borough-towns, both of them ſituated on the river Watawa. 5. Huſynee, a town ſituated on the river Blanice, remarkable only for giving birth to the famous John Huſs, the Reformer, who was burnt alive by the papiſts, for defending the truth. 6. Wolin, a ſmall town on the river Wolnika, belonging to the provoſt of the collegiate church at Prague. 7. Strahorrice, another ſmall town, belonging to the grand prior of the order of Malta in Bohemia, and ſituated on the river Wolnika.

VII. The circle of Bechin contains the following places, viz. 1. Budweis, a royal borough, ſituated on the river Moldau. It is a ſmall, but neat town, well-built, and ſtrongly fortified. The chief building in it is a cloiſter belonging to the order of Dominicans. All ſalt brought out of the Auſtrian dominions, muſt be firſt expoſed to ſale here, and pay toll. 2. Taber, a royal borough, pleaſantly ſituated on a mountain, forty-five miles ſouth-eaſt of Prague. 3. Wittingen, a good town, having a large fortreſs, and a cloiſter of regular canons of St. Auguſtine. 4. Neuhaus, a neat town, with a beautiful citadel and a large manufactory of cloth. 5. Krumlow, or Crumau, has alſo a fine citadel, and a handſome college.

VIII. The circle of Kaurzim contains four royal boroughs, namely, Kaurzim, Kolin, Bohemian-Brod, and Golowey; but neither of them contain any thing remarkable, except Kolin, which has ſeveral pariſhes and churches. The only building, excluſive of the above, in this whole circle, is the Benedictine cloiſter of St. Procopius, ſituated on the river Saſawa, the abbot of which has a ſeat in the diet. The chief produce of this circle is timber, which is conveyed to Prague by the river Moldau.

IX. The circle of Tſchaslau contains the following places, viz. 1. Kuttenberg, a royal borough, about thirty miles ſouth-eaſt of Prague. It is noted for its ſilver mines, which yield alſo copper, and were formerly very profitable. Though this town is ſmall, yet it is well built, and has in it many handſome edifices, among which is a large college that formerly belonged to the jeſuits. 2. Czalaw, is alſo a royal borough, in the principal church of which lie the remains of John Ziſka, the famous leader of the Huſſites, who died in 1424. 3. Lodecz, a ſmall town and ſeigniory, which the empreſs queen purchaſed in 1753 of baron Kock, for two hundred and forty thouſand florins. 4. Goez-Genikow, a handſome market-town, and remarkable for having in it an image of the virgin of Loretto. 5. Chotoſuce, a ſmall town, where, in 1742, the Pruſſians obtained a complete victory over the Auſtrians.

X. The circle of Chrudim contains the towns of Chrudim, Alla-Meyta, Polieſka, Choltice, Hrochuw, Teynecz, Koſſemberg, and Pardubice. The three firſt of theſe are royal jointure-towns. Koſſemberg was formerly the property of the jeſuits, but ſince their extirpation it hath been joined with Hrochuw and Teynecz, and all thoſe now belong to the order of Præmonſtratenſes. Choltice has a handſome citadel, as has alſo Pardubice, the latter of which is remarkable for the manufacture of ſword-blades and knives.

XI. The circle of Konigingratz contains, 1. The capital town which gives name to it. This is a royal jointure-town and biſhop's ſee, ſituated forty-five miles north-eaſt of Prague, at the conflux of the rivers Elbe and Erlitz. Here is a commandery of the Teutonic order, and a fine college that formerly belonged to the Jeſuits. 2. Trautenau is another royal jointure-town, ſituated on the river Uppau. 3. Chluemec, near Braunau: at this place the emperor Lotharius was defeated, and taken priſoner by the Bohemians. 4. Kukus, on the Elbe, has a celebrated medicinal ſpring and bath.

XII. The circle of Bunſlaw has Inng-Bunſlaw for its capital, which gives name to it. The town was a baron-borough till 1595, when the inhabitants purchaſed its freedom; and in 1609 it was ranked among the royal boroughs by the emperor Rodolph. 2. Mielnick is a ſmall royal jointure-town, ſituated near the conflux of the Elbe and Moldau, and contains a caſtle and collegiate church. It is remarkable for producing red wine of a moſt excellent quality. 3. Benatky, is a ſmall town on the river Iſer, and contains a citadel. It is remarkable for having been the reſidence of Tycho Brahe, the celebrated aſtronomer. 4. Nymburg is another ſmall town, ſituated on a plain at the conflux of the Elbe and Martin. King Wenzel II. made it a royal borough, and enlarged it.

In treating of the inhabitants of Bohemia, their perſons, &c. it is neceſſary to obſerve, that they are a mixture of Sclavonians and Germans; the former of whom live in villages, and are ſlaves. The inhabitants of the towns are neither fond of arms, arts, or trade, but prefer an idle, indolent life. They are in general well-made, ſtrong, and ſubject to few diſeaſes. In their diſpoſitions they are ſubtle, but courageous, and always make a point of fulfilling their engagements. The gentry and middling ſort of people are open and agreeable in their converſation; but the peaſants are ſly and moroſe; and ſuch arrant thieves, that

that there is no truſting them. The people in general are exceedingly illiterate, notwithſtanding there are many ſeminaries of learning in different parts of the country; which is owing to the negligence of the parents, who are void of literary emulation through their natural indolence.

The Bohemian language is a dialect of the Sclavonic, but ſomewhat harſher than that of their neighbours, who ſpeak the ſame language, as the latter change the conſonants more into vowels. Moſt people of faſhion, however, through their intercourſe with the court of Vienna, ſpeak High Dutch, or German, which is alſo intermixed with the language of the common people.

The inhabitants of Bohemia are ſuppoſed to have received the Chriſtian faith ſo early as the ſixth century; but if not then, it is certain they did in the ninth, and their religion was that of the Greek church, till Boleſlaus, ſurnamed the Good, introduced Popery among them. John Huſs and Jerom of Prague were burnt by order of the council of Conſtance, in the 15th century, for endeavouring to bring about a reformation in religion.

In 1627 the Proteſtants were deprived of all their rights and privileges; and ſuch as would not ſubmit to the Roman Catholic church, were compelled to quit the country. Since the above period, Popery has been eſtabliſhed in this country. There are, however, a few Lutherans in ſome parts of it; but they are obliged to be on their guard, and to conceal themſelves as much as poſſible. The Jews have an ample toleration of their religion, and are allowed many indulgencies which are denied to the Proteſtants.

It hath always been the office of the archbiſhop of Prague, who is born legate of the holy apoſtolic ſee of Rome, to crown the kings of Bohemia. He is alſo a prince of the holy Roman empire, though he has no ſeat in the diets, primate of the kingdom, and perpetual chancellor of the univerſity of Prague: the biſhops of Leutmeritz and Konigingrotz are his ſuffragans. The government of the church and clergy is veſted in the archiepiſcopal conſiſtory, from which an appeal to the ſovereign or pope is admitted.

The kingdom of Bohemia was governed, for a conſiderable time, by dukes, and afterwards by kings, who were limited in their power, and elected by the ſtates; though they uſually kept to the family of the deceaſed monarch. After the battle of the White Mountain in 1620, the crown was made hereditary in the Auſtrian family; ſo that, from that time, the ſtates have had nothing more to do with reſpect to the right of ſucceſſion. They are indeed ſummoned every year, by command of the empreſs queen, and meet at Prague; but it is only for form's ſake. The ſtates conſiſt of the clergy, nobility, gentry, and repreſentatives of the towns. Here a commiſſioner from the ſovereign lays before them the neceſſity of granting ſuch ſupplies as the court demands, which uſually amount to a very great ſum; and theſe are granted without heſitation, or examination. The peaſants here are bondmen to their lords; and to the hard yoke which galls them is doubtleſs owing, in a great meaſure, both their perverſe, obſtinate diſpoſition, and their indolence; the latter of which, among other things, is evident from the wretched condition of the villages, which, though wood is to be found here in great plenty, are very mean and deſpicable.

The clergy are compoſed of the archbiſhop of Prague, ſeveral biſhops, provoſts, and abbots, beſides the inferior clergy. The nobility are divided into princes, counts, and barons; and the next degrees to theſe are the knights, burghers, huſbandmen, and peaſants. Each circle has two headmen, or captains; one out of the ſtate of lords, and one out of the ſtate of knights. The chief manufacture of Bohemia is linen, of which they export great quantities, together with corn, malt, hops, and mineral waters. They have alſo conſiderable manufactures of copper, iron, glaſs, earthen-ware, and paper, part of which they export to foreign kingdoms.

The ſtates of the kingdom of Bohemia raiſe the revenues: they aſſemble annually at Prague, to provide ſuch ſums as the ſovereign demands of them, over and above the cuſtom and duties to which they are entitled by prerogative. The revenue is ſaid to amount to near one million ſterling a year. The ſtanding militia of the Auſtrian hereditary countries is twenty-four thouſand men, towards which Bohemia furniſhes nine thouſand. Theſe ſerve to fill up the marching regiments in time of war.

Bohemia is generally conſidered as a part of Germany, but with very little reaſon, for it is not in any of the nine circles, neither doth it contribute any thing towards the forces, or revenues, or is ſubject to any of the laws of the empire.

SECT. II.

Of the Marquiſate of MORAVIA, its Extent and Boundaries, Produce of the Country, Inhabitants, and principal Towns: with a Deſcription of LUSATIA, its Situation, Diviſion, States, Towns, Inhabitants, Manufactures, &c.

MORAVIA is about one hundred and twenty miles in length, and one hundred in breadth. It is bounded, on the eaſt, by Sileſia and Hungary; on the weſt, by Bohemia Proper; and, on the ſouth, by Auſtria. A great part of it is over-run with woods and mountains, where the air is very cold, but much wholeſomer than in the low grounds, which are full of bogs and lakes. The mountains in general are barren; but the more level parts tolerably fertile, yielding corn, hemp, flax, ſaffron, paſturage, wines, fruits, and garden-ſtuff. This country alſo abounds in horſes, black cattle, ſheep, and goats. In the woods, and about the lakes, are plenty of wild fowl, game, veniſon, bears, hares, foxes, wolves, and beavers; alſo a beaſt of prey called ryſowe, about the ſize of a middling dog, having its belly and feet ſpotted, and leaps ſuddenly on its prey, from rocks or trees. Here are likewiſe produced marble, baſtard diamonds, amethyſts, alum, iron, ſulphur, ſalt petre, vitriol, but ſalt is imported: here are likewiſe mineral waters, and warm ſprings.

March and Morawa, or Morau, are the chief rivers: they abound with a great variety of fiſh, particularly trout, cray-fiſh, barbel, jack, perch, and eels.

The Moravians are in general open-hearted, not eaſy to be provoked or pacified, obedient to their maſters, and true to their promiſes; but credulous of old propheeies, and much addicted to drinking. The nobility and citizens ſpeak the German and French languages; but that of the lower claſs of the inhabitants is the Sclavonic, differing little from that of Bohemia.

The clergy, lords, knights, and burgeſſes compoſe the ſtate of this country; and the diets when ſummoned by the regency, are held at Brunn. The marquiſate is divided into ſix circles, each of which has its captain, and contributes to its ſovereign about one third of what is exacted from Bohemia. In this marquiſate there are uſually quartered ſeven regiments of foot, one of cuiraſſiers, and one of dragoons.

The Chriſtian religion was planted in this country in the ninth century, and the inhabitants continued attached to the church of Rome till the 15th, when they eſpouſed the doctrine of John Huſs, and threw off popery; but after the defeat of the elector palatine, whom they and the Bohemians had choſen king, the emperor Ferdinand II. re-eſtabliſhed popery. However, there are ſtill ſome Proteſtants in Moravia; and, among others, a ſet of reformers, called Hernhutters, or Moravian brethren, headed by one of the counts of Zinzendorff, appeared among them, who, about the year 1740, met with great encouragement in England, but have at preſent only a certain number of followers, chiefly among the lower ſort. The biſhop of Olmutz, who ſtands immediately under the pope, is at the head of the eccleſiaſtics; and the ſupreme eccleſiaſtical juriſdiction is veſted in a conſiſtory, under the biſhop.

With reſpect to the commerce of this country, which is not very conſiderable, Brunn enjoys the principal part. There are iron-works, and glaſs-houſes in ſome places; and at Iglau and Trebitz are manufactories of cloth, paper, gunpowder, &c.

The following are the principal places in this marquiſate; viz. Holomauc, or Olmutz, the capital, which is a ſmall, but neat, well-built, and populous city, ſituated on the river Morawa, eighty miles north of Vienna. It is divided into the Old and New Town, in which are ſome ſpacious, regular ſtreets, with fine houſes, all painted on the outſide, two great ſquares, a cathedral dedicated to St. Wenzel (where it is ſaid St. Cyril is interred), ſeveral hoſpitals and cloiſters of monks and nuns, an univerſity, riding academy, learned ſociety, and twenty-ſix churches. In the neighbourhood is a cloiſter of canons regular of the order of Præmonſtratenſes, whoſe abbot is mitred. Olmutz is a royal borough, and the ſee of a biſhop; and, by means of its river, carries on a conſiderable trade with Bohemia, Hungary, Poland, Sileſia, and Auſtria.

2. The town of Brunn, or Brinn, is ſituated twenty-eight miles ſouth-weſt of Olmutz, fifty north of Vienna, and one hundred and thirteen ſouth-eaſt of Prague. It is well-built, fortified, and inhabited; and a place of the greateſt trade in Moravia. Here are held the courts of judicature

judicature and the diets. There are ſix cloiſters, a collegiate church, the biſhop's palace, and a large college, with an hoſpital of the knights of Malta in the ſuburbs. The citadel is called Spielburg, or Spilenberg, and ſtands on a mountain cloſe to the town. The cloiſter of Auguſtine hermits, is famous for an image of the Virgin Mary, made, as they pretend, by St. Luke, and a foundation for young ladies.

3. Iglau, or Gihlawa, is a ſtrong, well-built, populous town, and royal borough, on the river Ighlawa, ſeventy-ſix miles ſouth-eaſt of Prague, and near fifty weſt of Brinn. The principal buildings are, a large college and gymnaſium, with two monaſteries, one of Dominicans, and another of Franciſcans. The trade of the town is chiefly in beer, and a coarſe woollen cloth. This was the firſt place in Moravia that received the Augſburg confeſſion. Being ſituated on the borders of Bohemia, and in the high road to Hungary, it is much frequented by travellers.

4. The royal borough of Znoyms, is ſituated on the river Teya, and is in the road from Prague to Vienna, which makes it a conſiderable thoroughfare. There is a ſtrong caſtle; but the town being overlooked by a mountain within cannon-ſhot, is incapable of holding out long. Here are four cloiſters, and a large college; and in its neighbourhood are four cloiſters, and many vineyards.

5. The ſtrong royal town on the March, containing a large college and cloiſter of Franciſcans. The Ciſtercian cloiſter of Welehrad, whoſe abbot is the firſt of the regular prelates at the diet, ſtands about a mile from the town.

6. The well-built and walled town of Kromerziz, or Kremſier, is ſituated on the river March, or Morave, and belongs to the biſhop of Olmutz, whoſe large and beautiful palace here was deſtroyed by fire in 1752, together with the archives, the ſuburbs, and fifty-five burghers houſes. Here is alſo a mint, a collegiate church, and ſeveral cloiſters.

7. Proſtnitz; 8. Muglitz; 9. Zwittaway; 10. Littau; 11. Uniczow; are all walled towns. The firſt is a royal town, and has a conſiderable manufactory of ſalt-petre, glaſs, and gunpowder. The other towns in this marquiſate are too inconſiderable to merit attention.

The province of Luſatia is bounded by Brandenburg on the north, Bohemia on the ſouth, Miſnia on the weſt, and Sileſia on the eaſt. It is divided into the Upper and Lower Marquiſates; the air of the former, which is a hilly country, is more ſalubrious than that of the latter, the ſituation of which is low and fenny. The mountainous tracts are barren, the vallies fertile, and both the marquiſates produce wood, turf, wheat, rye, oats, millet, beans, peas, buck-wheat, lentils, flax, hops, tobacco, manna, wine, &c. Here are likewiſe medicinal ſprings, quarries of ſtone, earths and clays for tobacco-pipes and earthen-ware, baſtard diamonds, agates and jaſpers, allum, vitriol, &c. Cattle, veniſon, and fiſh are plentiful, and the country is well watered. Both marquiſates were antiently ſubject to the king of Bohemia, the archdukes of Auſtria, or the electors of Brandenburg; but in the year 1636 they were ceded to the elector of Saxony. The manufactures are woollen and linen ſtuffs, caps, gloves, ſtockings, ſpatter-daſhes, hats, leather, paper, iron, glaſs, gunpowder, bleached wax, &c. many of which articles the inhabitants export. The imports are ſilk, yarn, wool, ſpices, wine, corn, hops, garden-ſtuff, fruit, &c. The language of the people is very inarticulate, guttural, and barbarous; and their dreſs, both ſingular and mean. Chriſtianity was eſtabliſhed here in the ſeventh century, and at preſent the Reformed is the eſtabliſhed religion.

Upper Luſatia is compoſed of the following ſtates; viz. ſtate-lords, prelates, gentry, and commonalty; and without the concurrence of theſe, nothing of importance can be tranſacted. The diets are either ordinary or extraordinary; the former meet once in three years, the latter only on particular or preſſing occaſions.

This diſtrict is ſubdivided into two great circles, called Budiſſen and Gorlitz; the firſt of which receives its name from the capital of the marquiſate. The town of Budiſſen, is the ſeat of the ſame diets, and of the chief officers and tribunals. It is ſituated on the Spree, twenty miles north-weſt from Gorlitz. It is pretty large, handſomely built, ſtrongly fortified, and well inhabited: its caſtle is ſituated on a high rock within the town walls. The Lutherans and Roman catholics perform divine ſervice in different parts of the cathedral. Here are ſeveral other churches, a council-houſe, library, orphan-houſe, ſpinning-houſe, houſe of correction, two diet-houſes, three hoſpitals, a gymnaſium, &c. A conſiderable trade is carried on in hats, ſtockings, gloves, linen, glazed leather, cloth, fuſtian, Turkey manufactures, &c.

The other towns and places are, 1. Carnenz on the Elſter, which contains eight churches, three hoſpitals, a manufactory of linen, and another of woollen cloths, and a Latin ſchool. 2. Baruth, a ſmall town, with a citadel, is ſituated ſo pleaſantly, that the meadow in which it is erected is called the Golden Au. 3. Uhyſt, a caſtle. 4. Markliſſa, a Latin ſchool. 5. Lobau, which has a mineral ſpring.

The town of Gorlitz, the capital of the circle of the ſame name, is twenty miles to the eaſt of Budiſſen. It was erected in 1139, by Boleſlaus king of Poland, but ſoon after burnt, from whence ariſes its name; for Gorlitz, in the Sclavonic tongue, implies "burnt down." It is the ſeat of juſtice for this part, and the reſidence of the governor, has ſeveral neat churches, and many ſtately houſes, built of ſtone. It is well fortified with walls, towers, and ditches; and the approach to it is difficult, becauſe it ſtands in a moraſs, on the weſt ſide of the Neiſſe, which riſes on the borders of this country, and runs through it into the Oder; its great church, formerly called St. Peter and Paul, has hardly its equal in Europe: near a ſmall church, on a mount without the city, there is a model of the holy ſepulchre at Jeruſalem, built two hundred years ago by the direction of a citizen who had been there ſeveral times. Zeyler, who ſays there is a fine college in this town, mentions ſeveral fires that have happened here, and which have been more frequent in this than any part of Germany, or indeed of Europe. The chief trade of this town is in beer, and in dreſſing and dying woollen and linen cloth.

The other principal places are, 1. Great Radmeritz, which contains a noble temporal foundation for twelve ladies. 2. Hernhutt is a ſmall place belonging to the count Zinzendorf: it was founded in 1722, by ſome Moravian brethren, and is now the chief nurſery and ſeat of that ſect called Hernhutters. 3. Muſka has a great allum-work. 4. Lauban, upon the river Queiſs, and the confines of Sileſia, four leagues eaſt of Gorlitz, which, though but little, is well fortified, and has a great linen manufactory. 5. Zittow, on the river Neiſſe, a fine city near the borders of Bohemia, eight miles ſouth of Leibau, and twenty-eight eaſt of Dreſden. Wenceſlaus, king of Bohemia, encompaſſed it with walls in 1255. It is well fortified, and the houſes are built in the neweſt ſtyle. It has a good trade in beer, a great manufactory of cloth, an hoſpital, which was once a Franciſcan monaſtery, and the ſuburbs are large and populous.

With reſpect to the land eſtates of Lower Luſatia, they are ſimilar to thoſe of the Upper. Spiritual matters belong to a conſiſtory erected in 1668; the chief officers are the preſident of the upper office, the land captain, and the land judge. The tribunals are the upper office and the land court.

The whole is divided into five little circles, viz. 1. Luckau, containing no place worth notice but the town of the ſame name, which is walled, has a Latin ſchool, a poor houſe, a houſe of correction, two hoſpitals, and ſeveral churches. 2. Guben, containing a town of the ſame name, to which belong ſix villages. In this circle are alſo the following places: Neuzell, with the appendage of thirty-ſix villages: Schiedlo, Schenkendorf, and Terſta, to which belong thirty-five villages: Pforten having the juriſdiction of twenty villages, and the town of Sorau, which has a caſtle, ſchool, hoſpital, and manufactories of yarn, linen, and woollen. 3. Kalau contains a town of the ſame name, Lubbenau Dobrilugh, and twenty villages. 4. Luben contains a town of the ſame name, the town of Friedland, and a few ſmall villages. 5. Spremberg contains a town of the ſame name, and thirty-two villages.

CHAP. XI.

THE NEW HISTORY AND DESCRIPTION OF

FRANCE.

SECT. I.

Treating of the Name, Situation, Extent, and Natural Hiſtory of the Country; alſo of the Perſons, Dreſs, Food, Manners, Cuſtoms, Religion, Arts, Manufactures, &c. of the FRENCH.

THIS extenſive and populous kingdom obtained its preſent name from the Franks, who in the fifth century paſſed out of Germany into Gaul, and made themſelves maſters of the whole country, from the Rhine to the mouth of the Loire. This kingdom is bounded by the Britiſh channel, and the Netherlands, towards the north; on the eaſt by Germany, Swiſſerland, and Italy; on the ſouth, by the Mediterranean ſea, and Spain, from which it is ſeparated by the Pyrenean mountains; and on the weſt by the Atlantic ocean; extending from the forty-third to the fifty-firſt degrees of north latitude, and from the fourth degree weſt to the ſeventh degree eaſt longitude. Did not the province of Bretagne extend itſelf above an hundred miles farther into the ocean, than any other part of the kingdom, it would be nearly of a ſquare form, and the breadth and length almoſt equal, that is, about five hundred and forty miles; but allowing for the hills and valleys, with the winding of the roads, it would, in a traveller's account, be above ſix hundred miles over.

In the interior parts of the kingdom, the air is mild and wholeſome. The winters, however, in the northern provinces are cold, and laſt four or five months. Indeed the cold is in that ſeaſon generally much ſeverer there than in England; for we being ſurrounded by the ſea, are leſs ſubject to continued froſts, and are beſides better provided againſt the cold from our ſuperior advantages in being furniſhed with firing. They have, however, the advantage of clear ſettled weather, and are but little troubled with fogs, which are ſo diſagreeable in Great Britain and other countries. The ſummers in France are hotter than ours.

With reſpect to its ſituation, France has the advantage of every kingdom in Europe, the ſeas which border upon it affording the inhabitans an eaſy communication with the reſt of the world; the northern ſhores being waſhed by the Britiſh channel, the weſtern coaſt by the Atlantic ocean, and the ſouth by the Mediterranean. Hence no country can be better ſituated for the advancement of trade and navigation, than this.

The Alps towards Italy; the Pyrenees, which border on Spain; and thoſe of the Cevennes and Auvergne, are its chief mountains.

As to minerals, Languedoc is ſaid to have veins of gold and ſilver. In Alſace theſe metals have been found in the ſand of the Rhine; and the mountain of Waſgau, in that province, yields a ſilver ore, which is worked, and further diſcoveries are making after it. Plenty of iron ore is found in various parts of the kingdom, and in Alſace are mines of lead. Pit coal is principally found in Hennegau, and all parts of the kingdom make ſalt petre. Here is alſo no want of marble; for ſince Colbert's time, quarries, particularly in Languedoc, Provence, and Bourbonnois, are kept continually open. France, however, produces few gems; but has a mine of excellent turquoiſes in Languedoc.

France is extremely well watered with navigable rivers, the chief of which are the Loire, the Rhone, the Garonne, and the Seine. Of theſe the Loire is the largeſt. It riſes in the mountains of the Cevennes, and taking its courſe north and north-weſt, runs to Orleans; and from thence directly weſt by Tours, Angers, and Nantes, falling into the weſtern ocean forty miles below the laſt city; having received in its courſe the Allier, Cher, Indra, Creuſe, Vienna, and the Maine; and has a communication with the Seine, by means of the canals of Briare and Orleans. Its whole courſe is computed to be about five hundred miles, including all its windings. The Rhone riſes in the mountain of La Fourche, in the province of Uri in Swiſſerland, and running weſtward through the country of the Valais, paſſes through the lake of Geneva; and having viſited that city, flows ſouth-weſt to Lyons, where it joins the Soan, and then runs ſouth till it falls by three ſeveral channels into the Mediterranean. The Garonne receives its ſource in the mountains of Aure, in the county of Cominges. It becomes navigable at Muret, and after being joined by ſeveral rivers, changes its name into the Gironde; and at length diſcharges itſelf by two outlets into the Atlantic ocean. This river has a celebrated canal, by which the weſtern ocean is joined to the Mediterranean. The Seine riſes near Dijon, in Burgundy, and running to the north-weſt viſits Troyes, Paris, and Rouen, in its way, and at length falls into the Britiſh channel near Havre de Grace.

France, though in general a fertile country, has nevertheleſs many barren tracts and mountains. In ſome parts it produces plenty, and in all of them a ſufficiency of the neceſſaries of life. In plentiful years it yields more corn than is neceſſary for the ſubſiſtence of the inhabitants; but a bad harveſt is generally ſucceeded by a ſcarcity, and in time of war there has been often a great dearth of grain, which is the more felt by the inhabitants of this country, as bread is their principal food.

Some of their roots differ much from ours; for here are no round turnips; theirs are long and ſmall, but well taſted, and being not ſo ſtrong as ours, are more proper for their ſoups. They have few potatoes; but plenty of Jeruſalem artichoaks. They abound in vaſt quantities of large red onions and garlick; and alſo in ſhalots, rockambole, and leeks. Theſe laſt are ſmaller than ours; but three times as long in the white part. Lettuces are the great and univerſal ſallad. In April and May the markets are ſerved with vaſt quantities of white beets. Aſparagus is here very plentiful; and they are ſo fond of ſorrel, that large fields are planted with it. They are alſo particularly fond of muſhrooms, of which they have ſeveral different ſpecies.

Great plenty of wine is produced in all the provinces of this kingdom. Among the ſeveral French wines, that of Champagne is reckoned the beſt, it being a good ſtomachic, racy, and in taſte and flavour exquiſite, with an agreeable tartneſs. That of Burgundy, the beſt of which is produced about Beaume, has a fine colour, and a pleaſant taſte. The wines of Angers and Orleans are alſo delicate, but a little heady. In Poicton is produced a white wine that reſembles Rheniſh. The neighbourhood of Bourdeaux, and the lower parts of Gaſcony, produce excellent wines. Pontac grows in Guienne. Muſcadel and Frontiniac are the delicious products of Languedoc. Between Valence and St. Valliere, along the banks of the Rhone, is produced a very agreeable, but a roughiſh red wine, that has a taſte not unlike that of bilberries; it is named Hermitage, and for its wholeſomeneſs, is much eſteemed.

Provence and Languedoc are the principal territories for the oil of olives. Theſe and other provinces produce ſaffron, and the northern parts in particular have large orchards, and make great quantities of cyder, which is there the common drink of the inhabitants. Bourdeaux exports great quantities of prunes, and capers are principally produced in the country about Toulon. Flax and hemp thrive in ſeveral parts of the kingdom; but lintſeed is procured only in the north. Moſt of the provinces abound

in wool, and ſilk is cultivated with great induſtry, eſpecially in Languedoc, Provence, Lionnois, and Dauphine; during all the time which the inhabitants attend on the ſilk worms, public prayers are offered up for their proſperity.

The horned cattle, ſheep, and hogs of France, though very numerous, are, in general, far inferior to thoſe of Great Britain. Good horſes are alſo produced here, as well as aſſes, and a great number of mules. The French wolf is the largeſt and fierceſt animal of the dog ſpecies, and partakes ſomewhat of the nature of a dog. He has a wild look, ſhining eyes, ſharp teeth, ſhort neck, and is of a blackiſh colour: he has a howling voice, an oblong blunt muzzle, ſhort ears, and a thick tail. Game and wild fowl are in the greateſt plenty, and extremely good. The Pyrenean mountains furniſh timber for ſhip-building, great quantities of which are alſo procured from Alſace, Burgundy, and Lorrain; but in the other provinces the ſcarcity of timber and wood begins to be more and more felt. Here is alſo plenty of ſea and ſpring ſalt. The people on the ſea-coaſt employ themſelves in fiſhing.

The natives of France are generally ſlender, nimble, active, and well proportioned; their hair and eyes are, for the moſt part, black; their complexions brown; and the ladies are fond of giving a bright colour to their cheeks. The people in general are merry, ſprightly, and ſeldom out of temper; they are familiar, and acquainted with a ſtranger at firſt ſight; but many are extremely vain, and moſt of them remarkably talkative. The common people are, in general, very extravagant in their dreſs, though they ſubſiſt on the moſt ſlender diet imaginable.

The French eat but little fleſh-meat, and dreſs it in a very different manner from the Engliſh: fricaſſees, ragouts, haſhes, and ſoups, diſguiſed with onions, herbs, and ſpices, are preferred before joints boiled or roaſted; and what they do boil or roaſt, has ſcarcely a drop of gravy left in it. As they are ſtrangers to the fine ſirloin and rump of beef, and other large joints which in Great Britain grace the tables of people even in middling circumſtances, they are unacquainted with the many Engliſh diſhes called by the name of puddings. The wealthy, however, ſupply this deficiency with ſweetmeats, and a number of little delicacies; but the poor mechanics, and all the labouring part of the nation, live almoſt entirely on ſoups and vegetables. The common people, in Lent, feed on a variety of ſallads, ſome of which grow wild in the fields; and on the ſeed of white kidney-beans boiled; they alſo eat white lentils, a ſort of pulſe not much known in England.

Theſe people are ſo far from being addicted to jealouſy, that it is good manners to commend the beauty of a woman, and to extol her charms even before her huſband's face. The women, too, behave, in general, without reſerve. The French are much commended for their obedience to their governors, and pride themſelves on their profound veneration for their prince; but while the people had any thing to contend for, rebellious and civil wars were as frequent in France as in any other country.

Their lands are ſo highly taxed, that ſmall eſtates will hardly afford the proprietors a ſubſiſtence, if they do not enjoy ſome poſt under the government; indeed, there is ſcarcely a conſiderable family in the kingdom, that has not ſome preferment in the church, the army, or the court.

The uſual diverſions of the French are gaming, walking, or taking the air in coaches, and attending plays and operas. With reſpect to their exerciſes, there are few French gentlemen who do not learn to dance, fence, and ride the great horſe. The nobility and gentry never apply themſelves to trade; they ſeem indeed naturally deſigned for the court or the army; and if they happen to be of a melancholy diſpoſition, here are always convents, and numerous preferments to be met with in the church. As to their military virtues, it muſt be acknowledged, that they do not want bravery, and have brought the art of war to great perfection, there being no people upon earth more capable of attacking or defending a place than they, or that are better ſkilled in the art of fortification.

The French language is formed out of that of the Gauls, Romans, and Franks, and is pretty generally underſtood throughout Europe; particularly by genteel people, whoſe education is deemed defective without it: it is not, however, ſo ſtrong, expreſſive, and energetic, as the Engliſh. The great Dryden obſerves, that the French language has all the ſwiftneſs of a greyhound; but the Engliſh all the ſtrength of a maſtiff. There are two great difficulties which an unpractiſed perſon is under here in common ſpeech; the one is, from the rapid pronunciation of the natives, which always appears to be the caſe when the language is not familiar to us, but is chiefly owing to the ſhortneſs of the words in general. There is no effectual cure for either, except frequent converſation with the French people of all claſſes upon their own ground. Some of our countrymen go armed with a dictionary, and make their French as they want it; but ſuch French is generally an aukward tranſlation of the Engliſh forms of ſpeech, not intelligible to French people. An Engliſh gentleman of this claſs was at dinner in a public company, and his buſineſs requiring him to be gone as ſoon as decency would permit, he wanted to tell the French ſervant, that "every body had done," in order that the things might be taken away: hereupon he conſults his book, and finds, that "every body" is "tout le monde," and "done" is "fini," which, with his narrow Engliſh pronunciation, was, "tout le monde eſt fini." The waiter, who happened to be a lad of humour, cried out, "miſericorde! que ferons nous? Monſieur dit que tout le monde eſt fini. ——Mercy on us! what ſhall we do? The gentleman ſays the world is at an end."

Since the repeal of the edict of Nantes in 1685, the Roman catholic is the eſtabliſhed religion in France; yet in Dauphine, Languedoc, and other provinces, there are ſuch a number of ſecret proteſtants, that they have been computed to amount to no leſs than three millions; but theſe, on account of their religious aſſemblies, at which ſometimes great numbers have been preſent, have been cruelly harraſſed and perſecuted; and in 1745 ſome proteſtant preachers were hanged, laymen were ſent to the gallies, women to the convents, and children forced away from the arms of their parents. The French proteſtants (or Hugonots, as the Romaniſts called them by way of reproach) were always perſecuted by the popiſh party, and even maſſacred in the moſt barbarous manner ſeveral times, particularly on St. Bartholomew's day in the year 1572, when in the middle of the night the famous admiral de Coligny, twenty other great men, twelve hundred gentlemen, and above one hundred thouſand proteſtants of all ſorts were murdered at Paris, and in other parts of the kingdom, without reſpect to age, ſex, or relation; though a peace had been very lately concluded with them; to confirm which, the king of Navarre, the head of the proteſtant party, was that day married to the French king's ſiſter. After the death of Henry IV. who granted to his reformed ſubjects ſeveral places, towns, and caſtles, his ſucceſſor Lewis XIII. abridged them of their privileges, took the cautionary towns from them, and even Rochelle, after a long and famous ſiege: and Lewis XIV. that deſpotic and tyrannical prince, carried the perſecution againſt them to the higheſt degree of cruelty, and permitted their enemies to vex them a thouſand different ways. They ſtript them of all their privileges and liberty; and after having in vain tried various methods to conquer their conſtancy, ſent amongſt them a vaſt number of dragoons, who practiſed the moſt horrid barbarities to force them to renounce their religion. The edict of Nantes being repealed October 1685, great numbers of them, to avoid the cruelty of their infernal perſecutors, endeavoured to take ſanctuary in foreign countries, which liberty was denied to many; however, about one hundred thouſand of them made their eſcape, moſt of them leaving their eſtates behind them. Multitudes came to ſettle in Great Britain and Ireland, and eſpecially in London, bringing with them ſeveral kinds of manufactures, which have proved very beneficial to theſe kingdoms, while it tended to impoveriſh that of their bigotted perſecutors. Theſe tranſactions are chronicled among many other ſimilar events which contributed to grace the reign of that prieſt-ridden monarch, prepoſterouſly ſtiled Lewis the Great! The proteſtants are, however, openly tolerated in Alſace by virtue of a treaty, and in many places even the Jews. Indeed the freedom of writing, which may be ſaid to have been firſt introduced into France by M. de Voltaire, and for the laſt twenty years has remarkably prevailed in that arbitrary government, has tended very much to ſoften the rage of religious bigotry; and has, in a good meaſure, delivered conſcientious Chriſtians from the ſcourge of intolerant zeal, by having made deiſm faſhionable among the licentious Free-thinkers.

The Gallican church, or the church of France, enjoys pretty conſiderable privileges; the principal of which are the following: I. In temporal, or government affairs, neither the ſovereign, nor his officers or magiſtrates, are ſubject to any church-diſcipline, inflicted either by the biſhops, or even by the pope himſelf. II. The pope has no other juriſdiction in France than what the king is pleaſed to grant him; his nuncios and legates à latere are only

conſidered

considered as envoys from the court of Rome to that of France, and cannot, in virtue of any papal mandate, interfere in affairs of juſtice, unleſs ſuch mandate has previouſly received the king's ſanction, and has been in due form regiſtered in parliament. III. The calling and holding all eccleſiaſtical aſſemblies, with the confirmation of their decrees, depends on the civil power, without requiring the knowledge and conſent of the pope IV. The king is empowered to enact laws that merely concern the eccleſiaſtical conſtitution, and to limit the exerciſe of the power of the clergy; and without the king's permiſſion and ratification, no law of the church, either by the biſhops or the pope, can ſubject any one to outward penalties or puniſhments, or even to church diſcipline. V. The pope can levy no money in France, on any pretence whatever, except the fees and impoſts allowed him by the concordat; though the king can tax the clergy without ſtanding in need of a papal mandate, a privilege which other princes muſt purchaſe by paying a quota of ſuch tax to the ſee of Rome. Not long ſince the king enjoined the clergy to pay the twentieth penny, and for that purpoſe to deliver in an inventory of their eſtates and incomes. This indeed occaſioned a great ferment, till in 1753 the clergy conſented to pay the king the annual ſum of twelve millions of livres, (five hundred and twenty-five thouſand pounds ſterling) under the name of a free gift, without being exempted from the uſual free gift which they bring to the throne every five years. VI. No eccleſiaſtical foundations, nor any new order of monks and nuns, are to be introduced without warrant from the king; and the rules of ſuch order are ſubject to the cognizance and amendment of the civil power. VII. The king nominates all archbiſhops and biſhops, abbots and priors, except with reſpect to the latter, where the convent is indulged with the choice of its ſuperior. VIII. The eccleſiaſtical juriſdiction is ſo far ſubordinate to the civil power, that appeals from the ſentences of the eccleſiaſtical courts are received by the parliament.

In the whole kingdom are eighteen archbiſhops, a hundred and thirteen biſhops, twenty-two thouſand two hundred and ninety-one prieſts, ſeven hundred and ſeven abbies for men, three hundred and ſeventeen abbies and priories for women, beſides a great number of other convents, together with two hundred and fifty commanderies of the order of Malta, among which are ſix grand priories, and four principal commanderies. The annual revenues of the archbiſhops and biſhops amount, in the whole, to four millions three hundred and thirty-ſeven thouſand livres (one hundred and eighty-nine thouſand ſeven hundred and forty-four pounds ſterling). The number of monks and nuns is computed, in the whole, at above a hundred and ninety thouſand, whoſe income is ſaid greatly to exceed a hundred millions of livres (four million three hundred and ſeventy-five thouſand pounds ſterling). It has been calculated that the eccleſiaſtics in France compoſe one eightieth part of the whole population of the country. The eccleſiaſtical ſtate is compoſed of eighteen provinces, each of which conſiſts of an archbiſhopric, beſides the ſubordinate biſhops.

This polite nation have always diſtinguiſhed themſelves by their ſkill in the arts and ſciences. Painting was firſt brought to great perfection among them under Francis I. when Roux and Franciſco Bologneſe introduced all the beauty of that art into France, towards the beginning of the ſixteenth century; and ſince that time this kingdom has produced ſeveral eminent maſters. In 1648 was inſtituted at Paris the royal academy of painting and ſculpture: but it is ſaid that the ingenious art of painting is now on the decline in France, and is ſucceeded by a frivolous taſte, which is far from tending to the improvement of the liberal arts. Engraving has been brought to a perfection unequalled in any other part of Europe, until of late years Great Britain has attained as great a degree of eminence in that art. France has alſo made great advances in ſtatuary. It has likewiſe been famous for its architects; and the great Colbert, in 1671, founded a royal academy of architecture, who now hold their meetings in the Louvre. The French learned the art of ſhip-building from the Engliſh. Their reputation in military architecture is well known, and they alſo excel moſt nations in gunnery and fire works. At Paris, beſides the antient univerſity and royal college, are four academies, namely, the French academy, the academy of inſcriptions and belles lettres, that of ſurgery, and the academy of ſciences, with three others for the education of young noblemen. Beſides theſe, there are eight other univerſities in France, and ſeveral academies for the ſciences, polite arts, &c.

The manufactures and productions of France are ſupported and improved with the greateſt diligence. By the advice of the above-mentioned Colbert, that enlightened and public-ſpirited miniſter, Louis XIV. erected the manufacture of the Gobelins, at Paris, which is ſo called from two brothers, Giles and John Gobelin, who under Francis I. found out the method of dying a moſt beautiful ſcarlet, which was afterwards called by their name. The houſe of the Gobelins, at Paris, is full of the works of the moſt excellent maſters in tapeſtry, fillegree, and ſculpture; and in the article of tapeſtry alone, no leſs than two hundred perſons are conſtantly employed. There are alſo conſiderable manufactories of tapeſtry in ſeveral other parts of the kingdom. The French hiſtorians inform us, that ſilk manufactories were firſt ſet up in France in the reign of Louis IX. yet in the time of Henry II. ſilk was ſo ſcarce, that the king was the firſt who had ever been ſeen to wear a pair of ſilk ſtockings, which were a part of his dreſs at the marriage of his ſiſter. The ſucceeding kings made good regulations with reſpect to the culture of ſilk, and the planting of white mulberry-trees; but it was not till the time of Louis XIV. that this was brought to any conſiderable degree of proſperity; and under his government the quantity of raw ſilk produced in the provinces of Dauphiné, Languedoc, and Provence alone, annually amounted to one million eight hundred thouſand pounds weight.

The revocation of the edict of Nantes has been of the greateſt detriment to the ſilk trade, by compelling the manufacturers, as was hinted above, to fly from France, to ſeek that protection, and to enjoy that religious liberty, which they were not allowed to poſſeſs at home. Hence the art of weaving ſilk is become almoſt univerſally known, and England has been enabled to ſurpaſs, in the elegance and beauty of their patterns, the French themſelves. Within theſe laſt hundred years the French have conſiderably improved their woollen manufactures, in which they have been aſſiſted by the clandeſtine exportation of wool from Great Britain and Ireland. Hence the cloths and other woollen ſtuffs made at Abbeville, are little inferior either in fineneſs or goodneſs to the Engliſh. Several provinces abound in manufactures of linen, thread, and ſail-cloth; and at Cambray is made the fine and beautiful linen called cambray linen, or cambric; and St. Quintin excels in its lawns. The glaſs manufacture is alſo of great advantage to France. In 1688, one Abraham Thevert contrived a method for caſting better and larger plates of looking glaſs than had been before known; but very lately a manufactory has been eſtabliſhed in the north of England, which produces plate glaſs equal in dimenſions to the largeſt that are caſt in France. There is a manufactory of very handſome porcelain at Vincennes.

The French carry on a very conſiderable trade, which conſiſts of gold and ſilver brocades, gold and ſilver embroideries, ſilk ſtuffs, ſattins, ſewing ſilks, crapes, cambric, lawn, fine linen, laces, toys, and millinery goods, tapeſtries of various kinds, fine cloths, pluſh, woollen ſtuffs, ſail-cloth, looking-glaſſes, drinking-glaſſes, paper, parchment, ſope, knives, and other hardware; wines of many ſorts, vinegar, brandy, corn, hemp, flax, walnut-tree wood, pot-aſh, pitch, turpentine, oil of turpentine, linſeed oil, and oil of olives, almonds, raiſins, cheſnuts, figs, prunes, capers, nuts, honey, ſaffron, ſalt, mules, and other articles.

They find great advantages to their inland trade, from the navigable rivers: and theſe have been joined at a vaſt expence by canals, the moſt famous of which is the royal canal in Languedoc. The coaſt trade is very conſiderable; for by this the maritime provinces reciprocally ſupply each other with their own produce. The land trade is carried on with Swiſſerland, by the way of Lyons; to Germany, through Metz and Straſburg; to Holland, by the way of Liſle; and to Spain, by the way of Perpignan and Bayonne. The French ports on the channel and the weſtern ocean are frequented by all the trading nations of Europe.

The trade with England, the United Provinces, and Italy, is of great advantage to France. However, but few French ſhips are ſeen in the ports of the northern nations. Their trade on the Mediterranean with Aſia and Africa, has, for ſome years, been very conſiderable; and the far greateſt part of it is carried on by the city of Marſeilles alone. They alſo carry on a conſiderable traffic to Guiney for gold, ivory, and ſlaves for their American colonies. The Eaſt India trade is in the hands of a company at Port L'Orient, in Brittany. To all which may be now added a commerce, by treaty, with the Britiſh North American colonies, which, by having involved her in a ruinous war with Great Britain, has hitherto brought no acceſſion of

wealth to France. A peace being now concluded between the ſeveral powers at war, we ſhall, in our hiſtory of this country, give ſome account of the commercial articles of the treaty, as they reſpect her trade with America.

In France, the gold coins are the louis d'or, of one pound value; there are alſo double and half louis; and a piſtole is eight ſhillings and four-pence. With reſpect to the ſilver coin, one louis blanc is five ſhillings. The ecu, or crown, is equal to three livres; ſixty ſous, or ſeven hundred and twenty deniers, equal to our half crown.

They keep accounts in France in livres, ſous, and deniers. One livre contains twenty ſous, and one ſou twelve deniers. The French livre is of the value of ten pence halfpenny, one ſou is worth a half-penny, and conſequently the denier is the ſixth part of a farthing. The liard is a ſmall piece of copper, of the value of three deniers.

SECT. II.

Deſcribing the Situation, Boundaries and Extent, Climate, Produce, Rivers, and principal Cities in PROVENCE; together with an Account of the Town of AVIGNON, formerly ſubject to the Eccleſiaſtical State; and of the Province of DAUPHINE, its Cities, Towns, Rivers, Springs, &c.

IT is neceſſary to premiſe, that France is now divided into thirty-ſix generalities, or general governments; we ſhall therefore, in our ſurvey of this extenſive country, begin at the ſouth-eaſt, and, firſt of all take notice of

That diſtrict of France called Provence, ſo called from the latin Provincia, it is about one hundred and forty miles in length; and about ninety in breadth, from the iſles of Hieres to the village of Sauze. It is bounded, on the ſouth, by the Mediterranean; on the eaſt, by the Alps and the river Var, which divide it from the territories belonging to the king of Sardinia; and on the weſt is ſeparated from Languedoc by the Rhone.

It is divided into Upper and Lower Provence: Upper Provence enjoys a pretty temperate air, and has a great deal of meadow ground, well ſtocked with cattle: it alſo produces corn, apples, and pears, though but little wine. Lower Provence, on the contrary, is extremely hot; and near the ſea-coaſt would be much more ſo, were not the air refreſhed by a breeze, which uſually laſts from nine or ten in the morning till the evening. The north-weſt wind alſo cools the country, and ſometimes, particularly after rain, blows freſh. In this lower part there is not half corn enough produced for the ſubſiſtence of its inhabitants; but the ſoil being dry and ſandy, oranges, lemons, pomegranates, and olives, with maſtick, cypreſs, palm, and the African cacia-trees, thrive extremely; as do alſo ſhrubs of all kinds, ſuch as brue, which reſembles box, only the leaves are longer and more pointed, bearing a red fruit, which continues on all the year round, and by a particular ſingularity, proceeds out of the middle of the leaf. The ſea-cherry-tree has a leaf like the alkermes, and its fruit reſembles a cherry. The wine in Lower Provence is thick, luſcious, and heady; but muſcadel is the ſort moſt admired.

There are ſome quarries of black agate in this province. Here is a ſmall delicious bird, called the beccafigo, that feeds only on grapes and figs; and, among the ſea fiſh, a remarkable kind called the date, ſo named from the reſemblance of its ſhape to that fruit, and is found within hollow ſtones in the road and harbour of Toulon: in order to get them out, the ſtone muſt be broke; they alſo abound along the coaſt of the marquiſate of Ancona, on the Adriatic.

There are no conſiderable rivers in this part of the country: the chief are, the Durance, the Soarge, the Largons, and the Var, the laſt divides France from Italy. The principal port is Toulon; beſides which, there are ſeveral capes, bays, and harbours.

The principal places in Lower Provence are: 1. Aix, in Latin Aquæ Sextiæ, called Aquæ pomits baths, and Sextiæ pomits, being enlarged and beautified by Sextus Calvinus. This city, which is the capital of Provence, ſtands in a valley of conſiderable extent, planted chiefly with olives, in the latitude of forty-five degrees fifty-four minutes, and in ſix degrees ten minutes eaſt longitude, twenty miles to the northward of Marſeilles, and thirty-five to the ſouth-eaſt of Avignon. It is rather populous than large; the ſtreets are well paved, and the houſes handſome, and moſt of them built of free-ſtone; there is a beautiful ſpacious walk within the city called Orbitelle, conſiſting of three rows of trees a mile long, interſperſed with fountains, and on each ſide are elegant uniform buildings; this is the uſual walk of the citizens. This city is the ſee of an archbiſhop, who enjoys a revenue of thirty-two thouſand livres (fourteen hundred pounds ſterling) out of which he pays to the court of Rome two thouſand five hundred florins. In the cathedral is a conſecrated roſe of gold, the preſent of pope Innocent IV. to count Raymond Berenger. In this city are alſo two colleges, with an univerſity founded in 1409, an academy of the polite arts erected in 1668, a public library in the town-houſe, eighteen convents, a palace formerly the reſidence of the counts of Provence, and now of the high bailiff. Here is alſo a mint; and this city is the ſeat of a parliament, of a chamber of accounts, a court of taxes, and many other public offices. The nobility of Provence reſide here, eſpecially in winter; ſo that this city is ſaid to have the moſt agreeable company, next to Paris, of any place in the whole kingdom. In its ſuburbs the warm mineral ſpring, once ſo celebrated, was found a ſecond time in 1704; but its antient virtues are much decayed. The principal trade of this country conſiſts in its fine oil; ſome ſtuffs are alſo made here, and excellent wine is produced in its neighbourhood.

The city of Arles (the antient Arellas, Arelata, and Arelatum) is large and well-built, ſeated on the eaſt bank of the Rhone, in forty-three deg. thirty-two min. north lat. and in four deg. forty-five min. eaſt long. upon very uneven ground, and almoſt ſurrounded by a moraſs, which renders the air thick and unhealthful. Over the Rhone is a wooden bridge, to preſerve the communication with Languedoc. The cathedral is a vaſt Gothic ſtructure, charged with an infinite number of figures, and the high altar is adorned with a tabernacle of ſilver, an admirable piece repreſenting the martyrdom of St. Stephen, to whom the church is dedicated. The archbiſhop ſtiles himſelf prince of Montaragon, has a province of fifty-one pariſhes, and an annual revenue of thirty-three thouſand livres; (one thouſand four hundred and forty-four pounds ſterling) out of which his taxation to the court of Rome is two thouſand and eight florins. Beſides the cathedral it contains one collegiate and ſeven pariſh churches, with an abbey, fourteen convents, an hoſpital, and a royal academy of ſciences founded in 1688. The town-houſe is an elegant regular ſtructure, finely ſituated. It is of a ſquare form, adorned with three orders of architecture, one above another: the portico (the roof of which is ſupported by twenty columns) is magnificent, and embelliſhed with the buſts of the counts of Provence.

Several councils have been held here, the moſt antient and diſtinguiſhed of which was in 1314. This town was antiently the capital of the kingdom of Burgundy, which was alſo called the kingdom of Arles, and the diſtrict belonging to this city is ſtill very extenſive.

Many Roman antiquities have been found at Arles; among which is a large obeliſk of porphyry, which was dug up here in 1675, and in 1676 ſet up again and dedicated to Louis XIV. It is of one entire ſtone, fifty-two feet high, and ſeven feet diameter at the baſe. On the top is placed an azure globe, ſtrewed with golden lilies; and a ſun, which was that prince's device; but the valuable monument above is far from being graced by its new plain pedeſtal of ſand-ſtone.

The ruins of an amphitheatre, ſuppoſed to have been built by Julius Cæſar, are alſo to be ſeen here: the building was of an oval form, one hundred and ninety-four fathoms in circumference, the longeſt diameter of the area ſeventy-one fathoms, and the ſhorteſt fifty-two. The porticoes are three ſtories high, built of free-ſtone of a prodigious ſize; each ſtory contains ſixty arches, which ſtill remain, and the walls are of a ſurpriſing thickneſs, but very much decayed. However, this fine monument of antiquity is almoſt entirely concealed by the private houſes built about it. Here is alſo the fragment of a circus, with two columns of marble of the Corinthian order; the remains of a Roman capitol erected here, and a large collection of Roman ſepulchral monuments, urns, and the like, kept in the archbiſhop's palace; an urn of a very extraordinary dimenſion, containing above twenty gallons, is found among the reſt.

There is a place called the Elyſian Fields, near the city, where the Romans uſed to bury the aſhes of their dead. Accordingly, here are ſeen an incredible number of ſtone and marble ſarcophagi, ſome ſtanding half, and ſome entirely out of the ground. The ſpot on which they ſtand

may be called a mine of antiquities. These fields afterwards became a Christian cemetery.

The Rhone divides itself, near the city, into two large branches, forming the island of Camargue, called in Latin Camaria, which, being intersected with several canals, is one of the best and most fruitful tracts in this country.

The second city in Provence, but the first in point of trade, is Marseilles, in Latin Massalia, and Massilia: it is large, rich, and the most antient place in all this province, and said to have been built five hundred years before the birth of Christ. It is seated at the foot of a rocky mountain near the sea, in forty-three degrees eighteen minutes north latitude, and in five degrees twenty-seven minutes east longitude, twenty miles to the south of Aix, and thirty to the north-west of Toulon. It is divided into the Old and New Town: the former stands on an eminence, and consists of narrow crooked streets with mean houses; but in the latter the streets are strait and broad, and adorned with handsome edifices. The Walk is a very fine street, with beautiful houses on each side, and in the middle two rows of lofty trees, which form a fine vista; and here are a great number of benches for resting-places.

Marseilles is the residence of a high bailiff, and has a bishop, suffragan to the archbishop of Arles, who has a diocese containing thirty-six parishes, with an annual revenue of thirty thousand livres (one thousand three hundred and thirteen pounds sterling), and he pays to Rome seven hundred florins. In this city are four parish churches, including the cathedral, which is said to have been a temple of Diana, and the most antient in France, and two collegiate ones, with two abbies, an academy of the polite arts, and an observatory. This city contains also a mint, and a large arsenal, well stored with materials for fitting out the king's gallies. The large armoury, which consists of four walks cross-wise, and is esteemed the finest in the whole kingdom, contains arms for forty thousand men. In the arsenal is a dock for building the gallies, which is roofed over, and has a communication with the harbour, which is in the form of a parallelogram, and has public and private buildings in the two long sides, and on one of the shorter. The other, which opens into the Mediterranean, is defended on each point by a fine strong fort. The entrance into the harbour has not depth of water sufficient for men of war, and is rendered difficult by a rocky cape near it.

There is a most delightful plain on the land side: there are said to be on it no less than eight hundred country seats of the citizens, with their gardens and vineyards, whither they retire from the noise of the town, which is very disagreeable from the multitude of slaves in the streets rattling their chains, some of whom have little shops and huts, where they are allowed to work at their trades, and others serve as porters.

The inhabitants make gold and silver stuffs. To Italy they export cloths, serges, honey, figs, prunes, olives, capers, fresh eels, a species of small sardines, oil, sail-cloth, brandy, cotton waistcoats, stockings, &c. and the returns are made in silk, hemp, sulphur, manna, anise, corn, and rice. To Spain, they export all kinds of linen, silk, wool, gold and silver stuffs, gold, silver, and thread lace, with several home and Levant commodities; and their trade in silk to Constantinople, Smyrna, Athens, Candia, the Archipelago, Tripoli, and Alexandria, is very considerable. Almost all the trade of France with Spain and Italy is carried on by Marseilles, which is also the centre of the commerce with the Levant. This city was visited, in 1720, by a most dreadful pestilence, which raged for near two years.

The next considerable city is that of Toulon, which is pretty large: it is situated in a bottom, almost encompassed with hills on the land-side, and on a bay of the Mediterranean, which forms a secure and commodious harbour, in the latitude of forty-three degrees five minutes, and in the sixth degree two minutes east longitude: near four hundred miles south-east of Paris. It is defended by very strong fortifications towards the land-side, and the new part of the town is very handsome. The bishop of this city is subject to the archbishop of Arles, under whom he has a diocese of twenty-five parishes, with an annual revenue of fifteen thousand livres, (six hundred and fifty-seven pounds sterling) out of which his taxation at the court of Rome is four hundred florins. Besides the cathedral, it has nine convents, a seminary, and a college, under the direction of the fathers of the oratory, and the jesuits had here a very fine house.

The old and new harbour lie contiguous, and by means of a canal you pass from one to the other, both having an outlet into the spacious outer harbour, which is surrounded with hills, and formed by nature almost circular. Its circuit is of very great extent; and at the entrance of both sides is defended by a fort with strong batteries. The new harbour, which was made by order of Lewis XIV. is also well defended by batteries, and round it stands the arsenal, where every man of war has its own particular store-house; but the guns and cordage are laid up separate. In it are also spacious work-houses for blacksmiths, joiners, carpenters, lock-smiths, carvers, &c. The rope-house, which is built entirely of free-stone, is six hundred and forty yards in length, with three arched walks, in which as many parties of rope-makers may work at the same time. The general magazine, which supplies whatever may be wanting in the particular store-houses for single ships, contains an immense quantity of all kinds of stores, disposed in the greatest order. The cannon foundery is also worth the notice of a curious traveller.

The duke of Savoy, in 1707, laid siege to this city, but without success; and in 1721, it suffered greatly by the plague. The inhabitants make a kind of coarse woollen-cloth, and there is great plenty of capers in its neighbourhood.

The small town of Hieres, the antient Areæ, was formerly much more considerable than at present; it having once an harbour where pilgrims used to embark for the Holy Land. This town has a district court, and several public offices; it also contains one collegiate, with two other parish-churches, and five monasteries and nunneries. The soil is excellent, and being laid out in orchards, produces the finest fruit in France. A great deal of salt is made here, both from sea water and a large salt lake; but the air was unwholesome, until a canal was formed, which extends from the lake to the sea, whereby the inconvenience was remedied.

The islands of Hieres take their name from this town: they lie in the neighbouring sea, and, in conjunction with the continent, form a fine road. These islands are three in number. The principal, which lies nearest town, is Porqueroles, so called from the great number of wild hogs, which swim over hither from the continent, for the sake of the acorns, abundance of oaks growing here. It is four French leagues in length, one in breadth, and is defended by an old castle. The second is Portecroz, that being the name of the harbour where a fort is built. The third is called Titan or Levant, from its situation to the eastward of the former; but though it is four French leagues in length and one broad, it is uninhabited. On these islands are said to be found curious medicinal plants of all the species that grow in Greece, Egypt, Spain, and Italy.

The city of Frejus, antiently called Forum Julii, is seated on the river Argent, at the distance of a mile and a half from the sea, and thirty-six miles to the north-east of Toulon. It is a fortified place, has a court of admiralty, is the see of a bishop, suffragan to the archbishop of Aix, and has within his diocese eighty-eight parishes, with a yearly revenue of twenty-eight thousand livres, (one thousand two hundred and twenty-six pounds sterling) out of which he is taxed one thousand florins at the court of Rome. This city contains four convents. Among the remains of Roman antiquities, here are an amphitheatre, and an aqueduct of considerable length.

The city of Sisteron is the principal place in Upper Provence, it has a small citadel, seated at the foot of a rock on the Durance, thirty miles to the south-west of Embern, and is the see of a bishop, suffragan to the archbishop of Aix, who has sixty-four parishes, and a revenue of one thousand five hundred livres (six hundred and fifty-seven pounds sterling) per annum, and his taxation at the court of Rome is eight thousand florins. Here is a cathedral and five convents, and on the other side of the river is a pretty large suburb called La Baune, which contains one parish-church, and one convent.

Avignon, though lately taken from the pope, is nevertheless for the most part surrounded by Provence; and the natives of Avignon enjoy the privileges of those of France. This country is very delightful, and particularly abounds in corn, wine, and saffron. While subject to the pope, it paid few taxes, and only the tenth of its produce; so that the annual expence of the vice-legate, and the militia, exceeded the income arising from it to the court of Rome. Yet the French farmers-general, by means of a sum of money, obtained the monopoly of salt and tobacco in this country, though that trade was carried on in the name of the pope.

The celebrated town of Avignon, in Latin Avenis, is

ſituated on the river Rhone, about twenty miles to the north of Arles, and is ſurrounded with a wall of fine free-ſtone; but has little trade, eſpecially ſince the manufactory of printed linen, which afforded a comfortable ſubſiſtence to great numbers of the inhabitants, was ſuppreſſed in favour of the French Eaſt-India company, who purchaſed this prohibition of the pope by paying him a conſiderable ſum. The vice-legate, as governor, uſually reſided in the papal palace, which is a large ſtructure of free-ſtone, encompaſſed with moats; but is far from being a regular edifice. The arſenal is a long lofty building, but without any other fire-arms than what are juſt neceſſary to be diſcharged on public rejoicings. The upper court of the vice-legate is called the Rota, and has a right of appeal to Rome. The cathedral, which ſtands on the ſame eminence with the palace, is not very large. In two chapels, are to be ſeen the monuments of pope Benedict XII. and John XXII. and alſo the chair or throne of the antient popes, during their reſidence here. In the church of the Celeſtines are fine paintings of the pretended miracles performed by Cardinal Peter of Luxemburg, to whom the church is dedicated. In this church is alſo a ſplendid chapel, and a monument in it erected in honour of ſome ſhepherds, who are ſaid to have built the ſtone bridge here over the Rhone. In the church of the Franciſcans, is the tomb of the beautiful and learned Laura, immortalized by the poetry and paſſion of the celebrated Petrarch. In this town were two ſocieties of jeſuits, to one of which belongs a fine college, with an univerſity founded in 1303. In this city the Jews enjoy the free exerciſe of their religion. The popes reſided here from the year 1305 to 1377.

We now proceed to a deſcription of the province of Dauphine, which is bounded, on the north, by the county of Breſſe and the river Rhone; on the eaſt it is ſeparated from Piedmont by the Alps and Savoy; on the ſouth it borders on Provence; and on the weſt by the Rhone. It is nearly of a triangular form, each ſide of the triangle being about a hundred Engliſh miles in length. It is divided into Upper and Lower Dauphine.

The latter produces corn, wine, olives, ſilk, hemp, ſalt, wood, vitriol, cryſtal, iron, copper, and lead; but Upper Dauphine, and indeed, above two-thirds of the whole province, being very mountainous, are ſo barren, that great numbers of the natives ſeek for ſubſiſtence in other parts; yet theſe mountains have ſome uſeful products, and contain many curioſities. In thoſe of Ambrun and Die, are found marcaſites. The golden mountain, as it is called, yields a ſpecies of cryſtal. Several mountains are covered with larch trees, on the rind of which is gathered manna, Benjamin of a delightful fragrance, and agaric, which is uſed in phyſic and ſcarlet dyes. Theſe mountains have on them many beaſts that are not found in any other part of France, particularly the chamois, bear, and marmot, and alſo hawks, eagles, and other birds.

Several remarkable phænomena are to be ſeen in this province. The firſt is the burning ſpring, on a hill nine miles from Grenoble: it is a little brook, which iſſues from a ſoil emitting ſmoke, and even ſmall flames have been ſometimes perceived in it, which communicated heat to the water; but for theſe two centuries paſt, this rivulet has altered its courſe to the diſtance of twelve feet from that igneous ſoil, and is now as cold as common water. The ſecond wonder is the Tower without Vernon, about a league from Grenoble, it being pretended that no venomous creature will ſtay in it; but this is a notorious miſtake, it being known to ſwarm with adders and ſpiders. The third is called the innacceſſible mountain; which is a ſteep, craggy rock, ſituated on a very high mountain, about two leagues from Die: but though it is extremely difficult to climb up to the top of it, this has been frequently done. The fourth is, the caves of Saſſanage, which are two excavated ſtones, that lie in a grotto near a village of that name. The country people relate, that annually on the ſixth of January, they become full of water; and that the quantity of it, in one of theſe ſtones, foretells whether they ſhall have a good or bad winter; and the other prognoſticates whether they ſhall have a good or bad harveſt of corn. But there is a great deal of artifice uſed to ſupport the credit of theſe wonders; of which there are ſeveral others in this province, and, among the reſt, a water-fall in a grotto near the above caves, and the floating meadow in the lake Palhotiers, but this ſuppoſed meadow conſiſts moſtly of graſs and ruſhes, which the ſlime of the water cements together.

The valley of La Mothe, about five leagues from Grenoble, runs between two high mountains, and enjoys no other proſpect but that of bare and ſteep rocks. Its waters are highly eſteemed, as a certain remedy againſt all diſorders of the ſtomach, fluxes, and even lameneſs, they being much better than the water at Aix, in Savoy. The only dwellings here are wretched huts of ſtraw, ſo that the country is in every reſpect diſagreeable. The Drac, a very rapid river, proceeding from the high part of the diſtrict of Gap, is, as it were, ſqueezed in at La Mothe, between two high rocks. On its ſhore, at the foot of a very ſteep rock, is the mineral ſpring, which, if the river riſes but half a foot, is covered with its turbid water. To come at the ſpring, a perſon muſt clamber half a French league over ſteep rocks and dreadful precipices, which ſeem to threaten the paſſenger with immediate deſtruction; and therefore it is no wonder that theſe excellent waters are but little reſorted to. In this province are alſo ſeveral other mineral ſprings. The principal rivers are the Rhone, the Durance, the Iſere, and the Drome.

Here are two archbiſhoprics and five biſhoprics. The governor and lieutenant-general of the province ſit in the parliament, and take place above the chief preſident. The civil law takes place here; the inhabitants have alſo particular cuſtoms of their own, and likewiſe a parliament, which is alſo a court of taxes, with one provincial court of juſtice, ſeven prefecturates, three bailiwics, four royal juriſdictions, and as many private lordſhips.

The city or town of Grenoble, called in latin, Gratianopolis, is the capital of the province: it is pleaſantly ſituated at the foot of a mountain on the river Iſere, near the place where the river Drac diſcharges itſelf into it. Here the parliament meets. This city has alſo an intendency, a chamber of accompts, a court of taxes, a mint, and a court of the lord treaſurer of France. It is a pleaſant populous city, and, beſides other fortifications, is defended by a citadel, called the Baſtile. The biſhop of this place is ſuffragan to the archbiſhop of Vienne, and has a revenue of twenty-eight thouſand livres, or one thouſand two hundred and twenty-five pounds ſterling, out of which he is taxed to Rome one thouſand florins.

The river Iſere divides this city into two unequal parts, the ſmalleſt of which is called La Perriere, and contains one pariſh-church, and one convent. The name of the largeſt is Bonne; this is the moſt beautiful; it being built with ſtrait, handſome ſtreets: and contains ſeveral magnificent public buildings, as, the biſhop's palace, the cathedral, the arſenal, a general hoſpital, and the palace in which are held the courts of juſtice.

The moſt celebrated of all the convents belonging to the order of Carthuſians, is the Grand Chartreuſe, ſituated on the Alps, at the diſtance of three leagues from Grenoble. There are two ways leading to it, but both are carried over ſteep rocks and precipices of a dreadful height, the terror of which is increaſed by the roaring of the river Guyer la Mort, during its precipitate courſe among them. The convent, which ſtands on an eminence, is environed with rocks and mountains covered with wood, that riſe to a much greater height. This convent forms a ſpacious oblong ſquare, walled in, and on the inſide are a few inns and ſtables. In the large hall of this convent is annually held the general chapter of the order of the Carthuſians, where the German priors take the precedence of all others; and, at their arrival, may ride into the court of the convent, which none of the reſt are permitted to do; but, like the others, muſt alight at the gate. In the hall are fine paintings, repreſenting the life of St. Bruno, and likewiſe the pictures of the generals of the order. The former are copies of the admirable paintings in the Chartreuſe at Paris. In a large gallery may be ſeen views of all the Carthuſian convents in Chriſtendom, moſt of which are executed by eminent hands. The church is not large, but very magnificent; and, among other relics, it is ſaid to contain the arm of St. Bruno, his body being interred in Calabria. The firſt ſettlement of Bruno and his diſciples was half a league from this place, and it having no particular name, was ſo called from Carthreuſe, a village ſtill in being, ſituated near it in a valley. This convent is the head of the order, and chuſes the general, who is obliged to reſide here during life. From the kitchen of this monaſtery above one hundred perſons are daily fed, and, among them, thirty monks and forty lay-brothers; and all ſtrangers are entertained here gratis. The wine-cellar conſiſts of two lanes lined with caſks of an extraordinary ſize, which being immoveable, are filled through the roof by means of leather pipes.

The town of Briançon, capital of a territory called Briançonnois, ſtands forty-five miles ſouth-eaſt of Grenoble, on

on the ſide of a ſteep rock, which has a caſtle on the top of it: the two little rivers Dure and Ance, by uniting their ſtreams, form the river Durance, near this town.

About twenty miles to the ſouth of Briançon, is Ambrun, or Embrun, the capital of the territory of Ambrunois: it ſtands on a ſteep rock, at the foot of which runs the river Durance. This place is ſtrong both by art and nature, and is the ſee of an archbiſhop, who ſtiles himſelf prince and count of Ambrun, and baron of Guilleſtre and Beaufort: he has alſo one half of the lordſhip and juriſdiction of the city. His annual revenue amounts to twenty-two thouſand livres, out of which he pays to the court of Rome two thouſand four hundred florins. The epiſcopal palace is the fineſt building in the city, and had lately a college of jeſuits: beſides the cathedral, it contains five pariſh churches, with a capuchin convent.

The antient city of Vienne, in Latin, Vienna Allobrogum, is ſituated on the Rhone, ſeventeen miles to the ſouth of Lyons, and is the capital of a diſtrict in Lower Dauphine, called Viennois. This place is very extenſive; but the ſtreets are narrow and ill-paved. Anchors and ſword-blades are made here, with other manufactures in iron and ſteel; there are alſo paper-mills. Here is a priory, nine convents, and a ſeminary. The cathedral is a beautiful ſtructure, and in it are three chapters. The archbiſhop of this place enjoys the title of upper primate of Gaul, and his annual revenue amounts to twenty-two thouſand livres, (nine hundred and ſixty-three pounds ſterling) out of which the court of Rome receives one thouſand eight hundred and fifty-four florins.

The laſt town we ſhall mention, in this province, is Palene, in Latin Valentia, the capital of a diſtrict called Valentinois, is ſeated on the Rhone, forty-eight miles to the ſouth of Lyons, and is pretty well built: it is large, and one of the moſt ancient cities in France, it having been formerly a Roman colony. The biſhop is ſubject to the archbiſhop of Vienne, and has an annual revenue of ſixteen thouſand livres, (ſeven hundred pounds ſterling) out of which his taxation to the court of Rome is two thouſand three hundred and eighty-nine florins. The epiſcopal palace is a fine building: beſides the cathedral, and an univerſity, it contains one chapter, and three abbies, with ſix convents.

SECT. III.

Containing a Deſcription of the Boundaries and Situation, Extent, Produce, Towns, Mountains, Rivers of FRANCHE COMTE, ALSACE; the Duchies of LORRAIN and BAR; the MESSIN, or Government of METZ; and the Counties of VERDUN and TOULOIS; alſo an Account of the Inhabitants, their Manners, Cuſtoms, Manufactures, Trade, &c.

FRANCHE Comté, called alſo the earldom of Burgundy, is bounded, on the north, by Lorrain; on the eaſt, by the earldom of Mumplegard and Swiſſerland; and on the ſouth and weſt by the government of Burgundy and Champagne. Its extent from ſouth to north is about ninety miles, and from the ſouth-eaſt to the north-weſt ſixty. Almoſt one-half of it is a level country, abounding in corn, wine, paſtures, hemp, &c. and the other half is mountainous, but produces ſome corn and wine, and a good breed of cattle.

Here are mines of copper, iron, lead, and ſilver. Near the village of Touillon is a ſpring that runs and ceaſes at ſtated times, and the town of Salines has profitable ſalt-ſprings and marſhes. In this diſtrict are likewiſe quarries of alabaſter and marble; and alſo near the river Doux is a large grotto, in which nature has formed pillars, and a ſurpriſing variety of figures; and near Leugne is a natural cavern of ice, which freezes in ſummer, and thaws in winter.

The Saone, Ougnon, Doux, Louve, and Dain, are the principal rivers.

This province has a parliament of its own; it is ſubject to a governor, lieutenant-general, and ſub-governor; and is divided into four large diſtricts, the principal places in which are the following; namely,

1. Beſançon, in Latin Veſontio, and Beſontium, the capital of the country, is a hundred and ſixty miles to the ſouth-eaſt of Paris, and is the ſeat of an archbiſhop, a parliament, an intendency, a bailiwic, a county and a mint-court, &c. It is divided by the river Doux into the Upper or Old Town, and the Lower or New Town, and is ſurrounded by a wall and other fortifications: it is alſo defended by a citadel that ſtands on a ſteep rock, and is an oblong ſquare, flanked with four irregular baſtions, the ground being too uneven to admit of regular works. Until the peace of Weſtphalia it was an imperial city, but at that time was transferred to Spain: it was afterwards taken by France, and its fortifications were greatly ſtrengthened by Lewis XIV. The cathedral, which is dedicated to St. John, ſtands at the foot of mount St. Stephen; and the archbiſhop, who ſtiles himſelf a prince of the empire, has three ſuffragans under him, with a revenue of thirty-ſix thouſand livres, (one thouſand five hundred and ſeventy-five pounds ſterling) out of which he pays a thouſand and twenty-three florins to the court of Rome. The city alſo contains two chapters, eight pariſh-churches, two abbies of monks, and two of nuns, twelve convents, one univerſity, three hoſpitals, and had a college of Jeſuits. The town-houſe, the governor's palace, and that of Granville, are the moſt remarkable buildings in the place; the laſt of which is furniſhed with a great variety of excellent ſtatues and pictures, and a library containing a great number of valuable books and manuſcripts. In the neighbourhood of Beſançon are the ruins of an amphitheatre, one hundred and twenty feet in diameter, and of ſome pagan temples, with a triumphal arch dedicated to Aurelian the Roman emperor.

2. Salines, in Latin Salinæ, ſo called from an excellent ſalt-ſpring, which yields the crown a great revenue, is pleaſantly ſituated on a rivulet in a valley between two mountains, twenty miles to the ſouth of Beſançon, and two hundred to the ſouth-eaſt of Paris. It is a long town, chiefly conſiſting of one ſtreet, and has four chapters, four pariſh churches, ten convents, one college, and one hoſpital. The hall, in which the inhabitants have their magazine of ſalt, and where the courts of juſtice are held, is a magnificent building. The town is defended by a wall, and near it ſtands fort Belin, which is ſeated on a hill, and on another is fort Brecon, and a caſtle. The city contains five or ſix thouſand inhabitants, and in its neighbourhood are quarries of black marble, jaſper, and beautiful alabaſter.

3. Dole is ſeated on the river Doux, eighteen miles to the ſouth-weſt of Beſançon, in a diſtrict of the ſame name, which, from its beauty and fertility, is ſtiled Val d'Amour, or, the Vale of Love. Dole was formerly, while Beſançon continued a free imperial city, the capital of the country, the ſeat of a parliament, of a chamber of accounts, and of an univerſity. On its being taken by Lewis XIV. in 1688, he cauſed the fortifications to be demoliſhed; it was afterwards taken by the Spaniards, who fortified it again; but the French retaking it in 1674, it was a ſecond time diſmantled, and the parliament and univerſity afterwards removed to Beſançon; but the chamber of accounts ſtill remain here. It is ſtill a pretty town, the ſtreets are ſpacious, and the houſes tolerably well built. The public edifices moſt worthy of notice are the church of our Lady, the Jeſuits college, and the palace where the parliament was held. It has alſo one chapter, eleven convents of both ſexes, and an hoſpital. The inhabitants are ſaid to amount to between four and five thouſand. Here are ſtill the remains of an antient aqueduct, and ſeveral other Roman antiquities.

4. Gray, in Latin Gradicum, is a pretty trading town ſeated on the Saone, about ten miles to the north-weſt of Beſançon, and was well fortified till taken by Lewis XIV. in 1668, who demoliſhed the works. It contains but one pariſh church, a collegiate church, five convents, and had a college of Jeſuits. The inhabitants are computed to amount to about four thouſand. Here they embark great quantities of corn, iron, and other merchandize, which they tranſport to Lyons.

The delightful and fertile country of Alſace is bounded, on the ſouth, by Swiſſerland and the Franche Comté; on the eaſt, by the Rhine; on the north, by the palatinate; and on the weſt, by Lorrain; extending from north to ſouth about eighty-five miles. The country in general is very pleaſant, and abounds in all kinds of grain, fruit, eſculent vegetables, flax, tobacco, and wood: its wine is very palatable, and its paſtures are alſo rich. The country between the rivers Ill, the Haardt, and the Rhine, is narrow, and but indifferently fertile; but has ſome vineyards and a few paſtures: here rye, barley, and oats, are the only grain; but that part which lies between the mountains, the Ill, and the plain of Soults, in Upper Alſace, to the diſtance of ſix miles beyond Hagenau, yields an exuberance of grain, wine, and paſtures. The mountains abound in wood, and though they produce but little corn, they feed large herds of cattle. The country from mount Saverne, and the levels from about Straſburg to the Rhine, are

are incomparably fertile and delightful, the lands being rich in all kinds of grain, tobacco, saffron, hemp, and kitchen herbs.

The Wasgau, called in French the Vosge, is the chief chain of mountains in this country. It begins in the neighbourhood of Langres, and extending at first from west to east, separates the country of Burgundy from Lorrain. After this, winding towards the north, it separates Lorrain from Alsace, and forms another curve towards the electorate of Triers. The summits and valleys of this chain, as well as the plains of Alsace, according to Busching, produce a hundred and fifty kinds of trees and shrubs, and fifteen hundred and fifty species of herbs, which all grow wild. This chain has also some excellent pastures, and the eminences, where the soil is favoured with a sunny exposure, produce very agreeable red and white wine, of which a great deal of brandy, vinegar, and tartar, is made. This chain of mountains has also for these several centuries past been famous for its mines of silver, copper, and lead; several parts also abound in iron, antimony, cobalt, sulphur, and other minerals. A great number of churches, chapels, and convents, are also built upon them.

That celebrated river, called the Rhine, which serves as a security to this country, frequently causes terrible devastations, not only in winter, but in the midst of summer, when the snow melts on the Alps. Its inundations then greatly injure the fields, by covering them with sand. The violent torrents of the Rhine, which generally happen every year, frequently alter the situation of the islands within it. It is remarkable of this river, that in its sand are found particles of gold, which the torrents in their fall wash from the Alps, and bring into it; so that it is only below Basil that the sand contains this precious mixture; which in autumn and winter, when the river is at the lowest, is drawn out with the sand, and, after passing through several waters, the gold is extracted. The particles of this metal are seldom so large as a grain of millet; the gold is indeed very fine and beautiful; but is so scarce, that the city of Strasburg, which has the privilege of gathering gold for the length of four thousand paces, scarce collects five ounces in a year. In the Rhine are also found a particular kind of pebbles, that receive a beautiful polish, and are much used in France; this river also contains many pebbles.

From the above chain of mountains issue the following rivers, which run into Lower Alsace; namely, the Leber, the Cher, the Andlau, the Ergers, and the Breusch; the three last run into the Ill: The Serr, Motter, Seltzbach, Lauter, and Queich, run into the Rhine; into which river also run the Berre and Ill, in Upper Alsace.

It is computed that there are about half a million of inhabitants in Alsace. Their common language is the German, and they are partly Lutherans, and partly Roman catholics. In Upper Alsace and Sundgau are thirty-two large and small towns; in Lower Alsace, thirty-nine; and in both are upwards of one thousand small towns and villages.

This country has been subject to several German families, and particularly to the house of Austria; but at the peace of Munster the emperor ceded to the crown of France all right to the town of Brisac, the landgravate of Upper and Lower Alsace, Sundgau, and the district of the ten united imperial cities in Alsace, with the whole sovereignty belonging to them. On the other hand, France engaged that the inhabitants should continue unmolested in the enjoyment of their freedom; and promised to be satisfied with the power which the house of Austria has enjoyed over them, and had transferred to France by that treaty. In the succeeding wars, France took the ten imperial cities in Alsace; and as, by the peace of Nimeguen, no express stipulation was made for their restitution, the king treated them as a part of his acquisitions, and directed a chamber of appeals at Brisac, to which not only those cities, but the nobility of the empire, and all others holding imperial lands in Alsace, were to bring their processes, and not to the imperial chamber of the empire. The emperor and the empire ceded to France the perpetual sovereignty of the city of Strasburg, and of all its dependencies on the left side of the Rhine, by the treaty of Ryswic, in 1697.

Strasburg, in Latin Argentoratum, is the principal place in Upper Alsace, and capital of the whole country. It is not very well fortified, but by means of a sluice in the city may be laid under water. The ramparts are extremely pleasant, and planted round with trees, and towards the Rhine it has a regular citadel. This is a royal, free, imperial city, and the seat of a mint court. It stands in forty-eight degrees thirty-six minutes north latitude, and in seven degrees forty-one minutes east longitude, near two miles distant from the Rhine, and is surrounded by the rivers Ill and Breusch, which also run through it; besides which, an arm of the Rhine is conveyed to the city, which is large and populous, containing about thirty-two thousand houses, four thousand three hundred families, and thirty thousand inhabitants. The streets are all of them narrow, except two, and are adorned with few handsome houses. The public buildings are the town-house, the episcopal palace, that of the intendant, the arsenal, and the play-house. The French hospital is a fine building, it being erected by Louis XIV. for the reception of his soldiers. In the city hospital is kept corn of a great age, and they are said to have wine that is some hundred years old.

The most antient structure in these parts is the cathedral, which being finished in the year 1449, the protestants are consequently not chargeable with the satirical sculptures which a few years ago were to be seen on the cornices and pedestals, representing monkies, asses, hogs, and other animals in monkish habits; and, amongst the rest, a monk in an indecent posture with a nun. It is supposed that these were done by order of the secular clergy, to be revenged on the monks for the ill offices they were always doing them. The steeple of the cathedral is justly reckoned one of the highest in Europe, it being five hundred and seventy-four feet in height. The clock belonging to this structure has been greatly admired; for it not only shewed the hours of the day, but the motion of the sun, moon, and stars: among other things, there was an angel which turned an hour-glass every hour, and the twelve apostles proclaimed noon by each of them striking a blow with a hammer on a bell; there was likewise a cock, which stepped out, and crowed every hour: but this curious clock has been long out of repair. Here are a triple set of missal vestments and altar furniture, six large silver chandeliers, each so heavy that it requires a strong man to carry it, and a crucifix of double the weight. These seven pieces of plate weigh, together, one thousand and sixty-six pounds eight ounces. Among the curiosities within this church are also the furniture and ornaments which Lewis XIV. presented to it, and are extremely rich and magnificent; fifty persons, it is said, were employed on them during eleven years, and they cost that prince six hundred thousand dollars: the principal of these is a splendid altar cloth.

Here are also three collegiate churches, two of which are parochial, together with four others belonging to the Romish community; but the Lutherans are in possession of St. Thomas's church, in which the illustrious count Maurice of Saxony was interred in the year 1751; yet the protestants do not perform their worship in the city, but at Wolfisheim: here are also six convents. The university and gymnasium are Lutherans; and here are also an anatomical theatre, a physic garden, a royal society founded in 1752, and particularly instituted for the natural history of Alsace.

The grand council consists of thirty members, ten of whom are noblemen, and twenty burghers. It has also an inferior council, for the determination of affairs of less importance. The city council is half Lutheran and half Roman catholics, but most of the burghers are Lutherans. The supreme magistrate here, since the city has become subject to France, is the royal prætor, who takes care of the king's rights, and that nothing be done in the college of magistrates, contrary to his majesty's pleasure. The inhabitants, however, pay nothing to the king; but all the imports levied here are expended in the support of the city. The college of magistrates consists of three chambers; to the first belong thirteen persons, who preside over matters of justice; the second is composed of fifteen persons, under whose care are the rights and privileges of the city, the hospitals, police, and finances; the other chamber is composed of twenty-one, in whom is lodged the ordinary government of the city.

There are five districts or lordships belonging to this city. The bishopric of Strasburg also comprehends a considerable tract of territory subject to the bishop, as a temporal lord. It lies scattered in Upper and Lower Alsace, and on the other side of the Rhine, where he has two districts. He stiles himself prince of the empire, and landgrave of Alsace; and though at present subject to France, yet, by virtue of the districts on the other side of the Rhine, is actually a state of the empire, and has a seat and voice in the diet: he has also many vassals under him, and among them almost all the nobility in Lower Alsace, together with a great part of those in the Upper. As a bishop, he is subordinate to the archbishop of Mentz. His revenue is said to amount annually to two hundred and fifty thou-

sand

ſand livres (ten thouſand nine hundred and thirty-eight pounds ſterling,) and it was formerly much more conſiderable.

Upon an iſland in the Rhine, twenty miles to the north-eaſt of Straſburg ſtands Fort Louis, which is a very ſtrong and handſome fortification. It was erected in the year 1686, and conſiſts of a ſpacious and regular quadrangle, with four large baſtions, and the ſame number of half-moons. Near it is a ſmall town, formed of ſtrait ſtreets, and the whole iſland is fortified in every part.

The ſmall town of Zabern is ſeated on the river Sor, fifteen miles to the north-weſt of Straſburg. It was the uſual reſidence of the biſhop of Straſburg, until the inhabitants embraced the Lutheran religion; and his palace and gardens here are delightful. Here is a collegiate church, an hoſpital, and two convents; but what is particularly remarkable is the beaten broad road, carried behind the city, to the top of a high mountain, the aſcent to which is rendered ſo eaſy by ſuch a number of windings, that a perſon may either aſcend or deſcend without the leaſt difficulty.

The town of Colmar, the capital of Upper Alſace, is ſituated near the river Ill, thirty-five miles ſouth by weſt of Straſburg, and had ſtrong walls, which Lewis XIV. cauſed to be demoliſhed in the year 1673; but after the treaty of Ryſwic he encompaſſed it with new walls. The inhabitants are ſaid to enjoy all their privileges, and though moſt of them are Lutherans, have liberty of conſcience. It contains about eight hundred houſes, and ſeven thouſand one hundred and forty inhabitants.

With reſpect to the duchies of Lorrain and Bar, which come next under our conſideration; the former of theſe derives its name from Lotharius II. grandſon to the emperor Lewis I. and was formerly of much greater extent. It is at preſent bounded on the eaſt by the Lower Palatinate and Alſace, from the latter of which it is ſeparated by the Vogean mountains, on the ſouth by Franche Comte, on the weſt by Champagne, and on the north by Metz. Its greateſt breadth from north to ſouth is about a hundred miles, and from eaſt to weſt, nearly as much.

This duchy enjoys a very temperate climate, and has a fruitful ſoil, which particularly abounds in grain, though it has many woods and mountains; but in theſe are good game, and alſo excellent paſture. The country has alſo ſalt ſprings, with ſome mines of iron, copper, tin, and ſilver. In the mountains of Wiſgau are found agates, chalcedonies, and other gems. Its lakes too abound in fiſh, particularly the lake of Lindre, the profits of which are ſaid to amount to ſixteen thouſand livres per annum, (ſeven hundred pounds ſterling.)

The Maeſe, the Moſelle, and the Saar, are the chief rivers. Here are alſo the rivers Voloy, Mortaire, and Meurte, which are not ſo conſiderable.

The modern dukes have conſtantly kept on foot a particular army, which have performed ſignal ſervice. But the French have frequently had the policy to turn the power of Lorrain to their own advantage, and to the prejudice of the duke. The Lorrainers are alſo laborious; but have little trade with ſtrangers, they having no navigable rivers, and all neceſſaries within themſelves; but what little trade they have conſiſts of corn and linen. The language ſpoken here is French, except in the German diſtricts, where that language is ſpoken. The Romiſh religion prevails all over this province.

The ſtate, after the deceaſe of Lotharius II. its firſt founder, was divided among his relations, and was afterwards ſometimes poſſeſſed by the Germans, and ſometimes by the French, and continual diſputes aroſe between the emperors of Germany and the kings of France. At length, in 1733, France took poſſeſſion of this duchy; and in the preliminaries of peace in 1735 it was concluded, that not only the duchy of Bar, but likewiſe that of Lorrain, the earldom of Falkenſtein excepted, ſhould be ceded to Staniſlaus, king of Poland, and father-in-law to Lewis XV. and after his deceaſe both duchies, together with the abſolute ſovereignty of them, ſhould for ever belong to the crown of France. On the other hand, the emperor Charles VI. engaged in return to cede the great duchy of Tuſcany to his ſon-in-law Francis Stephen, the late emperor, to atone for his loſing Lorrain. This was ſettled in 1738, and the following year Staniſlaus took actual poſſeſſion of the duchies of Lorrain and Bar, and Tuſcany fell to the duke of Lorrain.

The titles of the dukes of Lorrain are theſe: S. by the grace of God, duke of Lorrain and Mercœur; king of Jeruſalem and Marchis; duke of Calabria, Bar, and Gueldres; margrave of Pont a Mouſſon and Nomeny; and count of Provence, Vaudemont, Blamont, Zutphen, Saarwerden, and Salem. From theſe titles may be ſeen not only the countries the duke actually poſſeſſes, but likewiſe their pretenſions. The eldeſt ſon, during the lifetime of his father, is ſtiled count of Vaudemont, and alſo writes himſelf, while unmarried, margrave of Pont a Mouſſon; but after his marriage he aſſumes the title of duke of Bar. The antient houſe of Lorrain, by virtue of a treaty concluded in 1736, retains all the titles, arms, and privileges, with the rank and quality of ſovereign princes, which it formerly enjoyed, yet without any claim to the countries ceded by the peace.

The moſt remarkable places in the duchy of Lorrain are the following: 1. Nancy, the capital of the duchy, and the antient reſidence of the dukes, is ſeated in a delightful plain near the river Meurte, ſeventy five miles to the weſt of Straſburg, and is divided into the Old and New Town. The former is both the ſmalleſt, and makes the meaneſt appearance, it being built with narrow ſtreets; but in it ſtands the palace, which was begun by duke Leopold Joſeph; yet only the main body is finiſhed. The ſpacious long ſquare, or wide ſtreet before, has a fine appearance.

In the palace are eighteen very exquiſite pieces of tapeſtry, repreſenting the atchievements of Charles IV. duke of Lorrain. Here are alſo ſhewn the ſabres of two Burgundians, who were killed with Charles the Bold; and likewiſe that duke's helmet, lined with red velvet, and a yellow creſt on the top. This helmet uſed to be carried every year in proceſſion by the captain of the Swiſs, while two other Swiſs carried the ſabres. Near the palace is a beautiful garden upon one of the baſtions, from which there is a very fine proſpect. Adjacent to this garden ſtands the opera-houſe, which was built by Bibienia, an Italian architect, who alſo built the theatre at Vienna. This houſe is not remarkable for its ſize, but extremely well contrived, and on each ſide of it is a good tribuna, which is a great ornament to it.

In the New Town, which is larger, and contains broad and ſtrait ſtreets, are ſeveral beautiful houſes; but, according to the faſhion of this country, they are generally low. In this city are three pariſh and three collegiate churches, with two abbies, ſeventeen convents, one college, one hoſpital, an academy of ſciences, and one commandery of the knights of Malta. Among the collegiate churches is the new ſtately cathedral, which is immediately ſubject to the pope. This is a magnificent building, it being adorned with two towers and a cupola after the Italian taſte.

The chapter conſiſts of a primate and ſixteen canons. The duke nominates the primate without conſulting the canons. In the collegiate church of St. George ſtands not only the monument of Charles the Bold, duke of Burgundy, who was ſlain in 1476, but alſo the tombs of the antient dukes of Lorrain. The latter dukes are interred in the church of the Capuchins. The city was heretofore fortified, but the works of the Old Town now only remain, the reſt of the city having been diſmantled by the peace of Ryſwic.

The ſmall, but very antient town of Luneville, ſtands on the river Verouze in a low marſhy country, twelve miles to the ſouth-eaſt of Nancy. It was once a fortified town; is at preſent the capital of a provoſtſhip, and has a fine palace, in which not only the two laſt dukes of Lorrain chiefly reſided, but was the reſidence of king Staniſlaus, until the year 1755, when the right wing of the palace was entirely burnt down. The gymnaſium in this place is altered to a foundation for cadets, one half Lorrainers, and the other Poles. In this town there is alſo an abbey, with a commandery of the knights of Malta, and three convents.

At a few miles diſtance from Luneville is Beaupré, an abbey of proteſtant Benedictines, but they follow the Ciſtercian rule of St. Benedict. It is ſeated in a delightful country, and has an abbot, nine prieſts, nineteen religious, and twenty-three lay-brothers, with eighty thouſand Lorrain livres annual revenue.

Barr, or Barrois, was antiently an earldom, ſo called from the caſtle of Bar, erected in the year 964 by Frederic I. whom the emperor Otho created earl of Bar.

The principal place in this diſtrict is, the Bar-le-Duc, the capital of the country, ſeated on a riſing ground on the banks of the river Ornain, about forty miles to the weſt of Nancy. It is a handſome well-built city, and contains a ducal palace, two chapters, one pariſh-church, one priory, ſeven convents, and an hoſpital.

Metz conſiſts of the countries of Meſſin, the French Barrois, La Saare, and French Luxemberg. The principal

rivers in this government are, 1. the Maese; 2. the Moselle, which rises in one of the Wasgau mountains, and is constantly navigable from Metz, discharging itself into the Rhine. 3. The Saone, which falls into the same river. 4. The Meurte, which rises in the Wasgau chain, and runs into the Moselle. 5. The Saare, which runs into the same river, 6. The Orney or Ornain.

The country round the city of Metz, called the Messin, is but indifferently fertile, and produces little wheat. It was antiently a part of the kingdom of Austraria, of which Metz was for a long time the capital, and the usual residence of the king. When the children of Charles the Great, and Lewis the Pious, divided the dominions of that crown, the kingdom of Lorrain rose out of the remains of that of Austraria; and towards the end of the second royal line of France, Metz, Toul, and Verdun, three principal cities, shook off the yoke, and, to secure their freedom, put themselves under the protection of the emperor. The power was divided between the bishop and the magistrates; but the latter, by the assistance of the people, obtaining the superiority over the former, the bishop had no other power in the city of Metz, and the country of Messin, than a share in the election of the magistrates, and in the administration of the oath of office. The magistrates enjoyed an unlimited authority in the city and country of Messin, and the bishop in the domains of his bishopric on this side the Vis; though in certain cases appeals lay to the imperial chamber, which they acknowledged as the supreme power of the empire. Metz, Verdun, and Toul, put themselves, in 1552, under the protection of France, which kept possession of these three cities under the name of the protected district, until the three bishoprics were actually transferred to France, in 1648, by the treaty of Westphalia.

The capital town, Metz, lies between the Moselle and Seille, which here unite their streams; and is situated twenty-eight miles to the north of Nancy. The Old Town is large, but the streets are narrow; and though the houses are built in the old taste, they are handsome structures. The New Town is likewise large, and much more beautiful than the former. Besides the cathedral, this city contains three chapters, sixteen parish churches, six abbies; and as many Jews are here, these people have a synagogue. The bishop, who stiles himself prince of the Roman empire, is suffragan to the archbishop of Treves, and has a diocese of six hundred and thirteen parishes, with a revenue of one hundred and twenty thousand livres (five thousand two hundred and fifty pounds sterling), out of which he annually pays to the court of Rome six thousand florins. Among its fortifications are three citadels. Here are a parliament, an intendency, a chamber of accompts, and imposts, a mint, a county and forest court, besides other public offices.

We must distinguish the Messin from the bishopric of Metz and its district, which is a long, but irregular tract of land, the lord of which is the bishop; but he has been deprived of his temporal jurisdiction, which chiefly belongs to the duke of Lorrain, particularly the salt works, in lieu of which the bishop receives thirty thousand livres (one thousand three hundred and thirteen pounds sterling,) and four hundred bushels of salt, which is annually delivered into the bishop's magazine by order of the duke, or the French king.

The new town and fortification of Sare-Lewis, was begun on the river Sare in 1688 by Lewis XIV. and finished about four or five years after. This town, with a district belonging to it, has been ceded by the duke of Lorrain to France. It is situated about thirty-two miles to the north-east of Metz. Its streets are regular, and the fortifications form a regular hexagon. It is the seat of the county court, and contains one parish-church with two convents.

The territory of Verdun, which extends along the Maese, has only one city of the same name, but there are in it many large towns and villages.

Verdun, the capital of the country, is situated about thirty-eight miles to the north-west of Nancy; it is the see of a bishop, and has a provincial and a manor court. It consists of three parts, namely, the Upper, Lower, and New Town; and, besides its other fortifications, is defended by a fine citadel. This was formerly an imperial city, but in the year 1552 the inhabitants put themselves under the protection of France, and in 1648 fell entirely under the power of that monarchy. The bishop, before the city and district were annexed to the crown of France, was a prince of the empire, and still assumes that title, as also count of Verdun: the archbishop of Treves is his metropolitan. His diocese consists of one hundred and ninety-two parishes, his revenue is fifty thousand livres (two thousand one hundred and eighty-eight pounds sterling), and he is taxed to the court of Rome four thousand four hundred and sixty-six florins. Besides the cathedral, there are in this city one collegiate and nine parish-churches, six abbies, and a college of Jesuits.

Toulois, a small earldom, is hemmed in by Lorrain; and, together with the city of Toul, and the other bishoprics of Metz and Verdun, put itself, in 1552, under the protection of France, which in 1648 obtained entire possession of the country.

The principal town in this earldom is Toul, the see of a bishop; it is seated on the Moselle, over which is a fine stone bridge, with a regular fortification. It is situated ten miles to the west of Nancy, has a provincial and district court, and was formerly an imperial city. Its bishop was a prince of the empire, which title, together with that of Toulois, he still assumes: he is suffragan to the archbishop of Treves, and his diocese contains one thousand four hundred parishes; yet his revenue is little more than seventeen thousand livres (seven hundred and forty-four pounds sterling), and he pays two thousand five hundred florins to the court of Rome. There are in this city a fine cathedral, one collegiate and four parish-churches, three abbies, two priories, seven convents, one seminary, one commandery of the knights of Malta, and two hospitals.

SECT. IV.

Containing Descriptions of the Province of PICARDY; also of the Government of CHAMPAGNE and BRIE, BURGUNDY, and LYONNOIS; their Situation, Extent, Produce, Rivers, Commerce, principal Cities, Inhabitants, &c.

THE province of Picardy is long and narrow, it being usually compared to a bent arm, and in this figure is nearly one hundred and fifty miles in length, but not above forty in breadth, and in many places not above twenty. It is bounded, on the south, by the Isle of France; on the west, by Normandy and the English channel; on the east, by Champagne; and, on the north, by Hainault, Artois, and the Straits of Calais. This is for the most part a plain country, and produces wine, fruit of all kinds, plenty of corn, and great quantities of hay: they have some pit-coal, but it is not so good as that of England: wood being scarce, most of the inhabitants burn turf instead of it.

The following are the principal rives in this province; viz. 1. The Oise, which has its source in Picardy, on the confines of Hainault, and, after receiving several rivers, becomes navigable at La Fere, and falls into the Seine at Conflans. 2. The Somme, the whole extent of which is confined to Picardy; it becomes navigable at Bray, and after receiving several small rivers, divides into twelve channels, which are afterwards united, when it falls into the British channel. 3. The Lys, which falls into the Scheld. 4. The Canche, which falls into the British channel below Estaples. 5. The Scarpe, which falls into the Scheld. 6. The Deule, which was formerly no better than a brook, but now by means of canals and sluices is become a considerable river. 7. The Lanthia, which falls into the British channel. 8. The Aa, which is made navigable at St. Omers, by means of sluices, and at last discharges itself into the channel.

This province has a flourishing trade, owing to its situation on the sea, the many navigable rivers and canals it contains, and the industry of the inhabitants, who make beautiful silk stuffs, coarse linen, woollen stuffs, lawn, and soap; they also carry on a large trade in corn and pit-coal. In the government of Calais and Boulogne are annually brought up five or six thousand colts, which being afterwards turned loose in the pastures of Normandy, are sold for Norman horses. Here are four bishoprics, two provincial courts, two governments, five courts of Admiralty, four forest manors, and four lordships. Here are also very advantageous fisheries on the coast.

This province is divided into Upper, Middle, and Lower Picardy, and is again subdivided into four deputy-governments, the principal places in which are the following: viz.

The town of Amiens, in latin Ambianum, the capital of Picardy, and of the earldom of Amienois; it is seated on the Somme, sixty-five miles to the south of Calais, and eighty to the north of Paris. It appears very delightful from the largeness of the streets, the beauty of the houses, and

J. H. Grimm inv.

F. M. Le Maitre sculp.

The BEGGARS asking Alms of Sterne, at MONTREUIL, in France.

Published by J. Cox Hogg N.º 9 Paternoster Row

and the extent of the ſquares, in two of which ſeven fine ſtreets meet. On the ramparts are planted two rows of trees, which form a very agreeable walk. The river Somme enters the city in three different channels, through the ſame number of bridges; ſo that theſe unite again, after watering ſeveral parts of the town.

In this city is one of the fineſt and beſt embelliſhed cathedrals in all France: it is dedicated to the virgin Mary; the pillars, choir, chapels, tombs, and paintings, are particularly adorned, and more eſpecially the principal entrance, which is flanked with two lofty towers, on which are placed ſeveral ſtatues. Among other relics, they pretend to have the heart of John the Baptiſt. Here is alſo a collegiate church, a chapter of St. Nicholas, fourteen pariſh churches, ſeveral abbies, fifty-five priories, ſeven hundred and fifty reftories, one hundred and three chapels of eaſe, and forty-eight communities. The annual revenue is thirty thouſand florins, (one thouſand three hundred and thirteen pounds ſterling) out of which four thouſand nine hundred florins are paid to the court of Rome. Here are the ſeat of a preſidial court, an independent bailiwic and provoſtſhip, an office for the finances, and a mint. The inhabitants of this city and the neighbouring villages make a conſiderable quantity of black and green ſoap, and alſo carry on a manufacture of ferrets.

The town of Abbeville, or Abbot's Town, is the capital of Ponthieu, a diſtrict of Picardy, and is ſeated twenty miles to the north-weſt of Amiens, and fifty-two to the ſouth of Calais, in a very delightful plain on the Somme, which divides itſelf into ſeveral branches, and parts the city into two main diviſions, the one towards the Low Countries, and the other towards Normandy. The tide here flows up the Somme, to the height of about ſix feet, by which means, and its ſituation, it is rendered a commodious port; it being but fifteen miles from the Engliſh channel. This town, beſides the Somme, is alſo watered by the rivulets of Scardon, Sottins, and Corneille, or Tauiere.

Reſpectable as this place is at preſent, it was originally no more than a farm or manor belonging to the abbey of St. Requier, from which it had its name: it afterwards became a borough, from the concourſe of people who came and ſettled in it. It is now well fortified, and encompaſſed with walls, which are flanked with baſtions, and large deep ditches. The houſes are moſtly of timber, old and meanly built; it is likewiſe extremely dirty, for want of a good pavement; but, next to Amiens, is the moſt populous place in all Picardy.

As the town of Abbeville is conveniently ſituated for commerce, it carries on a great trade in corn, oil, hemp, flax, cordage, and ſoap. The woollen manufactory eſtabliſhed here in 1665 by Mr. Roberts, a Dutchman, has ſucceeded ſo well, that at preſent its cloths are little inferior in fineneſs and goodneſs to thoſe of England. Here are alſo made very beautiful barragons, together with mocades, a kind of carpets, dimity, pluſh, coarſe linen, ſpun wool, and fire-arms. There is in this town a collegiate church, dedicated to St. Ulfranc, which is a lofty ſtone building, fourteen pariſh-churches, fifteen convents, a commandery of the order of Malta, and a college; here are alſo a provincial court, baliage, foreſt-court, court of commerce, court of admiralty, and a ſalt work.

Montreuil, on the Couch, extends three leagues on the Britiſh channel; it contains about five thouſand inhabitants, and has a pretty briſk trade. The peaſants round this ſpot ſeem to ſuffer great poverty. We cannot determine how proper the land may be for cultivation, but it is certainly at preſent very little improved thereby, for all ſeems a deſart.—No ſooner does a carriage ſtop, than the cottages pour forth ſwarms to crave charity: young and old all join in the chorus, "Charite, pour l'amour de Dieu;" that is, "For God's ſake beſtow your charity." The celebrated Mr. Sterne, in his Sentimental Journey, tells us, That he viſited this place; and at his departure, diſplayed much generoſity in relieving a number of beggars, who, ſurrounding him, ſolicited his charity with the moſt clamorous importunity. Children are here very early taught the art of getting money without labour; and young girls of ſixteen years and upwards employ entreaties as well as ſmiles to draw a ſou from the pockets of ſtrangers.

Calais, in Latin Caletum, is ſeated in a marſhy plain on the coaſt of the Britiſh narrow ſea, called from thence the ſtreight of Calais, and in French le Pas de Talais, the paſs or paſſage, becauſe it is the paſſage into England. It is three leagues diſtant from Gravelines, and the confines of Flanders to the weſt, ſeven from Boulogne to the north, and about as many from Dover and the neareſt ſhore of England to the ſouth-weſt. It is reported, that Baldwin IV. ſurnamed the Bearded, count of Flanders, firſt built the port, and that Philip, count of Boulogne, cauſed the town to be ſurrounded with walls, which before was only a ſimple borough. However, it is at preſent a conſiderable mart, and a place of ſtrength. Its figure, including the citadel, is an oblong ſquare, the two long ſides of which are each about two hundred and twenty perches long, and the two ſhorteſt about ninety. One of the largeſt ſides is towards the ſea, and very well fortified; the other is towards the land, and is fortified with baſtions lined with ſtones, covered with half-moons, and deep ditches nine or ten perches broad, and which can be filled either with ſea-water, or with freſh water, according as it is proper. The ſhort ſide, which is oppoſite to the fort of Nieulai, is defended by being laid under water. The other ſide, which is called the attack of Gravelines, is better fortified ſtill. This whole city is encompaſſed by a good covered way. Fort Nieulai is a piece of fortification perfect in its kind; it has four baſtions, and from thence one can in leſs than four and twenty hours time lay all the country about Calais under water, and prevent a circumvallation.

The citadel of Calais is one of the greateſt ever built: it has ſtill its ancient circuit and ditches; but the Chevalier de Ville has ſurrounded it with a new incloſure fortified with three irregular baſtions: that citadel is ſo advantageouſly ſituated, that it commands not only the city and port of Calais, but alſo all the adjacent country. There is only one paſſage to the town over a cauſey, commonly called the bridge of Nieulai. Ships enter into the port by a long canal, made by order of Lewis XIV. between two moles, at the head of which there are two horn-works, defended each by an half-moon, and encompaſſed with a wall, a deep ditch, and a covered way, after the manner of marſhal de Vauban. This port is very happily ſituated, but yet it has ſeveral inconveniencies; for no veſſel can enter into it without running a great danger, whether it comes along the eaſt, or along the weſt mole. There is here no road for the ſhips to ride at anchor. The canal of Calais is a work very uſeful to the inhabitants; for by that means one can go very eaſily by water from Calais to St. Omer, Gravelines, Dunkirk, Bergues, and Ypres. Notwithſtanding the convenient ſituation of Calais with regard to England and Holland, yet it is not ſo populous as might be expected, for it is reckoned to contain but five thouſand inhabitants. Here is but one pariſh church, the altar of which is all wrought marble, and its dome extremely magnificent; there are alſo four convents. A packet-boat ſails regularly twice a week from Dover to Calais, and back again.

Edward III. king of England, took Calais from the French in the year 1347, and after the Engliſh had poſſeſſed it above two hundred and ten years, the duke of Guiſe retook it in January 1558. By the treaty of Cateau-Cambreſis, it was agreed that Calais ſhould continue in the hands of the French during eight years, after which it was to be reſtored to the Engliſh: that term being expired, queen Elizabeth demanded it; but the chancellor de l'Hopital refuſed to reſtore it, under pretence that during the firſt religious war in France, which began three years after the peace of Cateau-Cambreſis, the Engliſh had ſeized Havre-de-Grace, by which means they had violated the treaty, and forfeited their right to Calais, which the French kept accordingly, though the Engliſh did not keep Havre-de-Grace, which was retaken by the French. Albert, arch-duke of Auſtria, and governor of the Low Countries, made himſelf maſter of Calais in the year 1596, and it was reſtored two years after to the French king Henry IV. by the articles of the peace at Vervins.

The next remarkable town is that of Boulogne, the antient Geſoriacum, or Giſoriacum, and ſince Bononia: it is the capital of a diſtrict called the Boulonnois, a particular government entirely independent of the governor-general of Picardy. This city ſtands upon a hill, ſixteen miles to the ſouth-weſt of Paris. It is divided into the Upper and Lower Town: the former is well fortified with a ſtrong citadel, and adorned with ſeveral public places and fountains; as alſo a palace, where juſtice is adminiſtered; a cathedral church, dedicated to the Virgin Mary, a parochial church of St. Joſeph, an abbey of St. Vilemar, and ſome other monaſteries; a ſeminary for the education of thoſe who deſign to take orders, and a magnificent hoſpital, built by the care and at the expence of the family of Aumont. The Lower Town is not inhabited by ſo many perſons of quality as the other, but it is larger and more conſiderable for its trade; it extends along the port at the mouth of the river Liane. The harbour is very incommodious,

modious, and the road before Boulogne extremely bad, no veſſels being able to keep there, unleſs the wind blows from ſome point between the north and the ſouth-eaſt. With all other winds the ſea is exceſſively rough and boiſterous. Here ſtood formerly a watch-tower, called La Tour d'Ordre, the Tower of Order, and by the Engliſh, the Old Man, ſaid to have been built by Julius Cæſar, and repaired by the emperor Charles the Great; but being neglected, it is fallen down, and they have built in the room of it a ſmall fort for the defence of the harbour. The epiſcopal ſee, under the metropolitan of Rheims, was eſtabliſhed here by pope Paul IV. after the deſtruction of Teroüenne. The dioceſe comprehends not only the governments of Boulonnois, Calais, and Ardres, but alſo part of Artois, and has within its diſtrict two hundred and ſeventy-ſix pariſhes, and an hundred and forty-ſix chapels of eaſe. The livings ſituated in Artois pay no tenths. Lewis XI. did, in the year 1478, ſurrender this county to the Virgin Mary, declaring that, for the future, he and his ſucceſſors ſhould hold it from her immediately, as her vaſſals, paying her for homage a golden heart at their acceſſion to the crown, in conſequence of which Lewis XIV. paid twelve thouſand livres for himſelf and for his father Lewis XIII. The city of Boulogne, together with the adjacent territories, was formerly ſubject to the dominion of its own counts, of great reputation, from whom were deſcended Godfrey of Boulogne, and his brother Baldwin, kings of Jeruſalem; but it was united to the crown of France by king Philip Auguſtus, in the year 1209. Boulogne was taken by Henry VIII. king of England, in the year 1544, and afterwards reſtored for a ſum of money to the French king Henry II. by a treaty of peace in 1550. This city has a ſeneſchalſhip, compoſed of a ſeneſchal, a preſident, a lieutenant-general, a lieutenant-criminal, an aſſeſſor, three counſellors, a king's advocate, and a king's attorney, a deputy-attorney, and a recorder. There lies an appeal from the ſentence of this court to the parliament of Paris.

Champagne is bounded, on the north, by Hainault and part of the biſhopric of Liege; on the eaſt, by Luxemburg and Lorrain; on the ſouth, by Burgundy; and, on the weſt, by the iſle of France and Picardy: it being one of the moſt conſiderable provinces in the whole kingdom. This province extends from the weſt to the ſouth-eaſt, or from Lagny to Bourbon, forty-ſix leagues in length, and from ſouth to north, or from Ravieres to Rocrois, about fifty-four. It derives its name from the large plains in its centre, but its borders are full of foreſts, hills, and mountains.

This country is particularly famous for its wine, which is exported in great quantities; it alſo produces plenty of grain; and the natural commodities in which the inhabitants trade are corn, wine, iron, wood, and cattle, with hay, woollen and ſilk ſtuffs, linen, &c.

The Meuſe, or Maeſe, which receives its ſource near the village of Meuſe; the Seine; the Maine, which riſes in Baſſigny; the Aube, which has its ſource on the frontiers; and the Aiſne or Aine, are its principal rivers.

Here are two archbiſhoprics and four biſhoprics. The country is governed by the parliament, the chamber of accompts, and exchequer of Paris, except the territory of Sedan, which belongs to the parliament of Metz. It has ten provincial and diſtinct courts, ſeveral foreſt-courts, two courts of mintage, and a generalite. The military government of this province is lodged in a governor, and four general-lieutenants, under whom are four hereditary ſub-governors.

The principal cities are the following, viz. 1. Troyes, the ancient Auguſtomanni, or Auguſtobona, the capital of the province, is ſeated in Lower Champagne, on the river Seine, about ſeventy miles to the ſouth-eaſt of Paris, and is pretty large, but far from being ſo flouriſhing and populous as formerly. It has fourteen pariſh-churches, including the cathedral, and two collegiate churches, with four abbies, ten convents, one college, one ſeminary, and one hoſpital. The cathedral, which is dedicated to St. Peter, is a very noble ſtructure; its portico is in a fine taſte, but the tower on the left ſide of it has been left unfiniſhed. The city is ſurrounded with walls, but they are not kept in good repair; and formerly it had three caſtles, from which it is ſuppoſed to have obtained its preſent name; but there are now few remains of them left. The biſhop of Troyes is ſuffragan to the archbiſhop of Sens; his dioceſe contains three hundred and ſeventy-two pariſhes, ninety-eight chapels of eaſe, with ſeventeen abbies; his yearly revenue is fourteen thouſand livres, (ſix hundred and thirteen pounds ſterling) and his taxation at the court of Rome is two thouſand florins. This city ſtill carries on a tolerable trade, eſpecially in linen, flax, hemp, and cotton fuſtians, canvas, wax and tallow candles, needles, ſerges, tapeſtry, &c.

2. Chalons is a large city, ſeated on the Maine, in a ſmall territory called the Chalonois, ninety-five miles to the eaſt of Paris. Here are a cathedral, two chapters, eleven pariſh churches, three abbies, nine convents, and there was till lately a college of jeſuits. The biſhop, who is alſo a count and peer, is ſuffragan to the archbiſhop of Rheims, and in his dioceſe are comprehended three hundred and four pariſhes, ninety-three chapels of eaſe, with nineteen abbies. His yearly revenue is twenty-four thouſand livres, (one thouſand and fifty pounds ſterling) and his taxation at Rome three thouſand florins. The inhabitants carry on a conſiderable trade in woollen ſtuffs and ſhalloons, the latter of which took their name from this place.

3. Rheims, the ancient Durocortorum, and Civitas Remorum, the capital of a diſtrict called Rheimois, is ſituated ſixty-two miles to the north of Troyes, and eighty-five to the north-eaſt of Paris, and is one of the moſt ancient and celebrated cities in the whole kingdom. It is about four miles in circumference, and contains ſeveral fine ſquares, large ſtreets, well built houſes, and magnificent churches. Among theſe is the cathedral of our Lady, which is a fine ſtructure, though of Gothic architecture; the principal door is remarkable for its workmanſhip, and the great altar, at which the coronation of the kings of France is performed, is plated with gold. The treaſury of this cathedral muſt be very great, as every king, at his coronation, makes an offering here. The book of the goſpel upon which the king takes the coronation oath, is ſaid to be written in the Sclavonic tongue, and the cover is of gold ſet with gems.

The archbiſhop of this place is the firſt duke and peer of France, perpetual legate of the ſee of Rome, and primate of all Gallia Belgica. He alſo crowns the king; he has an annual revenue of fifty thouſand livres, (two thouſand one hundred and eighty-eight pounds ſterling) and his taxation at the court of Rome is four thouſand ſeven hundred and fifty florins. Here are, beſides the cathedral, three collegiate churches, five abbies, nine convents, a commandery belonging to the order of St. Anthony, a commandery of the knights of Malta, and, till the jeſuits were expelled, they had here a large ſeminary, and a fine college. The abbey of Benedictines of St. Remy in this city is one of the nobleſt belonging to that order in all France; and on the altar of its church is kept the holy phial, which at the baptiſm of Clovis, in 496, by biſhop Remigius, they pretend was brought from heaven by a dove, at the prayer of that ſaint, the crowd being ſo great that he was unable to get to the font with the uſual oil. This phial is of a dark, red glaſs, about the length of one's little finger, and nearly reſembles in ſhape a ſmall Hungary water bottle. It has a gold ſtopper, and is fixed in a perforated ſquare caſket, faſtened on a ſilver ſalver, it being ſeen only through a cryſtal cover placed over the caſket. The oil is ſaid to be grown dry; but in every unction of a king of France a ſmall quantity of it is taken out, and mixed with the oil prepared for the unction. Among the other public buildings, are three ſpacious hoſpitals. Here are ſeveral remarkable remains of Roman antiquities, particularly three gates of the city, which to this day bear the names of ſo many pagan deities, namely, of Mars, the Sun, and Ceres. The univerſity here was founded in the years 1547 and 1549. This city carries on a conſiderable trade in wine, woollen and ſilk ſtuffs, and gingerbread.

4. The town of Sens, ſeated on the Yonne, is large, but not very populous, though well ſituated for trade: it is the Agendium of the ancients, and the capital of a diſtrict called the Senonois. This city is the ſee of an archbiſhop, whoſe revenue amounts to fifty thouſand livres, (two thouſand one hundred and eighty-eight pounds ſterling) and its taxation to the court of Rome is ſix thouſand one hundred and ſixty-ſix florins. Here are ſixteen pariſh-churches, five abbies, and nine convents. The cathedral, which is dedicated to St. Stephen, is admired for its ſtately front, being adorned with various figures, and lofty towers, as alſo on account of its rich chapels, antient tombs, and the magnificence of the high altar, where is a table of gold enriched with precious ſtones, on which are repreſented in relievo the four evangeliſts, together with St. Stephen. Here is a provincial diſtrict and foreſt court, together with a ſalt office. Several councils have been held in this city, one of the moſt famous of which is that in the year 1140.

5. The town of Meaux, capital of a district called Brie Champonoile, is seated on the river Marne, twenty-five miles to the north-east of Paris, and contains a provincial and district court, a salt-office, &c. It has also a general lieutenant, and a particular governor. Besides the cathedral, there are in this city one chapter, five abbies, several convents, one alms-house, and an hospital. The bishop is suffragan to the archbishop of Paris, his diocese is divided by the river Marne into two large archdeaconries, to each of which belong three rural deanries; under these are nine abbies, seven chapters, and two hundred and twenty-seven parishes. The bishop's annual revenue amounts to twenty-two thousand livres, (nine hundred and sixty-three pounds sterling) and he pays two thousand florins to the court of Rome.

The government of Burgundy, called by the French Bourgogne, derives its name from the Burgundians, who, towards the beginning of the fifth century, settled in Switzerland and Franche Comté, whence spreading themselves towards the river Soane and Rhone, they erected a kingdom of their own, which was gradually reduced by the kings of the Franks. This country extends from east to west above thirty French leagues, and from north to south about forty-five; being bounded, on the north, by Champagne; on the west, by the Borbonnois and Nivernois; on the south, by Lyonnois; and, on the east, by Franche Comté. It produces excellent wine, and is very fertile in corn and fruit.

The chief rivers in this country are the Seine; the Dehune, which runs into the Soane; the Brebince, or Bourbince, which issues out of the lake of Longpendu; also the Armançon, the Ouche, and Tille, with several springs of a mineral quality.

The states of the country, consisting of the representatives of the nobility, clergy, and commons, meet regularly every three years, by writ from the king, in order to raise the sums required of them. The district and provincial courts are subordinate to the parliament of Dijon, which was erected in 1476; except the provincial courts of Magon and Auxerre, and the district of Bar-sur Seine, which are subject to the parliament of Paris. There are four bishoprics in this government.

The city of Dijon, in Latin Divio, capital of the country and government of Burgundy, is situated in the Dijonois, about one hundred and forty miles to the south-east of Paris. It is a pretty large city; the streets are well-paved, broad, and strait; the houses are handsome, and the churches and squares beautiful. Here are seven parish-churches, four abbies, three large hospitals or alms-houses, several convents, with a chapel, in which is kept a supposed miraculous host; they have likewise an academy of sciences, and in 1723 a college of law was erected here.

This city is the residence of the governor, the parliament, an intendancy, a taillage-office, a provincial, supreme, and particular court, a salt-office, &c. The bishop is suffragan to the archbishop of Lyons, and enjoys a revenue of eighteen thousand livres, (seven hundred and eighty-eight pounds sterling) and his taxation to the court of Rome is one thousand two hundred and thirty-three florins. The neighbouring country is fruitful, pleasant, and watered by the rivers Suson and Ouche; the first of which is but a rivulet, and, after running through the city-moat, passes through the city itself, where it falls into the Dijon. The walks before the city are a quarter of a league in length, planted with three rows of Linden-trees, and terminated by a delightful grove.

On an eminence, near three hills on the river Arux, stands Autun, the Augustodunum of the antients. It is about a mile in length, and as much in breadth; and consists of the Upper City, which is commanded by mount Cenis; and the Lower City, in which is the citadel, and where are held the provincial tribunal, a forest court, a salt-office, and several other courts. The bishop of this place is suffragan to the archbishop of Lyons, though he is president of the assembly of the states of Burgundy, and has a diocese of six hundred and eleven parishes, and fourteen abbies under him. His revenue amounts to seventeen thousand livres, (seven hundred and forty-four pounds sterling) and he pays four thousand eight hundred florins to the court of Rome. In the midst of this city is an open place called the Field of Mars; and there are still the remains of three pagan temples, one of them dedicated to Janus, and another to Diana. Here are likewise two antient gates of excellent workmanship, which some have taken for triumphal arches, with a circus, and the remains of a pyramid; which last, to all appearance, has been a tomb. In this city, besides a cathedral, are five abbies, two seminaries, two priories, one collegiate, and twelve parish-churches; here are also six convents, particularly a fine chartreuse, situated in the suburbs, in the church of which lie the last dukes of Burgundy; and two hospitals.

The city of Auxerre, called in Latin Antissidorum, is the capital of the earldom of Auxerrois, stands on a hill near the river Yonne, ninety-two miles to the south of Paris. It has a provincial and forest court, a chamber of tithes, a salt-office, &c. and is the see of a bishop, suffragan to the archbishop of Sens; his diocese contains two hundred and thirty-eight parishes, and he has a yearly revenue of thirty-five thousand livres, (one thousand five hundred and thirty-two pounds sterling) and he is taxed to the court of Rome four thousand four hundred florins: his palace is a most noble structure. There are also, in this city, two hospitals, a collegiate and eight parish-churches, five abbies, six convents, and one commandery of the knights of Malta. A good trade is carried on here, by means of the Yonne.

The last city we shall describe, in this government, is Trevoux, the ancient Trivortium, the capital of the principality of Dombes, and of the castellany of Trevoux: it is seated on a hill by the Saone, one hundred and eighty miles to the south by west of Paris, and is the residence of a governor, a parliament, a district-court, and a mint. It has one chapter, three convents, and an hospital. It is said to have derived its name from its situation on one of the highways which Agrippa made into Gaul, and which here divides into three branches.

Trevoux, with the little principality of Dombes, belong to the Duke of Maine, and were declared by Lewis XIV. an absolute principality. Hence the prince of Dombes has the power of life and death, can confer nobility, coin money, and impose what taxes he pleases on his subjects, though he has his own parliament. His certain revenue is about one hundred and fifty thousand livres, (six thousand five hundred and sixty-three pounds sterling) and this little principality is subject to a governor-general in the name of the prince.

The government of Lyonnois is bounded on the north by Burgundy, on the east it is separated by the Soane and Rhone from Dauphine, on the south it is bounded by Vivarais and Valais, and on the west by Auvergne. It comprehends the three small provinces of Lyonnois, Beaujolois, and Forez; and produces corn, wine, and fruit, particularly an excellent kind of large chesnuts called marrons. The principal rivers are the Rhone, Soane, and Loire; besides several small ones, as the Furan, Azarque, Rhin, Lignon, &c. Here are also a mine of copper and vitriol, with several springs of mineral water.

Besides the governor and general-lieutenant, here are two sub-governors, one over Lyonnois and Beaujolois, the other over Forez. The courts of this government proceed according to the civil law, and appeals from them lie to the parliament of Paris.

Lyonnois is about twelve French leagues in length, and seven in breadth. The capital city, Lyons, in Latin Lugdunum, which is also the capital of the whole government, stands fifteen miles to the north of Vienne, in Dauphine, at the conflux of the Soane and the Rhone; the former runs through a part of the city, and has two bridges of wood, and a narrow one of stone; but the stone bridge over the Rhone is a noble structure. The city is about a fourth part as large as Paris, and is very populous; but most of the streets are narrow. The houses, which are said to amount to four thousand, are generally high and well-built, but disgraced by the ruggedness and mean appearance of their paper windows; and they are said to contain above ninety thousand people.

Here are several fine squares, in one of which is the town-house, the most elegant in Europe, which was begun in 1647, and finished in 1655. It is a large building in the form of an oblong square, and on each side of the front is a wing four hundred and twenty feet in length. In the middle of the front is a tower, with a cupola on the top, and in the angles project two large pavilions. The great gate is adorned with two columns of the Ionic order, and leads into a large hall arched over, where are to be seen the busts of Philip the Fair, Charles VIII. and Henry IV. with the pictures of all the kings of France of the name of Lewis: the roof is also finely painted. Here are likewise the consular chamber, where the provost and the four echevins, or aldermen, usually sit; the hall where the merchants hold their meetings; and in another hall are the pictures of the echevins. Before the house is a handsome square, in which is a large fountain. The cathedral of Lyons is dedicated to St. John, and the chapter consists

of gentlemen of the beſt families. They boaſt of their having formerly had ſeveral kings and princes, who were members of it; particularly in the thirteenth century, when at one time they had the ſon of an emperor, nine ſons of kings, fourteen ſons of dukes, thirty of counts, and twenty of barons. To this chapter belong not only the cathedral, but the churches of St. Stephen and the Holy Croſs.

The cathedral is a large ſtructure, and particularly famous for its clock, which, like that at Straſburg, is celebrated for the variety of its motions, moſt of which have ceaſed; for at every hour a cock at the top clapped his wings thrice, and crowed twice, after which an angel coming out of a door, ſaluted the virgin Mary, and at the ſame time the Holy Ghoſt deſcended, and an image of God the Father gave the benediction. The minute motion had an oval circle, and yet the hand always touched the circumference. Beſides the cathedral are three chapters or collegiate churches, thirteen pariſh-churches, and till lately there were two colleges of jeſuits, the largeſt of which was the moſt ſtately in all the kingdom. This ſtructure is a regular quadrangle, curiouſly painted in freſco, though ſomething defaced on the eaſt-ſide, where the winds from the mountains beat upon it. Over the front door, and over part of the church of that college is an obſervatory, one of the boldeſt pieces of architecture in Europe. Their chapel has a fine altar-piece of lapis-lazuli, and an excellent piece of painting by Blanchard. Their library is a ſpacious and handſome apartment, in which are about forty thouſand volumes; among which are ſome manuſcripts of the bible, but not very antient; but one of the moſt valuable pieces is a very antient manuſcript of Pliny's Natural Hiſtory.

There is a large ſuburb without the gate of St. Juſtus where the bare-footed Carmelites have a delightful convent, with ſpacious gardens, from which there is a fine proſpect of the city: in their church is an altar of agate and lapis-lazuli. The capuchins have alſo the pretended miracles of their ſaint painted on the walls of their cloiſter, among which is one of his paying his apothecary with prayers, inſtead of money. The nunnery of St. Peter is a fine ſtructure, and the pariſh-church of St. Niege is adorned with ſeveral fine pieces of painting by Le Brun. In one of the ſquares ſtands an equeſtrian ſtatue in braſs of Lewis XIV. La Belle Cour is a ſpacious area, and near it are a mall and a delightful walk. The monument of the two lovers ſtands on the other ſide of the Soane, and ſeems to have been ſome Roman building, conſtructed with very large ſtones. The friars in Lyons are very importunate beggars, coming into the chambers of ſtrangers for charity.

Here is a fine arſenal, well ſtored with military implements; alſo three forts, but one of them only is garriſoned, and that ſerves for the priſon of the city. In this city are ſtill to be ſeen ſome remains of Roman antiquities, as baths, aqueducts, part of an amphitheatre, &c.

In this place are an archbiſhopric, an intendency, a mint, with a provincial and other courts. Its archbiſhop is primate over the archbiſhoprics of Rouen, Tours, Sens, and Paris; ſo that appeals lie from them to him. He has alſo ſix biſhops for his ſuffragans, with a dioceſe of ſeven hundred and ſixty-four pariſhes, and a revenue of forty-eight thouſand livres, (two thouſand one hundred pounds ſterling) out of which he is taxed by the court of Rome three thouſand florins; and he has the title of count of Lyons, beſides that of archbiſhop.

Some mountains lie round the city, on which there being ſeveral convents, ſeats, gardens, and vineyards, form a very delightful proſpect.

The inhabitants are, for the moſt part, makers of ſilk, gold, and ſilver laces. Formerly the looms in and about this city amounted to eighteen thouſand; but in 1698, this number was found reduced to four thouſand. It is ſtill, however, in great repute for the above manufactures, particularly for its bombazines, which are admired for their beautiful luſtre; and its trade extends not only over all France, but even to Spain, Italy, Swiſſerland, Germany, and the Low Countries.

The diſtrict of Forez, the next diviſion of this province, is equal in extent to Lyonnois and Beaujolois put together, but has only ſeveral ſmall towns. Its capital is Montbriſon, ſituated on the little river Veziza, ſeventeen miles to the ſouth-weſt of Lyons, and has ſeveral courts of juſtice and public offices: a collegiate church, with ſome other churches and convents are alſo contained in it.

The diſtrict of Beaujolois is ten French leagues in length, and eight in breadth. This is a very fruitful country. Its capital is Ville Franche, which is ſeated on the little river Morgon, near the Soane; and has a collegiate church and an academy of the polite arts, with ſeveral public offices and buildings.

SECT. V.

Deſcribing the Situation, Extent, and Boundaries, Climate, Mountains, Rivers, Minerals, Produce, Trade, Government, Inhabitants, principal Cities and Towns, &c. of the Governments and Provinces, of LANGUEDOC, ROUSILLON, and FOIX, LOWER NAVARRE and BEARNE, GUIENNE and GASCONY, AUVERGNE, LIMOSIN, and LA MARCHE.

THE government of Languedoc is bounded on the eaſt, by the Rhone, which ſeparates it from Provence and Dauphine; on the north, by Lyonnois, Auvergne, and Guienne; on the ſouth, it terminates on the counties of Rouſſillon and Foix, and alſo on the Mediterranean; on the weſt, a part of it is divided by the Garonne from a part of Gaſcony. The eaſtern coaſt, from Agde, as far as the Rhone, is remarkably increaſed, the ſea having retired from it conſiderably as evidently appears on conſulting the accounts of ancient geographers with reſpect to the ſituation of ſeveral of its maritime places, and comparing them with the preſent.

The form of this country is very irregular; however, its extent, from eaſt to weſt, may be computed at about ſeventy leagues; but from north to ſouth, in the narroweſt part, it is between ten and twelve: in the broadeſt part, weſtward, it is almoſt thirty, and to the eaſtward near thirty-two. Along the ſouthern coaſt, which is properly a long valley, extending from Toulouſe to the ſea, it generally blows a weſt wind; though it is ſometimes north, and ſometimes ſouth-weſt. This wind gradually increaſes, and, being cool, refreſhes the country in ſummer. The inhabitants call it Cirs, in conformity to its ancient name Circius: oppoſite to this blows another from the eaſt or ſouth-eaſt, which is called Autun. This is firſt perceived near Narbonne, and at Caſtlenaudari it is very violent: this wind, being hot, cauſes head achs, with loſs of appetite, and ſeems to ſwell the whole body. In the eaſtern part of Languedoc is frequently felt a cold and very ſtrong north wind, which follows the courſe of the Rhone, in the valley through which it runs, from north to ſouth, and is called Biſe, or Black. Sometimes, in direct oppoſition to the latter, blows a ſea wind, which is uſually accompanied with a drizzling rain; but, when dry, has the ſame morbid effect as the Autun in Upper Languedoc: beſides, in the heat of ſummer, from the coaſt of Leucate to the Rhone, ſea-breezes conſtantly ſet in, at nine or ten o'clock in the morning, and, to the great refreſhment of the air, laſt till about five in the evening. It is alſo obſervable, that at the foot of the Pyrenees, near the village of Blaud, in a narrow valley wholly environed with mountains, except towards the north-weſt, and this contains openings two or three hundred paces wide, blows a very cool weſt or north-weſt gale, which chiefly prevails in ſummer, and then only in the night. In clear and warm weather this gale is much ſtronger than in a thick and cold air. In ſummer, it cools the whole valley, and in winter prevents white froſts; and the inhabitants of the valley of Blaud can winnow their corn at no other time than in the night, and it only blows at that time.

This is a very mountainous country, particularly the Cevennes, which are very high and ſteep; yet theſe being, as it were, the head-quarters of the proteſtants, abound in people. Here are lead and iron mines; ſome very beautiful marble is alſo dug out of the quarries, and in ſeveral places in Lower Languedoc are found turquoiſes.

Languedoc is very fertile in corn, fruit, and fine wine; it alſo contains large plantations of olive and mulberry-trees, the latter for ſilk worms, and the former for oil; though this laſt is inferior to that of Provence. They here tread out the corn in the manner practiſed in the eaſt, by cauſing a number of mules and horſes to turn round a circle upon the grain, which is ſtrewed under them, and afterwards alſo tread the ſtraw into ſmall pieces, to ſave the trouble of chopping it. In Upper Languedoc grows a plant called Woad; its root is uſually an inch thick, and a foot or a foot and a half in length, with five or ſix leaves growing from it, that are a foot long, and ſix inches broad. The flower repreſents a croſs, and bears an oblong ſeed, which is ſometimes of a violet, and ſometimes of a yellow colour; but the former is the beſt. It is uſually ſeen in February, and requires a good ſoil, with great care after it begins to ſhoot. When the herb is ripe, it is cut off cloſe

to the ground, and immediately pounded to a paſte, which is made up into cakes or balls; and theſe acquire a very beautiful and laſting blue, when dried in the ſun, and reduced to a powder.

One of the curioſities of this country, though found alſo in Spain and Italy, is the fork-tree. The ſtem is from two to four feet high, when its farther growth is generally checked. At the top of its ſtem grow a conſiderable number of ſtrait ſhoots, which are ſuffered to riſe five or ſix feet, and about the third year are cut into the form of three pronged forks, and in the ſixth, ſeventh, and ſometimes the ninth, when they have completed their growth, are carefully cut off cloſe to the ſtem, and, being put into a hot oven, undergo a ſecond formation.

The principal rivers are, 1. The Rhone; 2. The Garonne, which iſſues from the Pyrenean mountains; 3. The Loire, which iſſues from the Vivarez, and falls into the Mediterranean; 4. The Aude; 5. The Tarne, which ſprings from the Gevaudan; and, 6. The Allier, which riſes in the ſame country. Here are likewiſe ſeveral periodical and medicinal ſprings.

One of the nobleſt works that any country has ever produced, is the royal canal, formed in order to make a communication between the ocean and the Mediterranean ſea, that veſſels might paſs from one ſea into the other, without going round by Spain. Riquet, after employing twenty years in a minute conſideration of every particular, during which he had no other counſellor than his gardener, completed his plan, which he executed between the years 1666 and 1680, in the reign of Louis XIV. This canal begins at the harbour of Lette on the Mediterranean, and traverſes the lake of Thau, and a quarter of a mile below Toulouſe is conveyed into the Garonne by three ſluices. There are in it ſixty-four large ſluices, many of which conſiſt of two, three, and four ſmaller ones, by means of which the water is conveyed into the riſing grounds. The whole is forty French leagues in length, and every where ſix feet deep; ſo that a barge of one thouſand eight hundred quintals may be forwarded to any place upon it; and its breadth, from one bank to the other, is one hundred and forty-four feet.

There is a large reſervoir at St. Ferreol, a quarter of a mile below Revel, between two rocky hills, that are in the form of a half moon: it is one thouſand two hundred fathoms in length, five hundred in breadth, and twenty deep, the whole ſurface being ſix hundred eighty-ſeven thouſand four hundred and thirty-eight feet. Into this baſon of water the rivulet of Laudot, which runs down the hills, is received, and incloſed by a wall two thouſand four hundred feet long, one hundred and thirty-two in height, and twenty-four thick, having a ſtrong dam defended by a ſtout wall of free ſtone. Under the dam runs an arched paſſage reaching to the main well, where three large cocks, of caſt braſs, are turned and ſhut by means of iron bars; and theſe cocks diſcharge the water through mouths as large as a man's body into an arched aqueduct, where it runs through the outer wall, and when got beyond it, goes under the name of the river Laudot; continuing its courſe to the canal called Rigole de la Plain. From thence it is conveyed to another fine reſervoir near Naurouſe, two hundred fathoms in length, one hundred and fifty in breadth, and ſeven feet in depth; and out of this baſon it is conveyed by means of ſluices, as well to the Mediterranean ſea as to the ocean; according as the canal requires it. Though the above cocks remain open for ſome months ſucceſſively, yet there is no viſible diminution of the water in the great reſervoir.

Near Bezieres are eight ſluices, which form a regular and grand caſcade nine hundred and thirty-ſix feet long, and ſixty-ſix high, by means of which veſſels may paſs acroſs the river Orb, and continue their voyage on the canal. Above it, between Bezieres and Capeſtan, is the Mal Pas, where the canal is conveyed for the length of a hundred and twenty fathoms, under a mountain cut into a very lofty arcade, the greateſt part of which is lined with free-ſtone, except towards the end, where it is only hewn through the rock, which is of a ſoft ſulphureous ſubſtance.

At Agde is a round ſluice, with three openings, three different depths of the water meeting there; and the gates are ſo ingeniouſly contrived, that veſſels may paſs through by opening which the maſter pleaſes; an invention that ſtruck the great Vauban himſelf with admiration. The leſſer rivers and ſtreams that might have prejudiced the canal have been carried under it by water courſes, of which there are forty-four, beſides eight bridges. The whole work coſt thirteen millions of livres, (ſomewhat more than half a million ſterling) part of which money was furniſhed by the king, and part by the ſtates of Languedoc.

The king generouſly granted to Riquet, the inventor of this canal, and his male heirs, all the juriſdiction and revenues belonging to it; ſo that the crown does not come into poſſeſſion till the extinction of that line. Ships paſſing on it, for every hundred weight pay twenty ſous, (ten pence Engliſh money) and even the king himſelf pays this toll for military ſtores, &c. ſent by way of this canal; ſo that the revenue, eſpecially in time of briſk trade, is very conſiderable. However, the charges attending it are alſo very great: for the ſalaries of the ſeveral directors, receivers, comptrollers, lieutenants, clerks, and watchmen, annually amount to one hundred thouſand livres, (four thouſand pounds ſterling) beſides the great expence of repairs. The counts of Caraman, deſcendants of the above-mentioned Riquet, are alſo obliged to keep paſſage-boats, which are drawn by mules or horſes; and though there are no paſſengers, they muſt go and come at ſtated times. This is a dangerous coaſt, and alſo in want of good and ſecure harbours.

With reſpect to trade, the city of Montpellier, by means of the river Lez, and the lakes near it, carries on, at the harbour of Cette, the greateſt maritime trade in all Languedoc; but the whole is not very conſiderable. The commerce of this province principally conſiſts of manufactures and other goods. Wine is exported hence to the coaſts of Italy; oil to Switzerland and Germany; and, when the harveſt is uncommonly good, corn to Italy and Spain; dried cheſnuts and raiſins are ſent to Tunis and Algiers; and cloth to the Levant, Switzerland, and Germany.

About the middle of the ſixteenth century, the Reformation made an extraordinary progreſs in this province; but was ſoon followed by civil broils, and all the rage of perſecution, which was carried on here with greater fury than in other parts of France; and Languedoc was the ſcene of continual commotions and cruelties for above an hundred years. But notwithſtanding the torrents of blood that were poured out here, in order to exterminate the Hugonots (and the whole kingdom of France did not exhibit more ſcenes of cruelty than were inflicted on this ſingle province); yet there ſtill continue to reſide in theſe parts many ſecret proteſtants. So ineffectual are fire and ſword to accompliſh the purpoſes of ſuperſtition and bigotry.

Here are great numbers of popiſh clergy, who are alſo very wealthy, there being in Languedoc no leſs than three archbiſhops and twenty biſhops, and the whole eccleſiaſtical revenues amount to twenty-five millions forty-one thouſand eight hundred and fifty-two livres per annum (or, one million one thouſand ſix hundred and ſeventy-four pounds ſterling). It has alſo a great number of inferior courts, ſubject to the ſupreme ones, which are the parliament of Toulouſe, and the chamber of accompts and taxes at Montpellier. The governors of diſtricts here reſemble the bailiffs in the other provinces, and are eight in number. Every diſtrict has a court of juſtice, to which lie appeals from the Vigueries or royal courts. In it is alſo a ſuperior foreſt court, with ſeven dependent on it. The parliament conſiſts of the clergy, the nobility, and the commons, who are called together by the king every October. Under the governor of Languedoc are three general lieutenants, namely, one over Upper Languedoc, the ſecond over Lower Languedoc, and the third over the dioceſes of Niſmes, Alais, Mende, Puy, Viviers, and Uſez. It has alſo nine inferior governors, to each of which a diſtinct department is aſſigned.

The following are the principal places in this province; viz. 1. Toulouſe, or Thoulouſe, the capital of Languedoc, and one of the moſt ancient cities in the kingdom, is ſituated in latitude forty-three degrees thirty-five minutes forty ſeconds, and in one degree ten minutes eaſt longitude, in a diſtrict called the Toulouſain, in a moſt delightful plain on the Garonne, and, next to Paris, is ſaid to be the largeſt city in all France. The ſtreets are moſtly broad, and the houſes built of brick; it is not, however, very populous, and though ſo finely ſituated, its trade is inconſiderable, its ſtaple article being Spaniſh wool. This is chiefly imputed to the vanity of the merchants, who no ſooner acquire a conſiderable fortune than, laying aſide all commerce, they make it their chief aim to obtain a ſeat in the city-council.

In this city are the ſeat of an intendency and receiver's office, of a governor, a provincial court, a royal tribunal, an admiralty, a foreſt-court, a mint, and other public offices;

offices; here alſo is the reſidence of an archbiſhop, and the ſecond parliament of the kingdom. The dioceſe of the archbiſhop contains two hundred and fifty pariſhes, his revenue amounts to ſixty thouſand livres a year (two thouſand four hundred pounds ſterling), and he pays five thouſand florins to the court of Rome.

Though the cathedral is an ancient handſome ſtructure, yet it contains nothing remarkable: in the ſpacious area before it is a fountain, over which is an obeliſk curiouſly wrought. In the church of St. Semin, or St. Saturnin, are ſaid to lie thirty bodies of ſaints, and among them ſeven of the apoſtles, one of whom they pretend to be St. James the Younger, though St. Jago de Compoſtella, in Spain, alſo boaſts of being poſſeſſed of the body of that apoſtle. Near this city ſtands a ſecularized abbey. The church of La Dorade is thus called from a gilded, but now a coal black image of the Virgin Mary, which ſtands on the great altar, and in any time of calamity is the conſtant refuge of the inhabitants. The name of the ſtatuary was Luke, which being marked on the baſe, has made the common people imagine that this image was carved by St. Luke. The church of the Carmelites has a large and magnificent chapel; that of the Dominicans is alſo large and ſplendid. Under the choir of the Franciſcan church is a vault, where bodies dry without mouldering or putrefaction, but become extremely light.

The ſociety of the Blue Penitents in this city, is one of the moſt renowned fraternities in the whole kingdom, having in its regiſters kings, princes of the blood, and eminent eccleſiaſtics. The univerſity of Toulouſe is reputed the ſecond in France, and conſiſts of ſeveral colleges. The four faculties, namely, divinity, law, philoſophy, and phyſic, with the liberal arts, are taught here. Here is alſo an academy of polite literature, founded by royal patent in September 1694; it is compoſed of a chancellor, and forty-two members or fellows, who employ their talents chiefly in Poetry. This is in the room of a ſociety called the Floral Games; and ſtill every year, on the third day of May, they give away four prizes, one gold and three ſilver flowers, to thoſe who diſtinguiſh themſelves by writing the beſt copy of verſes. The above ſociety meets in the town-houſe, which is a ſpacious building called the Capitolium, in which there is a white marble ſtatue of Clementia, who is ſaid to have inſtituted the above-mentioned Floral prizes in the year 1330. The hall of this ſtructure is adorned with the buſts of the illuſtrious and celebrated natives of Toulouſe, as alſo of two gothic kings, ſome accounts of Toulouſe, and ſeveral diſtinguiſhed civilians. Here are preſerved five large parchment folios, finely written and illuminated, being the annals of the city from the year 1288 to the preſent time. Here is alſo an academy of the ſciences and liberal arts.

The ſtone bridge over the Garonne, which is a hundred and thirty-five fathoms long, and twelve broad, reſts on ſeven arches of different magnitudes; but, except the cantons, which are of ſtone, is wholly built of brick. In this city are made bergamo carpets, but of little value, together with ſome ſlight ſilk and woollen ſtuffs.

2. The city of Narbonne, the antient Narbo, is ſixty-four miles to the weſt of Montpellier, ſeated on a canal which paſſes through it, and joins the river Aude. It is a fortified place, and the reſidence of an archbiſhop, whoſe province contains one hundred and forty-four pariſhes, and its revenue amounts to ninety thouſand livres per annum (three thouſand ſix hundred pounds ſterling), and he is taxed nine thouſand florins at the court of Rome. The cathedral, called St. Juſtus and St. Paſtor, is remarkable for its fine organ, and curious paintings, in which are repreſented the raiſing of Lazarus from the dead, the laſt judgment, and other pieces. Here are alſo five other pariſh-churches, the principal of which is the collegiate church of St. Paul, with a college of the fathers of the chriſtian doctrine, and ſeveral convents for perſons of both ſexes. Among the antiquities ſtill to be ſeen here, is a beautiful ſepulchre of white marble, in the garden of the archbiſhop's palace; and in the walls of the court of it, ſeveral ſtones and inſcriptions are placed.

3. The city of Montpellier, in Latin Mons Peſſalanus, is ſeated on a hill by the river Lez, fifty miles to the north-eaſt of Narbonne, and, next to Toulouſe, is the moſt conſiderable city in all Languedoc. Here are many fine houſes; but the ſtreets are very narrow, which is attended with this convenience, that in hot weather they have linen awnings drawn over them, under which a perſon may walk without being incommoded by the ſun. In this city is a chamber of taxes and accompts, with an intendency, a treaſurer's office, a provincial court of juſtice, a ſheriff's court, an independent court, a foreſt court, a mint, &c. The air here is ſo pleaſant and healthy, that numbers of foreigners, and eſpecially of the Engliſh, reſort hither for the recovery of their health, particularly when labouring under hectic diſorders.

The city is adorned with ſeveral ſtately edifices, as the hall of juſtice, the churches of St. Peter and the Virgin Mary; and a ſtrong citadel, flanked with four royal baſtions, which commands the town and neighbouring country. The biſhop of this place is ſubject to the archbiſhop of Narbonne; his dioceſe contains one hundred and ſeven pariſhes; his revenue is thirty two thouſand livres (one thouſand two hundred and eighty pounds ſterling) out of which he pays four thouſand florins to the court of Rome. In the ſquare of Louis the Great, which is without the city, is the pleaſant walk of Peyron, in which ſtands an equeſtrian ſtatue of that monarch in bronze, upon a pedeſtal of a greyiſh white marble. This the ſtates of Languedoc erected in honour of him. The city gate, leading to this ſquare, is built in the form of a triumphal arch.

In 1706 a royal academy of ſciences was founded here, and they have an excellent phyſic garden, in which public lectures on botany are read. The univerſity here is particularly famous for phyſic, it being founded by phyſicians, who were expelled Spain in the year 1180. The celebrated ſcarlet gown of Rabelais, with which all doctors of phyſic are inveſted at taking their degree, has long ſince ceaſed to be an original, the ſtudents having, from time to time, cut off little ſlips; ſo that the robe now uſed is ſaid to be at leaſt the third or fourth ſubſtitute. The inhabitants carry on a conſiderable trade in wool brought from the Mediterranean; alſo in wine, Hungary water, aqua-vitæ, cinnamon-water, &c. they are likewiſe much employed in making verdegris, and in manufacturing dimities, ſilks, and woollen ſtuffs.

The proteſtants were formerly poſſeſſed of this city, as one of their cautionary towns; and though Henry IV. ceded to them this and other places, his ſon Lewis XIII. took it from them in 1622, after a vigorous defence by the garriſon and inhabitants.

4. The ſmall town of Frontigniac, or Frontignan, is ſeated on the lake of Thau, ſeventeen miles to the ſouth-weſt of Montpellier. The above lake, which is alſo called Magalone, is twelve leagues in length, and ſeparated from the ſea only by a narrow tract of land; but in one place has a communication with the gulf of Lyons, which we are told, does not take its name from the city of Lyons, which is ſeated at a great diſtance from the ſea, but rather from the violent ſtorms ſo frequent in this ſhallow part of the Mediterranean, and which deſtroy the ſhips as a furious lion does its prey. This place is remarkable for its excellent wine, jar-raiſins, and its handſome town-houſe: the wine is called, by the Engliſh, Frominiac.

5. The large city of Niſmes, in Latin Nemauſius, ſtands thirty miles to the north of Montpellier, in a pleaſant ſituation, having on one ſide hills covered with vines, and on the other a very fertile plain. The ſtreets are in general narrow, but kept pretty clean, and the houſes are handſomely built with ſtone. Here is a collector's office, an intendency, and a provincial court of juſtice. Its biſhop is ſuffragan to the archbiſhop of Narbonne, and his dioceſe contains two hundred and fifteen pariſhes: he has an annual revenue of twenty ſix thouſand livres, (one thouſand and forty pounds ſterling) out of which his taxation at the court of Rome is one thouſand two hundred florins. Here are ſeveral convents in this city; an academy of polite literature, founded in 1682; and it is defended by a citadel conſiſting of four baſtions. Here are ſuch a multitude of manufactories, that its cloth and ſilk trade alone exceeds that of the whole province. One third of the inhabitants are ſecret proteſtants.

Several illuſtrious monuments of antiquity are to be ſeen in this city and its neighbourhood: one of the principal of theſe is an amphitheatre, ſaid to be the leaſt damaged of any in Europe. It is built of free-ſtone, the outſide of which is very entire: the ſtones are in many places of an amazing length and thickneſs: it is two ſtories high, and has ſixty arches and columns in each ſtory; on theſe and their cornices are to be ſeen the Roman eagles, with figures of Romulus and Remus ſucking a wolf. The ſteps or ſeats are ruined, and the area filled with houſes. Over the large entrance is a triple and winged priapus, the figure of a woman holding by a bridle, and two half bulls cut in ſtone.

Beſides the above antiquities, here is an oblong ſtructure, embelliſhed with thirty-two columns of the Corinthian, ſuppoſed to be a temple erected by the emperor Adrian

Adrian, in honour of Plotina, conſort to Trajan. A temple conſiſting of moſt beautiful free-ſtone, above half of which is ſtill ſtanding, and is ſuppoſed to have been dedicated to Diana, and cloſe by it is the fountain of Diana, mentioned by Auſonius, which firſt diffuſing itſelf into a deep and wide pond, furniſhed water enough to ſupply all the gardens of the city. It appears, from ſeveral remains, that this was a public bath. Here is alſo an octangular tower fifteen fathoms high, the whole being a ſolid ſtructure from the bottom to the top. The eſplanade, or walking-place without the city, is extremely delightful. The heads of all the Roman eagles found here are ſtruck off; which is imputed to the Goths, who on their reduction of this country, are ſuppoſed to have done this by way of inſult to the haughty enemy they had ſubdued.

About a mile and a half from the market-town of Remoulins, and not far from Niſmes, is a bridge called the Pont du Gardé. This is a moſt valuable piece of Roman antiquity, being part of the great aqueduct by which the ſpring of Eure was carried the length of nine hours diſtance to Niſmes, and there diſtributed in the amphitheatre, public fountains, and private houſes. The above bridge conſiſts of three ranges of arches, built one above another, over the river Gardon, and thus connecting the high rocks on both ſides the river, ſo as to afford a free paſſage to the water of the ſpring above-mentioned from one mountain to the other. The lower part conſiſts of ſix arches, four hundred and thirty-eight feet in length, and eighty-three feet in height. The ſecond conſiſts of eleven arches each fifty-ſix feet in diameter, and ſixty-ſeven in height; and is of ſuch an extraordinary width, that, beſides the pillars on which the upper part or range of arches reſts, there is a horſe and foot-way leading through it, ſecured by a breaſt-work. The third range, which reſts on the ſecond, and is five hundred and eighty-five feet and a half in length, conſiſts of thirty-five arches, each of which is ſeventeen feet in diameter; and over this uppermoſt range runs the aqueduct, which is of ſuch a height and breadth, that with a little inclination of the body a perſon may walk in it. The whole is of a very hard and durable free-ſtone. From an eminence towards Uzez, a ſmall epiſcopal town, near the ſpring of Eure, entire ranges of arches, belonging to this vaſt aqueduct, are here and there to be ſeen.

The ſmall village of Quiſſac is ſeated on the Vidourle, between which and the town of Sauve, at the foot of a mountain near the river, is a periodical ſpring, which runs and intermits twice in twenty-four hours. The flow laſts ſeven hours twenty-five minutes, and the intermiſſion five hours. This is ſuppoſed to be occaſioned by a cave or reſervoir in the mountain, which being filled every five hours, diſcharges itſelf through a canal in the form of a ſyphon. This water is drank as a mineral, and when heated is uſed for bathing. It contains a conſiderable quantity of ſulphur, and is reputed very good for all diſorders of the eyes.

The diſtrict of Albigeois, in Languedoc, is that from whence the Albigenſes take their name, they being a brave and upright people, who ſo early as the eleventh century oppoſed popery, and adhered to the doctrines of the goſpel, amidſt the violent perſecutions which their integrity drew upon them. The country produces plenty of corn, wine, fruit, and ſaffron; but the people are poor.

Alby, the capital of this country, ſtands on an eminence near the river Tarn; it is the reſidence of an archbiſhop, and has a royal tribunal, with ſeveral other courts. This dioceſe contains three hundred and twenty-ſeven pariſh-churches, and the annual revenue of the archbiſhop amounts to ninety-five thouſand livres, (three thouſand eight hundred pounds ſterling) out of which he pays two thouſand florins to the court of Rome. He is lord alſo of the city, though the high and low juriſdiction, and the high domains are in the king's hands. The cathedral is one of the richeſt and fineſt buildings in the kingdom: the epiſcopal palace is alſo very noble. The walk called La Lice, a little above the city, is extremely pleaſant, and the little town of Chateauvieux forms a handſome ſuburb. At a council held here in 1176, the doctrines of the Albigenſes were condemned.

Thirty-five miles to the north of Montpellier ſtands Alais, or Alez, which is a pretty large populous city, and ſeated on the river Gardon. It is the ſee of a biſhop ſuffragan to the archbiſhop of Narbonne, who has an annual revenue of ſixteen thouſand livres, (ſeven hundred pounds ſterling) out of which he pays to the court of Rome five hundred florins. This dioceſe conſiſts of eighty pariſhes; the biſhopric was founded ſo lately as the year 1691, in order to bring over to the church of Rome the great number of proteſtants in that part of the country, and a college of Jeſuits was added as auxiliaries to it. The quantity of unwrought ſilk annually carried out of this city, is ſaid to amount to one million two hundred thouſand pounds weight, at the loweſt computation.

Rouſſillon is ſeparated to the north from Langeudoc by the Leſſer Pyrenees, to the eaſt it borders on the Mediterranean, and to the ſouth and weſt is divided by the large Pyrenean mountains from Catalonia and Cerdagne. The length of this country, from eaſt to weſt is about fifty miles, and it is twenty-five in breadth. Its name of Rouſſillon is derived from its ancient capital of Ruſcino. Among the ſeveral mountains here, the higheſt are thoſe of Maſſane and Canigou, the latter of which is ſaid to be fourteen hundred fathoms in height.

The country is on all ſides environed with mountains: and the ſummer heats are ſo intenſe, that the inhabitants are almoſt univerſally ſwarthy and meagre. The ſoil is very fruitful in corn, wine, and forage; and in ſome parts ſo uncommonly fertile, that, after the corn harveſt is got in, they ſow millet, and thus procure two, and ſometimes three harveſts in a year. Mules are here uſed for the plough. The great wealth of the country conſiſts in olives and oranges, which are almoſt as common here as apples and pears in Normandy. They have very little wood, and that only of ſhrubs, and the only way of being ſupplied with goods from other countries is by means of mules, from their want of navigable rivers.

With reſpect to animals, they have a great number of ſheep, which are much eſteemed for the uncommon delicacy of their fleſh. Oxen are alſo fattened here, for the gratification of the wealthy; but the breeding of cows is neglected, their milk being bad; however, the pigeons, quails, and partridges of Rouſſillon are excellent. The chief branch of trade in this province is oil, which they ſell to the annual amount of two hundred thouſand livres; (eight thouſand ſeven hundred pounds ſterling) they alſo export wool, corn, and millet. The Tet, Tec, and Agly, its only rivers, are no more than rapid brooks, which diſcharge themſelves into the ſea. Here are alſo hot baths, and a cannet, and the lake of St. Naizaire; the ſea water is conveyed into canals, and there by the heat of the ſun converted into ſalt.

Louis XIII. took this country from the king of Arragon, to whom it formerly belonged; but by the peace of the Pyrenees in 1669 it was ceded to France. It contains but one biſhopric. At Perpignan is a ſuperior court, or council, to which lie appeals from all the inferior courts. In it is alſo a mint. The contributions payable by the inhabitants conſiſt of a poll-tax, which produces about forty thouſand livres, (one thouſand ſeven hundred and fifty pounds ſterling.) This country, beſides a governor, has a lieutenant-governor, and deputy-governor.

The capital town is Perpignan, in Latin Perpeniacum; it is ſeated on the river Tet, partly in a plain, and partly on a hill. It is fortified with a high and thick wall, ſtrengthened with baſtions: and has alſo a citadel, which is a fine work, and the ſuburbs are likewiſe defended by a fort. It is, however, a place of no great extent; but is very populous, there being here a ſuperior royal council, or high court of juſtice, an intendency, a chancery, a ſalt office, and a mint. Its biſhop is ſuffragan to the archbiſhop of Narbonne, and has a dioceſe of a hundred and eighty pariſhes. His revenue is about eighteen thouſand livres, (ſeven hundred and eighty pounds ſterling) out of which he is taxed by the court of Rome fifteen hundred florins. Beſides the cathedral it has four pariſh-churches, a ſeminary, twelve convents, and had two convents of Jeſuits. It has likewiſe an univerſity founded in 1349, with ſeveral alms-houſes and hoſpitals. Among the other public buildings is a large cannon foundery. The greateſt diſadvantage of this city is the want of good water.

The government of Foix contains the diſtrict and county of Foix, with the territories of Andorre and Donezan. It is bounded on the north and eaſt by Languedoc, on the ſouth by the Pyrenean mountains and Rouſſillon, and on the weſt by Gaſcony. The principal rivers are the Auviege and the Rize. This country is a dependency on the parliament of Toulouſe, and conſtitutes a part of the lands of the ſtates who are annually called together by the king. Its trade conſiſts of cattle, raiſins, turpentine, pitch, cork, jaſper, and particularly iron; and has a lieutenant-general, beſides the governor.

Among the mountains is ſituated Upper Foix, its products are wood, iron, mineral waters, with ſome paſtures. In this country are ſeveral caverns, in which are very ſingular figures formed by the petrifying waters. Lower Foix

produces ſome grain and wine. In this government are four principal towns; but theſe are very ſmall, and too inconſiderable to require particular attention.

Donezan, the little diſtrict or ſovereignty juſt mentioned, is nine miles in length, and the ſame in breadth; it is ſeparated from the county of Foix, by a chain of mountains, and contains nine market-towns and villages; and the territory or valley of Andorre has alſo ſeveral villages in it.

We ſhall deſcribe that part of Navarre which belongs to Spain, in treating of that kingdom; and now come to French, or Lower Navarre, which is united under the ſame government with the principality of Bearne. Theſe two contiguous countries are bounded on the north and eaſt by Gaſcony; on the ſouth by the Pyrenean mountains; and by another part of Gaſcony on the weſt.

The little government of Lower Navarre is one of the ſix bailiwics which formerly compoſed the kingdom of Navarre: but in 1512 Ferdinand, king of Arragon and Caſtile, having, under frivolous pretences, poſſeſſed himſelf of the kingdom of Navarre, all that Catharine, the lawleſs heireſs, and her huſband John d'Albert, could procure to be reſtored to them, was this little ſpot. They were alſo poſſeſſed of Bearne. John, their ſon, had no better ſucceſs; he poſſeſſed the ſame countries, but the title of ſovereign was confined to the ſcanty remnant of Navarre, which was called a kingdom. Johanna, his daughter, in 1584, married Anthony of Bourbon, to whom ſhe brought the above-mentioned countries as a dowry. Their ſon, Henry IV. became king of France, and Lower Navarre and Bearne were annexed to that crown by his ſon and ſucceſſor Louis XIII.

Lower Navarre, conſidered as a ſeparate kingdom or province, is bounded, on the north, by Gaſcony; on the eaſt, by a part of Gaſcony and Bearne; it is ſeparated from Upper Spaniſh Navarre by the Pyrenean mountains, on the ſouth; and, on the weſt, borders on Labourd, a diſtrict of Gaſcony; its extent is only twenty-four miles in length, and fifteen in the broadeſt part.

The principal rivers are ſmall; theſe are the Nive, which has its ſource from the Spaniſh mountains; and the Bidouſe, which has its ſource here; and both fall into the Adour. The country is mountainous, and produces little. The inhabitants ſpeak the Baſque dialect, which is the ſame with that of Biſkay.

There is neither abbey, collegiate church, nor convent, in the whole country; the only eccleſiaſtical buildings remaining here being four parochial priories. The Reformation took place here under the reign of Henry II. king of Navarre; but in 1694 there was, at leaſt in appearance, a general return to the Romiſh church. In Bearne are two biſhoprics. They allow to the governor ſeven thouſand ſeven hundred and forty livres, and two thouſand ſeven hundred and forty to the deputy-governor. The whole government is ſubject to the juriſdiction of the parliament of Pau; yet both Lower Navarre and Bearne have ſtates of their own, each paying the king annually four thouſand eight hundred and ſixty livres (two hundred and thirteen pounds ſterling) as an ordinary contingent, with two thouſand more towards the maintenance of the troops.

There are five diſtricts in LowerNavarre, and its principal town is St. Jean Pied de Port, or St. John at the Foot of the Gate, which is ſituated at the entrance of the paſs that leads through the Pyrenean mountains into Spain. It ſtands on the river Nive, twenty miles to the ſouth-eaſt of Bayonne, and has a citadel placed on an eminence. Beſides the above town, there are only four other ſmall ones, and ſome inconſiderable villages in this country.

Bearne is a principality of much greater extent; it being about forty-eight miles in length, and thirty-ſix in breadth; but is mountainous, and, except the plains, is in general barren. However, ſome of the mountains contain mines of copper, iron, and lead, and are covered with pines fit for maſts and planks. In this country are produced great quantities of maillac, which is a kind of Indian corn, and alſo flax. In ſome places the inhabitants make excellent wine, the very rocks being planted with vines; but very little wheat or rye is produced here.

The capital town in this principality, namely, Pau, in Latin Palum, ſtands on an eminence, at the foot of which runs the river Gave Bernois. It is ninety-ſeven miles to the ſouth of Bourdeaux, and is the ſeat of a parliament and a bailiwic. This is a ſmall, but pretty town, and has manufactures of cloth. It has a caſtle, in which king Henry IV. of France was born: here are alſo five convents, and two hoſpitals.

The ſmall, but populous city of Oleron is ſeated on the banks of the river Gave, which, from this city, is called the Gave of Oleron, ten miles to the ſouth-weſt of Pau. It has a bailiwic court, and is the ſee of a biſhop, who is ſuffragan to the archbiſhop of Auch, and has a dioceſe containing two hundred and ſeventy-three pariſhes, with a yearly revenue of thirteen thouſand livres, (five hundred and ſixty-nine pounds ſterling) and pays ſix hundred florins to the ſee of Rome. Its trade is not, at preſent, ſo conſiderable as formerly.

The town of Navarreins, built by Henry d'Albert, king of Navarre, and prince of Bearne, is alſo ſituated on the Gave of Oleron, ſixteen miles to the ſouth-eaſt of Bayonne. It ſtands in the middle of a fertile plain, and is a ſquare city, pretty well built. This place is ſurrounded with walls; but lies open to an attack from the neighbouring hills. It is the ſeat of a governor, and a king's lieutenant.

Guienne and Gaſcony are bounded, on the eaſt, by Auvergne and Languedoc; on the weſt, by the Bay of Biſcay; on the north, by Saintonge, Angoumois, Limoſin, and Auvergne; and, on the ſouth, by the Pyrenean mountains. This government extends, from north to ſouth, about eighty leagues, and from eaſt to weſt, about ninety. It was formerly part of the antient kingdom of Aquitaine. Here are mines of copper, and fine quarries of marble of all colours; and the country abounds in corn, wine, fruit, hemp, and tobacco; it alſo produces brandy, prunes, and many other commodities. Its trade in wine is ſo very conſiderable, that the city of Bourdeaux alone exports annually one hundred thouſand tons.

The principal rivers are, the Garonne, which receives many ſmall ſtreams; and the Adour, which riſes in the mountains of Bigorre, and falls into the ocean: here are alſo ſeveral ſprings of medicinal waters.

Soon after Charlemagne had created his ſon Louis king of Aquitaine, this kingdom was divided into the duchies of Aquitaine and Gaſcony, which, by the marriage of William IV. duke of Aquitaine, with Briſce, heireſs to Gaſcony, were united, and continued in that family till the year 1150, when, by the marriage of Eleanor with Henry II. king of England, this duchy fell to that crown, and during almoſt three hundred years was ſubject to the Engliſh, who were diſpoſſeſſed of it by Charles VII. in 1453. Louis XI. in 1469, conferred it on his brother Charles, who was the laſt duke of Guienne, it being on his deceaſe, again annexed to the crown of France. However, in 1753, the title of duke of Aquitaine was revived, being conferred on the ſecond ſon of the Dauphin.

There are, in this government, an archbiſhop, with nine ſuffragans: it alſo contains two generalities, namely, that of Bourdeaux, which is under the parliament of that city; and that of Montauban, under the parliament of Thouloufe. The former is compoſed of nine, and the latter of four large ſeneſchalſhips or bailiwics. In each is alſo a court of aids, under the direction of the governor, whoſe ſalary amounts to about ten thouſand livres, (four hundred and thirty-ſeven pounds ſterling,) with two lieutenant generals, one for Guienne, and the other for Gaſcony and Bigorre: here are thirteen deputy-governors, beſides the above-mentioned.

The capital town of Guienne is Bourdeaux, in Latin Burdigula: it is ſeated on the Garonne, in forty-four degrees fifty minutes north latitude, and in forty minutes weſt longitude, two hundred and ſixty miles to the ſouth-weſt of Paris. This is a pretty large and populous town, having a great number of ſtately houſes built of ſtone; but they are old, and the ſtreets very narrow. The inhabitants are ſaid to amount to forty thouſand.

The neweſt and handſomeſt part of the city is the Royal ſquare, near the harbour; in which ſtands a grand magazine, and the exchange. The ſquare is adorned with a ſtatue of Louis XIV. in braſs. There is a conſiderable traffic carried on in the town, it being reſorted to by merchants from moſt parts of Europe. Its haven, which is very capacious and ſafe, is called Le Port de la Lune, or the Port of the Moon, from its being in the form of a creſcent. The tide flows into it very high, and carries ſhips of large burden up to the quay. The city itſelf is in the form of a triangle, the two ſhort ſides towards the ſea, and the largeſt towards the river Garonne. The palace, the town-houſe, the handſome markets, the public fountains, the quay, and the cathedral dedicated to St. Andrew, are worth the curioſity of a traveller; as is alſo the caſtle called the Chateau Trompette, which ſtands at the entrance of the quay, and commands the whole harbour. There is alſo another caſtle, at the other end of the quay, called Le Chateau de Haa, which is alſo very ſtrong: in both

both theſe fortreſſes a garriſon is conſtantly kept. There is alſo a fort called St. Louis, or St. Croix; but it is of no great importance.

During the reign of Louis XIV. Bourdeaux was fortified in the modern taſte by Vauban; but the ramparts are now ſaid to be ruinous. At the mouth of the Garonne, ſix leagues below the city, ſtands on a ſmall iſland a ſtately watch-tower, where they light flambeaux every night for the direction and ſecurity of ſuch veſſels as ſail up or down that river; a precaution highly neceſſary, on account of the many rocks and ſhelves with which it abounds.

Bourdeaux is the ſee of an archbiſhop, the ſeat of a parliament, a court of aids, a ſeneſchalſhip, a provincial tribunal, an admiralty, and a treaſurer's office. It has alſo an exchange and a mint. The archbiſhop has nine ſuffragans under him, with a province of four hundred and fifty pariſhes, beſides about fifty chapels of eaſe. His revenue is fifty-five thouſand livres per annum (two thouſand five hundred and ſix pounds ſterling) and his taxation at the court of Rome four thouſand florins. The cathedral is a large gothic ſtructure, which contains nothing remarkable but the ſilver ſhrine of relics on the great altar.

The church and convent of the Dominicans are new and elegant ſtructures, but thoſe belonging to the Carthuſians have a ſplendor ſeldom ſeen in any convents of that order. In this city is likewiſe an abbey of Benedictines, of the order of St. Maur. The Jeſuits had, till their expulſion in 1764, a fine college here. The univerſity was founded in 1441, and in 1712 the king erected here an academy of the ſciences and polite arts, the library to which does not contain a great number of books, but conſiſts entirely of ſelect pieces, placed in a moſt elegant hall.

Here are ſtill ſome viſible remains of Roman antiquities, particularly an amphitheatre built by the emperor Gallienus, whoſe place it is called; only ſome parts of the ſide walls are ſtanding, with the two principal gates of the building.

This city carries on a very conſiderable trade, and for its improvement a kind of toleration is granted to the Engliſh, Dutch, Danes, Hamburghers, and Lubeckers, and even to the Portugueſe Jews; but theſe laſt have no ſynagogue, nor are any proteſtants indulged in the public exerciſe of their religious worſhip, only the Engliſh are connived at, and have a miniſter in a lay habit, and the other foreign proteſtants are not prohibited reading a ſermon privately to their families. The Scots, on account of the ſervices they formerly performed for the French, have conſiderable privileges allowed them in this city, and a gate of Bourdeaux bears the enſigns of one of the name of Douglas; even to this day Scottiſh veſſels have peculiar immunities allowed them in trade, and from this port they generally ſhip their wines. In this city Edward the Black Prince reſided for ſome years, and his ſon, afterwards Richard II. king of England, was born during his ſtay here.

The city of Perigueux is the capital of a very large diſtrict named Perigord, the ſee of a biſhop and the ſeat of a bailiwic, and a court of juſtice; it is ſeated on the river Iſle, in a fine country, ſixty-five miles to the north-eaſt of Bourdeaux; the biſhop is ſubordinate to the archbiſhop of Bourdeaux, and has a dioceſe containing four hundred and fifty pariſhes, with a revenue of twenty-four thouſand livres, (one thouſand and fifty pounds ſterling) out of which he is taxed two thouſand five hundred and ninety florins at the court of Rome. This city has four convents, one hoſpital, and had a college of Jeſuits. The old town is called La Cité; and the new town named La Ville, is about one hundred paces diſtant.

The town of Agen, capital of a diſtrict called the Agenois, is pretty large, and well inhabited. It is ſeated on the river Garonne, ſeventy-five miles to the ſouth-eaſt of Bourdeaux. The biſhop ſtiles himſelf count of Agen, but this is only a titular honour; he is ſuffragan to the archbiſhop of Bourdeaux, under whom he has a dioceſe of three hundred and ſeventy-three pariſhes, and one hundred and ninety-one chapels of eaſe, with a yearly revenue of thirty-five thouſand livres, (one thouſand five hundred and thirty-one pounds ſterling) out of which he is taxed by the court of Rome two thouſand four hundred and forty florins. There are here a cathedral and a collegiate church, two pariſh-churches, with ſeveral convents; and there was here a college of Jeſuits. This city is finely ſituated for trade, but makes little advantage of it.

In the diſtrict of Lower Quercy, ſtands Montauban, in Latin Mons Albanus, a well-built handſome city, ſeated on the river Tarn, twenty-ſeven miles to the north of Toulouſe, and is the ſee of a biſhop, with the ſeat of a court of aids, a provincial court, and a bailiwic. It properly conſiſts of three parts, the Old and New Town, with the town of Bourbon, which lies on the other ſide of the river, and is a ſuburb. The biſhop is ſuffragan to the archbiſhop of Toulouſe, and has a dioceſe of ninety-ſix pariſhes, with a revenue of twenty-five thouſand livres per annum, (one thouſand and ninety-four pounds ſterling) out of which he pays a tax of two thouſand five hundred florins to the court of Rome. In this city are two collegiate churches, an academy of polite literature, one ſeminary, eight convents, and a general hoſpital; it had alſo, till lately, a college of Jeſuits. Woollen ſtuffs are its principal trade.

The inhabitants, in 1562, became proteſtants, and fortified the city in ſo ſtrong a manner, that Louis XIII. beſieged it in 1621 without ſucceſs, and was unable to reduce it till the year 1629, when he cauſed its fortifications to be demoliſhed.

The diſtrict of Gaſcony, called by the French Gaſcogne, conſtitutes the ſouth part of the government of Guienne, and includes the country lying between the Garonne, the ocean, and the Pyrenean mountains. It receives its name from the Gaſcones and Vaſcones, by the moderns called Baſques or Vaſques, a people who lived on the Pyrenean mountains in Spain, and towards the cloſe of the ſixth century ſettled on the north ſide of the Pyrenees, where they defended themſelves againſt the Franks; but were at laſt obliged to ſubmit. It is bounded, on the north, by Guienne; on the weſt, by Languedoc and the county of Foix; on the ſouth, by the Pyrenean mountains, which ſeparate it from Spain; and on the eaſt, by the ſea of Gaſcony, or bay of Biſcay. The inhabitants are ſaid to have quick parts, but are ſo addicted to boaſting, that from them the term gaſconade is become proverbial for bragging ſtories. The country is not very fertile, it producing little corn, though it has great plenty of fruit, and the mountains afford timber fit for building of ſhips.

The principal places in this province are the following; viz. 1. Auch, the ancient Eluſaberris, and afterwards Auguſta; it is the capital of the diſtrict of Armagnac, and of all Gaſcony; and ſtands on the ſide and top of a hill, at the foot of which runs the river Gers, thirty-ſeven miles to the weſt of Toulouſe, and is divided into the Upper and Lower Town, between which there is a communication by means of two hundred ſtone ſteps. This place is the ſee of an archbiſhop, and has an intendency, a treaſurer's office, a bailiwic, a provincial and royal court. The lordſhip of this city is divided between the archbiſhop and the count of Armagnac. The dioceſe conſiſts of three hundred and ſeventy-two pariſh-churches, and two hundred and ſeventy-ſeven chapels of eaſe; and the revenue of the archbiſhop is ninety thouſand livres, (three thouſand nine hundred and thirty-ſeven pounds ſterling) out of which he pays to the court of Rome ten thouſand florins. The cathedral is one of the moſt magnificent in the kingdom; the chapter is compoſed of fifteen dignitaries, and twenty-five canons; and among the latter there are five which are only honorary. The king himſelf is the firſt of them, as count of Armagnac; the four others are the barons of Monteſquieu, Pardaillau, L'Iſle, and Montruit.

2. The town of Bayonne, in Latin Lapurdum, capital of the diſtrict of Labourd, is ſeated in forty-three degrees thirty minutes north latitude, and in one degree twenty minutes weſt longitude, at the junction of the Adour and Nive, near the mouth of the former, and a little below the city they diſcharge themſelves into the bay of Biſcay. It is of pretty conſiderable extent, and is the ſee of a biſhop: it has alſo a bailiwic-court, an admiralty, and a mint. The name of Bayonne is compounded of two Baſque words, Baia and Ona, ſignifying a good harbour, and it well deſerves that title; for though the ſhallows render the entrance to it ſomewhat difficult, it is notwithſtanding much frequented.

There is no other place in France that has, like this, the advantage of being ſituated on two rivers, into which the tide flows; the Nive runs through it, and the Adour cloſe to its walls; ſoon after which they unite, and divide the city into three parts; that called the Great Town, lies on the ſide of the Nive; the Little Town is between the Nive and the Adour; and the ſuburb of St. Eſprit, in which great numbers of Jews reſide, lies on the other ſide of the river. The two firſt parts, beſides their other works, have each a ſmall fort; the ſuburb has good fortifications, and a regular ſquare citadel, which, ſtanding on an eminence, commands the three ſeveral parts of the city, the harbour, and the adjacent country. Moſt of theſe works have been repaired and improved by Vauban, the celebrated engineer; for though the city is not very large, yet from

its

its being one of the keys to France by the side of Spain, it is of the utmost importance.

There are in this city a cathedral and collegiate church, five convents, and one college; the suburb has also a collegiate church: but neither the cathedral, which is dedicated to the holy Virgin, nor any of the other public or private buildings, have any thing remarkable. Its bishop is suffragan to the archbishop of Auch; he has a revenue of one thousand nine hundred livres, or eighty-three pounds sterling, out of which he pays one hundred florins to the court of Rome; his diocese contains seventy-two parish churches.

Auvergne, which is the next government to be described, takes its name from its antient inhabitants the Averni: it is almost one hundred miles in length, and seventy five in breadth; and is bounded, on the north, by Bourbonnois; on the west, by Limosin, the district of Quercy in Guienne and the Cevennes; on the east, by Forez, a large district in the government of Lionnois; and on the south, by Guienne and the Cevennes.

This government is divided into Upper and Lower Auvergne; the latter of which is a very pleasant fertile country, abounding in corn, wine, fruit, forage, and hemp; it far excels Upper Auvergne, which is cold, and full of mountains that are covered with snow seven or eight months in the year, though its pastures are excellent, and the inhabitants deal largely in cattle. The situation of the mountains occasions the winds blowing in such eddies, that the windmills here are of no service.

There are several mountains in this country, the highest of which are, 1. Le Puis de Dome, the perpendicular height of which is eight hundred and ten fathoms; 2. The Cantal, nine hundred and eighty-four; and, 3. Mont-d'Or, one hundred and thirty: the two latter are no less famous for the curious plants that grow on them. At Pontgibaud is a silver mine, but the produce not answering the expence, the working of it has been discontinued; however, there are very profitable coal mines in the neighbourhood of Brisac.

The most considerable rivers are, 1. the Allagnon, which rises in mount Cantal, and, after a rapid course, falls into the river Allier; 2. the Dordogne, which springs from Mont d'Or; and, 3. the Allire, which rises in the Gevaudan, and falls into the Loire.

This country produces corn, wine, cattle, cheese, coals, besides other useful articles, and carries on many manufactures, as all kinds of silks, stuffs, clothes, very beautiful laces, and paper, which is esteemed the best in all Europe. Some thousands of labourers go every year from hence to Spain, to gather in the harvest, and return here with the greatest part of the money they have earnt.

This province is intirely subject to the parliament of Paris, but is governed by different laws; Lower Auvergne having a particular code of its own, while in Upper Auvergne the civil law takes its place. The whole country is divided into five large districts, and two bailiwics. There are two lieutenants-general and two sub-governors under the chief governor.

The town of St. Flour, capital of Upper Auvergne, stands on a mountain of difficult access. It is the see of a bishop, whose diocese consists of two hundred and seventy parishes: he has a revenue of twelve thousand livres, (about five hundred and twenty-five pounds sterling) and his taxation to the court of Rome is nine hundred florins. Besides its cathedral, it has a collegiate church. The cloth, carpets, and knives, manufactured here, are greatly esteemed. The inhabitants carry on a good trade in grain, this city being, as it were, the general magazine of the neighbouring country, which produces a great deal of rye.

The town of Aurillac, which disputes the title of capital with St. Flour, is seated in a valley on the banks of the river Jordane, two hundred and fifty miles to the south of Paris, and thirty to the south-west of St. Flour. This town is populous, and pretty well built; it also confers the title of count, and here are some manufactures of tapestry and lace. Here is a district and bailiwic court; it has likewise a castle seated on a high rock, and a collegiate church, which is properly a secularized abbey, the abbot of which is lord of the town, and holds immediately of the pope; here are also an abbey, and four convents.

The city of Clermont, the antient Augustonemetum, afterwards Auvergne, the capital of the whole country, stands on a small eminence in Lower Auvergne, between the rivers Artier and Bedat. Its streets are narrow, and the houses are dark. It contains a tax chamber, a bailiwic, and a county-court, &c. This was formerly the principal place belonging to the counts of Auvergne, who therefore stiled themselves counts of Clermont. Besides its cathedral, it has three collegiate churches, three abbies, and many convents: in the abbey of St. Allire the bodies of several saints are said to be deposited. In the chapel of St. Viterand, and in that of St. André, are the tombs of the old counts of Clermont, and the dauphines of Auvergne. The bishop is suffragan to the archbishop of Bourges; he is also lord of the small towns of Billon and Croupieres, enjoys a diocese of eight hundred parishes, with a revenue of fifteen thousand livres, (six hundred and fifty-six pounds sterling) out of which he pays four thousand five hundred and fifty florins to the see of Rome.

There are several wells in the neighbourhood of this city: their water soon covers with a stony crust any substance laid in them. The most remarkable of these is that in the suburb of St. Allire, which has formed a famous stone bridge mentioned by many historians. This is a solid rock, composed of several strata formed during the course of many years, by the running of the petrifying waters of this spring. It has no cavity of arches, till after above sixty paces in length, where the rivulet of Tiretaine forces its way through. This petrifying spring, which falls on a much higher ground than the bed of the rivulet, gradually leaves behind it some lapidious matter, and in process of time has thus formed an arch, through which the Tiretaine has a free passage. The necessity which this petrifying matter seemed to be under of forming itself into an arch, could continue no longer than the breadth of the rivulet, after which, the water of the spring ran regularly under it, and there formed a new petrifaction resembling a pillar. The inhabitants of these parts, in order to lengthen this wonderful bridge, have diverted the brook out of its old channel, and made it pass close by the pillar, by which means they caused the spring to form the second arch, and thus they might have produced as many arches as they pleased; but the great resort of people to see this natural curiosity becoming troublesome to the Benedictines of the abbey of St. Allire, within whose jurisdiction the spring lies, in order to lessen its petrifying virtue, they divided the stream into several branches, which has so well answered their intent, that at present it only covers with a thin crust those bodies on which it falls perpendicularly; but on those over which it runs its ordinary course, no traces of its petrifying qualities are any longer perceivable. This is the only water drank in this suburb, and we do not hear that the use of it is attended with any bad effects.

The government of Limosin, or Limousin, derives its name from the antient Lembovices, and is bounded, on the east, by Auvergne; on the south, by Guienne; on the west, by Perigord, in Guienne, and Angoumois; and on the north by La Marche and Poitou. Its extent from north to south is about twenty-five French leagues, and from east to west somewhat less.

It is divided into Upper and Lower: Upper Limosin is very mountainous, and consequently cold, but Lower Limosin is more temperate. The former produces little wine, and that too very indifferent, but that of Lower Limosin is extremely good. It produces such numbers of chesnut-trees, that the inhabitants derive their principal subsistence from them. The grain which grows here is rye, barley, and Turkish corn. They have also mines of copper, tin, iron, and lead, and there are some iron works in this country.

The principal rivers are, 1. The Vienne, the source of which lies in the borders of Lower Limosin and La Marche. 2. The Vezere, which rises in the same country. 3. The Coureze, which falls into the Vezere; and, 4. The Dordogne, which divides Limosin from Auvergne, and the district of Quercy in Guienne. The country is subject to the parliament of Bourdeaux, and, besides its governor, has one lieutenant-general, and two sub-governors.

The principal places are, 1. Limoges, in Latin Lemovicæ, the capital of the country, which is situated on the river Vienne, partly on a hill and partly in a valley, thirty leagues to the west of Clermont. The town is about a league and a half in circumference, but ill built, the houses being generally of wood, small, and dark; but the cathedral is a magnificent structure; besides which it has a collegiate church, three abbies, one convent, and a college and seminary, which lately belonged to the jesuits. Its bishop is suffragan to the archbishop of Bourges, and his diocese, which extends over Upper and part of Lower Limosin, La Marche, and a part also of Angoumois, contains nine hundred parishes; and his revenue amounts to twenty thousand livres, (eight hundred and seventy five pounds sterling) out of which he pays sixteen hundred florins to the court of Rome. It contains a bailiwic, a

county

county and royal court, with other public offices, and also a mint.

2. The town of Tulle, properly Tuelle, which is situated in Lower Limosin, near the confluence of the little rivers Coureze and Solane, fifteen leagues to the south of Limoges, and a mile and a half in circumference. It contains about twelve hundred houses, and five thousand people. Its bishop, who is lord and viscount of the town, is suffragan to the archbishop of Bourges; and his diocese, which consists of seventy parishes, brings him in a revenue of twelve thousand livres, (near five hundred and twenty-five pounds sterling) out of which he pays to the see of Rome fourteen hundred florins. It has six convents in it.

3. The little town of Brize la Gaillarde is seated near the confluence of the Coureze and Vezere, seventeen leagues to the south of Limoges, and five to the west of Tulle, in a valley environed with little hills, planted with vines and chesnut-trees; the situation being extremely pleasant. It is the only fine town of the province: the houses are elegantly built, and the walks about it are extremely pleasant. In this town are found all the pleasures and conveniences of life. It contains about one thousand houses, in which are about five thousand inhabitants.

La Marche is bounded on the north by Berri; on the east, by Auvergne; on the south, by Limosin; and on the west by Poitou: it being about twenty-two French leagues in length from north to south, and eight in breadth from east to west.

This government, like Limosin, is divided into Upper and Lower, and the soil and climate in both are the same. Its principal rivers, are the Vienne; the Great and Little Creuse, which discharge themselves into the Vienne; the Cher, and the Gartempe, the later of which falls into the Creuse. The upper parts of the district are pretty fruitful in corn. Subordinate to its governor, are a lieutenant-general, and two sub-governors. It contains two bailiwics, and is governed by its own laws.

The Capital of the Upper and Lower Marche, is Gueret, seated on the river Gartempe, ten leagues to the north-east of Limoges, and the place where the courts of justice are held; but it has only one parish church, one college, one priory, two convents, and an hospital. The other places in this government contain nothing remarkable.

SECT. VI.

Describing the Governments of SAINTONGE and ANGOUMOIS, NIVERNOIS and BOURBONNOIS, BERRI and TOURAINE, POITOU and AUNIS, ANJOU and SAUME, ORLEANNOIS, MAINE and PERCHE, with an Account of their Boundaries, Situation and Extent, Climate, Produce, Rivers, principal Cities, Towns, Places, and Government; Inhabitants, their Trade, Manufactures, &c.

THE government of Saintonge is bounded by Poitou and Aunus on the north; by Angoumois and Perigord on the east; by Guienne and the river Gironde on the south; and by the bay of Biscay on the west; extending twenty-five leagues in length, and twelve in breadth. It derives its name from the Santoni, its ancient inhabitants. The country abounds in corn, wine, and all kinds of fruit; and the inhabitants, who are situated near the sea, make great quantities of excellent salt. Its horses are also much esteemed. In it are some mineral springs. Its principal rivers are the Charente, which abounds in fish; it rises near Charennac, and runs into the sea; and the Butonne, which rises in Poitou, and falls into the Charente.

This province is divided, by the Charente, into the south, or Upper Saintonge: and into the north part, or Lower Saintonge. It is subject to the parliament of Bourdeaux, a few parishes excepted, which are within the jurisdiction of Angoumois. The governor-general is also deputy-governor of this country.

The principal places in Upper Saintonge, are, 1. Saintes, the capital; which is seated on the Charente, fifty-eight miles to the northward of Bourdeaux, and twenty to the east of the bay of Biscay. It is a little ill-built city; but contains a provincial and a bailiwic court, with other public offices, and is the see of a bishop, suffragan to the archbishop of Bourdeaux. His diocese contains five hundred and sixty-five parishes and chapels, and his revenue amounts to twenty thousand livres, (eight hundred and seventy-five pounds sterling) out of which his Roman tax is two thousand florins. The streets are narrow and mean, but in the suburbs is an abbey, and the jesuits had a college here. Some ancient ruins discover its antiquity; as, a triumphal arch supposed to be erected in the reign of Tiberius, the ruins of an amphitheatre, another triumphal arch, and several aqueducts.

2. Pons, a handsome town, stands high on the little river Seigne, over which it has several bridges, whence it probably received its name. It is divided into the Upper and Lower, and contains three parish-churches, three convents, three alms-houses, and a commandery of the knights of Malta. And,

3. St John d'Angeli, in Latin Angeliacum, situated on the river Butonne, five leagues to the north-east of Saintes, and has a royal court of justice. While this place continued in the possession of the protestants, it was populous and well fortified; but being reduced in 1621 by Louis XIII. the fortifications were razed, and the city deprived of its privileges. It has an abbey and three convents. The inhabitants make woollen stuffs; and its brandy is much esteemed.

The government of Angoumois is bounded by Poitou on the north; by Limosin, on the east; by Perigord, on the south; and by Saintonge on the west; it being between fifteen and sixteen French leagues in length, and about sixteen in breadth. The country is full of little hills, but has none of any considerable size. It produces wheat, rye, barley, Spanish corn, oats, saffron, wine, and fruit: it also yields some excellent mines of iron, and is particularly famous for making of paper.

Its principal rivers are the Charente and Touvre, the latter of which rises here, and runs into the former. This country is subject to the parliament of Paris, and contains a bailiwic and a territorial jurisdiction.

The two following places are the most considerable in this government; viz. Angouleme, the capital of Angoumois, which is seated on the top of a hill surrounded with rocks, at the foot of which runs the river Charente, thirty miles to the eastward of Saintes. It confers the title of duke, is the see of a bishop, and has a bailiwic, a country and forest court, an office of the five great farms, &c. and is said to contain eight thousand persons. Here are twelve parish-churches, and the abbey of St. Cibard, in which lie buried the old counts of Angoumois; it also contains ten convents, and a general hospital. Its bishop is suffragan to the archbishop of Bourdeaux, and has a diocese of two hundred parishes, with a revenue of twenty thousand livres, (eight hundred and seventy-five pounds sterling) out of which he is taxed one thousand florins to the court of Rome.

2. The second town of this county is Coignac, or Cognac, which stands seven leagues to the westward of Angouleme, in a most delightful situation on the Charente. This place is remarkable for its excellent wine and brandy: here is a castle, in which Francis I. was born, and three convents.

Nivernois is bounded, on the west, by Berri; on the south, by Bourbonnois; on the east, by Burgundy; and on the north, by Burgundy and the Gatinois. This government is pretty nearly of a circular form, and is about twenty leagues over either way. It produces corn, wine, and fruit; except in the district of Morvant, which is a mountainous country, that produces scarcely corn enough for the subsistence of the inhabitants. It has large woods, some pit-coal, and mines of iron.

Among the many rivers which water Nivernois, three of them are navigable; these are, 1. the Loire, which runs from south to north, along the western borders of this country. 2. The Allire, which runs into the Loire; and 3. The Yonne, which rises on the south-east part of this province, and, running northward, falls into the sea: the other streams serve to render the country fruitful and pleasant: here are also some mineral springs. This country, which is divided into eight districts, is subject to the parliament of Paris, and has its own particular laws: over it is a governor, a lieutenant-general, and a deputy-governor.

The most considerable places in this government are, 1, Nevers, the antient Noviodunum, and afterwards Nivurnum, the capital of the country, situated in the district called Le Vaux de Nevers. It is built in the form of an amphitheatre, on the banks of the Loire, which is here joined by the little river Nievre, thirty leagues to the south-east of Orleans. It has a handsome stone bridge of twenty arches: but the streets are narrow, and the ground uneven. The cathedral, dedicated to St. Cyr, is a fine structure; besides which, there are eleven parish-churches, two abbies, and several convents. Among the other buildings is an old castle, which fronts a large square, and consists of handsome houses uniformly built. Here are a forest and bailiwic court, with a salt-office. The bishop is suffragan of

the archbiſhop of Sens, and his dioceſe conſiſts of two hundred and ſeventy-one pariſhes. His revenue amounts to twenty thouſand livres, (eight hundred and ſeventy-five pounds ſterling) and he pays one thouſand two hundred and fifty florins to the court of Rome. This place is celebrated for its porcelain and glaſs-houſes, and for its works in enamel. The inhabitants alſo carry on a great trade in corn, hemp, wood, pit-coal, iron, and tin wares. The fields about the town are extremely pleaſant, particularly the public walks in the adjoining park. It is computed that the inhabitants amount to about eight thouſand.

2. The town of Clamecy is ſeated in a diſtrict called the Vale of Yonne, and upon the banks of that river, which is here joined by the Burron, and rendered navigable. Pantenor, one of its ſuburbs, ſtands on the other ſide of the Yonne, and in the year 1180 was the reſidence of the biſhop of Bethlehem, who had been compelled to leave Paleſtina. The biſhop of the city, who to this day ſtyles himſelf biſhop of Bethlehem, is created by the caunt de Nevers, and enjoys all the privileges of the other French biſhops, though his revenue amounts to no more than one thouſand livres, (forty-four pounds ſterling) and this town is his whole dioceſe. Here are a caſtellany, and a ſalt-office.

Bourbonnois is bounded, on the weſt, by Upper Marche; on the ſouth, by Auvergne; on the eaſt, by the duchy of Burgundy; and, on the north, by Nivernois and Berri. It is about thirty French leagues in length, and twenty in breadth.

The ſoil is pretty fertile, and produces corn, fruit, and forage: here is alſo good wine, but not in a ſufficient quantity for exportation. It has likewiſe a few coal-pits, and a great number of mineral ſprings and warm baths.

Its chief rivers are the Loire, the Allire, and the Cher; beſies which, it has ſeveral other ſmall ones. In July, when the ſnow melts on the mountains of Auvergne, great damages are done by the inundations of the Allire.

The whole country contains twenty-two ſmall towns. It is ſubject to the parliament of Paris; though the duke of Bourbon, to whom it belongs, has the nomination of all the civil officers, yet their proper maſter is the king. Beſides the governor and lieutenant-general, here are alſo two ſub-governors.

The principal places are, 1. Moulins, in Latin Molinæ, the capital of the country: It is ſeated on the Allire, in a pleaſant fertile plain, almoſt in the middle of France, thirty miles to the ſouth of Nevers, and fifty-five to the north of Clermont. It is well-built, and is one of the moſt agreeable places in the kingdom. It contains an intendency, a chamber of domains, a caſtellany, and ſeveral courts. It has likewiſe a collegiate church, five convents, a college which formerly belonged to the jeſuits, and an hoſpital.

The ſmall town of Bourbon l'Archambaud, ſtands fifteen miles to the weſt of Moulins, and is environed by four hills, on one of which is an old caſtle which contains three chapels, among which, that called The Holy is very ſplendid. Here are alſo one pariſh, and one collegiate church, a priory, a convent, and two hoſpitals. This town is famous for its hot baths and cold mineral ſprings. It contains a royal caſtellany and a diſtrict court.

Berri extends, from eaſt to weſt, between twenty-ſeven and twenty-eight French leagues, and between thirty-five and thirty-ſix from north to ſouth. This government is bounded, on the north, by the Orleannoiſe; on the weſt, by La Marche and Touraine; on the eaſt, by the Nivernois.

It enjoys a temperate climate; and the ſoil produces wheat, rye, and wine, which in ſome places is equal to that of Burgundy. Its other products are alſo good, particularly its hemp and flax, in which it abounds; and its rich paſtures feed great numbers of cattle, eſpecially ſheep, which are valued for the fineneſs of their wool. Oker, which is ſeldom met with in other parts of France, is found in this country.

Beſides the lake of Villiers, which is between ſeven and eight leagues in circuit, here are the following principal rivers, viz. the Loire, the Creuſe, and the Cher; the Large and Leſſer Sandre, the Lerre, and the Indre; theſe two laſt have their ſources in this country: the Orron, the Aurette, the Moulon, and the Evre.

This country is divided into Upper and Lower Berri: the whole is under the juriſdiction of the parliament of Paris, and is governed by laws of its own. Subordinate to the governor, are one lieutenant, and two ſub-governors.

The following are the two principal places in this government, viz. 1. Bourges, the capital of Upper Berri, and of the whole country: it is ſituated on a hill between the rivers Evre and Orron, to the banks of which it gradually deſcends, thirty-five leagues to the ſouth of Paris, and ſeventeen almoſt ſouth-eaſt of Orleans. Theſe two rivers encompaſs it on every ſide, except on that next the gate of Bourbonnoux. It is a large ſpacious city, containing a cathedral, four collegiate churches, beſides two annexed to the ſeminary, four abbies, and ſixteen pariſh churches, with a beautiful and large college, which lately belonged to the jeſuits. You meet here with many eccleſiaſtics, gentlemen, and ſcholars; and it is computed that there are in this city fifteen thouſand ſouls; but not many of them are tradeſmen; the place having no other trade than what is neceſſary for the ſubſiſtence of the inhabitants. It is the ſee of an archbiſhop, and has an intendency, a ſalt-office, an independent royal tribunal, and ſeveral other offices and courts.

The cathedral, which is dedicated to St. Stephen, is a fine Gothic ſtructure, ſtanding on the higheſt part of the city: the archbiſhop, who is ſtyled patriarch and primate of Aquitaine, has five ſuffragans, with a dioceſe of nine hundred pariſhes, and a revenue of thirty thouſand livres, (one thouſand three hundred and thirteen pounds ſterling) out of which he pays four thouſand and thirty-three florins to the ſee of Rome. The palace built by Prince John of France, duke of Berri, is a magnificent edifice, in one part of which, called the king's apartment, the governor reſides, and the other ſerves for the courts of juſtice; the great hall in the latter, which has no pillars to ſupport it, is eſteemed one of the fineſt and largeſt rooms in the kingdom.

The town-houſe, erected by Jaques Coeur, is one of the moſt elegant buildings ever erected by a private man, and was purchaſed by the great Colbert, about A. D. 1670, who gave it to the corporation of this city. The ſquare of Bourbon is the largeſt in Bourges, and here anciently ſtood a Roman amphitheatre. The public walks and the malls are much admired, and the great number of religious houſes are another conſiderable ornament to the city. The univerſity of Bourges conſiſts of four faculties, and was founded or revived in the year 1463.

Bourges was taken by ſtorm by Julius Cæſar; and the inhabitants having exerciſed ſome cruelties on the Roman ſoldiers that had fallen into their hands, he glutted his revenge by deſtroying near forty thouſand of the natives. In the fifteenth century Charles VII. made this the place of his reſidence, while the Engliſh were maſters of almoſt all the reſt of the kingdom; on which occaſion the Engliſh called him king of Berri, by way of deriſion.

The large town of Iſſoudun, in Latin Exolidunum, which is the ſecond in rank in the province, ſtands in a beautiful plain, ſeventeen miles to the ſouth-weſt of Bourges, and is the principal place in Lower Berri. It contains a ſalt-office, a manor-court, and other public courts and offices. It is divided into the Upper and Lower Town: it has one abbey, two collegiate, and four pariſh-churches, five convents, and two hoſpitals; and a caſtle that commands the place.

Touraine derives its name from the Turones. It is bounded, on the north, by the river Maine; on the eaſt by the Orleanois; on the ſouth by Berri and Poitou; and, on the weſt, by Anjou. Its greateſt extent, from eaſt to weſt, is twenty-two French leagues, and twenty-four from north to ſouth.

This government enjoys a temperate air; and the country is ſo delightful, that it is called The Garden of France; but it is not every where alike. The tract called the Varennes, which lies along the Loire, has a ſandy ſoil, that produces rye, barley, millet, garden-plants, and an herb which makes a good yellow dye. That called the Verron is richer, and yields corn, wine, very fine fruit, and particularly large plums. La Champagne is a ſmall ſtrip of land between the rivers Cher and Indre, abounding in grain, and particularly wheat. La Brenne is a ſwampy country, but the eminences along the Loire and Cher are covered with vineyards. La Gaſtine is a ſtiff land, very difficult to plow; and the country of Never is diſtinguiſhed by its having ſeveral iron and one copper-mine.

This province is governed by its own laws; but the inhabitants have a right of appeal to the parliament of Paris. It has a governor, a lieutenant-general, and a ſub-governor. There are twenty-ſeven towns or boroughs in the country.

The principal places are the following, viz. 1. Tours, the Cæſarodunum, or Turoni of the ancients, and the capital of the country, lies in a plain extending between the river Loire and the Cher, and is fifty-two miles to the north-eaſt of Poitiers, and a hundred and twenty-ſeven to

the ſouth-weſt of Paris. The city is large and well-built, and the ſtreets very clean, on account of ſeveral rivulets running through them from ſix public fountains. In this city is a very fine mall, above a thouſand paces in length, and adorned on each ſide with two rows of fine elms. The inhabitants are ſo ſcrupulous, that after it has rained, no perſon is ſuffered to play, nor even walk in it till it be dry, under a penalty of ten livres, (eight ſhillings and nine-pence Engliſh). This city has a mint, a receiver's office, and a ſalt office, an intendency, a provincial, a bailiwic, and foreſt-court.

The cathedral is a fine ſtructure, with two lofty towers, a curious clock, and a library, where are ſeen ſeveral ancient manuſcripts faſtened by chains upon deſks. The two moſt valuable of theſe manuſcripts are, one of the Pentateuch, written in ſmall capitals, which is reckoned to be a thouſand years old, and another of the four Goſpels in Saxon characters, which ſome think to be of the ſame age as the Pentateuch, and others, twelve hundred years old. There are here alſo five collegiate churches, three abbies, twelve convents, and the jeſuits had a college. Here is a royal palace, and an academy of polite literature. The city is the ſee of an archbiſhop, under whom are eleven ſuffragans, ſeventeen abbies, twelve collegiate churches, ninety-eight priories, three hundred pariſhes, and a hundred and ninety-one chapels. His revenue is forty thouſand livres, (one thouſand ſeven hundred and fifty pounds ſterling) and he pays to the court of Rome nine thouſand five hundred florins.

Poitou is bounded, on the north, by Touraine and Anjou; on the eaſt, by La Marche and part of Berri; on the ſouth by Angoumois and Aunis; and on the weſt by the bay of Biſcay. It extends from north to ſouth twenty-two French leagues, and from eaſt to weſt forty-eight. It received its name from the ancient Pictavi, or Pictoni.

In this country there is an agreeable variety of champaign lands, woods, and paſture-grounds, with a few foreſts. The ſoil is various, according to the different parts of the country; but it in general abounds in corn and cattle. The principal trade of the inhabitants conſiſts in woollen ſtuffs, oxen, horſes, and mules.

Its principal rivers are the Vienne, which riſes on the borders of Limoſin, and being joined by the Creuſe, falls into the Loire; the Sevre Niortoiſe, which riſes in this country, and, after receiving the Venotee, diſcharges itſelf into the ſea; theſe are all navigable: here is alſo the Clain, which riſes in the frontiers of Angoumois, and falls into the Vienne above-mentioned.

This city, while the manufactures of gold, ſilver, and ſilk brocades were in a flouriſhing condition, was computed to contain ſixty thouſand inhabitants, which number is now reduced to thirty thouſand. It is governed by a mayor and twelve eſchevins, or aldermen.

The town of Amboiſe, in Latin Ambacia, or Ambaſia, is ſeated at the confluence of the Loire and the Amaſſe, twelve miles to the eaſtward of Tours; it contains a ſalt-office, with a royal and foreſt-court. In it are two pariſh-churches, four convents, and one hoſpital. Near the town is a large caſtle ſtanding on a high rock, in which are the ſtatues of Charles VIII. and his conſort Anne; as alſo a ſtag's head of very extraordinary dimenſions, it being ten feet high and eight feet broad, from the extremity of one horn to the other. This was ſuppoſed to be natural, till it was at laſt diſcovered to be fictitious, and only made of wood. There are here alſo ſeveral other curioſities. In this town Charles VIII. was ſlain, either by running againſt a door, or, according to others, by being ſhot through the head. This was alſo the place where the civil war in 1561 firſt broke out, and where the name of Huguenot was firſt given to the French proteſtants.

Charlemagne erected this province into an earldom. Eleanor, daughter to the laſt duke of Aquitaine, brought it to her ſpouſe, Henry II. king of England, to which it continued ſubject, with ſome interruptions, till the unfortunate reign of Henry VI. when it was taken in 1436, ſince which time it has continued annexed to the crown of France.

This province is ſubject to the parliament of Paris, and has but one provincial court: there are under the governor a lieutenant-general, and two deputy-governors. The whole government is divided into two parts. Upper Poitou, which conſtitutes the eaſtern part of the country, is larger, more fruitful, pleaſant, and healthy, than the Lower.

The principal places in Upper Poitou, are, 1. Poitiers, or Poictiers, in Latin Auguſtoritum, the capital of the country. This city ſtands upon a hill on the left bank of the little river Clain, into which falls another rivulet; it is ſituated about eighteen leagues to the eaſt of the ſea-coaſt, and ſeventy miles to the north-eaſt of Rochelle. Were its circuit to be only conſidered, it would, perhaps, be eſteemed the firſt in the kingdom, next to Paris, but it is far from being peopled in proportion to its extent, there being corn-fields and meadows within the walls; for the city has been ſo reduced by the civil wars, that it is almoſt become a deſert, and is a mean, ſmoky place. It is the ſee of a biſhop, who is ſuffragan to the archbiſhop of Bourdeaux, and has a dioceſe of ſeven hundred and twenty-two pariſhes, with a revenue of twenty-two thouſand livres, (nine hundred and ſeventy-three pounds ſterling) out of which he pays to the court of Rome two thouſand eight hundred florins. The cathedral is of an uncommon ſize, and built in the gothic ſtile. In this city are alſo four collegiate churches, ſeventeen other pariſh-churches, four abbies, twenty-one convents, two ſeminaries, and three hoſpitals; an univerſity founded here in 1431. In 1687 the inhabitants erected, in the royal ſquare, a pedeſtrian ſtatue of Louis XIV. The manufactures of this town are gloves and combs; and woollen caps and ſtockings are imported from hence. It is the ſeat of a ſeneſchalſhip, a preſidial court, an office of the finances, and a county court.

Here are ſtill to be ſeen ſome remains of Roman antiquities; among which is an amphitheatre, which lies among gardens and ſmall houſes; a triumphal arch, or rather gate, erected at the beginning of a military way, of which nothing at preſent remains but the arch, with the two pillars which ſupport it. The palace, and thick round tower cloſe by it, bear evident marks of their being of gothic ſtructure, though ſuppoſed by ſome to be Roman works.

Edward the Black Prince obtained, near this city, a memorable victory over the French, in the year 1356, when he took priſoners John their king, with his ſon Philip.

2. The town of Niort, which has the moſt flouriſhing trade of any in the province: it is ſeated on the river Soure, and has a bailiwic, a royal juriſdiction, and a foreſt-court. Here are ſome manufactures of wool; and the place contains a caſtle, two pariſh-churches, nine convents, and a general hoſpital.

The city of Lucon, in Lower Poitou, is ſeated in a moraſs, twenty-three leagues to the ſouth-weſt of Poictiers, and enjoys the title of a barony. It is the ſee of a biſhop, who is lord and baron of the town, but ſuffragan to the archbiſhop of Bourdeaux. His dioceſe conſiſts of two hundred and thirty pariſhes, and he has a revenue of twenty thouſand livres, (eight hundred and ſeventy-five pounds ſterling,) out of which he is taxed one thouſand florins to the court of Rome. Beſides the cathedral, this place contains only one pariſh-church, one ſeminary, and two convents. The air is reckoned unwholſome.

Aunis is bounded, on the weſt, by the bay of Biſcay; on the north and eaſt, by Poitou; and, on the ſouth, by Saintonge. It is watered by the Soure, which riſes in Poitou, and there are good harbours along the coaſt. This little province is ſubject to the parliament of Paris, but is partly governed by its own common law, founded on cuſtom. Under the governor is a lieutenant-general, and a deputy-governor. The country is ſomewhat barren, but produces ſome corn, and a great deal of wine; and there is good paſturage in the marſhes.

Rochefort, in Latin Rupiſortium, is ſituated on the river Charante, at a league and a half diſtance from its mouth, three from Brouage to the weſt, and ſix from Rochelle to the ſouth, and has a very convenient harbour. It was formerly but a ſmall village, belonging to a private family, from whom Lewis XIV. bought it in the year 1664, to build a city here. It had been obſerved, that from this place to the ſea, the river Charante was deep enough to carry the largeſt ſhips, the bottom excellent for anchoring, and the banks very even and ſolid; whereupon it was reſolved to build here a city, which was done accordingly; ſo that here are all the neceſſary magazines and warehouſes for ſhipping, and a moſt commodious and large dock, where, in the year 1690, they built fifteen gallies, and two large men of war, in leſs than eight months time. There are here ſeveral other ſtately buildings, as a victualling-warehouſe, a foundery, a manufactory of ſail-cloth, the hotel called Cazernes, for the education of three hundred gentlemen of noble families, deſigned to ſerve in the navy, and who are taught at the king's expence all that they muſt know for that purpoſe: this hotel ſerves now to lodge the marines; an hoſpital for ſick ſeamen and ſoldiers, &c. The entrance of the river and the road are defended by ſeveral forts, which render it impoſſible for any ſhips that would come to attack the city; and a league below Rochefort,

there

there is a long ſtaccado acroſs the river, which is defended by a fort, on which are forty-four guns. On the twenty-firſt of September, 1757, the iſle of Aix, with the fort upon it, was taken by the brave captain Howe, in the Magnanime, after about an hour's reſiſtance, when the whole garriſon, which conſiſted of near ſix hundred men, were made priſoners of war.

La Rochelle, in Latin Rupella, and formerly Portus Santonum, becauſe it was dependent on Saintonge, has been always a very conſiderable port and trading town. It is the capital of the province of Aunis, ſituated on the ſea, in forty-ſix degrees ſixteen minutes north latitude, and one degree ten minutes weſt longitude. It ſtands over-againſt the iſle of Ré, and but two leagues diſtant from it, and four from that of Oleron, ten leagues from Saintes to the north-weſt, and twenty from Poitiers to the ſouth-weſt. This city being the chief ſeat of the reformed in France, ſuffered very much during the civil wars, and was often valiantly defended, and long poſſeſſed by that party, till at length Lewis XIII. after a long and famous ſiege, made himſelf maſter of it in the year 1628, chiefly by the means of an admirable rampart or bank of earth which cardinal de Richelieu cauſed to be raiſed againſt it on the ſide of the ocean. After it was taken the king cauſed the walls and fortifications to be demoliſhed, except only two towers, which defend the port: but Lewis XIV. has cauſed new and ſtrong fortifications to be raiſed about it.

The port is almoſt round, and about fifteen hundred paces in compaſs; it is defended by two towers, the one is a priſon for ſtate-criminals, and the other is called the Tower of the Chain. No veſſel can enter into the harbour without the leave of the governor and captain of this laſt tower. They drive here a conſiderable trade into the iſlands of America; and the Engliſh, the Dutch, the Swedes, and the Danes, ſend here yearly a vaſt number of ſhips to load wine, brandy, ſalt, paper, linen cloths, and ſerges. The merchants here ſend all the neceſſaries of life into America, and bring back from it the product of thoſe countries. Their chief manufacture here is the refining of ſugar; they have alſo ſet up of late a manufacture of earthen-ware, which ſucceeds very well. This city is well-built; the ſtreets are broad and ſtrait; and the houſes neat and fine, ſupported with piazzas and porticos, under which one is ſheltered from the rain and ſun. In the year 1649, the epiſcopal ſee of Maillezais was removed hither, and the iſle of Ré, together with many other neighbouring places, to the number of about an hundred towns and villages, were taken from the dioceſe of Saintes, and added to this. The biſhop is ſuffragan to the archbiſhop of Bourdeaux. There was formerly in this town a college of jeſuits, where all the forms were taught to philoſophy incluſively. Here is a college of phyſic, and a ſchool of anatomy and botany for the inſtruction of young ſurgeons and apothecaries. Here is likewiſe a preſidial, a ſovereign court for the ſalt-marſhes in the weſt, and a court of the mint.

The iſlands of Oleron and Ré are ſituated on the coaſt belonging to this government: the former of theſe is five leagues long, two broad, and about three from the main land, having a town, caſtle, and light-houſe on it. The inhabitants were anciently famed for their ſkill in navigation, and whatever relates to the ſea: they are ſtill good ſeamen, and have always enjoyed very conſiderable privileges both under the dukes of Aquitaine, and the kings of France. The other iſle (namely Ré) is about four miles in length, and two broad, and betwixt two and three from the continent. It is populous, abounds in wine and ſalt, and has ſeveral pits in it, with a little fortified town called St. Martin. Both theſe iſlands were taken, in the ſixteenth century, by the citizens of Rochelle; and as the inhabitants were very well affected to them on account of the reformed religion, which moſt of them profeſſed, the Rochellers continued maſters of them till the year 1625, at which time they were retaken by Louis XIII.

Anjou received its name from the antient Andes, or Andegavi. This government is bounded on the north, by the river Maine; on the eaſt, by Touraine; on the ſouth, by Poitou; and, on the weſt, by Brittany. Its greateſt length from eaſt to weſt is twenty-ſix French leagues, and twenty-four from north to ſouth.

Here is a pleaſant ſucceſſion of hills and vallies, producing corn, wine, peaſe, beans, flax, hemp, and fruit-trees. Its fine paſtures alſo furniſh great herds of cattle. It has likewiſe mines of coal, iron, and ſalt-petre, together with quantities of marble, ſtone, and ſlate.

Some have reckoned no leſs than forty-nine great and ſmall rivers in this country; but only ſix of theſe are navigable. Theſe are the Loire, the Vienne, the Toue, the Magenne, the Loir, and the Sarte. This country is under the parliament of Paris; but has laws of its own. Subordinate to the governor is one lieutenant-general, and two ſub-governors.

The principal city in this government is Angers, anciently Juliomagus, and in Laun Andegavum, the capital of the country, lies a little above the place where the rivers Loire and Sarte fall into the Mayenne, which divides the city into two equal parts. The firſt walls were raiſed by John, ſurnamed Lackland, king of England and duke of Anjou; but prince Louis, afterwards king Louis VIII. ſon to Philip Auguſtus, cauſed thoſe walls to be demoliſhed; however, St. Louis his ſon and ſucceſſor, rebuilt them as they now are. This is a large and populous city, containing nine thouſand houſes, and about thirty thouſand inhabitants; it has ſixteen pariſhes, twelve of which are within the town, and four in the ſuburbs. Here are likewiſe eight collegiate churches, and a great number of convents both of men and women. This city is the ſee of a biſhop, who is ſuffragan to the archbiſhop of Tours. His dioceſe contains ſix hundred and ſixty-eight pariſhes; his revenue amounts to twenty-ſix thouſand livres, (one thouſand one hundred and thirty-eight pounds ſterling) and his taxation at the court of Rome is one thouſand ſeven hundred florins.

The cathedral is remarkable for three very high ſteeples built on its portico, of which that in the middle reſts upon the foundations of the two others. Its roof is very high, large, and bold; it is not ſupported by any pillars; and the whole ſtructure is in general elegant. Part of the town ſtands very low; ſo that it is proverbially ſaid in the neighbouring country, "that Angers is a low town, has high ſteeples, rich ſtrumpets, and poor ſcholars." It has a ſtrong caſtle built on a rock, and encompaſſed with ditches cut into it, though very ſteep on the ſide of the river, which runs at its foot. This caſtle is flanked with ſeveral large towers, and has a half-moon at the gate which leads to the ſuburbs. It was built by St. Louis during the wars with the Engliſh, and it now ſerves as a priſon for ſtate criminals. The univerſity, which is one of the moſt famous in France, was founded by St. Louis. Here the civil and canon law, divinity, phyſic, and the liberal arts, are taught. A chair for a profeſſor of the mathematics has been lately erected here, in the college of the fathers of the oratory.

Louis XIV. in 1615, eſtabliſhed in this city a royal academy, with the ſame privileges as that of Paris: it conſiſts of thirty-ſix members, who muſt all be natives or inhabitants of the province. Here is a great proceſſion annually celebrated at a feſtival called la Fete du Dieu, which is on Corpus Chriſti day, when all the prieſts and monks, with the principal inhabitants, and numbers of ſtrangers, carry lighted torches in their hands, and repreſentations of ſcripture hiſtories engraved, to atone for the pretended crimes of their archdeacon Berengarius, who oppoſed tranſubſtantiation about the year 1019, when that doctrine was firſt preached here.

A mayor and four aldermen, are annually choſen governors of this town; ſubordinate to whom are twelve counſellors, eight aſſeſſors, a city attorney, a commiſſary, and a recorder. Their juriſdiction extends over the manufactures ſet up in the town, ſuburbs, and liberty. Theſe manufactures conſiſt of fine woollen ſtuffs, ſtriped with ſilk and gold. They alſo bleach wax and linen cloth. There are likewiſe ſome ſugar-bakers in the town.

The government of Saumur, or the Saumarvis, contains a part of Anjou and Upper Poitou: it is under the direction of a governor, a lieutenant-general, and a ſub-governor.

The principal place it contains, is Saumur, in Latin Salmurus, the capital, and the ſeat of the public courts and offices, ſtands twenty-two miles to the ſouth-eaſt of Angers, and a hundred and ſixty to the ſouth-weſt of Paris. It contains a fine caſtle, three pariſh-churches, nine convents, and one royal college. Here is an important paſſage over the Loir, upon which there is a famous bridge. This city was much more opulent while in the poſſeſſion of the proteſtants; but has ſtill an univerſity. Near it is the abbey of the Benedictines of the congregation of St. Maur, which is a magnificent ſtructure.

Orleanois conſiſts of ſeveral ſmall countries, and is bounded, on the north, by Normandy and the iſle of France; on the eaſt, by the iſle of France, Champagne, and Burgundy; on the ſouth, by Nivernois and Berri; and on the weſt, by Touraine and Maine; including Orleanois Proper, Sologne, Beauſſe Proper, or Chartraine, Dunois, Vendomois, Blaiſois, the greateſt part of Gatinois,

nois, and Perche Gouet. The whole government extends about thirty-two leagues in length from eaſt to weſt, and twenty-eight from north to ſouth in the broadeſt part.

Several rivers run through this government, or have their ſource in it, namely, the Loire, the Loiret, which riſes a league from Orleans, and falls into the Loire; the Cher, which alſo runs into the Loire; the Laconie, which riſes in the wood of Orleans, and loſes itſelf in the ſame river; the Aigle, which riſes in this government, and alſo mingles with the Loire; the Hyere, which loſes itſelf under ground, and, when it afterwards appears again near Montigny, is called le Ganelon, falls into the ſame river.

Here are likewiſe ſome remarkable canals. That of Briare, which receives its name from a ſmall town that joins the river Loire to the Loing, which falls into the Seine, and conſequently opens a communication between the countries lying on the Loire and the city of Paris. The canal of Orleans alſo joins the above-mentioned: this canal is near eighteen leagues in length, and contains thirty ſluices; it was begun in 1682, and finiſhed 1692.

The trade carried on there, by means of the Loire, is the moſt extenſive in the whole kingdom, comprehending not only all that comes from the ſouthern and weſtern parts, but likewiſe from foreign countries. The principal ſtaple is at Orleans. Under the governor are three lieutenant-generals, and three ſub-governors. The whole country, which contains four larger and three ſmaller juriſdictions, is dependent on the parliament of Paris.

The government of Orleannois Proper is one of the fineſt countries in France; it being fertile in corn, wine, and excellent fruit, and abounds in cattle, game, and fiſh.

The city of Orleans, anciently called Genabum, or Cenabum, and afterwards Aurelianum, and Aureliana, the capital of the government, is ſeated on the Loire, over which it has a fine ſtone bridge of ſixteen arches, leading to a ſuburbs on the ſouth ſide of the river. On this bridge is to be ſeen a beautiful monument of caſt braſs ſtanding on a ſtone pedeſtal, that has ſome ornaments in the Gothic taſte. In the centre of the monument is a crucifix, on the top of which ſtands a pelican with its brood pecking its own breaſt: before the crucifix is the virgin Mary ſitting, with the dead body of Chriſt reclined on her lap. On the right ſide is king Charles VII. kneeling, and ſtretching out both his hands towards the croſs, and on the left ſide the famous Maid of Orleans, alſo repreſented kneeling, both armed cap-à-pié with ſwords by their ſides; the king has a French coat of arms, and wears a crown on his helmet. The helmet of the maid is placed by her; her hair is tied behind, and the reſt of it hangs looſe on her back. Theſe ſtatues are not ſo big as the life. A ſolemn proceſſion is annually obſerved here on the 12th of May, in commemoration of the deliverance of the city by the Maid of Orleans.

This city, which is about four miles in circuit, ſtands in a moſt agreeable plain, and is built in the form of a bow: it makes, however, but a mean appearance, the ſtreets being in general narrow, though a few of them are broad and ſtrait; and, except ſome of the tradeſmen, the inhabitants are poor. It is the ſee of a biſhop, and contains an intendancy, a caſtellany, a country-court, a foreſt-court, a ſalt-office, and other courts and offices. It has a fine cathedral, built in the Gothic ſtyle, an abbey, three collegiate churches, twenty-two pariſh-churches, an univerſity, conſiſting only of civilians, which was formerly very famous, though it is at preſent in no great repute; one ſeminary in which divinity is taught, and a public library. The public walk is properly a part of the city ramparts, levelled and planted with beautiful rows of trees. This city, on account of its ſituation in the middle of the Loire, is the magazine of the whole trade of the kingdom, eſpecially in corn, wine, brandy, and ſpices: it alſo carries on a conſiderable trade in ſheep-ſkins and ſtockings, of which great quantities are made here. The ſuburbs on the farther ſide of the river makes a tolerable appearance, and has a Carthuſian monaſtery. The biſhop, who is ſubordinate to the archbiſhop of Paris, has a dioceſe of two hundred and ſeventy-two pariſhes, and a revenue of twenty-four thouſand livres, out of which he is taxed two thouſand florins to the ſee of Rome.

The city of Orleans was raiſed to a dukedom and peerage in the year 1344; and Louis XIV. gave it to his brother Philip, in which houſe it continues. It was beſieged by the Engliſh in 1428, and ſo ſtraitened, that the inhabitants reſolved to ſurrender to the duke of Burgundy, then in the Engliſh army, and their ally. But the Engliſh not being willing that the city ſhould be given up to him, he was diſguſted at it; and Joan of Arc heading the ſoldiers, raiſed the ſiege in 1429; from which ſhe obtained the name of the Maid of Orleans.

To the north of the city and of the river Loire, lies the foreſt of Orleans, which is the largeſt in the whole kingdom. It contains about fourteen thouſand acres planted with wood; but is interſperſed with ſeveral plains and villages. It is twenty leagues, or ſixty miles in length, and in ſome places ſeven or eight leagues, and in others only two or three in breadth. It contains high and lofty trees, as oaks, elms, &c. They fell timber in this foreſt, every year, to the value of one hundred thouſand livres, the profits of which belong to the duke of Orleans. The French language is ſpoken here in the greateſt purity.

The city of Chartres, the Autricum of the ancients, is the capital of the country of Chartrain: it is ſituated on the banks of the river Eure, about fourteen leagues to the ſouth-weſt of Paris, and is divided into two parts by the above river, the largeſt of which ſtands on an eminence. It is the ſee of a biſhop, who is ſuffragan to the archbiſhop of Paris, and has a dioceſe of eight hundred and ten pariſhes; his annual revenue amounts to twenty-five thouſand livres, out of which the court of Rome is paid four thouſand florins. Here is a noble cathedral; but the city has little beauty to recommend it, the ſtreets being narrow, and the buildings old. It has three abbies, one priory, ſix pariſh-churches (without including thoſe in the ſuburbs), nine convents, one ſeminary, and two hoſpitals. In the city are alſo held a provincial and bailiwic court, together with a ſalt-office.

The city of Blois, in Latin Bleſæ, the capital of the diſtrict of Blaiſois, ſtands partly on an eminence, and partly in a plain on the river Loire, over which it has a well-built ſtone bridge. It is ſituated ten leagues to the ſouthward of Orleans, in a pure air, and in the midſt of one of the fineſt countries in France. It is a large, handſome city; but the greateſt beauty of it is the palace, or caſtle, the reſidence of ſeveral of their kings, with gardens adorned with fountains and other water-works, and a park ſuitable to the magnificence of the buildings. The ſtair-caſe of the palace is much admired, as well as the gallery, which is ſaid to be ſix hundred feet long; and there is a ſtatue of Louis XII. over the great gate. In the grand court before the palace ſtands one of the largeſt collegiate churches in France. It is remarkable, that there is an image of the virgin Mary over every gate in the city; theſe were ſet up in 1631, when, after having ſuffered much by the plague, they imagine on its ceaſing, that they were miraculouſly delivered by the queen of heaven, as they ſtyle her.

The pariſh church of St. Solenne, the largeſt in Blois, having been deſtroyed by a tempeſt, was magnificently rebuilt by Louis XIV. and converted into a cathedral: here are alſo ſeveral other churches, and a conſiderable number of convents. The jeſuits had alſo a beautiful college here, the front of which is adorned with the Doric, the Ionic, and the Corinthian orders of architecture. The other public edifices, as the town-houſe, and the building where the courts of juſtice are held, are well worth viewing. Their fountains are alſo large, and well ſupplied by a noble aqueduct, ſuppoſed to be the work of the ancient Romans. The biſhop, who is ſuffragan to the archbiſhop of Paris, has in his dioceſe about two hundred pariſhes, and his annual revenue amounts to twenty thouſand livres, out of which he pays two thouſand five hundred and thirty-three florins to the court of Rome.

The inhabitants of Blois are ſaid to be remarkable for their good ſenſe and genteel behaviour, as well as their ſpeaking French in perfection, which is ſuppoſed to proceed from the frequent reſidence of the court in this city, which is alſo diſtinguiſhed for making the beſt watches in the kingdom: but their principal trade is in wine and brandy, which are ſent to Orleans, Paris, Tours, Laval, and even into Holland.

In a wood on the river Coſſon ſtands the royal palace of Chambord, which is a magnificent edifice of free-ſtone, built by Francis I. It is ſaid to exceed any Gothic edifice in France, and to have ſuch various beauties, that the greateſt maſters may learn ſomething from it. The body of the building is compoſed of four large pavilions, and the whole is ſurrounded with a wall of hewn-ſtone flanked with towers, which give it a magnificent appearance at a diſtance. The tower over the centre looks very grand, and the principal winding ſtair-caſe is much admired. The halls, anti-chambers, chambers, wardrobes, cabinets, and galleries, are of exquiſite architecture, and the garden and park anſwerable to the beauty of the building. In this palace Staniſlaus, the dethroned king of Poland, reſided

nine years. It was afterwards conferred on the celebrated general count Maurice of Saxe, who died here in the year 1750, when the king gave it to his heir the count de Friſe, who in the year 1755 died in this place.

The town of Montargis, the capital of the Gatinois Orleannois, is ſituated on the river Loing, near the place where the canal of Orleans falls into it, twenty-five leagues to the ſouth of Paris. It is not large; but having been burnt down, is handſomely rebuilt, and has a caſtle pleaſantly ſituated on a hill, that commands the town and the neighbouring country. Beſides the pariſh-church there are ten chapels founded by the inhabitants, with a college and ſeveral convents. Here is a bailiwic, a foreſt and provincial court, and a ſalt-office.

The province of Maine, the earldom of Laval, and the greateſt part of the earldom of Perche, form one government. The county of Maine is bounded, on the north, by Normandy; on the eaſt, by Perche; on the ſouth, by Touraine and Orleannois; and on the weſt, by Anjou and Brittany, extending eighty-eight miles in length from eaſt to weſt, and fifty in breadth from north to ſouth. It has mines of iron, quarries of marble, and, being very fruitful, abounds in corn, wine, flax, and cattle: their fowls are particularly admired, and are well known at Paris Its principal rivers are the Mayenne, or Maine; the Huiſne, which riſes in Perche, and runs into the Sarte; which alſo riſes in the Perche, and after receiving the Orne, the Huiſne, the Enferne, and the Little Loire, falls into the Mayenne in its paſſage.

This country was formerly an earldom, but has been united to the crown ever ſince the year 1584. It is governed by its own laws; but is ſubject to the parliament of Paris, and has a particular ſub-governor.

The following are the principal places in this government; namely, 1. Mans, in Latin Cenomanum, the capital of the province of Maine; it is ſituated on a hill, at the foot of which runs the river Sarte, which here unites its water with the river Huiſne, thirteen leagues to the north-weſt of Tours, and thirty-two to the ſouth-weſt of Paris. It is the ſee of a biſhop, and has a ſalt-office, a provincial and foreſt court, &c. Its biſhop, who is ſuffragan to the archbiſhop of Tours, has a dioceſe of ſix hundred and ninety-ſix pariſhes, and a revenue of thirty-five thouſand livres, out of which he pays two thouſand two hundred and ſixteen florins to the court of Rome. Beſides the cathedral and two collegiate churches, are four abbies, thirteen pariſh-churches, eight convents, one college, and one ſeminary, in this city.

2. Laval, which is the capital of an earldom, ſtands on the Maine, eight leagues to the weſtward of Mans, and is encompaſſed by a wall and other fortifications in the antique taſte: it has alſo an excellent caſtle of the ſame kind; but it is incapable of making any great defence, ſince the improvement of the art of war. It has a ſalt-office, a country and foreſt-court, &c. and contains two collegiate churches, two pariſh-churches, one priory, and eight convents. This town was taken by ſcalade in 1446, by the Engliſh, headed by the brave Talbot earl of Shrewſbury.

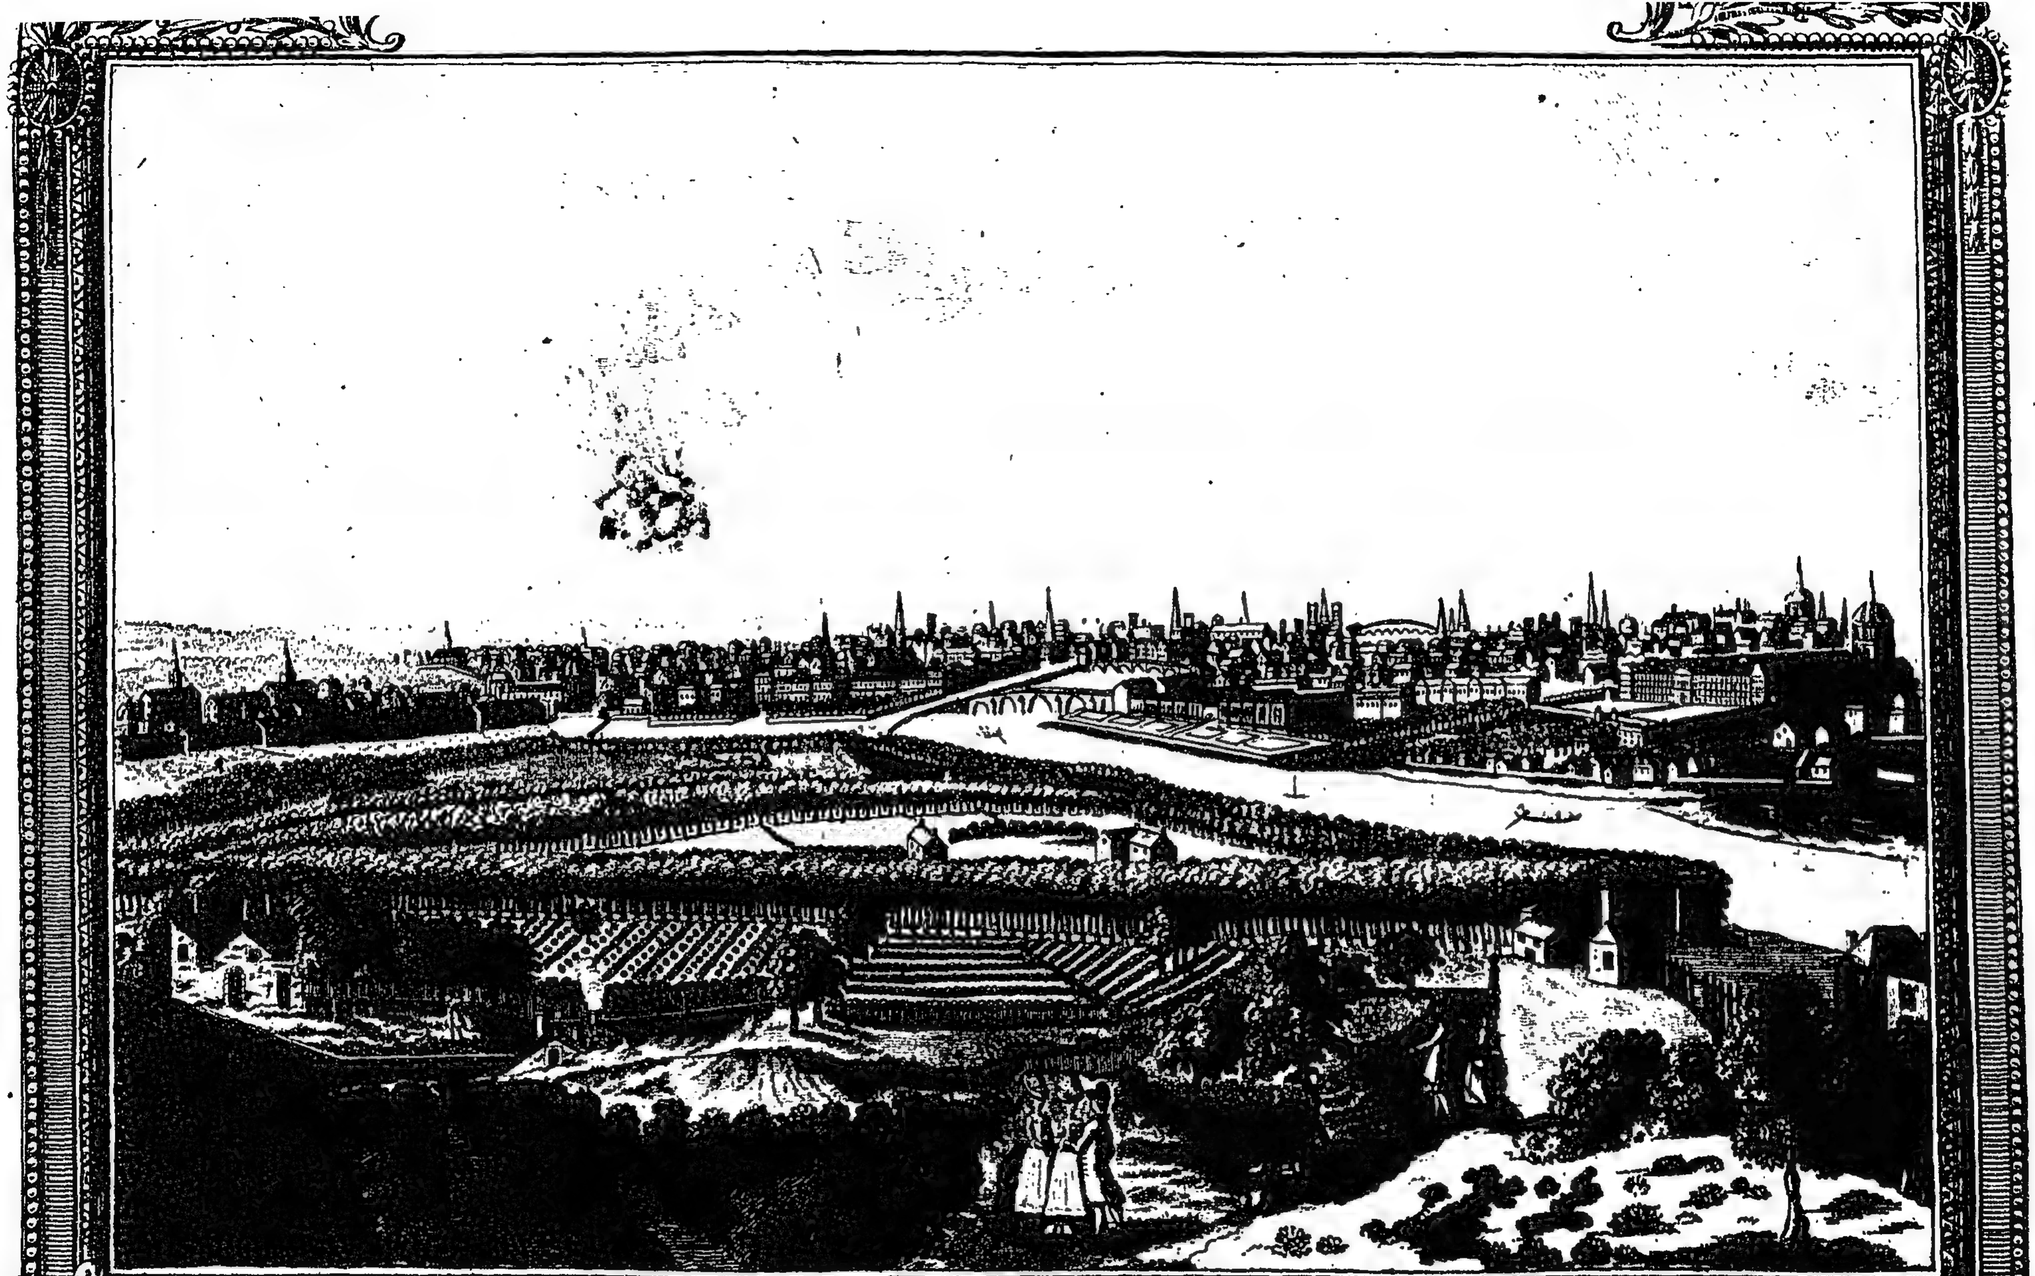
The diſtrict of Perche is bounded by Normandy on the north; by the iſle of France and Orleannois on the eaſt; by the river Maine on the ſouth; and by Normandy on the weſt; it not being above fifteen leagues in length, and twelve in breadth. It is a hilly country, and the eminences produce only graſs for cattle; but the valleys and plains bear all kinds of grain and hemp, they alſo abound in apples, of which they make cyder, the uſual drink of the country: they have indeed a few vineyards, but the wine is ſo poor, that cyder is generally preferred before it. They have here alſo ſome iron mines, and mineral waters.

This province is ſubject to the parliament of Paris, enjoys its own laws, and is governed by a particular ſub-governor. The whole country does not belong to this government, Perche-Gouet being ſubject to that of Orleannois, and Timerais to that of the iſle of France. The principal places in this country are the following: Mortagne, the capital of Perche, ſituated eighty-five miles to the weſt of Paris; it is the ſeat of a ſalt-office, a viſcounty, a diſtrict-court, a foreſt-court, &c. It has one collegiate and three pariſh-churches, four convents, with one hoſpital; there are ſome conſiderable manufactures of coarſe linen carried on here.

The ſmall town of Belleſme is ten miles to the ſouth of Mortagne, and ninety to the weſt-by-ſouth of Paris, diſputes the rank of capital with Mortagne, and is alſo the ſeat of a royal viſcount, a foreſt-court, and a ſalt-office. In a neighbouring wood is the mineral ſpring of Herſe, the water of which has very ſalutary effects in many caſes.

SECT. VII.

Containing a particular Deſcription of the Government and City of PARIS, and the Neighbouring Places; alſo of the Iſle of FRANCE, its Boundaries, Situation, Extent, Produce, Palaces, principal Cities and Towns; the Inhabitants, Trade, Manufactures, &c.



THE French geographers are not agreed about the boundaries of the government of Paris. It, however, includes, beſides the city, a part of the neighbouring country; and, beſides the governor, here are two lieutenant-generals, one of which is appointed for the city, the other for the provoté and vicomté, through its utmoſt extent. Within the boundaries of this juriſdiction are contained four others; theſe are Louvre and the Tuilleries, as alſo thoſe of the Baſtile and the Royal Hoſpital of invalids, the four governors of which receive their orders immediately from the ſovereign.

The city of Paris, in Latin Lutetia Pariſii, and Lutetia Pariſiorum, the capital of France, is ſeated in a large plain on the river Seine, in the middle of the iſle of France, in the forty-eighth degree fifty minutes north latitude, and in the ſecond degree twenty-five minutes eaſt longitude, two hundred and twenty-five miles to the ſouth-eaſt of London, ſeventy miles to the ſouth of Rouen, five hundred and fifty to the weſt of Vienna, ſeven hundred to the north-weſt of Rome, and ſix hundred and twenty-five to the north-eaſt of Madrid. It is of a circular form, about ſix or ſeven miles in diameter; and, including the ſuburbs, is eighteen or twenty in circumference. The ſtreets have been computed to amount to nine hundred and twelve, in which are about twenty thouſand houſes, from four to ſeven ſtories high; beſides churches, convents, chapels, colleges, communities, and warehouſes. "The number of its inhabitants," an accurate traveller obſerves, "cannot much exceed four hundred thouſand; for from the year 1728 to 1736, the annual bills of mortality were at a medium ſeventeen thouſand eight hundred; and it is calculated, upon very probable computations, that of twenty-five perſons in this city, one dies yearly; whence the above number of deaths make the number of living inhabitants four hundred and forty-five thouſand." This great city contains forty-ſeven pariſh-churches, beſides twenty others; three abbies and twelve priories for men, ſeven abbies and ſix priories for women; ſeventeen collegiate churches, thirteen of which have chapters; fifty convents and fraternities of eccleſiaſtics and laics, forty-three nunneries, and fourteen female communities; eleven ſeminaries, twenty-ſix hoſpitals, and forty chapels; an univerſity, ſix academies, beſides three others where young gentlemen are taught bodily exerciſes; five public libraries, four royal palaces, four caſtles, above one hundred hotels, ſome of which are ſtately ſtructures; eleven gates, ſeventy-three market-places, ſixty fountains, and twelve bridges over the Seine, ten of which are of ſtone.

With reſpect to the diſadvantages of this city, it muſt be obſerved, that Paris affords no good water fit for drinking, the inhabitants being obliged to uſe that of the Seine, which is fetid, and occaſions dyſenteries; or other ſort of water that is ſtill worſe, it being productive of the gravel and ſtone. The ſtreets are lighted in a very inelegant manner, by hanging up lanthorns in the middle of the ſtreets upon cords, which are put acroſs from one window to another: this is continued during ſix months in the year.

The ſtreets are kept clean, by means of ſome regulations formed by M. Turgot, provoſt of the merchants: theſe conſiſt in a canal lined with free-ſtone, ſix feet broad, and about the ſame depth, which receives all the ſoil from thoſe parts of the city through which it runs. This canal is kept clean by means of a large reſervoir formed in a particular building erected for that purpoſe, which is ſupplied with water from all the ſprings in the neighbourhood. In it are ſix pumps worked by a machine kept going by four horſes, and theſe diſcharge the water into a large reſervoir, likewiſe lined with free-ſtone, whence it runs under ground through two ranges of pipes of conſiderable bore, diſcharging itſelf with great violence into the above canal, and thus carries off all the filth into the Seine, which runs near the city.

In caſe of fire, very good regulations are made here: for the firſt preſident of the parliament, and the lieutenant of the police, the horſe and foot patrole, and ſome companies of the French and Swiſs foot-gaurds, are obliged to repair to the ſpot with all the expedition the diſtance of the place will

Cary sculp.

A General View of **PARIS**, *the Capital of* France, *taken from an eminence in the Village of* Chaillot.

will admit: but the actual extinguishing of the fire is committed to the care of the four mendicant orders, who on such occasions are to expend part of the stock they have acquired by begging, for the benefit of the public.

This city consists of three parts; namely, the town, which lies on the north of the Seine; the city, which is environed by that river; and the university, which lies to the south of that river; with twelve suburbs. In 1702 it was also subdivided into twenty quarters, or wards. The city is in the centre, and is the most cleanly and wealthy: it consists of three islands formed by the Seine; these are the isle du Palais; the isle of Notre Dame, and the isle Louviers. The last is small, and contains only storehouses for wood; it fronts the arsenal, and, by means of a wooden bridge, has a communication with the quarter of St. Paul.

L'Isle de Notre Dame, or the island of our Lady, is so called from the cathedral of that name: here the streets are very strait: by means of a stone-bridge, it has a communication with the quarter of St. Paul; by another, with that of Maubert; and it is also joined by means of a wooden bridge, to the isle du Palais; here is a parish-church of St. Louis, with some fine hotels.

L'Isle du Palais, or the island of the Palace, properly consists of Old Paris, and is so called from the place in which the parliament meet, and which takes up a great part of it. The metropolitan church stands at one end of this island, where are also several little parish-churches, the hospital called L'Hotel Dieu, or the House of God, which extends to the other side of the river, towards the south, and a vast number of small crooked streets or lanes, built with very high houses, inhabited by several families. Besides the above wooden bridge, which joins this island to that of Notre Dame, this quarter has a communication with other parts of the city by means of seven stone-bridges. The principal of these is the Pont-Neuf, or New Bridge, which is the finest bridge in Paris. It consists of twelve arches, and is twenty-two feet broad, reckoning the parapets. There is a footway raised on each side of the middle or carriage-way, which is thirty feet broad. Over the piles, on each side, are also semicircular lodgments, in which are one hundred and seventy-eight small shops belonging to the king's footmen, which only serve to obstruct a most beautiful prospect.

In the centre of the bridge is a fine equestrian statue of Henry IV. in brass, larger than the life, and standing on a marble pedestal, on the sides of which are basso relievos, with inscriptions representing the victories and principal actions of that hero. At the four corners are tied four slaves, also of brass, who trample upon antique arms. This stately monument is inclosed within iron-rails. Another monument of the Pont-Neuf is the Samaritaine, a building three stories high, in which is an engine that supplies some parts of the city with water. It is thus named from there being in the front, a group of figures representing the story of Christ and the woman of Samaria.

The Pont au Change, another bridge so called, has on it a brass statue of Louis XIV. and both this, and the bridge of Notre Dame, on which are also water-works, have each two rows of houses upon them, those of the first four stories high; and of the last, two.

The cathedral of Notre Dame is in the above island: this is a large and gothic structure, three hundred and ninety-six feet long, one hundred and forty broad, and one hundred and two in height: on the inside are four rows of pillars, thirty in a row, with forty-five chapels, built between the outermost rows and the wall. The pillars in the nave of the church are adorned with large and beautiful pictures; and the choir was splendidly repaired and beautified by Louis XIV. It has a small spire in the middle, and at the west end two square towers three hundred and eighty steps high; these are flat at the top, with a balustrade of free-stone, where you have a noble prospect of the city and the neighbouring country. In one of the towers are two large bells, one of which weighs forty thousand pounds, and the other thirty-one thousand. Near this structure stands the palace of the archbishop, in one of the halls of which is the library of the advocates, founded for the public use. There are also a great number of parish-churches in the island.

The division called Le Ville, or the Town, stands to the north of the above islands: it is daily beautified by rebuilding the old houses. On the east is the arsenal near the river, which consists of several courts, and has beautiful walks in the garden near the city-wall; and towards the north-east is the Bastile, a kind of fortress, consisting of eight large round towers, joined together by other strong buildings, and surrounded with ditches and bastions. The king keeps a governor, a lieutenant, and an independent company of soldiers in this place, which is also a prison for state-criminals.

The Louvre is one of the most considerable palaces in Paris, and is esteemed the principal ornament of the city. It is commonly divided into the Old and New. The old part of this royal palace was begun to be built with stone by Francis I. in 1528, and was finished by Henry II. in 1548. Succeeding kings improved and enlarged it, till Louis XIV. ordered it to be rebuilt on a new plan, which, if completed, would have rendered it a most magnificent structure. The whole building is three stories high in the new part; the first of the corinthian order, the second of the composite, and the third of the attic. The plan of the whole forms an equilateral quadrangle, containing a court in the centre three hundred and seventy-six feet square. The principal of the four main wings was built by Louis XIV. as also the greatest part of the two others which form the sides, together with a new front to that part which lies next the Seine. The four inner fronts, according to the plan, were to have consisted of eight pavilions, and eight corps de logis.

There is a kind of gallery, supported by four gigantic figures, in the hall of the Hundred Swiss. Great entertainments have been given in this hall: the queen Catherine de Medicis caused plays and interludes to be exhibited there for the amusement of the court. Henry IV. built a gallery along the river-side, quite to the Tuilleries, which is reckoned the finest in Europe; and the royal printing-house is under it.

The palace called the Tuilleries, or Thuilleries, stands at some distance behind the Louvre: it was built in 1564 by order of queen Catherine de Medicis, in a place where they formerly made tiles, (in French tuilles) from whence the palace takes its name; and this structure was also improved by Louis XIV. It is one range of building, with a dome in the middle, and a pavilion at each end. Before it is a handsome large space, divided into three courts; the whole adorned with columns, pilasters, and other ornaments. Behind this palace are pleasant gardens, adorned with fine walks planted with ever-greens, and other trees, with beautiful parterres, where may be seen all the year round every flower in season. It has also three beautiful fountains, and a large octagonal canal. Towards the river is a line terrace above a hundred perches long and eighty-four broad, planted with three rows of trees; and from this terrace is a most beautiful prospect over the adjacent country. These gardens are public, and great numbers of well-dressed people in summer evenings resort thither. All who wear a black bag and a sword are permitted to walk here, though all their other cloaths are not worth five shillings.

The palace called Le Cours stands on the bank of the river beyond the Tuilleries, it is composed of four rows of elms, eight hundred paces in length, forming three avenues that are altogether a hundred and twenty feet in breadth: that in the middle is the broadest, and has room for six coaches to pass a-breast. In the middle of the Cours is a large ring, encompassed with trees at the same distance from each other as in the other parts of the walks.

Luxemburg palace was built by queen Mary de Medicis, on the ruins of the old hotel of Luxemburg, which name it has retained. It is one of the most perfect and regular pieces of architecture in all France. Here is a gallery of fine paintings done by the celebrated Rubens, who spent two years in that work. It consists of the history of the life of Mary de Medicis, represented allegorically in twenty-four large pictures, nine feet broad, and ten feet high, placed in the piers between the windows. The other apartments are also richly furnished, and adorned with a fine collection of valuable paintings. The gardens of this palace are elegantly laid out, and ornamented with fountains. They are daily visited in summer time by the nobility and others, like those of the Tuilleries; but more especially on Sundays, when several thousands of all ranks make their appearance there. It is here the custom for the gentlemen and ladies of the first quality, though richly dressed, to sit down to discourse on the grass.

The palais royal, or royal palace, was built by cardinal Richelieu, who made a present of it to Louis XIII. It consists of several sets of buildings separated by large courts, and is adorned with fine gardens. Several new apartments have been added to it since the cardinal's time, and here queen Anne of Austria, mother to Louis XIV. resided during

during the minority of her ſon. In this ſtructure are now held the courts of juſtice, of which the parliament is the nobleſt.

With reſpect to the royal obſervatory, it is a very ſtately edifice, built in 1667 upon the higheſt ground in Paris; and as neither iron nor timber has been employed in its conſtruction, except for the ſtair-caſe, it has coſt great ſums. Several aſtronomers, maintained by the king, have apartments in it. The French make their firſt meridian paſs through this obſervatory, which is two degrees thirty minutes more eaſt than London, according to Street's obſervations; or, according to thoſe of Harris, two degrees thirty-five minutes fifty-one ſeconds.

The Gobelins is a houſe thus called from one Gobelin, an eminent dyer, who removed from Rheims to Paris in the reign of Francis I. and bought that houſe. He had diſcovered the ſecret of dying that beautiful ſcarlet, called from him the ſcarlet of the Gobelins. Lewis XIV. bought that and ſome of the neighbouring houſes, where he eſtabliſhed a manufacture of the fineſt tapeſtries, and alſo ſettled a great number of gold and ſilver-ſmiths, embroiderers, painters, carvers, and other artificers in every branch tending to ſplendor and magnificence. They are all under the direction of the ſuperintendent of the buildings, arts, and manufactures of France. There have been above eight hundred workmen employed here at a time; and though their number be ſince conſiderably decreaſed, yet there are ſtill to be ſeen many things of the moſt curious workmanſhip.

The moſt remarkable church, after that of Notre Dame, already deſcribed, are, 1. The church and nunnery of Val de Grace, founded by queen Anne of Auſtria, upon the ſuppoſed miraculous birth of Lewis XIV. after ſhe had been married twenty-two years without having any offſpring. Her heart and that of Henrietta Maria of England, ducheſs of Orleans, lie entombed here. The altar and cupola are exceeding fine. The nuns of this convent muſt all be of noble extraction, and chooſe a lady abbeſs once in three years. Madame la Valiere, one of Lewis the XIVth's miſtreſſes, retired to this monaſtery ſoon after her leaving the court. To it is a handſome aſcent by ſeveral ſtone ſteps, which lead into the portico in the front of the church.

2. The church, which lately belonged to the jeſuits, and which ſtands in St. Anthony's ſtreet, where they have the heart of Lewis XIII. incloſed in a gold caſe and ſupported by two angels of ſilver. Here is alſo a fine altar with ſeveral braſs ſtatues, and the monuments of the princes of Condé. This church is neat and elegant, and built in the modern ſtyle.

3. The large and beautiful church of St Euſtace.

4. The Theatines have a large church and cloiſter by the ſide of a river, ſome diſtance below the college of the Four Nations. Cardinal Mazarine left a legacy for erecting this edifice.

Here is a ſquare and lofty building, called Clermont college, which, till lately, belonged to the jeſuits, who taught here in ſeveral ſchools about two thouſand boys, many of whom were gentlemen's ſons: theſe boarded here, and had ſeveral halls to dine in. Many of the ſcholars wear coloured gowns, with large round velvet caps, when they learn logic, and ſquare caps when they read philoſophy.

The Paris univerſity is ſaid to be founded by Charlemagne in 791. In this univerſity are upwards of thirty colleges, the moſt conſiderable of which are, 1. The Sorbonne; 2. The college of Navarre; 3. The college of the Four Nations; and, 4. The faculty or college of phyſic.

1. The college of Sorbonne was founded in 1250; but was very poor when cardinal Richelieu cauſed it to be rebuilt in 1629. The preſent building is a very magnificent ſtructure, in which are apartments for thirty-ſix doctors, with a library and halls for public lectures and acts. To the three profeſſors chairs the cardinal added three others of a royal foundation. This is thought to be the ſtricteſt college in Europe, the degree of doctor being only given to thoſe who hold the Sorbonnic act, which is to anſwer all diſputants from ſun-riſe to ſun-ſet: on which account the title of doctor of the Sorbonne is of great repute. The doctors wear black gowns, and have white fur hanging acroſs the breaſt, when exerciſes are performed.

2. The college of Navarre was founded by Jane, conſort of Philip the Fair, queen of Navarre, in 1305, for ſtudying divinity; and in 1683 three other chairs were added, Beſides the fellowſhips for ſtudents in divinity, queen Jane founded alſo twenty others for ſtudents in grammar; ſix other fellowſhips have been founded here, and the records of the univerſity are kept in this college.

3. The college of the Four Nations is the fineſt in the univerſity, and deſigned for the reception of the children of gentlemen, or eminent citizens of four different nations, namely, French, Italians, Spaniards, and Germans. There ſhould be ſixty fellows in this college, by virtue of its original foundation; but they have been reduced to half that number. It is alſo called the college of Mazarine, from the cardinal of that name, who left two millions of livres to it in his laſt will. The univerſity adopted this college upon condition that neither divinity, law, or phyſic, ſhould be taught in it; nor any academy annexed to it in which ſtudents ſhould be taught to ride, fence, and dance. Beſides the ordinary profeſſors, here is one for mathematics. The doctors of the Sorbonne appoint the principal, who has the title of Great Maſter, and is always one of their own body. The fellowſhips are at the king's diſpoſal, who gives them to ſuch as are preſented to him by the ſecretary of ſtate of Paris. This college has a ſtately front, in the form of a theatre, facing the Louvre, which is on the oppoſite ſide of the Seine.

4. The faculty of phyſic has a college built in 1477, in which are five profeſſors, who are annually choſen. The morning profeſſors read lectures on phyſiology, botany, and pharmacy: and the evening profeſſors on pathology and ſurgery. In this college is an amphitheatre, in which are annually given complete courſes of anatomy, ſurgery, pharmacy, and chemiſtry. Every Saturday ſix doctors meet there in order to examine ſuch of the poor who are ſick, and come to conſult them; and the bachelors of phyſic are obliged to attend, in order to write the preſcriptions of the phyſicians. The faculty is compoſed of all the doctors and licentiates who have taken their degrees in the univerſity of Paris: they have a dean at their head, and a cenſor. Theſe doctors and licentiates have the ſole right of practiſing phyſic at Paris, no phyſician of any other univerſity being ſuffered to practiſe here, unleſs he be a phyſician to the king or royal family. There are fellowſhips for the ſtudents, in moſt of the colleges in the univerſity; and all the profeſſors have ſettled ſalaries.

We muſt not omit to mention the ſeveral academies; which are, 1. The French academy founded in 1633, by cardinal Richelieu, for the improvement of the French language: this conſiſts of forty members, who meet in a hall of the Old Louvre, on Mondays, Thurſdays, and Saturdays.

The next is, 2. The royal academy of Inſcriptions and Belles Lettres, inſtituted for the advancement of polite literature. In this academy ancient monuments are explained, and the tranſactions of the kingdom perpetuated by medals, inſcriptions, &c. It conſiſts of four ſorts of members: there are twelve honorary, and twenty penſioners, with twenty-ſix aſſociates, and twelve ſtudents. Wedneſdays and Saturdays are their days of meeting.

The third is, 3. The royal academy of ſciences, which has its honorary members, penſioners, aſſociates, and ſtudents: it was inſtituted in 1666.

In 1648 was founded, 4. The royal academy of painting and ſculpture. The maſter-pieces of the painters and ſculptors, admitted into this academy, are diſpoſed in three halls, and marked with the names of the ſeveral artiſts. Here are alſo the portraits of a great number of celebrated painters; and ſeveral of the ſtatues of Gyps, taken from antiques, are to be ſeen among others.

In 1671 was founded, 5. The royal academy of architecture, but letters patent were not obtained for it before the year 1717. It is divided into two claſſes: the firſt is compoſed of ten architects, a profeſſor, and a ſecretary; and the ſecond of twelve other architects. The profeſſor, whoſe poſt, as well as that of the ſecretary, is obliged to read public lectures, in the hall of the Louvre, every Monday and Thurſday.

There are ſeveral hoſpitals in this city, the moſt conſiderable of which are, 1. That for diſabled ſoldiers; 2. The Hotel-Dieu; 3. Trinity-hoſpital; and, 4. The General hoſpital.

1. The Royal hoſpital for diſabled ſoldiers may be conſidered as a large palace; it taking up above ſeventeen acres. Here are four large courts, all of the ſame form, ſurrounded with regular buildings four ſtories high. In the middle is a fifth court, larger than all the four taken together. It is encompaſſed with a double row of arches, one above the other, forming very narrow galleries. This hoſpital is full of lame and ſuperannuated officers and ſoldiers. The great order and ſtrict diſcipline obſerved in it cannot be ſufficiently admired. It has a governor, a king's lieutenant, and a major. The chapel is very beautiful, and its altar adorned in the moſt ſplendid manner.

2. The moſt ancient and largeſt hoſpital in Paris is the Hotel-Dieu, or, the Houſe of God. As all poor ſick people are admitted into it, there have ſometimes four thouſand perſons in it at the ſame time. They are attended with the greateſt care by the nuns of the order of St. Auguſtine, who perform the office of nurſes. All manner of patients are admitted into this hoſpital, without regard to their country, religion, or diſeaſe; nor are thoſe who labour under any incurable diſeaſe ever diſcharged, and ſuffered to periſh in the ſtreets; and no ſecurity is required for their burial in caſe of death. Theſe circumſtances redound greatly to the honour of this excellent charity.

3. The Trinity hoſpital was founded about the year 1202, by two friers, for the reception of poor travellers; but it is now uſed for the maintenance and education of poor children of both ſexes, born at Paris in lawful wedlock: they wear blue gowns. Here are an hundred beds for boys, and thirty-ſix for girls, who have different apartments, in the eaſt of which there is an infirmary. The youngeſt are taught to read and write; and, when they are ſix or ſeven years old, are inſtructed in ſome trade within the hoſpital. In order to encourage mechanics to come and exerciſe their trades here, and teach the children, the parliament has declared, that ſuch journeymen as have taught theſe children ſix years in this hoſpital, ſhall have the freedom of the city without any expence; and that ſuch children, as ſhould be arrived at the age of twenty-five, and ſhould have taught others during ſix years, after they were out of their apprenticeſhip, ſhould enjoy the ſame privilege. This wiſe eſtabliſhment has procured the city a vaſt number of ſkilful artificers. For the government of this hoſpital, ſix perſons are preſented by the attorney-general, out of whom five of the moſt eminent are choſen by the parliament.

4. The General hoſpital is in the ſuburbs of St. Victor: it alſo goes by the name of La Sal Petreria, ſalt-petre having been formerly made here. In it is a noble foundation for the female ſex, near ſeven thouſand of whom are here provided for, and live under the inſpection of ſixty ſiſters, ſubordinate to whom are eighty governeſſes, and a conſiderable number of maid-ſervants. Into this place are received foundlings, who take up one ward; girls and young women, who ſew and knit: a great number of bad women, who are here compelled to ſpin woollen: ſome hundreds of female ideots, who live in little houſes built in the form of a ſtreet: many other poor women, ſome of whom are kept here gratis, and others pay a ſmall matter: delinquents are alſo confined, but not put to work, in this hoſpital.

The caſtle of Biceſtre alſo belongs to this excellent foundation: it is ſeated on an eminence, at a ſmall diſtance from the above-mentioned hoſpital, and is on all ſides defended by a wall, which is of very conſiderable compaſs, containing within it many large buildings, and ſeveral open ſquares. In this caſtle are nearly four thouſand perſons of the other ſex, particularly poor men, who are entertained here gratis, and ſome who pay for their reception into the houſe: perſons diſordered in their ſenſes, whoſe ward reſembles a village, it being built in regular ſtreets: twenty-five men, and as many women, afflicted with the venereal diſeaſe. Common priſoners are kept here in a particular houſe, walled in, and every one in a cell by himſelf. But the moſt remarkable thing here is a large well, which is a modern work: it is of a circular form, and lined with free ſtone from top to bottom: it is one hundred and twenty-eight feet in depth to the ſurface of the water, and twenty more to the bottom. Round the well, at the water's edge, is a gallery, to which a perſon may, on occaſion, be let down. The water is drawn up by means of an engine worked by four horſes, who are relieved every three hours; it is received all the day long into huge buckets, each of which contains twelve hundred pounds weight of water, which is diſcharged out of theſe into a leaden baſon, whence it runs into a reſervoir, and is conveyed to all parts of this vaſt building by means of pipes.

Beſides the above-mentioned, here is alſo the hoſpital de la Piétié, in St. Victor's ſtreet, which conſtitutes alſo a part of the General hoſpital, and is the place where the governors uſually hold their meetings. The Piétié Biceſtre and General hoſpital, together with the Hotel Dieu, have one common fund, amounting to full two millions of livres per annum. Its preſent governors are twelve ſubſtantial citizens appointed by the provoſt of the merchants, and by the echevins, or magiſtrates; but approved by the parliament, before whom they muſt be ſworn. The archbiſhop of Paris, the firſt preſident of the parliament, chamber of accounts, and court of aids, the attorney-general, the lieutenant-general of the police, and provoſt of the merchants, are the ſeven honorary adminiſtrators, or governors.

With reſpect to the ſquares in Paris, the moſt famous is that called La Place des Victoires, or the Square of Victories. In it is a noble ſtatue of Louis XIV. which is one of the beſt pieces of ſtatuary in Europe: he is repreſented clad in his robes, with victory behind him of the ſame magnitude and metal, putting a crown on his head, and poiſed with her foot on a globe. Under her is a three-headed cerberus, to repreſent Louis XIV. triumphing over the triple alliance, and this inſcription under it; VIRO IMMORTALI, "to the immortal man." The whole mould was caſt at once, and weighs above thirty thouſand pounds. The pedeſtal is twenty-two feet high, which, with the maſſy piece of mould the ſtatue ſtands upon, makes the whole near forty feet high. Upon the pedeſtal there are four ſlaves of braſs, with baſſo-relievos of the king's battles and conqueſts. Under the pedeſtal there is a pavement of marble incloſed within ſtately iron grates. There are ſeveral inſcriptions upon the pedeſtal relating to the king's great actions, but very fulſome, alledging, for inſtance, that he gives laws to all the world, and to himſelf. The ſtatue being of braſs, and the outſide gilt, the ridiculous vanity of the king for whom it was intended, the odious flattery of his ſycophants, and the abſurd inſcriptions placed about the ſtatue, and intended to do him honour, occaſioned a ſatirical epigram, which may be thus rendered in Engliſh:

"Well may the French with wond'ring grimace ſtare,
"With gold to ſee their monarch's image glare;
"This ſtatue ſhews on what his pride is built,
"His heart is braſen, and his outſide's gilt;
"And his poor ſubjects' deſpicable plight,
"Prove all's not gold that glitters to the ſight."

In the eſtimation of the French, the triumphal arch at Paris exceeds every thing of the kind in Europe, whether antient or modern. The ſtructure is indeed noble, it conſiſting of three faces of an extraordinary height, with two portals, after the manner of the antient and modern Romans. The orders of the columns are finely deſigned; and the captives and trophies, with which this ſtructure is adorned, are executed in the moſt admirable manner; the whole being done from the deſign of the famous Perault. The king's ſtatue on horſeback is placed on this arch.

All the gates of this city are triumphal arches, and pompous pieces of architecture: that of St. Dennis, leading to the ſquare of the ſame name, is above ſeventy feet high, and as many over, adorned with columns, baſs reliefs, and trophies, with ſome inſcriptions relating to the paſſage of the French over the Rhine, and their taking of Maeſtricht. The gate of St. Martin is fifty feet high, and as many wide, and has on each ſide an inſcription relating to the actions of Louis XIV. The third gate is that of St. Anthony, erected in the reign of Henry II. but repaired and embelliſhed by the city, with ſome inſcriptions in honour of Louis XIV.

The fair of St. Germain, which begins on the third of February, and holds all Lent, is, among other things, worthy of notice. The place where it is kept is a large ſquare building; which has ſix or ſeven rows of ſhops, wherein the cuſtomers play at dice when they come to buy goods; for they are firſt cheapened and bought, and then the people play who ſhall pay for them. The greateſt gaming is after candle-light, and ſometimes the king himſelf comes hither to play. Here is a celebrated picture of our Saviour's aſcenſion, with St. Peter, St. Paul, and two angels in the ſame piece, the work of Antonio Moro: the frame, valued at two hundred piſtoles, is curiouſly carved and richly gilt.

There are a great number of pleaſure-boats on the river Seine, belonging to the king and perſons of quality, in which they ſometimes take the amuſement of ſailing on the water, for the ſake of the air. The water of this river generally looks green and dirty, which is not to be wondered at, as it is commonly filled with covered barges full of waſher-women cleaning their linen: yet it is carried in pails through many of the ſtreets, and ſold as milk is in London. It is a common obſervation, that the French women are the worſt laundreſſes in Europe: they waſh their linen in cold water in the river; and as to ironing and plaiting, they have not the leaſt notion of it. There are here indeed ſome Engliſh women who will finiſh them pretty neatly, but not ſo white as in England, which may

in a good measure be owing to the water, in which they are washed.

The jurisdiction of several courts at Paris extends very far. The principal of these are the parliament, which is the last resort in all causes where the crown does not interpose; a general court of the justices in eyre; a court of the constables and marshals of France; a court of the admiralty; the bailiwic of the palace; the court of the châtelet, or the ordinary court of justice for the civil government of the city, of which the provost, or mayor, with the four echevins, or aldermen, and twenty-six counsellors, are judges; a salt office; a court of the warren of the Louvre, established for the preservation of the game six leagues round Paris, and to prevent people from hunting in those limits without leave; the court of the Hotel de Ville, or town-house, which takes an account of the city rents, and of the taxes on all provisions brought into Paris; and the court of the consuls, which takes cognizance of all commercial affairs.

Malefactors here are condemned to the gallies, to the gibbet, and to what is called being broke alive upon the wheel: the last is used only in case of murder, but if the evidence leaves only some room to doubt the guilt of the person accused, he is, as in many other countries, cruelly put to the torture to obtain a confession: and here it must be observed, that malefactors in France receive their sentence on their knees; which is no sooner pronounced than the hangman ties a rope about their necks, and conveys them to prison, whence, after confession, they are generally dragged immediately to the gallows. The common place of execution is the Greve, the square in which stands the town-house.

We shall now give the manner wretches are broke, as it is called, on the wheel, which we shall take from Mr. Stephens's travels through France. "In the middle of the square, says he, a scaffold was erected; and at half an hour after four the prisoner was brought to it in a cart, attended by the city guard, walking two and two, a priest accompanying the dying man. On the scaffold was erected a large cross exactly in the form of that commonly represented for St. Andrew's. The executioner and his assistants placed the prisoner on it, in such a manner, that his arms and legs were extended agreeably to the form of the cross, and strongly tied down. Under each arm, leg, &c. was cut a notch in the wood, as a mark where the executioner might with the greater facility break the bone. He held in his hand an iron bar, not unlike an iron crow, and in the first place broke his arms, then in a moment after both his thighs. It was dreadful to see the poor wretch writhe his body with agony, and to observe the distortions of his face. It was a considerable time before he expired, and it would have been longer, had not the executioner given him what is called the coup de grace, or merciful stroke, on his stomach, which at once put an end to his misery. They then took the dead body from the cross, and put it on a wheel, fixed to a long pole, where he was exposed for some time; and this part of the ceremony occasions the common expression of being broke upon the wheel, though it is performed on a cross."

The inhabitants of Paris carry on a very extensive trade with the other parts of the kingdom. Their commerce with foreigners is also considerable; for it is observed, that one single branch, that of the gold, silver, and silk stuffs manufactured at Paris, is equal to the whole trade caried on at Lyons. They have here likewise manufactures of all other sorts of stuffs, of looking-glasses, and almost every other utensil necessary for support and convenience.

In this city are six principal companies of tradesmen, out of which the consuls, who have the regulation of trade, are chosen; these are the drapers, the grocers and apothecaries, the mercers and jewellers, the skinners, the hatters and goldsmiths: besides which there are the booksellers, the vintners and wine-merchants, the wool-merchants and timber-merchants: but though these are esteemed inferior to the others, they are capable of being elected consuls, and enjoy the same privileges.

In the neighbourhood of this capital the land is in general flat and even, intermixed, however, with a few eminences. Towards the north of Paris, the soil is fat, and produces a great quantity of very good corn. On the other side it is sandy, marshy, and wet. The whole is, however, cultivated with great care and industry; and the people have carried the art of gardening to such perfection, that in the midst of winter they raise all those sorts of kitchen-stuff that seem to be the produce of summer only. Within the election of Paris, they make one year with another, about sixteen thousand hogsheads of wine, which is all drank at Paris, or in the places contiguous to it.

Paris has undergone the fate of most other cities: it has been several times besieged, twice burnt, and once considerably damaged by an inundation of the Seine. Henry VI. king of England, was crowned here, and his court was kept with great state and magnificence at the Louvre in 1422. On the twenty-first of August 1572, it was in a most detestable manner stained with the blood of six thousand protestants; the signal for this most horrible massacre being given by the tolling of the great bell, which is still to be seen in the tower of the palace where the parliament sits. In the civil war, Paris took part with the Leaguers, and was besieged in the year 1589 and 1590, in vain, by Henry III. and IV. but in 1594, after the coronation of the latter, it readily opened its gates to him.

There are several palaces and little towns, in the neighbourhood of Paris, which are included under the same government. The principal of these are the following; viz.

The royal palace of Madrid, in the wood of Bologne, is situated about three miles to the west of Paris. This palace was built by Francis I. in 1529, after the model of the palace of Madrid in Spain. It consists of a suite of buildings three stories high, besides the ground-floor, supported by coupled columns. The whole building is surrounded with a narrow ditch. The arches have an ornament of a singular kind, they being incrusted with a sort of tiles that glisten very much when the sun shines upon them. The principal building is flanked on each side by two large pavilions, at the angles of which there are smaller ones. In the middle of the fronts of each of the large pavilions is a round tower, the top of which is in the form of a dome.

The fine seat of Conflans is thus called from its being near the confluence of the Seine and the Maine. It owes its beauty both to nature and the elegant taste of Francis de Harlay, archbishop of Paris: it belongs to that metropolitan see, and is the country-seat of the archbishops. The rooms within are extremely magnificent, especially the gallery, which is adorned with pictures executed by the best masters. The gardens are very beautifully laid out, and adorned with groves, walks, statues, water-works, &c.

About two leagues to the east of Paris stands the town of St. Maur de Fossez, on the banks of the river Maine, over which is a stone bridge. Here is a very fine seat, with beautiful gardens, belonging to the duke of Bourbon; also an antient abbey of St. Maur, which was secularized in 1535, and afterwards changed into a collegiate church of canons.

The small town of Ruel is situated on the banks of the Seine, five miles from Paris, where is a handsome church, and some elegant gentlemen's houses: but it is principally noted for a seat built by cardinal Richelieu, which, though not magnificent, is admired for its neatness, it being adorned with very beautiful gardens in the Italian taste, which have some curious water-works belonging to them.

Within the wood of Vincennes, at the distance of three miles to the east of Paris, is a royal palace, or castle, which was considerably improved and beautified by Francis I. Henry II. Louis XIII. and XIV. It is an oblong square building, encompassed with dry ditches, which are lined, and pretty deep. The castle is composed of several square towers, the highest of which is called the Donjon, and is surrounded with a particular ditch, over which there is a drawbridge. The chapel, though in the gothic taste, is not without beauty, it being adorned with several pyramids, and other embellishments; and the paintings on the windows are highly valued. The rooms within the palace are beautiful and stately, and the ceiling adorned with paintings. The wood above-mentioned reaches almost to the gates of Paris, and is inclosed within a wall.

Here is also a fine park; and the gate through which you enter is a noble piece of architecture, in the form of a triumphal arch, adorned with columns and statues, and stands in the middle of a large court, on each side of which is an open gallery supported by rustic arches, besides a fine suite of buildings.

There is a palace, at the entrance of this park, where they used formerly to keep wild beasts, as lions, tygers, and leopards. This park takes up one thousand four hundred and sixty-seven acres. The avenue leading to the palace has four rows of elms planted on a spot which has been made level for that purpose, they having been obliged to support it, in several places, by means of high and thick walls.

walls. This palace, or caſtle, has ſometimes ſerved as a priſon for perſons of the higheſt rank, when they have incurred the diſpleaſure of the king.

The iſle of France, conſidered as a government, is bounded, on the north, by Picardy; on the weſt, by Normandy; on the ſouth by the Orleannois; and on the eaſt, by the government of Champagne; extending, both in length and breadth about ninety miles. The air is temperate, and the ſoil fertile; ſo that corn, wine, and fruit, are produced here in great plenty.

This country is divided into ſeveral ſmall diſtricts. It has ſeveral conſiderable towns in it, which we ſhall hereafter deſcribe; but ſhall begin with the palaces, as having a nearer affinity to the places lately taken notice of.

The principal palace is that of Verſailles, ſituated four leagues to the ſouth-weſt of Paris, on a riſing ground, in the midſt of a country fit for hunting, and abounding with game. Louis XIII. built a caſtle here, to ſerve as a hunting-ſeat; but Louis XIV. being much pleaſed with the ſituation, converted the village into a fine town, and the caſtle into the moſt noble palace in the world. The ſide fronting the ſtables is not anſwering in magnificence to the reſt; but that facing the gardens is extremely beautiful. Its roof, glittering with gold, affords a noble proſpect at a diſtance; and the gardens, ſtatues, canals, groves, grottoes, fountains, and other water-works, far ſurpaſs any thing of the kind to be ſeen in Italy; and its riches and beauty within perfectly correſpond with its outſide. The avenue leading to the caſtle divides the town into two parts; that which ſtands on the left hand, in coming from Paris, is called Old Verſailles, and that on the right the New Town.

The palace, which is ſeated on an eminence in the midſt of a valley, is encompaſſed with hills. On the ſide towards Paris is a fine avenue of elms, the viſta in the middle being ſixty feet wide, and thoſe on the ſides thirty each. The end of the great royal ſquare is encompaſſed with regular pavilions built by the princes and lords of the court; theſe, with other fine houſes, form the new town. This ſquare has a fountain in the middle of it, with walks like thoſe leading to it. From thence you aſcend the great court of the palace, which is four hundred and eighty feet long, with four large pavilions at the corners for the officers lodgings.

The great court is incloſed with an iron baluſtrade, and two large buildings, that form the wings on each ſide, having balconies ſupported by columns, and adorned with fine ſtatues. Theſe wings, together with the pavilions, ſerve for offices to the palace, and have courts with other buildings behind them. Here are other double apartments, which, joining thoſe wings, form a communication between the new and old caſtle, and, contracting the upper part of the great court, end gracefully at the ſmall one. Out of this court is an aſcent of three marble ſteps into a large landing-place, and from thence by five more, into the little court paved with black and white marble. In the middle is a marble fountain and baſon, with ſtatues of gilt copper.

The front and wings are of brick and free-ſtone, adorned with marble buſts and brackets. Before this front is a balcony ſupported by eight marble columns of the doric order, with red and white ſpots like jaſper, and their baſes and capitals of white marble. In the two angles of the wings in the front are hanging pedeſtals, which ſupport two cloſets encompaſſed with gilt iron caſes; and underneath are two baſons of white marble in the form of ſhells, where young Tritons ſpout water. The middle building has three gilt iron doors in the porch, with apartments on the right and left ſides of it.

After quitting the great court, and paſſing through an open porch, you aſcend by a large ſtair-caſe eighty-one feet long and thirty broad. There is an entrance, from this porch, into two painted halls. The ceiling of one of them is ſupported by eight marble columns of the doric order, that have red and white veins; the capitals and baſes are of a green colour; and the columns, being four on a ſide, divide the hall into three parts. On the ſides oppoſite to each column are pilaſters of the ſame marble, that ſupport a cornice under the platform; and there are niches with ſtatues fronting the windows.

The other hall, which is next to the former, is ſupported by twelve columns of the ionic order, with marble pilaſters behind them that have red, black, violet, and yellow veins; and their capitals and baſes are of fine white marble. From this you enter another hall of the ſame dimenſions, where the ceiling is an octagon, with twelve double pedeſtals by the windows and doors, of fine marble, on which are placed figures of the twelve months, repreſented by winged young men in gilt copper. The pieces over the doors and windows are either of a white or flame-coloured marble. Upon one ſide of this hall is the chamber and cloſet of the baths.

All the parts that are not hung with tapeſtry are lined with marble, and the nearer you come to the king's apartments, the more ſumptuous are the marbles, ſculptures, and paintings. The like order is obſerved in the upper apartments, which are eight on a floor, adorned with different ſorts of marble and curious paintings. The guard-hall is ornamented with marble that has black and yellow veins. In the other apartments is a marble with green veins, and others are lined with a fine marble called agate, brought from the Alps.

On the ſide towards the green-houſe are other lodgings in the ſame order, with an apartment for the dauphine, under that of the queen, the ceiling of which is curiouſly adorned. The queen's apartments are a ſuite of rooms that have the ſame dimenſions with the king's; but of different workmanſhip; the paintings on the ceilings repreſent the actions of the antient heroes. Oppoſite to the front of the palace is a large plat in the garden, one hundred yards long, and twelve broad: the principal front looks towards a piece of water, and has three balconies, ſupported by four columns each, and a figure upon every column repreſenting a month of the year, and theſe balconies are richly adorned with ſtatues of excellent workmanſhip.

The vaſt variety of paintings and ſtatues, with which the apartments of this palace are adorned, are too numerous to particularize. The royal cabinet for medals, coins, paintings, and the like curioſities, had the choice of all that Italy could afford. The king's lodgings are enriched with utenſils of maſſy plate, even to the bedſteads, baluſtrades, and rails. The gallery towards the ſide of the garden is perhaps the nobleſt ever beheld, for its delightful proſpect, and the fine ſtatues and looking-glaſſes placed between the pannels of the windows.

The chapel, built in 1699, is a moſt finiſhed piece of architecture, ſculpture, and painting, performed by the moſt eminent maſters. Every room in the palace has a particular name taken from the principal object painted on the ceiling; for inſtance, the hall of plenty, from plenty and liberality being painted on the ceiling. Here are ſeveral pictures of the Holy Virgin; one in which ſhe holds the infant Jeſus, and is ſurrounded with ſeveral pilgrims, done by Pouſſin; the Virgin Mary and Joſeph flying into Egypt, by Guido, &c. The ſaloon of Venus has that goddeſs painted on the ceiling, ſeated in a chariot drawn by doves, the gods and heroes adorning her triumph. Here are pictures of Nebuchadnezzar, who gives orders in relation to the gardens of Babylon; of Auguſtus exhibiting a chariot race in the circus; of Cyrus reviewing his army; and of Alexander marrying Roxana. The hall of war has the ceiling adorned with paintings in five compartments, the largeſt of which in the middle repreſents France holding a thunder-bolt in one hand, and a buckler in the other; the four others are on the ſides of it: the firſt is Bellona in a violent rage; the ſecond repreſents Germany in vain endeavouring to defend the Imperial crown; in the third Spain ſeems to threaten France; but her ſoldiers are put to flight; the fourth ſhews Holland thrown back upon her lion. The room is alſo adorned with ſix heads of the Roman emperors in porphyry; the drapery of the buſts is of gilt braſs, and they are placed on oriental alabaſter pedeſtals.

The bed-chamber of the king is more magnificent than any of the other rooms; the carvings are all gilt, on a white ground. The bed is placed in an alcove, where two figures of Fame, who are repreſented ſitting, ſeem to watch for the preſervation of the king. The chamber is adorned with ſeveral fine pictures, and the furniture of the bed is of crimſon velvet, embroidered with gold.

No leſs magnificence appears in the gardens, than in the palace. In deſcending from the terrace, you ſee two baſons which contain ſeveral water-ſpouts, and in the midſt of each, a collection of ſpouts in the form of a wheat-ſheaf, that riſes twenty-nine feet high. The borders of theſe baſons are each adorned with eighty groups of brazen figures, repreſenting river gods and nymphs; and four others of the ſame metal repreſenting cupids, little nymphs, and genii. In two angles of the parterre are two other baſons of marble, where the water is thrown into two ſheets, that have a fine effect, and on the borders of the baſons are groupes of animals in braſs. From this parterre you ſee in a kind of creſcent which is below it, the baſon of Latona, round which are repreſented a groupe of the three figures, Latona, Apollo,

Apollo, and Diana. Latona here ſeems to complain to Jupiter of the cruelty of the peaſants of Lycia, who are repreſented as metamorphoſed into frogs, which throw a vaſt quantity of water upon the groupe. There are ſeveral other baſons with jets, and other curious water-works, a particular deſcription of which would carry us too far.

Here is a famous canal, at one end of which is a baſon of an octagonal figure, four hundred and twenty feet in diameter; four of its ſides are circular, three in ſtraight lines, and the other joins the canal. In two of the angles of this baſon is a ſea-horſe with a Triton on his back. The great canal is thirty-two fathoms broad, and eight hundred long, including the baſons at each end. In the middle it is croſſed by another canal about five hundred and twenty fathoms in length. The court ſometimes divert themſelves in yachts and galleys upon theſe canals.

The green houſe, or orangery, is a maſter-piece of its kind. It has a ſouthern expoſure; and contains, firſt, a large gallery, four hundred and eight feet long, with twelve arched windows in the front; and on each ſide are two others, each three hundred and ſixty feet long. Theſe galleries are adorned on the outſide with fine rows of columns. Before this green-houſe is a beautiful parterre, with a fine baſon in the middle, from which a ſpout of water riſes forty feet high. It is embelliſhed with four rows of columns, of the Tuſcan order, groupes of ſtone figures beautifully carved, vaſes, ſtatues of white marble, &c. This parterre ſeems a foreſt of orange and lemon-trees, myrtles, &c. in the ſummer-ſeaſon.

Another celebrated curioſity is the labyrinth, which is a fine grove, the ſeveral walks of which are ſo interwoven with each other, that it is very difficult for a perſon without a guide not to loſe himſelf. At the entrance are two ſtatues, the one of Æſop, the other of Cupid holding a clue of thread in his hand. At every turning of the alleys you meet with a beautiful fountain, in a baſon of fine ſhell-work, where one of Æſop's fables is very naturally repreſented; the ſubject of which is expreſſed in four lines, engraved in gold letters on a braſs plate with a black ground. Here are a great number of other groves, all beautifully adorned, and at one end of the garden is the place where a variety of foreign beaſts and birds are bred.

There is another palace, in the park of Verſailles, called Trianon, ſituated at one end of the canal which croſſes the large one. This is both genteel and magnificent; the architecture and ornaments are in an exquiſite taſte, and the front about ſixty-four fathoms broad. The court before it is adorned with a fine periſtile, ſupported with marble columns and pilaſters. The two wings are terminated by two pavilions, and over the whole building is a baluſtrade adorned with ſtatues, urns, &c. In the apartments are fine pictures, and the furniture is very ſumptuous. The gardens are here alſo embelliſhed with fine baſons, caſcades, and groupes of figures, extremely well executed.

There is another royal ſeat, in a park contiguous to Verſailles, called Marly, delightfully ſituated in a little valley, with a very fine proſpect of the caſtle of St. Germain, and of the neighbouring country. On coming from St. Germain to this palace, you enter firſt a round court, three hundred feet in diameter, where ſtands the guard-room, and where terminate the ſeveral courts for ſtables, coach-houſes, &c. The palace conſiſts of a large pavilion, ſtanding detached from any other, as alſo twelve ſmaller ones, ſix on each ſide: the outſide of the great one is adorned with paintings in freſco. The ſteps are embelliſhed with figures of ſphinxes, groupes of children, vaſes, &c.

In the great hall there are ſixteen pilaſters, and it is adorned with fine looking-glaſſes and pictures. In the king's apartments, and in thoſe of the royal family, there are ſeveral beautiful pieces of painting, repreſenting the ſieges which Louis XIV. carried on in perſon. The ſmall pavilions are joined to one another by arches, through each of which you go into a little arbour made with lath-work. In all thoſe pavilions there are apartments for people of quality. They have nothing very remarkable; but in each of the two laſt there is a globe, of which cardinal d'Etrées made Louis XIV. a preſent. They are eleven feet, eleven inches, and one half diameter, and were invented and made by father Coronelli.

There is a large caſcade in the gardens; it is properly a river, which falling from a very high place, forms very beautiful ſheets of water. At the bottom there are ſeveral baſons, adorned with groups, ſtatues, &c.

The engine of Marly, for raiſing the water, ſtands on the river Seine. It is compoſed of fourteen wheels, which are turned by horſes, and ſet two hundred and twenty-five pumps a going; by which means the water is carried up into a tower ſix hundred and ten fathoms diſtant from the river. From thence the water runs into an aqueduct three hundred and thirty fathoms long, and from thence it is conveyed through iron pipes of eighteen inches bore, into the reſervoirs of Marly, which are three hundred and fifty fathoms farther. Theſe reſervoirs furniſh all the water-works of Marly and Verſailles: all theſe works have coſt immenſe ſums; the water being conveyed over ſeveral hills.

From the ſide of the parterre which faces the large pavilion, there is a moſt extenſive and fine proſpect. From this parterre you go down into another, which is adorned with marble ſtatues, and has a fine baſon in the middle, where there are ſeveral water-ſpouts in the form of a wheat-ſheaf. Beyond it there is a large baſon ſurrounded with walks and graſs-plats. Going ſtill farther down, you meet with two other baſons adorned with ſhell-work, and groups of white marble, repreſenting rivers and nymphs. The water falling out of theſe baſons form ſeveral ſheets, and fall into another baſon below.

The town of Fontainbleau is mean, though it has a particular ſub-governor, a royal prevoté, and a foreſt-court. It is thirty-five miles to the ſouth-eaſt of Paris, and is ſolely remarkable for its royal palace, in which the French kings have taken great delight, it being well ſituated for a hunting-ſeat. It conſiſts of ſeveral ſets of buildings, added to one another at different times, without any order or ſymmetry, which conſtitute a confuſed maſs of various kinds of architecture; yet this very confuſion has an air of grandeur which ſtrikes the eye. Its ſituation is in a bottom, and ſurrounded by a large foreſt; and the neighbouring hills are crowned with bare rocks. The court frequently take the diverſion of hunting in the foreſt, as it abounds with game.

In this palace there is one room larger than the reſt, where plays are performed when the court is here. There is, in this room, a chimney-piece twenty-three feet high and twenty wide, built by Henry IV. it is adorned with four lofty Corinthian columns of ſpotted marble, with the baſes and capitals of white marble, on which ſtand the equeſtrian ſtatue of the laſt mentioned prince; underneath are two baſſo-relievos, one repreſenting the battle of Ivry, and the other the ſurrender of the city of Mante. Two marble ſtatues, repreſenting loyalty and peace, ſtand on each ſide of this figure, and facing the fire-place is a noble theatre for the acting of plays. All the rooms are adorned with paintings. That in which the king dines in public has a very fine ceiling, and noble pictures repreſenting fortitude, temperance, juſtice, and prudence, with ſeveral other ſubjects.

This palace has alſo very fine galleries belonging to it. Among the reſt, the ſtag-gallery, along the orangery, is particulary worthy of notice, it being adorned with paintings of all the royal palaces, between which are ſtag's heads ſet off with branches of a very uncommon ſize. Under each ſtag's head is an inſcription, ſhewing in what wood, and by what king, the ſtag was killed. Thus many of them are repreſented as ſaying, very politely, king Charles, or king Louis did me the honour of taking me.

In the gallery of Diana is the picture of Henry the Great in a hunting-dreſs, and the different kinds of hunting, in which he delighted, are repreſented in ſeveral paintings twelve feet high, and twenty broad. Near this gallery is the aviary, which is extremely large and beautiful, it being ninety feet in length, and nine in breadth. In the middle is a large dome, under which is an artificial rock, made of ſhell-work, from which iſſue ſeveral ſprings, the water of which runs along the whole aviary through many little channels made in the ſtone pavement.

There are ſeveral ſtatues and fountains in the gardens, the largeſt of which ſtands in the middle of the garden, and is called the fountain of the Tiber, from that river being repreſented in braſs. Beyond it are one grotto and ſeveral caſcades; and at the entrance of the park is a fine canal ſix hundred fathoms long, and twenty broad; it is all lined with ſtone, and has a fountain at each end. The alleys of this park being of a vaſt length, make a very rural and delightful appearance.

Meudon is a large open town, two leagues below Paris. There is here a fine palace built in the reign of Henry II. for the cardinal of Lorraine; it came afterwards ſucceſſively to Meſſieurs Servients and de Louvois, who each adorned it in their turns. Louis XIV. bought it of Monſieur de Louvois's widow, and gave it to his ſon the dauphin, grandfather to the preſent French king. The dauphin added ſeveral buildings and ornaments to it. This

palace lies in the middle of a pleaſant foreſt, and is decorated with a grotto paved with ſpotted porphyry, and fine water-works. The houſe is adorned with rich furniture, marble ſtatues, and fine paintings of Roman emperors, and ancient philoſophers.

At the entrance of the court of the palace is a large pile of buildings on the right, and another on the left, which open in the form of a ſemicircle, but are disjoined from the body of the houſe. In the middle of the front is a lofty advanced building, entered by three doors: above them runs an order of architecture, conſiſting of arches and columns finely deſigned; over them is another order accompanied with pilaſters; and over all is a fountain containing two ſtatues in a recumbent poſture, admirably well finiſhed. The wings are not ſo high as the principal building, and each of them is terminated by a ſquare pavilion. The inſide of the palace was adorned with the richeſt furniture, and a fine collection of ſtatues, paintings, medals, and other antiquities. The front towards the garden alſo conſiſts of a lofty advanced building, with wings conſiderably lower, which terminate on the right and left on two pavilions of the ſame height as the body of the building. The gardens are much admired for their fine walks, parterres, &c. There are ſome excellent ſtone quarries near Meudon.

St. Cloud, in Latin Fanum Sancti Clodoaldi, was formerly called Nogent: it is ſituated on the river Seine, two leagues below Paris; and ſtands on a hill, the foot of which is watered by the river, over which there is a ſtone bridge. There is in this town a noble palace belonging to the duke of Orleans; it is adorned with fine paintings and ſculptures; and the garden is extremely magnificent, abounding with water works, as fountains, caſcades, ſheets of water; alſo with pleaſant walks, charming parterres, and all that can pleaſe the eye, and ſatisfy a ſpectator of the niceſt taſte; but a particular deſcription of all thoſe beauties would carry us too far. The manor of St. Cloud was erected into a duchy peerdom in favour of the archbiſhops of Paris to whom it belongs.

This town is much reſorted to, on account of its extraordinary pleaſantneſs. It has a manufactory of porcelain, and a fine bridge of ſtone over the Seine. In 1589, Henry III. was murdered in this place. Beſides the palace, here are a collegiate church, and a convent.

The town of Senlis, in Latin Auguſtomagus, is ſeated on an eminence on the banks of the little river called Nonette, twenty miles to the north-weſt of Paris, in a diſtrict called Valois. It is the reſidence of a governor, a diſtrict court, and a ſalt-office. In this city, and its three ſuburbs, are ſix pariſh-churches; among which is the cathedral, which has a ſteeple that is one of the higheſt in France, and the figures that adorn the front of the right wing of this church are very curious. Here are alſo a collegiate church, and a royal chapel. Its biſhop is ſubject to the archbiſhop of Rheims, and has within his dioceſe one hundred and ſeventy-ſeven pariſhes, forty-four chapels, three abbies, nine priories, with nineteen infirmaries, and his annual revenue amounts to eighteen thouſand livres, out of which he pays to the court of Rome one thouſand two hundred and fifty-four florins. The city is defended by a wall, a dry moat, and baſtions, and has its own laws.

The town of Soiſſons, which is the capital of a diſtrict called the Soiſſonnois, and of the whole government, is ſeated in a pleaſant and fruitful valley, on the river Aiſne, ſixty miles to the north-eaſt of Paris. It is a pretty large well-built town, and gives the title of count. Several councils have been held here. It is the reſidence of a governor-general, and the ſeat of a generalité, an intendency, a board of the finances, a ſalt-office, a court of juſtice, a foreſt-court, &c. In this city, beſides the cathedral, which has one of the moſt conſiderable chapters in the kingdom, are three collegiate churches, one college of the fathers of the oratory, ſix abbies, ſeveral convents, a French academy, and an ancient caſtle. Its biſhop is ſubject to the archbiſhop of Rheims, in whoſe abſence he performs the ceremony of the king's coronation: he has three hundred and ninety-ſeven pariſhes, and twenty-three abbies within his dioceſe, which produces a revenue of eighteen thouſand livres, out of which he pays the court of Rome's taxation of two thouſand four hundred florins.

The town of St. Denis is ſeated in a fruitful plain, in the iſle of France Proper, five miles to the north-weſt of Paris, owes its origin to a celebrated abbey of Benedictines, founded there by king Clotaire, in honour of St. Denis, ſo early as the year 600, but greatly improved by his ſon Dagobert. The abbey is now rebuilt with the fineſt free-ſtone, and has a garden laid out in the moſt elegant taſte. The church, though Gothic, is a handſome ſtructure, and not only contains a very rich treaſury, in which are kept the crown jewels; but is likewiſe the place of interment for the kings of France and their families; but no tombs have been erected here, for Henry IV. or any of the ſucceeding kings. The famous marſhal de Turenne has a noble monument here erected by the king's order, in a marble chapel built on purpoſe, where his effigy lies at full length, ſurrounded with laurels and trophies, and a Roman eagle retreating backward at the ſight of ſo formidable an enemy. Immortality with a radiant crown on her head, holds in one hand a crown of laurel, while ſhe ſupports with the other the dying hero. Wiſdom and Valour are alſo repreſented in their proper attitudes: the former ſeems aſtoniſhed at the ſtroke which deprives France of that great man, and the latter appears in conſternation. On the altar in this abbey is a croſs, ſaid to be of maſſy gold, ſeven feet high, ſet with diamonds and rich pearls, and by it a table of gold; the altar is plated over with ſilver. After the death of cardinal de Retz, its laſt abbot, its income, amounting to one hundred thouſand livres, was given to the houſe of St. Cyr. Its preſent revenue is ſixty thouſand livres. Beſides this church here are thirteen others, among which are the collegiate church of St. Paul, and five convents.

The ancient city of Novon is pretty large, and well-built; it ſtands in the diſtrict called Noyonnois, on the little river Verſe, twenty-two miles to the north-weſt of Soiſſons. It is the reſidence of a governor, and has a ſalt-office, a foreſt-court, &c. Beſides its cathedral and a royal chapel, it has ten pariſh-churches, two abbies, two convents, one community, one ſeminary, and two hoſpitals. Its biſhop, who is alſo ſuffragan to the archbiſhop of Rheims, is a count and peer of France: his dioceſe conſiſts of four hundred and fifty pariſhes, and ſeventeen abbies; and his revenue amounts to twenty-five thouſand livres, out of which he pays three thouſand florins to the court of Rome. The principal trade of this city conſiſts in corn. It has been ſeveral times deſtroyed by fire. Calvin, the celebrated reformer, was born here.

The city of Laon, in the diſtrict called the Laonnois, ſtands on a ſteep eminence in the midſt of a large plain, twenty miles to the north-eaſt of Soiſſons. It is well-built, and has an old caſtle, and beautiful ſtreets. It has a governor, a ſalt-office, a foreſt-manor, and a court of juſtice. Beſides its cathedral, it has three collegiate churches, five abbies, two convents, a college maintained at the expence of the city, one general hoſpital, and an alms-houſe. Its biſhop, who is ſubject to the archbiſhop of Reims, is the ſecond duke and peer of France. Within his dioceſe are three hundred pariſhes, and twenty-four abbies. His revenue amounts to thirty-thouſand livres, out of which he pays four thouſand florins to the court of Rome. Excellent wine is produced in the neighbouring country.

The city of Beauvais, in the diſtrict of Beauvaiſis, is ſeated on the river Teraine, ſixteen leagues to the north of Paris, and is almoſt ſurrounded with hills. Cæſar having beſieged and taken this town, is ſaid to have given it the name of Cæſaromagnus. It is fortified, but is of no great ſtrength, it being commanded by the neighbouring mountains. Its cathedral, dedicated to St. Peter, is a magnificent building: it has alſo ſix collegiate churches, thirteen pariſh-churches, three abbies, a general hoſpital, and an alms-houſe. It has likewiſe a manor-court, which, together with a foreſt-court, are dependent on the biſhop. It has likewiſe a province-court, and a ſalt-houſe. The biſhop, who is ſuffragan to the archbiſhop of Rheims, is a count and peer of France, and has a dioceſe conſiſting of twelve chapters, fourteen abbies, forty-eight priories, four hundred and forty-two pariſhes, and three hundred chapels, with an annual revenue amounting to fifty-five thouſand livres, out of which he pays a taxation of four thouſand ſix hundred florins to the court of Rome. In this city is a conſiderable manufactory of tapeſtry, and great quantities of ſerge and woollen cloths are alſo made here.

This city was beſieged in vain by the Engliſh in 1443, and in 1472 it made a brave defence againſt Charles duke of Burgundy, when the women ſignalized their courage under the conduct of a brave heroine named Joan Hatchet, whoſe picture they preſerve in the town-houſe; and in memory of this action the women are allowed to march firſt in a proceſſion annually obſerved on the tenth of July. The adjacent country abounds in corn, paſture, and fruit, and affords ſome of the beſt mutton in France.

The town of St. Germain's, or St. Germain en Laye,

is well inhabited; it is ſeated on an eminence along the Seine, ten miles to the north-weſt of Paris, and has very good air and water. The Engliſh deſtroyed a palace which ſtood here in 1346; but a new building being raiſed by Francis I. it afterwards received the name of the Old Palace, to diſtinguiſh it from one built there by Henry IV. which was called the New. Louis XIII. added ſome conſiderable embelliſhments to it, and Louis XIV. enlarged it by the addition of five ſtately pavilions, whence, though it is no regular building, it makes a grand appearance.

The New Palace, as it is called, fronts the Old, and ſtands on the brow of a hill, with a garden of ſix beds of earth ſupported by arches ſloping into the valley. This building is a true image of the tranſitorineſs of all ſublunary things, the galleries in it being turned into granaries, and the paintings ſcarce diſtinguiſhable for filth. The very alcove in which Louis XIV. was born is now a duſt-hole, and the grand ſtair-caſe leading into the garden is wholly in ruins, while the arches for the beds in the garden are in many places ſunk into the ground. The Old Palace was the reſidence of James II. after his flight from England, and here too he died. The ſtreets of the town are well paved, the houſes are lofty and handſome, with ſome large ſquares and hotels, though only one pariſh-church, three convents, and an hoſpital, are contained in it.

The convent of St. Cyr, for nuns of the order of St. Auguſtine, was founded in 1686 by Madame de Maintenon, miſtreſs, if not the ſecret conſort of Lewis XIV. of which ſhe herſelf was abbeſs till the fifteenth of April, 1719, when ſhe died. It contains fifty ladies of quality, thirty-ſix lay-ſiſters, and two hundred and fifty pupils, who muſt be between the age of ſeven and twelve; but muſt prove their nobility for four generations, and have no defect in body or mind. Here they continue till they are twenty years of age, when ſuch of them as are diſpoſed to be nuns are diſtributed among the royal abbies, where they are admitted gratis: the others are married to gentlemen, with a portion of four hundred piſtoles, beſides a certainty of preferment to the bridegroom; or elſe they are ſent back to their parents. On the death of any one of the fifty ladies, her place is filled up by election from among the young ladies. The thirty-ſix lay ſiſters inſtruct them in every branch of education becoming their ſex. The convent is a very ſpacious and ſplendid ſtructure; and the foundation has an annual revenue of one hundred and eighty thouſand livres, one hundred thouſand of which ariſe from the extinction of the abbey of St. Dennis, excluſive of its lands and immoveables.

SECT. VIII.

Treating of the Government of BRITTANY and NORMANDY, their Situation and Extent, Hiſtory of the Country, its Produce, principal Cities and Towns, Trade and Manufactures of the Inhabitants, &c.

BRITTANY, called by the French Bretagne, is a kind of peninſula, ſurrounded, on the ſouth and weſt, by the Atlantic ocean; on the north, by the Britiſh channel; and joins Normandy, Maine, Anjou, and Poitou towards the eaſt. Its greateſt length, from eaſt to weſt, is ſixty leagues; and its greateſt breadth forty-five, but in many places it is very narrow. It received its name from the old Britons, who being driven out of Britain about the middle of the fifth century, by the Angles and Saxons, croſſed the channel into Gaul, and, after wandering about for ſome time, ſettled in this province, to which they at length gave their name. In ſucceeding times the Britons were obliged to ſubmit to the kings of France.

Charles the Great had a fleet here, to act againſt the Normans, and under his ſucceſſors, Numenius, a chief of the Britons, created himſelf king; but his ſecond ſucceſſor was taken off by ſome conſpirators, who made themſelves maſters of the country, under the title of counts. The Normans afterwards reduced the country, but were unable to keep the quiet poſſeſſion of it; till at length Conan, count of Brittany, married his only daughter Conſtantia to Gottfried, count of Anjou, the ſon of Henry II. of England, and duke of Normandy; and the daughter and heireſs of this Conſtantia marrying Peter of Dreux, Brittany fell to the royal family of France, Peter being a prince of the blood. It was then governed by the dukes of Brittany; and at length, by marrying their daughters to the kings of France, in 1532, it became united to that crown.

This province is intermixed with plains and mountains, of which there are more in Lower Brittany, which is croſſed by a chain of mountains, called Mount Arré. There are ſeveral fruitful plains, and alſo many ſandy and barren heaths. The air is every where pretty temperate, but thick and moiſt towards the ſea-coaſt. The ſoil here yields paſture, hemp, wood, minerals, corn, and but very little wine. The meadows feed abundance of cattle, eſpecially horſes, of which a very good race is bred here. Hemp and flax grow in great plenty, ſo that abundance of canvas and linen is made in this province. The foreſts are many and large, and contain great variety of game. There are alſo here ſome mines of iron, lead, copper, and tin. This province is happy in havens, having more good ſea-ports than any other parts of France. The inhabitants are good fiſhermen, being encouraged by the great variety of delicate fiſh taken on their coaſt, particularly ſalmon, herrings, ſardines, and a certain fiſh of a moſt delicious taſte, called imperator, or empereur, at Marſeilles, and gracieux ſeigneur, or gracious lord, in Brittany; beſides tunnies, porpuſſes, dolphins, &c.

They have their own parliament, which is held at Rennes; as alſo their own laws, and particular ſtates, the latter of which conſiſt of the clergy, nobility, burghers, and peaſants. They uſed to meet formerly every year, but ſince 1630 they meet once in two years. Their chief buſineſs is, to conſent to the free-gift demanded of the province by the king. The governor is likewiſe admiral of Brittany; and under him are two lieutenant-generals one of whom has the ſuperintendency of eight dioceſes, and the other only of the earldom and biſhopric of Nantes: beſides theſe, there are three ſub-governors. In the meeting of the ſtates, and aſſeſſment of taxes, the country is divided according to its nine biſhoprics, five of which belong to Upper, and four to Lower Brittany.

The principal places in this government are, 1. Rennes, the ancient Condate, the capital of the province being ſeated on the river Vilaine, about fifty-five miles to the north of Nantes, and forty-five to the ſouth of St. Malo's. It is divided by the river into two parts, which have a communication by three bridges. It is pretty large, populous, and the ſee of a biſhop; here is alſo held the parliament of the whole country, an intendency, a county-court, a foreſt-court, and a conſulate. The biſhop, who is ſuffragan to the archbiſhop of Tours, has a dioceſe conſiſting of two hundred and thirty-ſix pariſhes, with an income of fourteen thouſand livres, out of which his taxation to the ſee of Rome is one thouſand florins. This town contains many well-built houſes; but the ſtreets are narrow, dark, and dirty. Beſides the cathedral, it has eight pariſh-churches; and ſeventeen convents; the Jeſuits had here a fine college, and the ſtates of the province have erected in this city a noble ſtatue of Louis XV.

2. Nantes, in Latin Nannetes, was called by the ancient Romans Condiviſtum: it is the ſecond city of Brittany, and the capital of a county of the ſame name, ſituated on the northern bank of the river Loire, near the confluence of the river Ardre, about eight leagues from the ſea to the eaſt, and eighteen from Rennes to the ſouth. It was the ſeat of the late dukes of Brittany, and gave the title of count to their eldeſt ſons. It is a pretty large city, ſurrounded with ramparts, and very deep ditches, with ſome fortifications; it has an old caſtle flanked with large round towers towards the city, and with ſome half-moons towards the ſuburb of St. Clement. This is an epiſcopal ſee, the biſhop of which is ſuffragan to the archbiſhop of Tours, and, by virtue of his dignity, a counſellor in the parliament of Rennes. There is alſo here a chamber of accounts, an office of the finances, a preſidial, and an univerſity. The public buildings are the cathedral, dedicated to St. Peter, a fair ancient ſtructure, beautified with two high towers; there are to be ſeen in this church the tombs of ſeveral dukes of Brittany; the collegiate church of the virgin Mary; ſeveral parochial churches; divers monaſteries; the town-houſe, built after the modern architecture; the palace of the chamber of accounts; that of the preſidial court, with a beautiful tower and clock; and a ſtately hoſpital. This city is a great mart for trade, vaſt quantities of all ſorts of merchandiſes are brought in by the river Loire, which flows up to its walls, and brings up very large boats, and ſhips of ſmall burthen; and from thence, by the ſame river, foreign goods are ſent to Anjou, Blois, Orleans, &c. and native commodities brought down. An excellent ſort of brandy is exported hence into foreign countries. By reaſon of this convenience for trade, the city has been, from time to time, conſiderably increaſed; and there are now four ſuburbs round it, which are much larger than the city itſelf, and very well filled with inhabitants.

bitants. One of the ſuburbs, called la Foſſe, is near the harbour, and inhabited by rich merchants. There is here a large key, along which are very fine houſes, and large warehouſes. There is a very particular kind of ſociety or partnerſhip eſtabliſhed above a century ago, between the merchants of Nantes and thoſe of Bilboa in Spain. This ſociety is called the contraction, and has in each of theſe cities a reciprocal tribunal, after the manner of a conſular juriſdiction; a merchant of Nantes, who happens to be at Bilboa, has a right to ſit in this tribunal, and has a deliberate voice; and the merchants of Bilboa are uſed after the ſame manner when they are at Nantes. It is becauſe of this ſociety, that the Spaniſh wool pays but a very ſmall duty at Nantes, and that in return the linen of Brittany is upon the ſame footing at Bilboa. Theſe two cities had even formerly ſhips in common, which traded for the profit of the partnerſhip; but this is now no longer practiſed. They have eſtabliſhed of late at Nantes a manufactory of cotton-linens, which ſucceeds as well as that which has been long ſince ſet up at Rouen, and may even exceed it in time, becauſe cotton and indigo are here much cheaper than at Rouen.

The famous edict in favour of the proteſtants, was made at Nantes by king Henry IV. in the year 1595, which was regiſtered in the parliament of Paris, and confirmed and ſworn by his ſucceſſors Louis XIII. and Louis XIV. notwithſtanding which the latter repealed it in the year 1685, and cruelly perſecuted his proteſtant ſubjects, as we have related in another place.

The city of St. Malo, or St. Malo's, in Latin Macloviûm, and Maclopolis, is ſmall, but populous, ſeated on a little rocky iſland, formerly called St. Aaron, in the Engliſh channel, is in forty-eight degrees thirty minutes north latitude, and in the ſecond degree fifteen minutes weſt longitude; but is joined to the continent by a long mole, not above thirty fathoms broad, at the head of which is a ſtrong caſtle flanked with large towers. The harbour is ſpacious, and one of the beſt on the coaſt, but of difficult entrance, it being ſurrounded with ſeveral rocks, and at time of ebb left almoſt dry, ſo that it will not admit large veſſels, though it is very eaſy to build or refit ſuch ſhips as can enter it.

On the neighbouring rocks are ten different forts, and the town, which is ſurrounded with walls, and deep ditches, is always guarded by a ſufficient garriſon. As ſoon as the gates are ſhut, they let looſe upon the ramparts twelve or thirteen very fierce bull-dogs, which would infallibly tear in pieces any perſon that ventured to come near them, whence it is commonly ſaid that St. Malo is guarded by dogs, though theſe are only deſigned to prevent the garriſon from being ſurprized. This city is alſo ſecured towards the ſea by a ſhoal of ſand that encompaſſes it, and, beſides the rocks, by ſmall iſlands; ſo that the harbour is eſteemed one of the keys of France.

This city is very conſiderable, not only for its ſtrength, but alſo for its trade. The inhabitants, who are ſea-faring people, are famous for their ſkill in maritime affairs, on which account a great number of privateers are fitted out from hence in time of war, which very much diſturb the trade of the channel, and accordingly made many Engliſh captures during the reign of king William, which brought a bombardment upon the town, though it received but little damage. But in 1758, a ſelect body of above twenty thouſand Britiſh troops, under the command of the late duke of Marlborough, and a powerful ſquadron under commodore Howe, having landed at Cancalle bay between the ſixth and ſeventh of June, they burnt all the ſhips in the harbour, to the number of a hundred, great and ſmall; after which, finding the town impracticable, they re-embarked, and arrived ſoon after at Spithead, with little or no loſs. It is the ſee of a biſhop, ſuffragan to the archbiſhop of Tours; his dioceſe conſiſts of one hundred and ſixty pariſhes; he is lord of the city, and his income amounts to thirty-five thouſand livres per annum, out of which he pays one thouſand florins to the court of Rome. The cathedral of St. Vincent is one of the moſt ancient in all France: ſeveral fine monaſteries, and other conſiderable public buildings, are alſo in this city.

Breſt, in Latin Breſcia, a famous ſea-port in the biſhopric of St. Pol de Leon, is ſituated on the north ſide of a large and commodious harbour, which opens to the ocean in the weſtern part of the continent of France, about fifty miles to the north-weſt of Belleiſle, in forty-eight degrees twenty-five minutes north latitude, and in four degrees thirty minutes weſt longitude. It is a ſmall fortified city; the ſtreets are narrow, and it is defended by a ſtrong caſtle which ſtands on a rock, very ſteep towards the ſea; and likewiſe by a tower oppoſite to the caſtle, which guards the entrance into the port on that ſide. It is encompaſſed on the land-ſide with a broad ditch, and ſome other works. It has a ſpacious fine road and harbour, and the latter is ſurrounded with very good quays; upon which are built warehouſes filled with naval ſtores of all kinds. The harbour lies between the city and the ſuburb of Recouvrance, which is half as big as the city. The road is extremely ſpacious, and might contain five hundred men of war; but the entrance to it, on account of its narrowneſs, is exceeding difficult, and particularly from the blind rocks which lie under water at high tide.

This port is the moſt ſecure retreat for the French ſhips of war, and is the beſt poſſeſſed by that nation on this ſide of the Mediterranean; whence that city is one of the grand magazines of the admiralty of France, the other being at Toulon, in the Mediterranean; and therefore in this harbour the greateſt number of the French navy is fitted out. It is ſaid that naval ſtores and neceſſary proviſions for ſeventy ſail of men of war are conſtantly laid up at Breſt, and ſhips of eighty or ninety guns are built here, which renders the place rich and populous. There is always a ſtrong garriſon in the caſtle, commanded by ſtaff-officers. Louis XIV. cauſed an arſenal to be built here, and erected an academy for the marine. Here are a court of admiralty and bailiwic, with only two pariſh-churches, and a convent. The jeſuits had alſo a ſeminary here, before their expulſion from France.

The Engliſh, in 1694, made an attempt upon Breſt, but the deſign tranſpired, ſo that the avenues being defended by a numerous train of artillery, and an army ſuperior to that of the invaders, general Talmaſh, who commanded the Engliſh, was mortally wounded in making the deſcent, and the forces were obliged to retire with loſs from the place.

The iſland of Belleiſle is about ſix leagues from the coaſt of Brittany, in the forty-fifth degree twenty minutes north latitude, and in the third degree five minutes weſt longitude. The ancients called it Coloneſus, or the Beautiful iſland, which is the ſignification of its preſent name. It is about ſix leagues long, two broad, and confers the title of marquis. It is ſurrounded on all ſides with rocks, and has only three landing-places, Palais, Sauzon, and Goulſard; every one of which labours under ſome capital defect, either in being expoſed, ſhallow, or dangerous at the entrance. It contains only one little city, called Palais, three country towns, a hundred and three villages; and there are about five thouſand inhabitants in the iſland.

The capital town, Palais, takes its name from a caſtle in its neighbourhood belonging to the duke of Belleiſle, afterwards converted into a citadel. This fortification is ſtrong and regular; it fronts the ſea, and is compoſed principally of horn-works, and provided with two dry ditches, the one next the counterſcarp, and the other ſo contrived as to ſecure the interior fortifications. The citadel is divided from the largeſt part of the town by an inlet of the ſea, over which is a bridge of communication. In the year 1759 admiral Hawke, with a ſquadron of Engliſh ſhips, off the ſouth coaſt of this iſland, burnt, ſunk, and deſtroyed moſt of the French fleet from Breſt under Conflans, who was himſelf either mortally wounded, or loſt in making his eſcape in his boat to ſhore. Two of the enemy's ſhips ſunk to the bottom with all the men, and the ſhattered remains of his fleet, to the number of ſeven ſail, ran up for ſhelter, after throwing their guns over-board, into the river Vilaine in Brittany, and there continued diſabled on account of the ſhallowneſs of the water. The Engliſh indeed loſt two of their men of war by too eager a purſuit of the enemy; but though they ran aground, all the crew were ſaved, and their loſs was inconſiderable in other reſpects.

This iſland was attacked in 1761, by an Engliſh fleet under the command of commodore Keppel, and the land forces under general Hodgſon. The Engliſh fleet after landing their troops and their cannon, which was accompliſhed with the greateſt difficulty, by dragging them up the rocks, laid ſiege to the city; and the garriſon, commanded by the chevalier de St. Croix, a brave and experienced officer, threatened a long and obſtinate defence. The enemy made ſome ſallies, which only animated the Engliſh troops by the difficulties with which they had to contend; but at length a furious attack being made upon the enemy's lines which covered the town, they were carried with no great loſs; this was principally owing to the uncommon intrepidity of a body of new-raiſed marines. No action of greater ſpirit and gallantry had been performed during the whole war. However, the garriſon held out till the ſeventh

of

of June, when they capitulated, and marched out with the honours of war. This iſland was reſtored to the French by the late peace, until which time it was kept by the Engliſh.

The government of Normandy, which derives its name from the antient Normans, is bounded on the eaſt by Picardy and the Iſle of France; on the ſouth, by Beauſſe, Perche, and Maine; on the weſt, by Brittany; and, on the north by the Britiſh channel: from north to ſouth, its extent is thirty leagues, and upwards of ſixty from eaſt to weſt.

This province is one of the moſt fruitful in the whole kingdom, and one of the moſt profitable to the king. It abounds in corn, flax, hemp, and vegetables for dying, but the little wine it produces is very indifferent. It, however, yields great quantities of apples and pears, of which the natives make cyder and perry for their uſual drink. It is alſo a fine country for cattle, it being full of excellent paſtures. The ſea ſupplies it with plenty of fiſh, and great quantities of ſalt are extracted from its waters. Here are ſome mineral waters. The many iron-works are of no ſmall advantage to the country, in which are alſo ſome mines of copper.

This province is watered by ſeveral rivers, the principal of which are, 1. The Lezon, which riſes here, and, being joined by the Orbiquet, is afterwards called the Tonques, and, becoming navigable, loſes itſelf in the channel. 2. The Carentone, which has alſo its ſource in this province, falls into the Rille. 3. The Orne, which riſes here, and, after receiving ſeveral ſmaller rivers, falls into the Britiſh channel. 4. The Eure. 5. The Andelle, which riſes in this province, and, falling into the Seine, is of great advantage in conveying to Paris wood for firing. 6. The Rille, or Riſle, which riſes here, and alſo falls into the Seine. 7. The Dive, which alſo riſes here, and, after receiving the Vic, becomes navigable, and diſcharges itſelf into the Britiſh channel.

With reſpect to the hiſtory of this province, is is neceſſary to obſerve, that the antient dukes of it roſe to great power, both here, and in foreign countries; and William, in the year 1066, became king of England by conqueſt. In 1135 the male line of this king became extinct in the perſon of Henry I. and his daughter Matilda marrying Godfrey, count of Anjou, the fruit of this marriage was Henry II. king of England, duke of Normandy, lord of Guienne, Poitou, and Saintonge. He leaving three ſons, Richard, Godfrey, and John, the laſt of them ſeized on the dominions of both his brothers, and even cauſed Arthur, the ſon of Godfrey, to be taken off, for which he was deprived of moſt of his territories in France, and in 1203, Normandy was annexed to that crown. Henry III. of England ceded to Louis the Pious and his ſucceſſors all his claim to this province; which afterwards, to the end of the fourteenth century, ſome kings beſtowed on their eldeſt ſons, with the title of duke of Normandy, till that of Dauphiné was inſtituted. And at length the animoſities between the houſes of Orleans and Burgundy afforded the Engliſh an opportunity of conquering not only Normandy, but a great part of France. This province was ſubject to England about thirty years, till at laſt, during the minority of that unhappy prince Henry VI. the Engliſh were driven out by Charles VII.

Normandy is governed by its own law, which is called, "the wiſe," and on this account the country is ſtyled, Le Pais de la Sapience, or, The Land of Wiſdom. Rouen has a parliament, on which all the other courts of the province are dependant. With reſpect to its finances, it has three generalities, namely, at Rouen, Caen, and Alençon, from which the king is ſaid to have drawn twenty millions of livres, (eighty-ſeven thouſand five hundred pounds ſterling) a year. Hence the government of Normandy is one of the moſt conſiderable in the whole kingdom. Under the governor, are two lieutenants-general, one for Upper, and the other for Lower Normandy; and each of the ſeven great diſtricts, into which the country is divided, has a deputy-governor of its own. Under the archbiſhop of Rouen are the ſix biſhoprics of Normandy; and theſe ſeven dioceſes contain eighty abbies, and four thouſand two hundred and ninety-nine pariſhes.

The principal places in this province, beginning with Upper Normandy, are the following, viz. 1. Caudebec, in Latin Calidum Beccum, that is, the Hot Bec. This is a ſmall, but populous town, ſeated on the river Seine, into which, near this place, falls a rivulet which runs through the town, and gives name to it. It is cloſely built, and has walls flanked with towers, and ſurrounded with deep ditches. It has three ſuburbs; and the ſmall river Caudebec, being divided into ſeveral canals in the town, turns a conſideral number of mills, that are very ſerviceable to the tanners and leather dreſſers ſettled here. In this town is a ſalt and treaſury office, with a provincial, an admiralty, and a foreſt court. It contains two convents, one pariſh-church, and an hoſpital. This place is a conſiderable thoroughfare for ſuch as go from Rouen to Havre de Grace, and other parts of the country of Caux, of which it is the capital. Among other manufactures, the inhabitants make hats, which were formerly in great repute, on account of their not letting in the rain, but this branch of trade has greatly declined.

The ſea-port town of Dieppe is ſituated on the ſhore of the Britiſh channel, oppoſite to Brighthelmſtone in England, and is much reſorted to, particularly by veſſels from Scotland. It ſtands thirty miles to the north of Rouen, on a level ſpot, between two rocks, or mountains, and the mouth of the river Betune, called at this town the river of Arques, which, falling into the ſea, forms the harbour. It is fortified with bulwarks next the ſea, with a fortreſs at the ſuburb called Pollet, and a caſtle, which, together with the craggy rocks that lie on the ſouth, render it a place of conſiderable ſtrength, though its fortifications are very irregular. Its natural ſtrength induced Henry the Great to chuſe it for his head quarters, when oppoſed by the league, at his acceſſion to the throne.

This town is pretty large, and well-built: it has a good harbour, which is long, but narrow, and on this account difficult of acceſs. In time of war, it is generally a ſtation of privateers; but has not a ſufficient quantity of water for large ſhips. It is chiefly inhabited by ſeafaring men, who are eſteemed very expert in maritime affairs; alſo by mechanics, who make curious works in ivory; and likewiſe by merchants, who carry on a conſiderable trade to foreign parts. The inhabitants were chiefly proteſtants, until the perſecution which enſued upon the revocation of the edict of Nantes. The pariſh-church of St. James is a very fine ſtructure; and has a tower, from which, in fine weather, the coaſt of England may be ſeen. It contains two ſuburbs, and has both a ſalt-office and a court of admiralty.

During the wars between England and France, this town was frequently taken and retaken. It was almoſt totally deſtroyed, in 1694, by bombs fired into it from the Engliſh fleet commanded by lord Berkely; and in the wars of Queen Anne it was alſo roughly treated, after which the court ſent thither an architect and engineer, who rebuilt it in a regular manner: this indeed gives the town an external air of beauty, but it is attended with very great inconvenience to the inhabitants. The chief trade of Dieppe conſiſts in herrings, with which they furniſh Paris and the province of Normandy: they alſo fiſh for whitings, mackarel, and oyſters, which they ſell in the neighbouring provinces: together with their ivory-works and laces made here. The ſea compaſſes made in this town were once much eſteemed; but its trade has of late years very much decreaſed.

The town of Rouen, the capital of Normandy, called by the antients Rothomagus, and afterwards Rothomum, is ſeated in a diſtrict called Le Vexin Normand, and is environed on three ſides by high hills covered with trees, and, on the fourth, is ſeated on the north bank of the Seine in forty-nine degrees thirty-ſix minutes north latitude, and in one degree ten minutes eaſt longitude. It is alſo watered by two little rivers called Aubette and Robec. The tide flows ſo high up the Seine, that veſſels of above two hundred tons burthen can come up hither, and load and unload at a large quay, which is built along the city. Its ſituation is ſo very commodious for trade, that Rouen is conſidered as the centre of the northern trade of France. It had formerly a ſtately ſtone bridge over the Seine, of thirteen arches, but it is now ruined; and there is another of boats of a very artificial ſtructure built near it, and extending two hundred and ſeventy paces in length; it riſes and falls with the tide, and is paved like the ſtreets. This bridge, however, coſts a great deal of money to keep it in repair; and they are obliged in winter to take it in pieces, leſt the ice ſhould damage or carry ſome part of it away. The city has no other fortifications than a wall, with round towers in the antique taſte, and irregular baſtions to defend the gates on the land-ſide, except an old caſtle which was begun in the year 1429, as ſoon as king Henry V. of England made himſelf maſter of Rouen, and was finiſhed in the reign of Henry VI. in 1443. It is an antique building of little ſtrength, flanked with five large round towers; it has a draw-bridge, the whole being encompaſſed with a wet ditch.

In this city there is no garriſon, though it has a particular

lar governor. It is, however, very populous, for it contains ſeven thouſand two hundred houſes, in which are ſixty thouſand perſons; but is not very ſpacious. The ſtreets in general are very cloſe and narrow, and the houſes moſtly of wood and plaiſter; it has, however, ſix large ſuburbs, in which are five pariſhes, and thirty in the city; it has alſo fifty convents, and four abbies; the jeſuits had alſo a college here. Its archbiſhop has ſix ſuffragans, and a province of thirteen hundred and eighty-eight pariſh-churches, beſides chapels, and his annual revenue amounts to eighty thouſand livres, (three thouſand five hundred pounds ſterling) out of which he pays twelve thouſand florins to the court of Rome. He ſtyles himſelf primate of Normandy, though he has no archbiſhop in his province ſuffragan to him; but for this title he has no ſuperior in France, and he depends immediately on the holy ſee.

The city is adorned with many ſtately piles of building, among which is the cathedral dedicated to the Virgin Mary, the choir of which is lined round with copper. It has three very lofty towers, particularly that of the pyramid, the ſpire of which is only made of wood, and covered with lead gilt. It has two hundred ſteps, and the whole edifice upwards of ſix hundred to the top. In this cathedral are to be ſeen the monuments of ſeveral kings, lords, and prelates; and likewiſe the monument of John duke of Bedford, who was regent of France under our Henry VI. In the butter tower, as it is called, which is that juſt mentioned, is a great bell, ten feet in height, the ſame in diameter, and weighs thirty-ſix thouſand pounds. On the great gate is a triumphal arch in honour of king Henry the Great, with emblems of his conqueſt over the holy league. The body of the church is ſupported by twenty pillars; and, upon the whole, this church exceeds in beauty and regularity that of Notre Dame at Pars.

The other remarkable ſtructures are the church of St. Toin, a very lofty building, chiefly famous for its great bell; the convent of the Cordeliers; the church which lately belonged to the jeſuits; the church and the abbey of St. Owen; and the parliament-houſe; which are all beautiful ſtructures. The archbiſhop's palace is alſo a fine building, adorned with elegant paintings and pleaſant gardens. In the veal-market ſtands the image of the celebrated maid of Orleans, whom the Engliſh had the cruelty to burn as a witch, and is here repreſented kneeling before Charles VII. and in the new market is the ſtatue of Louis XV. erected in 1721; but the workmanſhip is very ordinary.

There is a very extenſive trade carried on in the city and diſtrict of Rouen, conſiſting of woollen and linen cloths, leather, hats, paper, and many other merchandizes. The woollen manufactories, which employ ſeveral thouſand workmen, are particularly advantageous to the whole province; but they are only ſo far profitable to the nation in general, as they prevent the money from being ſent abroad; but the linen manufactures of various ſorts exported to Spain are highly beneficial, and the returns generally made in the coin of that country.

This place has undergone various calamities and viciſſitudes of fortune: it has been almoſt entirely burnt thirteen or fourteen different times. In 841 it was taken by the Normans; the Engliſh made themſelves maſters of it in 1418, and in 1449 it was ſurrendered to Charles VII. the French king. It was afterwards ſtormed and taken by the French proteſtants, and re-taken and plundered in 1562 under Charles IX. Anthony of Bourbon, king of Navarre, received a mortal wound before it; but his ſon Henry IV. took it in 1592. William I. king of England, commonly ſurnamed the Conqueror, died in this city.

The town of Caen, in Latin Cadomus, is ſituated in a diſtrict of the ſame name, thirty miles to the ſouth of Havre de Grace, ſixty-five to the weſt by ſouth of Rouen, and a hundred and twenty-five to the weſt of Paris. It ſtands in a valley between two large meadows, at the confluence of the rivers Orne and Odan, by the united ſtream of which it is divided into the Upper and Lower Towns, that have a communication by means of the bridges of St. James and St. Peter, on the latter of which is erected a ſtately town-houſe, adorned with four large towers. The Upper town is defended by a caſtle built upon a rock and very well fortified, and the Lower is entirely ſurrounded with water. It is a place of good trade, veſſels of ſome burthen being able to come up from the ſea to St. James's bridge, and its inhabitants are ſuppoſed to amount to forty thouſand ſouls.

This is the ſecond town in Normandy, and contains an intendency, an admiralty, a provincial, and forelt-court, with a ſalt-office. It has twelve pariſh-churches, one collegiate church, two abbies, fourteen convents, with a houſe which till lately belonged to the jeſuits, and two hoſpitals. King Charles VII. founded an univerſity here about the year 1430, and likewiſe a mint. An academy of ſciences and belles letters was alſo eſtabliſhed in this city by Louis XIV. and in the royal ſquare, which is both ſpacious and regular, with fine houſes on three ſides of it, ſtands a marble equeſtrian ſtatue of that prince, ſurrounded with an iron baluſtrade. The principal trade of this town and its diſtrict conſiſts in fine linen and cloth.

The city of Bayeux, the capital of the country of Beſſin, is ſeated on the river Aure, fifteen miles to the north-weſt of Caen, and contains an admiralty, a ſalt-office, a foreſt and diſtrict-court, &c. It has ſeventeen pariſh-churches, nine convents, two hoſpitals, and a college and ſeminary, which lately belonged to the jeſuits. The biſhop, who is ſuffragan to the archbiſhop of Rouen, has a dioceſe of ſix hundred and fifteen pariſhes, with a revenue of ſixty thouſand livres, (two thouſand ſeven hundred and twenty-five pounds ſterling) out of which he pays four thouſand four hundred and thirty-three florins to the court of Rome. The cathedral, dedicated to the Virgin Mary, is a very ſtately ſtructure, beautified with a tower and two lofty ſpires. The city is divided into Upper and Lower, and manufactories of cloths, ſerges, and ſtockings, were ſet up here, which ſucceeded very well; but the high taxes impoſed on them, which the merchants were forced to pay, obliged them not only to abandon thoſe manufactories, but likewiſe the city itſelf.

The ſea-port town of Cherburg, in Latin Cæſaris Burgus, ſituated in the Engliſh channel oppoſite to Hampſhire, is fifty miles to the north-weſt of Caen, in a diſtrict called the Coutantin, and lies between Cape La Hogue and Barfleur. It contains an admiralty, a bailiwic, and a viſcounty-court: it has alſo one abbey, and a general hoſpital. Here they formerly made very fine glaſs, which, for clearneſs and beauty, even excelled that of Venice; but, for certain political reaſons, the work has been removed to Auxerre, in Burgundy. It was a very ſtrong place, from the fortifications that have been lately erected there, before they were deſtroyed, together with the famous baſon, by the Engliſh in the year 1758. The port is ſmall but pretty good, for veſſels of three hundred tons can come into it, and ſome merchant ſhips are built here. Off this place the confederate fleet under admiral Ruſſel obtained a ſignal victory over that of the French, commanded by M. de Tourville, in 1692, and afterwards burnt, took, or ſunk about fifteen of their ſhips of war, near Cape La Hogue; among which was the Soleil Royal, or the Royal Sun, the French admiral's ſhip. In the laſt war with France, in the reign of George II. the Britiſh forces, under the command of the late duke of Marlborough and lord George Sackville, landed here and took the town without the leaſt oppoſition in Auguſt 1758, together with the ſhips in the baſon; demoliſhed the fortifications, and ruined the other works, particularly the baſon and harbour, with the ſluice and all the forts, carrying away to England twenty-one pieces of braſs cannon and two mortars.

The town of Havre-de-Grace is ſituated at the mouth of the river Seine, forty-miles to the weſt of Rouen; it was built by Francis I. who alſo called it, after his own name, Ville François; whence it has been alſo called Franciſcopolis; but this name is now ſuperſeded by the other. This is the capital and ſeat of its little government, and contains a naval intendant, a viſcounty, an admiralty, a royal court of juſtice, and a ſalt office; with one pariſh-church, one ſeminary, and two convents. It has a good harbour between the town and citadel, which is ſmall but regularly fortified, and an arſenal. It is a pleaſant well-built town, and a place of good trade, many merchants reſiding here.

In the reign of Charles IX. this town was ſeized by the proteſtants, who in 1562 delivered it to queen Elizabeth, in conſideration of the aſſiſtance that princeſs had given them; but the following year it was vigorouſly beſieged by the French, and with equal courage defended by the Engliſh, under the earl of Warwick; but a peſtilence, which raged in the town, forced them to ſurrender in July, 1563. Afterwards, in 1694, the Engliſh deſtroyed this city by a bombardment.

The ſea-port town of Barfleur is ſituated forty miles to the north-weſt of Rouen, and about five to the weſt of Havre-de-Grace: it ſtands between two hills, the one on the eaſt, and the other on the weſt. It contains an admiralty-court, and a ſalt-office: it is the ſeat of a royal juſtice, and contains a ſmall magazine; but has only one pariſh-church and one convent. This place was twice taken by the Engliſh, viz. in the years 1415 and 1440.

It was formerly a conſiderable port; but that of Havre being found more convenient, it has been neglected, and is now only capable of receiving ſmall veſſels.

SECT. IX.

Containing a geographical Deſcription of FRENCH FLANDERS, together with the County of ARTOIS, and the Town thereunto belonging, their Situation and Boundaries, Hiſtory, Trade, Manufactures, Inhabitants, &c.

LOUIS XIV. having, in 1667, over-run French Flanders, then a part of the earldom of Flanders, it obtained its name from thence. This country alſo includes the Cambreſis, the county of Hainault, and a ſmall part of the earldom of Namur; and is bounded, on the north, by the Seine and German ocean; on the ſouth, by Artois; on the weſt, by the German ocean; and, on the eaſt, by the Auſtrian Netherlands. Its paſtures are excellent, and conſequently produce fine cattle; but for want of wood, or coal, the inhabitants are obliged to make uſe of turf for their fuel: it abounds alſo in corn and vegetables of all kinds, as alſo in flax.

In French Flanders are the following conſiderable places, viz. 1. Gravelines, or Gravelingen, a ſmall but ſtrong town ſeated near the mouth of the Aa, or the Engliſh channel, fifteen miles to the ſouth-weſt of Dunkirk, and, beſides its other fortifications, is defended on the land-ſide by a good citadel, and to the ſea by a fort. It was taken and burnt by the Engliſh in the year 1383, but afterwards rebuilt to better advantage, and walled round. In 1528 it was fortified by the emperor Charles V. but in 1644 it was taken by the French, and in 1652 by the archduke Leopold. In 1658 it was again taken by the French, and was at laſt yielded to them by the treaty of the Pyrenees; but in 1694 the Engliſh fleet laid it entirely in aſhes; but it was rebuilt, and its fortifications have ſince been greatly improved by marſhal de Vauban, ſo that it is now a place of ſtrength.

The town of L'Iſle, Liſle, or Ryſſel, the capital of French Flanders, and of all the French conqueſts in the Netherlands, is ſituated on the Deule, thirty-ſeven miles to the ſouth-eaſt of Dunkirk. It is beautifully built, and is large, handſome, and populous; it is the reſidence of the governor-general; and has an intendency, a mint, a caſtellany, a bailiwic, and foreſt-court. It has a collegiate church, and about thirty other churches, ſeven of which are parochial, a great number of convents, and a noble hoſpital called L'hoſpital Comteſſe. Several of the buildings are very fine, particularly the exchange, which is a ſquare ſtructure, ſurrounded with piazzas.

This city is ſtrongly fortified, which the Engliſh and their allies experienced in the reign of queen Anne, when prince Eugene, after the battle of Oudenarde, ſat down before it in 1708 for near three months, and though he at laſt took it, it was with the loſs of a great number of men; but it was reſtored to the French by the treaty of Utrecht, in 1713. Both the ancient and new fortifications are very numerous and conſiderable, they having been greatly improved by marſhal de Vauban. The citadel, which was the firſt built by that great engineer, is a pentagon, compoſed of five regular baſtions, defended by ſeveral works, and ſurrounded with a deep ditch, a covert-way, and glacis. To the fortreſs are two gates, one towards the city, and the other towards the country. The eſplanade, or ſpace between the city and citadel, is planted with four rows of trees, which form very pleaſant walks.

The general governor of French Flanders is alſo governor of this city, in whoſe abſence his place is ſupplied by the king's lieutenant. The citadel has alſo a governor, and a lieutenant of the king. The governor preſides at the meeting of the ſtates, which is commonly held about the cloſe of the year. The other members of this aſſembly are the magiſtrates of L'Iſle, who have always the firſt rank, the lords who have ſovereign juriſdiction, and the deputies from Douay and Orchis. The ſum demanded by the king from the ſtates generally amounts to two hundred and fifty thouſand livres, (ten thouſand nine hundred and thirty-eight pounds ſterling) which is always granted and raiſed from the twentieth part of the revenue of eſtates, and from duties on taxes. Beſides which the city of L'Iſle annually pays thirty-ſeven thouſand five hundred livres, (one thouſand ſix hundred and forty-one pounds ſterling) towards the repairs of the fortifications. The clergy and nobility pay no ſubſidy, and do not aſſiſt at the meeting of the ſtates; but three or four days after they break up, theſe are called together by the governor, &c. and a ſum demanded in the king's name; and then theſe two bodies commonly grant a twentieth part and a half of the income of their eſtates. The body of the magiſtracy of L'Iſle and its diſtrict is compoſed of a mayor, ſtyled revart, and twelve echevins, all of whom are annually changed. There are here conſiderable manufactories of ſilk, cambric, fine linen, and other ſtuffs; and their camblets are highly eſteemed. The trade of L'Iſle through France by land-carriage, or by the way of Dunkirk, is pretty conſiderable. The moſt profitable commerce is that to Spain and the Weſt Indies, either by commiſſion, or on their own account.

The city of Douay is pretty large and well fortified; it ſtands on the river Scarpe, twelve miles to the eaſt of Arras, and is of an oval form, larger than L'Iſle, but leſs populous by one-third. It is defended by fort Scarpe, which ſtands about a mile below the city, and the whole country may be laid under water by means of ſluices. Here is an univerſity founded in the year 1559, one collegiate church, and ſeven that are parochial, with a famous Engliſh ſeminary. The principal trade of this city conſiſts in the making and ſelling of worſted camblets, which are bought up by all the neighbouring people, eſpecially at the annual fair kept here in September. The magiſtracy conſiſts of twelve echevins, the firſt of whom is ſtyled the chief. In 1710 the confederates made themſelves maſters of the city; but in the year 1712 they loſt it again.

The territory, called the Cambreſis, is about ten leagues in length, and from five to ſix broad, though in ſome places not above two or three. It is fruitful and well inhabited.

The city of Cambray, in Latin Cameracum, and Camaracum, the capital of the Cambreſis, is ſituated on the Scheld, fifteen miles to the ſouth-weſt of Douay, and is a pretty large well-fortified city, defended by a citadel and fort. It is the ſee of an archbiſhop, and beſides its cathedral, contains two chapters, ten pariſh churches, two abbies, and two hoſpitals. The archbiſhop ſtyles himſelf prince of the holy Roman empire, as indeed he formerly was, and count of Cambreſis. He is, however, lord of the city. His dioceſe conſiſts of eight hundred pariſhes, and his revenue is a hundred thouſand livres, (four thouſand three hundred and ſeventy-five pounds ſterling) out of which he is annually obliged to pay ſix thouſand florins to the court of Rome. This city has been ſubject to France ever ſince the year 1667: it is famous for its Cambric, which took its name from it.

The town of Chateau-Cambreſis, capital of the earldom of Cambreſis, lies thirteen miles to the ſouth-eaſt of Cambray, and was once fortified; but at preſent lies open, and contains one abbey. The archbiſhop, who has here a very magnificent palace, and fine gardens, is lord of this place. In the year 1559 the famous treaty of Chateau-Cambreſis was concluded here, between Henry II. king of France, and Philip II. king of Spain, by which the French gave one hundred and ninety-eight towns for Ham, Le Catelet, and St. Quintin.

Hainault is a part of the earldom of Henegau, and its principal city is the following; viz. Valenciennes, a large and populous city, ſeventeen miles to the north-eaſt of Cambray, is ſeated on the river Scheld, which not only divides it into two parts, but almoſt runs round it. The fortifications are after the manner of Vauban; it has a good citadel on the Scheld, and very fine ſluices. That part on the right of that river belongs to the dioceſe of Cambray, and has one collegiate church, and one abbey; the other ſide belongs to the dioceſe of Arras. This city was taken by the French in 1677. The inhabitants have manufactories of woollen ſtuff, and very fine linen.

In the government of Dunkirk there is only the town of the ſame name, and ſome neighbouring villages.

The town of Dunkirk, called by the French Dunquerque, is ſeated on the Colne, which here falls into the Britiſh channel, in fifty-one degrees two minutes north latitude, and in two degrees twenty-ſeven minutes eaſt longitude; twenty-ſix miles to the eaſt of Calais. It derives its name from a church built there on the Duns, or ſand banks, erected, as it is ſaid, by St. Eloi, who firſt preached Chriſtianity among the Flemings. Some houſes were gradually built near it, ſo as to form a little town, which Baldwin, earl of Flanders, in the tenth century, encompaſſed with a wall; and it enjoying a harbour commodious for trade, the inhabitants engaged in commerce, by which it grew large and wealthy, and had even ſome ſhips of war; ſo that in the twelfth century the inhabitants fitted out a ſmall fleet againſt the Norman pirates, and performed ſuch

emment

eminent ſervices, that Philip, earl of Flanders, conferred ſome conſiderable privileges on the town.

In the thirteenth century, this town was ſold to the biſhop of Cambray, who enlarged the ſame, and improved the harbour. It was afterwards in the poſſeſſion of ſeveral different families, and in 1538 the emperor Charles V. erected a caſtle here; but in 1551 it was taken and deſtroyed by the French. It was afterwards poſſeſſed by Spain, and though the town recovered itſelf again, the inhabitants had a great ſhare in the diſturbances which aroſe in the Netherlands. In 1646 and 1658 it was taken by the French, and in the laſt mentioned year ceded to the Engliſh, for aſſiſting France againſt Spain. In 1662 Charles II. king of England, ſold the town to France for five millions of livres, (one hundred and ſixty-eight thouſand, ſeven hundred and fifty pounds ſterling) by which means Louis XIV. alſo acquired Mardyke, and the other villages which had been built round Dunkirk by the Engliſh.

After this, the French king ordered the city to be well fortified, erected a fine citadel, and built fort Louis, which ſtands to the ſouth on the canal of Bergen, about a mile and a half from the town. The harbour was alſo put into a moſt excellent condition, two moles of piers forming a canal in the ſea one thouſand fathoms in length, and about forty in breadth, and at each end of the moles were erected two batteries. Beſides theſe, on each ſide of the dyke, was a fort, together with the battery of Revers; the caſtle of Gaillard on the eaſt, and a little farther Fort Blanc. Between all theſe forts ſhips were able to paſs in their way to the harbour, and there was alſo a large baſon contiguous to it.

In 1706, this city enjoyed a flouriſhing trade, and contained one thouſand ſix hundred and thirty-nine houſes, in which were fourteen thouſand two hundred and ſeventy four inhabitants. The Engliſh, for the ſecurity of their commerce, which had ſuffered immenſe damage from the privateers of Dunkirk, compelled France to promiſe at the peace of Utrecht to deſtroy the fortifications, to fill up the harbour, to demoliſh the dams and ſluices, and never to repair them. This was actually begun; but it was found, or at leaſt pretended, that by filling up the harbour, the country round, for about ten French leagues, would be in danger of being overflowed. To remedy this inconvenience, ſeveral fruitleſs negociations paſſed between France and England, and in the mean while a new canal was made at Mardyke.

By a treaty concluded at the Hague between France, England, and Holland, in 1717, it was agreed, that the large entrance of the new ſluice at Mardyke, which was forty-four feet broad, ſhould be entirely demoliſhed; and that no harbour, ſluice, or baſon, ſhould ever be made either at Dunkirk or Mardyke, or within two French leagues round: and that the demolition of the works of Dunkirk ſhould be entirely compleated; but France making no great haſte in this work, it was, in 1748, made an article of the peace at Aix la Chapelle. After which France, inſtead of fulfilling theſe engagements, began ſome new works, which gave freſh umbrage to the court of England, who received certain intelligence that the city was again fortified on the land ſide, the baſon widened, and rendered as commodious for the reception of ſhips as ever the harbour had been. The French court replied, that theſe works had no other view than to free the inhabitants from the exhalations of the ſtagnating water, a pretence as falſe as it was ridiculous, ſince the French made the greateſt advantage of this place during the war in the reign of Louis XV. but at the concluſion of it, again agreed to demoliſh the works, and fill up the bar, which was the more neceſſary to be inſiſted upon, as the French have no other harbour in the channel, but that of St. Maloes, which is only capable of receiving ſhips of between thirty and forty guns.

By the late treaty, concluded in 1783, the French are permitted to fortify the harbour of Dunkirk, from which the merchants apprehend the moſt dreadful conſequences; as the next time we are at war with the French, they will be able to ſend, in a few hours, from that port, ten ſail of the line, which can ſweep the Downs, by capturing the whole fleet, which often conſiſts of two hundred ſail, and upwards, of merchantmen, with three or four men of war: the ſhips ſo taken can eaſily be conveyed in a few hours to Dunkirk, before any fleet at Portſmouth can hear of it, and the fortifications will prevent any fleet from retaking them.

The village of Mardyke is about four miles to the eaſt of Dunkirk, and was formerly conſiderable only on account of its fort, built on the ſea-ſhore, which has often been beſieged and taken, and was at laſt demoliſhed. Mardyke at length became celebrated for its noble canal, which Louis XIV. cauſed to be formed under the direction of Le Blanc, it being three thouſand three hundred and thirty-eight fathoms and two feet in length. It began at the canal of Bergen, near Dunkirk, and extending, with the breadth of between twenty-five and thirty fathoms, no leſs than one thouſand five hundred fathoms in length from eaſt to weſt; then winding from north to ſouth, three hundred fathoms farther it had an incomparable ſluice with two baſons, one of which was forty-four feet broad, it being contrived for the reception of large veſſels; the other twenty-ſix in breadth, and intended for thoſe that were ſmall.

Artois, which forms a part of the Netherlands, is bounded, on the north, by Flanders; on the eaſt, by Hainault; and on the ſouth and weſt, by Picardy. This county is twenty-ſix French leagues in length, and about half as much in breadth. It is one of the beſt and fineſt provinces in the whole kingdom, and, beſides its great fertility, has in it ſeveral linen manufactories, and carries on a conſiderable trade in flax, hops, wool, and oil of turnip-ſeed. The Scarpe, the Aa, and the Canche, are its principal rivers.

The county of Artois, together with Picardy, are ſubject to one governor-general, a lieutenant-general, and two deputy-governors; one for Arras and Bipauma, and the other for Air and St. Omer's. Here is a provincial council, which, in civil affairs, is ſubordinate to the parliament of Paris. The raiſing of the royal revenues is here adminiſtered by the conſent of the ſtates, which conſiſt of the clergy, a great number of abbots, and the deputies from every chapter: beſides theſe, there are the nobility, who amount to about ſeventy perſons; and the commoners, who conſiſt of the council of Arras, and the deputies of the magiſtracy of the eight principal towns of the country. No cuſtoms are paid here; the free gift required is in ſome meaſure ſettled at four hundred thouſand livres, (ſeventeen thouſand five hundred pounds ſterling) but as the number of cavalry in the country is not always alike, the charges of forage vary accordingly.

The following are the moſt conſiderable places in this province: viz. 1. Arras, the Origiacum of Ptolemy, and the Atrebatæ of Cæſar: it it ſituated in a diſtrict of the ſame name, and ſtands on the Scarpe, twelve miles to the ſouth-weſt of Douay. This is a very ancient and large place, divided into two parts, the one called the city, and the other the town, which is the more modern of the two; each of theſe is ſurrounded with old walls, which have round towers, built after the ancient manner, and a gate, over which was an inſcription in French, "That when the French ſhall take Arras, the mice ſhall eat the cats;" but the event ſhewed that it was not impoſſible, for in 1640, it was taken by the French.

The celebrated Vauban repaired the old walls, to which he added ſeveral baſtions, and a great number of new works in the ditch, which is large and very deep; particularly lunettes, built after Vauban's manner, and the firſt works of that kind which that excellent engineer performed. The ditch is ſurrounded with a covert-way, and a glacis as uſual, beyond which are ſeveral redoubts of a pentagonal figure, placed in the re-entering angles, and each has its particular ditch, covert-way, and glacis. The citadel is ſomewhat higher, towards the country; it is not very large, but is eſteemed one of the ſtrongeſt in the kingdom: it being an oblong pentagon, compoſed of five baſtions, as many half-moons, four tenailles, placed in the curtains, and a fauſſe braye, which covers the front on the city ſide. All theſe works are ſurrounded with a ditch, with which the Scarpe, or at leaſt a canal drawn from that river, communicates.

There are ſeveral handſome broad ſtreets, and it is inhabited by wealthy traders and artificers, who make ſail-cloth and tapeſtry, eſpecially the latter, which was invented here, and therefore that manufacture obtained the name of Arras: this is, indeed, very beautiful, though inferior to the tapeſtry made at Paris, Bruſſels, and Antwerp. The large market-place here is ſurrounded with fine buildings, among which is the governor's houſe. There are eleven pariſh-churches, ſeveral convents, one ſeminary, and there was lately a college of jeſuits. The cathedral, which is dedicated to the Virgin Mary, is a fine ſtructure, in which are preſerved ſome famous relics. The abbey of St. Vaſt has a magnificent church belonging to it; and among the chapels here, is one called the chapel of the Holy Candle, in which was kept a candle, which it is pretended was given by the bleſſed Virgin to the inhabitants, to cure them of an inward heat, which burnt and conſumed them. The biſhop, who is lord of the city, and preſident in the aſſembly of the ſtates, is ſuffragan to the archbiſhop of Cambray, and has a dioceſe of four hundred pariſhes, with

with a revenue of twenty-two thouſand livres a year, (nine hundred and ſixty-three pounds ſterling), and is taxed at the court of Rome four thouſand florins.

The ſtrong city of Aire, in Latin Aeria, and Aria, is ſituated on the river Lys, near the confines of Flanders, and is about ten miles to the ſouth-eaſt of St. Omer's. This is a well-fortified place, having, beſides the walls, baſtions, half-moons, horn-works, redoubts, counter-ſcarps, and ditches, with a moraſs, which encompaſſes it on three ſides. On that ſide which is acceſſible, at the diſtance of a cannon-ſhot from the city, and the river Lys, ſtands fort St. Francis, to which you go from the city by a regular canal. This fort is a ſmall, but regular pentagon, compoſed of five baſtions, encompaſſed by a ditch, a covert-way, and glacis. The Lys divides the city into two unequal parts, which contain a collegiate church, with ſeveral convens, and had till lately a college of jeſuits, with two hoſpitals, one of which is inſtituted for ſoldiers. But, notwithſtanding the ſtrength of this place, the French took it in 1641, and ſoon after it was retaken by the Spaniards. In 1676, it was again taken by the French, and was confirmed to them at the peace of Nimeguen. In November 1710, it ſurrendered to the allies, after a very vigorous ſiege, and the trenches had been open for ſix weeks; but it was reſtored again to the French, by the treaty of Utrecht.

The ruins of the once conſiderable city of Terouenne are between Aire and St. Omer's. This city formerly ſtood on the river Lys, and was famous on account of its being inveſted by Henry VIII. king of England, in perſon, in the year 1503, aſſiſted by the emperor Maximilian, who on this occaſion wore a St. George's croſs. At this ſiege the French, attempting to throw proviſions into the town, were defeated by the Engliſh, with great ſlaughter, and from the hurry with which they fled, this was called the Battle of the Spurs, intimating that theſe were the principal weapons they made uſe of to eſcape in ſafety. A fortnight after this battle, the city was taken, but diſmantled and quitted. The French afterwards repaired it, but the emperor Charles V. taking it in 1553, levelled it with the ground, and it has never been rebuilt ſince that time.

The city of St. Omer, capital of a bailiwic, is called in Latin Andomaropolis, and was formerly called Sithin. It is a conſiderable city, ſeated on the Aa, eight miles north-weſt of Aire, partly on an eminence, and partly on a moraſs, and is one of the beſt fortifications in the Netherlands: it being defended not only by a caſtle, but by large baſtions, between which are half-moons ſurrounded with large ditches, which are indeed too high to have any water in them; but are ſo deep, that it would be very difficult to mount from them to the walls of the ramparts. It is the ſee of a biſhop, ſuffragan to the archbiſhop of Cambray, who has a revenue of forty thouſand livres, (one thouſand ſeven hundred and fifty pounds ſterling) and is taxed one thouſand florins to the ſee of Rome.

There are ſeveral fine ſtreets, a large ſquare, and many handſome houſes in this city, and among the latter is the town-houſe. The cathedral dedicated to St. Omer, is a noble ſtructure, chiefly remarkable for its chapels, which are embelliſhed with fine marble and beautiful paintings. Beſides the cathedral, are ſix pariſh-churches, and a very rich abbey of the order of Benedictines. On each ſide of the portico belonging to it ſtands a large ſquare ſteeple of great height, where a conſtant watch is kept, to give notice whether there be an enemy in the neighbourhood of the city, the gates of which are never opened till it be day-light, and the watch has given notice, by a ſignal, that he has diſcovered no danger.

In this city are ſeveral convents and nunneries, two hoſpitals for maidens, a general hoſpital for the ſick, an orphan-houſe for poor boys, another for girls, and a houſe for twelve poor old men, in memory of the twelve apoſtles, beſides ſeveral other foundations, particularly one for annually giving a ſum of money to poor girls in marriage. Here is alſo an Engliſh ſeminary. The city is populous, and has ſome trade, a number of ſmall veſſels coming up here from the ſea by means of the river Aa. The government of St. Omer's is under a mayor, who is annually changed, and twelve echevins; and there are above an hundred villages under its juriſdiction.

Several floating iſlands are ſeen to the north-eaſt of St. Omer's: they move backwards and forwards, according to whatever motion is imparted to them. Upon theſe iſlands are ſeen graſs always growing, and the people draw them with ropes to the ſhore in order to drive their cattle into them: they have alſo ſome trees growing here, but theſe they keep very low, for fear the wind ſhould have too much hold of them, and drive the iſlands with too much impetuoſity.

SECT. X.

Deſcribing the ancient and modern Hiſtory of FRANCE; giving an Account of their Monarchs, from the earlieſt Times to the preſent Reign; the King's Titles, his Succeſſion to the Throne, Arms, Coronation, Enſigns of Royalty, &c. the ſeveral Orders of Nobility, and Knighthood; Parliaments, great Officers, great Councils of State and Courts of Juſtice; Laws, Taxes, Land Forces, and Navy of this Kingdom.

THE Celtæ were the moſt antient inhabitants of France: the Romans firſt conferred on them the name of Gauls, and Julius Cæſar reduced the country into a Roman province, calling it Tranſalpine Gaul, or Gaul beyond the Alps, to diſtinguiſh it from Ciſalpine Gaul, or Gaul on the Italian ſide of the Alps.

In the fifth century, the Burgundians, Viſigoths, and Bretons, ſettled in ſeveral parts of Gaul. Theſe were followed by the Franks from Germany, who under Merovic and Childeric conquered a part of Gaul, and under Clovis extended their dominions from the Rhine to the mouth of the Loire: for king Clovis, who began his reign in 468, quelled the Burgundians, Viſigoths, and inhabitants of Brittany, and became the firſt Chriſtian monarch of the Franks, whoſe kingdom was then divided into Auſtraria, on the eaſt part; and Neuſtria, on the weſt; and the four ſons of Clovis, on the deceaſe of their father, divided his kingdom among them.

The Franks, when they had conquered the lands of Gaul, diſtributed them among their officers; and theſe, with the clergy, formed the firſt great councils or parliaments. Thus the government appears to have been a mixed monarchy, in which nothing of moment was tranſacted without the grand council of the nation, conſiſting of the principal officers, who held their lands by military tenures; while the conquered Gauls, who manured the lands for the Franks, were reduced to a ſtate of ſervitude.

The government of France continued under this conſtitution until Charles Martel, in 732, uſurped the ſovereignty. This nobleman was marſhal of France, or mayor of the palace, and had long exerciſed the ſovereign power in the name of Childeric, a weak and indolent prince. The Saracens, who had made themſelves maſters of the ſouth of France, penetrating into the heart of the kingdom, he entirely defeated them, and driving them out, was conſidered as the deliverer of Chriſtendom: he there became ſo popular, that with the conſent of the people, and even of the pope, he aſſumed the dominion of France; and having a victorious army at his command, not only depoſed the king, but deprived the nobility and clergy of their ſhare in the government, and thereby rendered himſelf an abſolute prince.

Pepin, the ſon of Charles, ſucceeded his father in the throne, but reſtored the privileges of the noblity and clergy, on their agreeing to exclude the former race of kings. He alſo divided the province among his principal nobility, allowing them to exerciſe ſovereign authority in their reſpective governments; till at length, aſſuming a kind of independency, they only acknowledged the king as their head: and this gave riſe to the numerous principalities, and their ſeveral parliaments, every province retaining the ſame form of government that had been exerciſed in the whole; and no laws were made, or taxes raiſed, unleſs the nobility and gentry gave their aſſent and concurrence thereto.

Their next monarch was Charlemagne, or Charles the Great, the ſon of Pepin: he conquered Italy, Germany, and part of Spain, and was crowned emperor of the Romans by pope Leo, in the year 800, and from him ſprang the race of kings called the Carlovingian line. About eighty years after the death of Charlemagne, the empire was ſeparated from France, and the Normans greatly diſtreſſed that country by their invaſions.

The race of kings of the Carlovingian line continued ſovereigns of France till the reign of Louis V. when, in 987, Hugh Capet, a popular nobleman, began the Capetine line of monarchs. Cruſadoes, or expeditions to the Holy Land, for the recovery of Jeruſalem from the Saracens, being preached up by order of the pope, the princes of every kingdom in Europe engaged in thoſe falſely called holy wars, in which Chriſtianity was to be propagated by fire and ſword, and in which ſeveral hundred thouſand deluded zealots periſhed: but though they at length took Antioch,

Antioch, Jeruſalem, and other ſtrong places, they loſt them all again within two hundred years. In one of theſe wild expeditions, Louis IX. with moſt of the nobility, were taken priſoners in Egypt, and an immenſe ſum was paid for their ranſoms.

The kingdom of Navarre was added, in 1285, to the crown of France, by the marriage of Philip IV. with Jane queen of Navarre. During this reign, the conſtitution of the government received a conſiderable alteration; for the nobility and clergy refuſing to grant the king the ſupplies he demanded, he ſummoned the deputies or repreſentatives of the commons to parliament, and conſtituted them a third ſtate, on their granting him his demands.

Hubert, count dauphin of Vienne, transferred his dominions to the crown of France in 1349, on condition that the king's eldeſt ſon ſhould be ſtyled dauphin ever afterwards, which has accordingly continued to this day.

A claim being laid to the crown of France by Edward III. king of England, on account of his being deſcended in a direct line from Philip IV. that prince invaded the kingdom; and in 1346 obtained a complete victory at Creſſy in Picardy, and the next year took Calais. In 1356 the French were again defeated at Poictiers, by the eldeſt ſon of Edward III. ſtyled Edward the Black Prince, who brought priſoners to England John king of France, and his ſon Philip.

The French king Charles VI. being ſeized with a kind of frenſy, and becoming unfit to govern, the dukes of Burgundy and Orleans contended for the adminiſtration; and the quarrel grew to that height, that the duke of Burgundy cauſed the duke of Orleans to be aſſaſſinated in the ſtreets of Paris, which laid the foundation for a civil war. About the ſame time Henry V. king of England, invading France, obtained a victory at Agincourt, in 1415. The French now propoſed a reconciliation between the duke of Burgundy and the Orleans family; and a conference was held between the young duke of Orleans and the duke of Burgundy, to accommodate matters; but at a ſecond conference, the dauphin and the duke of Orleans cauſed the duke of Burgundy to be murdered. Hereupon the queen and the young duke of Burgundy joined the Engliſh, with whoſe aſſiſtance king Henry made an almoſt entire conqueſt of France; and a parliament being held at Paris, the king of England was made regent of France during the life of the French king Charles VI. declared ſucceſſor to that crown, and at the ſame time married the princeſs Catherine, the French king's daughter. King Henry dying, and leaving an infant ſon, that infant was crowned king of France at Paris in 1431; but Charles the dauphin, alſo cauſing himſelf to be proclaimed king, recovered all the countries which the Engliſh had taken.

Charles VIII. the laſt of the firſt line of the houſe of Valois, dying in the year 1498, the crown deſcended to Louis XII. duke of Orleans. Three of his ſons ſucceeded him in order. Under the firſt, namely, Francis II. the religious diſputes began to break out in France; the proteſtants were perſecuted; and under Charles IX. theſe diſputes occaſioned two civil wars; after the concluſion of which, on the eighteenth of Auguſt, 1572, was perpetrated the barbarous maſſacre of Paris, which left an indelible ſtain on the hiſtory of France. Afterwards king Henry III. being thought to favour the proteſtants, was aſſaſſinated by one Clements, a monk. His legal ſucceſſor was Henry IV. king of Navarre, the firſt of the houſe of Bourbon that ſat on the throne of France: but he being a proteſtant, was obſtinately oppoſed by the popiſh party; and though he changed his religion in order to pleaſe his ſubjects, yet having paſſed an edict of Nantes, for the toleration of the proteſtants, he was aſſaſſinated in the ſtreets of Paris, by one Ravaillac, a monk.

After the death of Henry, which happened in 1610, Louis XIII. a minor of nine years of age, ſucceeding to the throne, Mary of Medicis, his mother, was declared regent. She continued to invade the liberties of the ſubjects, and to revive the perſecution againſt the proteſtants, which occaſioned another civil war. Cardinal Richlieu, being about this time introduced into the miniſtry, entirely ſubdued the Parliament of Paris, and put a final period to the liberties of the people.

On the death of Louis XIII. and that of cardinal Richlieu, which happened about the ſame time, his ſon Louis XIV. ſucceeded to the throne, and in his long reign carried the power of France to its greateſt height. To his kingdom he added the provinces of Alſace and Rouſſillon, with a conſiderable part of the Netherlands, Franche Comté, or the earldom of Burgundy, and the other principal city of Orange. He alſo enlarged his dominions in America and Aſia, and placed his grandſon Philip of Anjou on the throne of Spain, while navigation and manufactures were improved throughout the kingdom. But the bravery and ſkill of the great duke of Marlborough ſet bounds to his conqueſts, which had been carried on with the utmoſt cruelty; and particularly on his invading the Palatinate of the Rhine in 1689, he burnt and deſtroyed all the fine towns in that country. He alſo repealed the edict of Nantes, and began a ſevere perſecution againſt the Proteſtants, who fled into England and other countries, where they ſet up ſilk manufactories, &c.

Louis XV. the late king, ſucceeded his grandfather Louis XIV. on the firſt of September, 1715, and was crowned at Rheims on the twenty-fifth of October, 1722. Louis XVI. the preſent king of France and Navarre, was born in 1754, ſucceeded his grandfather Louis XV. in 1774, and married in 1770, to Maria Antonietta, ſiſter of the emperor of Germany, born in 1755. The dauphin, the iſſue of this marriage, was born October 29, 1781, and named Louis Xavier Benedict.

The king of France's title is, Louis XVI. by the grace of God, king of France and Navarre. The title of ſire, or lord, is given him by his ſubjects, as a mark of his unlimited power; and foreigners ſtyle him the moſt Chriſtian king, or his moſt Chriſtian majeſty; but the king's ſubjects are not to make uſe of it.

The French writers affirm, that their king never dies, but as ſoon as his eyes are cloſed, the next prince of the blood ſucceeds to the throne, and is inſtantly inveſted with the ſupreme authority; but where the king is a minor, that is, before he has entered the fourteenth year of his age, the adminiſtration of government is entruſted to a regent, uſually the queen-mother, or a prince of the blood, according to the determination of the parliament at Paris, in which the reſt of the kingdom generally acquieſce. But that is ſeldom diſputed, if the deceaſed king has appointed a regent by his will.

A new king, on entering into his fourteenth year, goes in great ſtate to the parliament of Paris, attended by the princes of the blood, the peers, and general officers of ſtate. This aſſembly is generally called the bed of juſtice, and here he is declared to be of age; yet the regent frequently procures himſelf to be conſtituted prime miniſter, and under that title ſtill continues to govern the kingdom till his majeſty thinks fit to aſſume the reins of government.

The French arms are three flours de lys, or, in a field azure, ſupported by two angels, in the habit of Levites, each holding in his hand a banner with the ſame arms: the creſt is an open crown: the whole under a grand azure pavilion ſtrewed with fleurs de lys, or, and ermine, and over it a cloſe ground with a double fleur de lys, or, on the ſides of which are flying ſtreamers, on which are written the words uſed in battle, MON JOIE S. DENNIS, and above them on the royal banner or oriflame, LILIA NON LABORANT NEQUE NENT; that is, lilies neither toil nor ſpin; which is ſuppoſed to be an alluſion to the ſalique law, that excludes females from the ſovereign power.

In France, the nobility are divided into four claſſes: the firſt includes only the princes of the blood, conſiſting of the houſe of Orleans, and the two branches of the family of Bourbon, thoſe of Condé and Conti. Next to theſe immediately follow the king's natural children who have been legitimated, and theſe precede all the nobility of the kingdom.

To the ſecond claſs belong the high nobility, as the dukes and peers of the realm, of which there are forty-five in all, including the ſix princes of the blood, who are peers by birth.

The third claſs is compoſed of the common ancient nobility, who in ſome provinces, particularly in Languedoc, are ſtyled nobles; but in moſt of the others ecuyers.

In the fourth claſs are the new nobility, whom the king has either raiſed by patent, or ennobled by their employments.

There are three orders of knighthood in France: firſt, that of St. Michael, inſtituted in 1469, and though originally compoſed of only thirty-ſix knights, was afterwards enlarged to one hundred. A perſon muſt be a knight of this order, before he can enter into that of, ſecondly, the the Holy Ghoſt, which was founded in 1578, by Henry III. and is compoſed of one hundred perſons beſides the ſovereign, and conferred only on princes of the blood, and perſons of the higheſt rank. Thirdly, the order of St. Louis, which was inſtituted in the year 1693, by Louis XIV. merely as a diſtinction for military merit, and is worn by almoſt every officer, and even by ſubalterns.

The three ſtates of the kingdom formerly conſiſted of the repreſentatives of the clergy, the nobility, and the repreſentatives of the citizens: nothing of conſequence, in relation to the ſtate, was decreed or enacted without their conſent; but theſe aſſemblies are now entirely aboliſhed, and have never been convened ſince the year 1614.

The courts in which juſtice is now uſually adminiſtered, are, firſt, the parliaments, which are the laſt reſort when the court does not interpoſe. There are, at preſent, twelve, namely, thoſe of Paris, Toulouſe, Rouen, Grenoble, Bourdeaux, Dijon, Aix, Rennes, Pau, Metz, Beſançon, and Douay. They principally conſiſt of a certain number of preſidents and inferior judges, who purchaſe their places either of the crown, or of thoſe who are in poſſeſſion of them: for all magiſtrates and officers of juſtice in France openly purchaſe their places, and the government makes a conſiderable revenue by theſe ſales. They enjoy their poſts for life, except they have been guilty of ſome crime in the exerciſe of their office.

The parliament of Paris is the moſt conſiderable in the kingdom, for hither the king frequently comes in perſon, and here the royal edicts are recorded and promulged; till when they have not the force of laws. It is compoſed of the princes of the blood, dukes, and peers of France, beſides the ordinary judges, and takes cognizance of all offences committed by peers, where the court does not interfere. This parliament conſiſts of ten chief preſidents, ſome honorary counſellors, or judges, four maſters of the requeſts of the houſhold, twenty-one preſidents a mortier, ſo called from the form of their caps, and of two hundred and thirty-two other counſellors or judges; an attorney-general, advocates, ſolicitors-general, regiſters, notaries, ſecretaries, &c.

The principal officer of the crown is the chancellor, who preſides in all courts and councils of ſtate in the king's abſence; the others are, the keeper of the ſeals, four ſecretaries of ſtate, the marſhals of France, the colonel-general of the horſe, the great maſter of the artillery, the admiral of France, two vice-admirals, the general of the galleys, the four great officers of the order of the Holy Ghoſt, namely, the chancellor, the maſter of the ceremonies, the great treaſurer, and the ſecretary; the chief preſidents of the ſeveral parliaments, with the governors and the lieutenant-generals of the provinces. And the principal officers of the houſhold are the great maſter of the houſhold, the great maſter of the horſe, the great almoner, the great chamberlain, the gentlemen of the bed-chamber, the great butler, the great huntſman, the four captains of the garde du corps, and the great porter.

All affairs of ſtate are conducted by ſeven great councils. The firſt of theſe is, the ſupreme council of ſtate, in which, beſides the king and the prime miniſter, when there is one, it is compoſed of the comptroller-general of the finances, and the three ſecretaries of ſtate.

The ſecond is the ſecretary of ſtate's office, in which, beſides the king, the dauphin, and prime miniſter, there ſit the chancellor, the preſident of the council of finances, the four ſecretaries of ſtate, and the comptroller-general of the finances. Here all affairs of the provinces are tranſacted; commiſſions, letters, and orders ſent to the governors and other officers of the ſeveral provinces and cities. The ſecretaries of ſtate make the motion, and every one expedites the reſolution taken on the articles of his department: and the members divide among them the foreign and domeſtic affairs of ſtate.

The third council is that of the finances, which beſides the king and chancellor, conſiſts of a preſident, one of the ſix intendants of the finances, a member of the council of ſtate, and the comptroller-general of the finances. The royal revenues are under the direction of this council.

The fourth is the privy-council, which is convened by the chancellor on ſuch days as he pleaſes. On the king's abſence, there is always a chair ſet for him. This council at preſent conſiſts of the chancellor, or keeper of the great ſeal, twenty-one ordinary counſellors of ſtate, the ſecretaries of ſtate, the comptroller-general of the finances, the intendants of the finances, who are all ordinary members, and twelve ſtate-counſellors, who officiate only half-yearly. The ordinary ſtate-counſellors have each a ſalary of five thouſand five hundred livres, (two hundred and forty-one pounds ſterling) the half yearly, three thouſand three hundred livres, (one hundred and forty-five pounds ſterling). In this council alſo aſſiſt twenty-two maſters of requeſt, who belong alſo to the parliament, and lay before it any affairs they are entruſted with.

The fifth is the grand council, which has the deciſion of all cauſes relative to archbiſhoprics, biſhoprics, and abbies; and has alſo the power of determining all diſputes of the other ſovereign tribunals, in matters of juriſdiction and other conteſts. The chancellor of France preſides in this council: he is aſſiſted by ſeveral preſidents, counſellors, &c.

The ſixth is the high court of chancery; which conſiſts of the keeper of the great ſeal, who is frequently the ſame with the chancellor of France; of four grand audienciers who peruſe papers ſent from the ſecretary of ſtate's office to be ſealed, and make report to the chancellor: of four comptrollers of the audience, who give the papers allowed to be ſealed to an officer called chauff-cire, or chaff-wax, and receive them back from him; and four keepers of the rolls of the offices of France, who keep the regiſters of all the officers that require the great ſeal, with ſeveral clerks and other officers and aſſiſtants.

The ſeventh and laſt office is that pertaining to commerce, the members of which, beſides the king and prime miniſter, are the chancellor, the comptroller-general of the finances, and two ſecretaries of ſtate.

In this kingdom, juſtice is adminiſtered by inferior, middle, and ſuperior courts. The more important cauſes are cognizable only by the parliament, which decides cauſes in the laſt reſort. The middle tribunals pronounce definitively in certain ſmall cauſes, both civil and criminal. The inferior courts belong to the prevotes, mayors, judicatures, chatellanies, and other juriſdictions dependent on the crown, or particular lordſhips; from theſe, appeals lie to the bailiwics, or precinct courts, and from theſe again to the provincial courts.

The civil law prevails in many of the provinces; while others have their own cuſtomary laws. Thoſe of principal note among the latter are about ſixty; but, including the juridical cuſtoms of ſingle places, they make about two hundred and eighty-five. Beſides theſe, there are ordinances, edicts, and declarations, which are of univerſal force. The civil and criminal proceſſes were amended and reduced to a general uniformity, in 1666, under Louis XIV.

There is a ſtrict diſtinction made in France between the canonical and papal eccleſiaſtical law; and by the obligatory canons, or church ordinances, are only underſtood thoſe canons of the firſt ages of Chriſtianity, and the œcumenical councils, that have been confirmed by the conſent of the churches bound by them, which could not be tranſacted without the approbation of the civil power. Thus the interpolated decretals of the ſee of Rome are abſolutely excluded. The king's ordinances iſſued for the protection of the liberties of the Gallican church, conſtitute the moſt conſiderable part of the eccleſiaſtical law of France.

The French king's revenues are both ordinary and extraordinary. The ordinary revenues comprehend the domains, which conſiſt in lands, lordſhips, and foreſts: the aids or duty on wines, which are the twentieth part of the wine ſold by wholeſale, and the eighth or tenth of that retailed: the gabelle or ſalt-duty, which is here extremely high. The other duties are the taille, or land-tax, the capitation, or poll-tax; the cuſtoms of all kinds, the duty on ſtamped paper, and other impoſts.

The cuſtoms, ſuch as wine-licence, ſalt and ſtamp-duty, tobacco, poſts, &c. are farmed out to the farmers-general, who have their under farmers and receivers. The great officer for levying the taxes is the comptroller-general, who keeps a duplicate of all receipts and diſcharges relative to the royal revenue.

It is reckoned that the ordinary revenues of the crown, ariſing from the above taxes, amount to about ten millions ſterling. An amazing ſum conſidering the lands belonging to the church, and what is payed to ſupport the clergy; and the many thouſand drones who, ſhut up in convents, are ſupported by the labour of the induſtrious.

In time of peace, the land forces of France amount to about two hundred thouſand men, among which are a great number of Swiſs, Germans, and other foreigners; and in time of war they are frequently augmented to four hundred thouſand.

The French have alſo a very conſiderable navy. Claſſes are inſtituted through all the maritime provinces, where the ſea officers and ſailors, and others belonging to the navy, reſide. Each claſs ſerves three or four years alternately, and thoſe who are not in actual ſervice, on board the king's ſhips, may enter on board thoſe of the merchants. In the beginning of the war in the late king's reign, France had upwards of a hundred and eleven men of war.

CHAP. XII.

THE NEW HISTORY AND DESCRIPTION OF

SPAIN.

SECT. I.

Containing a general Deſcription of SPAIN, its' Name, Situation, Extent, and Boundaries; alſo an Account of the Country, with reſpect to its Mountains, Rivers, Climate, Produce, Cattle, &c.

SPAIN was anciently called Iberia, from the river Iberus; and Heſperia, from its weſtern ſituation; but Hiſpania, from which its modern name is derived, is ſuppoſed to have been formed from the Phœnician word Sepana, implying a rabbet, with which animals this country hath always abounded. It is ſituated between thirty-ſix and forty-four degrees north latitude, and between three and ten degrees weſt longitude, being the moſt weſtern part of the continent of Europe. Its length is ſeven hundred, and its breadth five hundred miles; it is bounded to the eaſt and ſouth, by the Mediterranean, the ſtreights of Gibraltar, and part of the Atlantic ocean; towards the weſt, by Portugal; and on the north, by the bay of Biſcay and the Pyrenean mountains, which ſeparate it from France. It was formerly conquered by the Romans, afterwards overrun by the Goths, then ſubdued by the Moors, from whom the Chriſtians recovered it.

There are ſeveral remarkably high mountains in Spain, the principal of which are the Pyrenees, which ſtretch from the Mediterranean to the Atlantic ocean; but not in a direct line, for near two hundred miles: their breadth is, in ſome places, not leſs than eighty. That called the Pic de Midi is of a prodigious height. Over theſe mountains there are only about five paſſages out of Spain into France, and thoſe alſo very narrow: even the vallies between the mountains are covered with thick and lofty woods. The other ridges of hills in Spain are the Sierre d'Occa, Sierra Molino, Sierra Morena, and Sierra Novada, or the ſnowy mountains. Near Gibraltar, oppoſite to mount Abyla in Africa, ſtands the celebrated mount Calpe: theſe were anciently called Hercules's Pillars. The mountains yield great quantities of timber for ſhipping, which are conveyed by the Ebro, and other rivers, to the Mediterranean.

According to ancient and modern writers, the mountains abound with gold, ſilver, iron, lead, tin, cinnabar, quickſilver, allum, vitriol, copperas, lapis calaminaris, &c. beſides gems, and mineral waters both hot and cold. The gold and ſilver mines are not worked at preſent, but thoſe of iron are. The neglect of the former is owing partly to the indolence of the Spaniards, and partly to the gold and ſilver imported from America.

Beſides the rivers Minho, Douro, Tagus, Menda, Lima, and Guadiana, which run through Portugal, but have their ſources in Spain, the moſt conſiderable are the Ebro, olim Iberus, Gaudalavier or Turio, Gaudalguivir, olim Perea Bœtis, and Tarteſſes, Segura, and Zucar. From the falſe notion of the Guadiana loſing itſelf under ground, it is ſuppoſed to have had the name of Anas, or the Duck.

The air, during the months of June, July, and Auguſt, is exceſſively hot in the day-time; but the reſt of the year it is pleaſant and temperate. Even during the above months, it is very cool in the ſhade; and ſo cold in the night, that it makes a traveller ſhiver; and in the day-time the violent heat continues only for about four or five hours. In the north, on the mountains and near the ſea-coaſt, the air is much leſs ſultry in ſummer than in the ſouth, eſpecially in the lower parts of the country, and at a diſtance from the ſea. It ſeldom rains here, except about the equinoxes, and the froſts are very gentle towards the ſouth; but on the mountains in the north and north-eaſt, the air is very ſharp in winter. Both in the ſouth and north, the air is generally clear and ſerene; and, as in the northern countries, diſtempers for the moſt part proceed from colds; ſo, in Spain, they are commonly the effects of heat.

In ſome parts of Spain there are ſandy deſarts, and in others barren mountains: the greater part of the country, however, has a good ſoil, and is very fertile, producing a great variety of rich wines, oils and fruits, particularly oranges, lemons, prunes, citrons, almonds, raiſins, dates, figs, cheſnuts, capers, pears, peaches, pomegranates, &c. Grain, however, is ſcarce, which is owing to the almoſt general neglect of tillage; and but very ſmall quantities of flax, hay, and hemp, are produced. Some parts produce rice and ſugar-canes; and in others, honey, ſalt, ſilk, cotton, and wool abound.

Good horſes are produced here, but mules are more numerous, and in general much admired, which makes the fine breed of aſſes particularly valuable. Deer, wild fowl, and other game, are very numerous. Here are many goats, particularly the chamois, or Shamoy goat, and wolves are almoſt the only wild beaſts in the country.

The herb kali, which is uſed in making ſalt, ſoap, and glaſs, grows in great plenty about the ſea-coaſt. The locuſt-tree, an ever-green, is common in Valencia; the trunk is about two feet in diameter, the leaves green, ten on a twig, viz. five on each ſide; the fruit is an inch broad, reſembles kidney-beans, and grows in cluſters from the branches and body of the tree in a ſingular manner; the pods are thick, mealy, ſweet, and when dry, are given to horſes and cattle as provender.

The beautiful bird avelucos, or bee-eater, is found in no part of Europe but Granada and Andaluſia. It is of the ſize of a black-bird, and has a black bill, thick at the baſe, bending downward, and near two inches long. The legs and feet are like thoſe of a king's fiſher; the eyes are of a fine red, and there is a black ſtreak on each ſide of the head, which begins at the corner of the mouth, and runs beyond the eyes. The baſe of the upper chap, and under the chin, are covered with bright pale and blue feathers; but the upper part of the back of the head is of a duſky yellow, as well as the back and wings, only theſe laſt are ſhaded pretty ſtrongly with green. The tips of the quill feathers are brown, the breaſt and belly green, and the under part near the vent of a pale yellow, with a ſmall mixture of green. The outermoſt feathers of the tail are variegated with green and yellow, and the two middlemoſt feathers are twice as long as the reſt, that is, nine inches, and terminate in ſharp points of a brown colour.

There is great plenty of fiſh in the Spaniſh ſeas, among which is the anchovy. The wild bulls uſed in the bull-fights are principally bred in Andaluſia; and the ſheep in Spain are innumerable, as may be eaſily gueſſed by the number of ſhepherds, which are computed to amount to forty thouſand. The ſheep that bear the fine wool are driven every ſummer from ſouth to north, through the whole extent of the kingdom, and towards winter return again.

SECT. II.

Giving a geographical Deſcription of the ſeveral grand Diviſions or Provinces of SPAIN; together with an Account of their principal Cities, Towns, and Places, and the Trade, Manufactures, Manners, Cuſtoms, &c. of the Inhabitants.

THERE are fourteen diviſions or provinces in this country; namely, 1. Galicia; 2. Aſturias; 3. Biſcay; 4. Navarre; 5. Arragon; 6. Catalonia; 7. Leon; 8. Eltra-

8. Eſtramadura; 9. Old Caſtile; 10. New Caſtile; 11. Valentia; 12. Andaluſia; 13. Granada; and, 14. Murcia, which we ſhall treat of in the order here laid down.

1. The province of Galicia, which was anciently a kingdom, has the ocean on the weſt; Aſturias and Leon on the eaſt; Portugal on the ſouth; and the bay of Biſcay on the north. It is of a ſquare figure, one hundred and twenty miles each way, very mountainous, had formerly mines of gold and ſilver, but is at preſent the pooreſt and coldeſt part of Spain.

The principal places are, 1. St. Jago de Compoſtella, the capital of the whole province, is ſituated in forty-two degrees fifty minutes north latitude, and in eight degrees twenty minutes weſt longitude, between the rivers Tambra and Ulla, in a moſt fertile plain, ſurrounded with hills of a moderate height, which ſhelter it from the nipping winds that blow from the mountains. The public ſquares and the churches are very magnificent; it has alſo a great number of monaſteries for both ſexes, and about two thouſand houſes. The cathedral is particularly worthy of notice, and in it is kept the pretended body of the apoſtle James the Younger, the tutelar ſaint and patron of all Spain. The order of St. Jago takes its name from this city, which alſo maintains a certain number of knights. The univerſity was erected in 1532; according to Major Dalrymple it has but few ſtudents. Here is alſo a tribunal of the inquiſition.

2. Orenſe, a city ſeated forty-ſeven miles to the ſouth-eaſt of St. Jago de Compoſtella, on the banks of the Minho, in a delightful country, and abounding in excellent wine and fine fruit. One part of it ſtands at the foot of a mountain, on which is felt a ſharp cold that is of long continuance; while the other part of the city, which lies on the ſide of the plain, enjoys all the pleaſures of ſpring, and the fruits of autumn.

3. The ſea-port town of Corunna, called by our ſeamen the Groyne, is ſituated on the bay of Biſcay. This is a place of conſiderable trade, having a ſpacious harbour, with walls and forts, ſeveral chapels, churches, and hoſpitals. It ſtands thirty miles north of Compoſtella, and is the ſeat of the governor and royal audience of Galicia. There is a quarry of jaſper in its neighbourhood.

4. The ſmall town of Lugo, anciently called Lucus Auguſti, is about ſeventy miles eaſt of Compoſtella. It is the ſee of a biſhop, who is ſuffragan to the archbiſhop of St. Jago, and has a revenue of eighteen thouſand ducats. This town is incloſed with a ſtrong wall, ſo broad, that two coaches may go abreaſt upon it; and its neighbourhood produces turnips of fifty pounds weight, and very well taſted. Here are many warm and ſome hot baths.

5. Tui is a walled city on the river Minho, about forty miles ſouth of Compoſtella, and not far from Valença in Portugal. It enjoys a good air, being delightfully ſituated among gardens and vineyards; and is the ſee of a biſhop, who has a revenue of ſeven thouſand ducats.

6. The town of Vigo is ſituated on a ſmall bay, where, in 1702, the Engliſh and Dutch burnt the Spaniſh plate-fleet. 7. Ferrol, two leagues from Corunna, is an agreeable town, with a fine harbour, where ſeveral Spaniſh men of war are uſually at anchor. 8. Finiſterre is an inconſiderable town near the cape of that name. 9. Montforte la Lemos is a town belonging to the count of Lemos, who has a ſtately palace here. On the top of a neighbouring mountain is a ſpring that ebbs and flows as the ſea does, and is alternately hot and cold. 10. Mondonnedo, ſixteen leagues from the ſea-coaſt, is the ſee of a biſhop. 11. Betanzos, on the Mandeo, has a good harbour.

II. Aſturias, which is a principality, and gives title to the hereditary prince of Spain, has Galicia on the weſt, the bay of Biſcay, on the eaſt; the ſea on the north; and Old Caſtile and Leon, on the ſouth. It is one hundred and ten miles long, fifty-four broad, fertile, but thinly inhabited. The people, who are very poor and proud, plume themſelves upon being the genuine deſcendants of the ancient Goths.

The principal places are, 1. Oviedo, the capital, ſituated twenty miles from the bay of Biſcay, between the little Ove and Duva, from the former of which it is ſuppoſed to take its name. Here is an univerſity, founded in 1580, ſeveral convents, chapels, churches, and hoſpitals; and here Pelayo, and the firſt Chriſtian kings, after the conqueſt of Spain by the Moors, reſided. The town has ſtrong walls, and is the ſeat of the royal audience for the province. It is alſo the ſee of a biſhop, who is immediately ſubject to the pope, and has an income of twelve thouſand ducats. The neighbouring country is very mountainous, but abounds in grain, cattle, and cheſnut-trees.

2. The ſmall town of Gyon, near the ſea, has a good wall, caſtle, and port. It was called by the Romans Aræ Sextiæ, or Seſtinæ, and was once the capital of Aſturias, and the reſidence of Pelayo, whoſe ſucceſſors ſtyled themſelves kings of Gyon, for ſome time.

3. St. Andero, in Latin Portus Sancti Emederi, is a ſmall town, but has a large, ſecure, and well-fortified harbour, which, however, has a dangerous rock at the entrance of it.

4. Santillana is a ſmall town on the bay of Biſcay, belonging to the duke del Infantado, to whom it gives the title of marquis. It is ſuppoſed to be the Caulana, or Caucana, of the Greeks and Romans.

5. Liebana, an earldom, belonging to the dukes del Infantado. The Moors could never get footing in this province, which is one of the moſt craggy and mountainous parts of Spain.

III. The province of Biſcay has the bay of the ſame name on the north, and Old Caſtile on the ſouth, the Aſturias on the weſt, and Navarre on the eaſt. It is one hundred and ſixteen miles long, eighty broad, is famous for its oranges, lemons, and apples, of which good cyder is made, but in many places it is mountainous, and the ſoil ſtony and barren. This province is divided into three parts, viz. Biſcay Proper, Guipuſcoa, and Alaba.

The principal places in Biſcay Proper are, 1. Bilbao, vulgarly called Bilboa, the capital of the province: it is pleaſantly ſituated on the river Ybaicabal, ſix miles from the ſea, where it has a good port, and a great trade in iron, wrought and unwrought, wool, ſaffron, and cheſnuts. It is large and populous, ſtanding where was formerly the Portus Amanus, and taking its name from a ford near the town, as having been at firſt called Bello Vado, which was at laſt corrupted into Bilbao, or Bilboa. The city is large and populous, containing twelve hundred houſes, five pariſh-churches, the like number of monaſteries, and ſeven nunneries. It has a good air, and is ſurrounded by a fruitful country, whence proviſions are cheap and plentiful.

There is alſo in this province Orduna, a ſea-port city, ſeated in a pleaſant valley formed by high mountains, twenty-five miles to the ſouth-weſt of Bilbao; and two other ſmall towns, one of which is Durango, fifteen miles ſouth-eaſt of Bilbao.

The city of St. Sebaſtian is of conſiderable ſize, has a ſecure harbour at the mouth of the little river Gummea, by the ancients called Menaſcum. It is a handſome place, well defended by a citadel, carrying on alſo a conſiderable trade in iron, ſteel, and wool; here is alſo a company which trades to the Caraccas. It enjoys a pleaſant proſpect of the ſea on one ſide, and the Pyrenean mountains on the other.

Fontarabia, or Fuentarabia, is a little neat town, ſituated on a peninſula on the ſea-ſhore, twenty-two miles to the ſouth-weſt of Bayonne. It is fortified both by nature and art; and has a good harbour, though it is dry at low water. The town is built in the form of an amphitheatre, on the declivity of a hill, and on the land-ſide is ſurrounded by the lofty Pyrenean mountains. It is a very important place, being accounted the key of Spain on that ſide. Near the city runs the river Bidaſſoa, or Vidoſſo, which is here very broad, and is the boundary between France and Spain. This place held out a ſiege againſt the French in 1638, for which it was honoured by the king with the title of a city; but in 1719 was taken by them.

The town of Toloſa, capital of Guipuſcoa, is ſeated between two mountains in a delightful valley, at the confluence of the Araxis and Oria, over which there are two handſome bridges, and at a ſmall diſtance ſeveral fine natural caſcades. This place is not large, but inhabited by a great number of perſons who are employed in making ſword-blades.

Salmas is noted for its ſalt-ſprings; the Sierra de Adriane, in this diſtrict, is the higheſt mountain among the Pyrenees; and Mondragon is celebrated for its mineral ſprings.

Alaba, the third diviſion of Biſcay, contains no place worthy of mention but Victoria, its capital, which is ſurrounded by a wall; has in it many magnificent monaſteries, and carries on a trade in wine, ſword-blades, iron, ſteel, and wool.

IV. The province of Navarre, called Upper Navarre, to diſtinguiſh it from Lower Navarre, belonging to France, was formerly part of the ancient kingdom of Navarre. It has

has Arragon on the ſouth; the Pyrenean mountains on the north and eaſt; and Old Caſtile and Biſcay to the weſt; being ninety miles long, and ſeventy broad. By a particular compact, no part of the revenues of this province is permitted to go into the royal treaſury, but all are obliged to be appropriated to the public ſervice. This country abounds with horned cattle, ſheep, game, horſes, honey, oil, wine, ſome grain, a few medicinal waters, and ſome minerals.

The principal places are, 1. Pampeluna, the capital, ſituated at the foot of the Pyrenees, and walled. It is the ſee of a biſhop, who is ſubject to the archbiſhop of Burgos, and has a revenue of twenty-eight thouſand ducats. In 1608 an univerſity was founded in this city, where are alſo two caſtles, ſeveral churches, and a great many convents. Two high roads lead from hence over the Pyrenees, to France; one to Bayonne, through the valley of Batan; and the other, which is the beſt, to St. Jaen pied de Port, by the way of Taraffa. This city is ſaid to have been built by Pompey the Great, and thence called Pompeiopolis.

The city of Taſalla, on the Cadaço, is large and handſome, contains an univerſity, and is defended by a caſtle; and Oleta, on the ſame river, was formerly the reſidence of the kings of Navarre, though it is now an inconſiderable place.

3. Fifty-eight miles ſouth of Pampeluna ſtands the city of Sudela, pleaſantly ſituated on the banks of the Ebro. It is walled, has a ſtately bridge over the Ebro, and contains ſeveral churches and convents.

4. Eſtella is a handſome town on the river Ega. Its name ſignifies a ſtar, having been built to guide and chear, like a ſtar, the weary pilgrims paſſing through theſe wild mountains, in their way to Compoſtella. 5. Viana, on the Ebro, formerly gave title of prince to the eldeſt ſon of the king of Navarre. 6. Songueſſa is a ſmall town on the river Arragon. 7. Caſcante, a ſmall city on the banks of the river Queiles, in the diſtrict of Tudela. Its Roman name was Caſcantum; and ſome coins of Tiberius, inſcribed Municeps Caſcantum, are ſtill extant.

V. The province of Arragon, which was antiently a kingdom, has the Pyrenees on the north, Valencia on the ſouth, Catalonia on the eaſt, and Caſtile and Navarre on the weſt, being one hundred and ſeventy miles long, and one hundred and ten broad. It is barren, though well-watered. The principal places are,

1. Saragoſſa, or Saragoza, the capital, ſituated on the banks of the Ebro, and almoſt in the heart of the province. It was antiently a Roman colony, and called Cæſaria, or Cæſar Auguſta, of which its preſent name is a manifeſt corruption. It is a large, magnificent, and populous city, ſtanding in a pleaſant fertile plain, watered by four rivers, and containing a great many ſplendid convents and churches; but the cathedral is an old irregular building. The archbiſhop has a revenue of fifty thouſand ducats. The univerſity here was founded in 1744. Of the churches, that of our Lady of the Pillar; and of the convents, that of St. Francis, are the moſt remarkable. Here are two ſtately bridges over the Ebro; and the walls of the city, though old, are ſtrong and lofty. A great many perſons of quality reſide in this city, which has alſo a conſiderable trade, and is the ſeat of the court of royal audience for Arragon, of the governor and captain-general, and an office of inquiſition.

2. Thirty-ſix miles north-weſt from Saragoza, is a conſiderable town on the little river Queiles: it is mentioned by Pliny, Ptolemy, and Strabo, under the name of Turiaſſo. Near it is Mon Cayo, antiently Mons Caci, which name the Spaniards pretend it had from the tyrant Cacus, who was killed by Hercules. This town is the ſee of a biſhop, who is ſuffragan to the archbiſhop of Saragoza, and has a revenue of twenty-thouſand ducats per annum. It is well built, and walled, and drives a good trade.

3. Forty-eight miles from Saragoza, ſtands Daroca, a conſiderable town on the banks of the river Xiloca. It is walled, and ſituated on an eminence, amidſt a fertile and delicious plain. Here are ſeveral convents, chapels, ſquares, and fountains; and in the neighbourhood is a large cave, of which they relate many wonders. They pretend alſo to have in one of their churches ſix linen cloths, ſtained with the blood that came from ſo many conſecrated wafers, which upon an alarm of the approach of the Moors, were wrapped up in them.

4. About eighty miles ſouth of Saragoza, ſtands Turriel, a city on the banks of the Turias or Guadalaviar, where it is joined by the Alhambria. The river is called by Ptolemy Turiolus, and much extolled by Claudian for the rich flowery verdure of its banks. Here is a citadel, and the ſee of a biſhop, who has a revenue of ſix thouſand ducats, and is ſuffragan to the archbiſhop of Saragoza.

5. On the banks of the Guadalaviar, towards the borders of Caſtile, is ſituated Albarracein, a walled city, antiently called Lobetum and Turia. Here is a caſtle, and the ſee of a biſhop, who is ſuffragan to Saragoza, and has an income of ſix thouſand ducats per annum.

6. About thirty miles north-eaſt from Saragoza ſtands Hueſca, a handſome town on the Iſuela. The city ſtands in a healthy pleaſant air, and a fertile ſoil. Here is an univerſity, founded in the year 1354; and the ſee of a biſhop, who has a revenue of thirteen thouſand ducats per annum, with ſeveral monaſteries.

7. Xavier, on the river Callego, has its name from the famous St. Xavier. 8. Boria, a ſmall, but pleaſant city, near Mon Cayo, about thirty miles from Saragoza towards the weſt-north-weſt, called by antient writers Belſinum, and Balſio. It is walled, and has a caſtle, with ſeveral convents. 9. Xaca, at the foot of the Pyrenees, ſixty miles north-eaſt of Saragoza, is a well-built walled town, has a ſtrong caſtle, and is the ſee of a biſhop. 10. Barbaſtio is ſituated on the Vero, over which it has a ſtately bridge. It ſtands in a fertile plain, is ſurrounded by a wall, contains ſeveral convents, and is the ſee of a biſhop. 11. Calatayud, forty-five miles ſouth-weſt of Saragoza, is pleaſantly ſituated, has a fine air, ſtrong walls, many convents, and is celebrated for its fine-tempered ſteel. 12. Alcanitz, on the Gaudalupe, appertains to the order of Calatrava. 13. La Puebla de Alfundeu, is a handſome town near the river Ebro. 14. Montalvan is a fortified town belonging to the order of St. Jago.

VI. The province of Catalonia has the Mediterranean ſouth and eaſt; the Pyrenees north; and Arragon and Valencia weſt. It is one hundred and fifty miles long, one hundred and twenty broad, is well watered, has a fertile ſoil, and temperate air. The principal places are the following; namely, 1. Barcelona, or Barcino, the capital of Catalonia. This is a large and well-fortified ſea-port, ſeated at the foot of Montjoui, in the forty-firſt degree twenty minutes north latitude, and in the ſecond degree five minutes eaſt longitude. It opens to the ſea in a beautiful ſemicircle, between the rivers Llobregat and Beſes. It is a large and well-fortified place, divided into the Old and New Town, which are ſeparated from each other by a wall and ditch. Moſt of the ſtreets are broad, well paved and clean. It has many beautiful ſtructures, a large and ſuperb cathedral, with ſome other fine churches and convents, and ſeveral handſome ſquares.

2. Tarragona, an antient and ſtrong city, is ſituated on an eminence near the mouth of the little river Francoli, forty-five miles to the north-eaſt of Tortoſa, and about the ſame diſtance to the weſt of Barcelona. It is the ſee of an archbiſhop, who enjoys a revenue of twenty thouſand ducats a year. It has an univerſity, founded in the year 1532. Its harbour, on account of its many rocks, will not admit of ſhips of burthen; but it has a pretty good trade. The neighbouring country produces corn, oil, flax, and very good wine; and there are to be ſeen the ruins of magnificent buildings, and other ornaments of antiquity, both within and without the town.

3. The town of Girona, antiently Gerunda, ſtands in the eaſt part of the province, about twenty-one miles from the ſea, and ſixty north-eaſt of Barcelona. It is ſeated at or near the conflux of the Ter and Onhar; has ſtrong old walls, and other fortifications; with a great many convents, and an univerſity; being alſo the ſee of a biſhop, who is ſuffragan to the archbiſhop of Tarragona, with a revenue of three thouſand ducats per annum. The town carries on a pretty trade, and gives the title of count: the neighbouring country is reckoned the moſt fertile in Certalſnia.

4. The antient city of Tortoſa, on the Ebro, ſtands near the ſea, and has a bridge of boats over the river, with a ſtrong caſtle, and other fortifications, an univerſity, and ſeveral churches and convents. This place is walled, carries on a good trade in ſilk and earthen-ware, is the ſee of a biſhop, and gives the title of marquis.

5. In the heart of the province ſtands Salſona, which is ſtrongly fortified, and the ſee of a biſhop. 6. Balagner, on the Legre, is nine miles north-eaſt from, 7. Lerida, on the ſame river; which is an antient, handſome, and ſtrong city, one hundred and five miles north-weſt of Barcelona. It contains ſeveral convents and monaſteries, an univerſity, a court of inquiſition, and is a biſhop's ſee. 8. Terroſis, near Lerida, has an air which is remarkably ſalubrious, and particularly in caſes of infanity; ſo that it is common all over Catalonia to ſay to a paſſionate man,

"You muſt be ſent to Terroſis for a cure." 9. Palames, a little town on a bay of the ſea, near cape Palaſugel, with a good harbour. It is fortified, has a good citadel, and gives the title of count. 10. Urgel, anciently Orgia and Orgelium, an ancient city, earldom, and biſhopric, not far from the Pyrenees, on the banks of Segre, about nine miles north-eaſt from Barcelona. It is ſtrongly walled, has an ancient caſtle, and ſeveral convents, and its territory is extremely fertile. 11. Roſes, a ſtrong town with a good harbour, on a bay of the ſea. It owes its name and origin to the ancient town of Rhoda, which ſtood a little way off, near cape Cruz. 12. Peucerda, a large town, and the capital of the earldom of Cerdagne. It is fortified in the modern manner, and ſtands at the foot of the Pyrenees, betwixt the rivers Carol and Segre.

VII. The province of Leon, which was anciently a kingdom, is bounded by the Aſturias, on the north; Eſtremadura, on the ſouth; Galicia and Portugal, on the weſt; and Old Caſtile, on the eaſt. It is one hundred and eighty miles long, and upwards of eighty broad; has a fruitful ſoil, abounds in cattle and game, and contains ſeveral quarries of ſtone, and mines of jewels. The dukes of Negera are hereditary governors.

The principal rivers of Leon are the Piſuerga and the Carrion, which riſe in Old Caſtile; the Eſſa and Orbego, both which have their ſources near the city of Leon; the Torto and Tera, which run into the Orbego; and the Formes, or Rio de Salamanca, which falls into the Douro on the frontiers of Portugal.

In this province are the following remarkable places; viz. 1. Leon the capital of the province, was built by the Romans in the reign of the emperor Galba, and called Legio Septima Germanica, from whence it derived the name of Leon. It is ſeated in the forty-third degree ten minutes north latitude, and in the ſixth degree twenty minutes weſt longitude, between both the ſprings of the river Eſla, and at the end of a large plain bounded by the mountains of the Aſturias, fifty miles to the ſouth-eaſt of Oviedo. The biſhop, whoſe annual revenue is twelve thouſand ducats, is immediately ſubject to the pope. The cathedral is famous not only for its beauty, but for its being the burial place of ſeveral ſaints, thirty-ſeven kings of Spain, and one emperor.

2. Salamanca is ſituated in forty-one degrees five minutes north latitude, and in ſix degrees ſixteen minutes weſt longitude. This city is of a peculiar form, built on three hills and two valleys, and on every ſide ſurrounded with proſpects of fine houſes, noble ſeats, gardens, orchards, fields, and diſtant villages; and is ancient, large, rich, and populous. Its walls are ſix thouſand three hundred and ſixty paces in circuit, and adorned with thirteen handſome gates and ſtately towers. Within the city are one hundred and ſixty-two ſtreets, five thouſand houſes, many of which are magnificent buildings, ſeventeen ſquares, twenty-five pariſh-churches, twenty monaſteries, eleven nunneries, two houſes of retirement for young women to lead a penitent life, ſixteen chapels, ſix hoſpitals, and twenty-five colleges. The river Tormes, which runs by it, fertilizes the neighbouring country.

3. Roderigo, an epiſcopal city, which, after its being ruined by the Goths, was, in 1102, rebuilt by Don Roderigo Gonzales Giron, and from him received its name. It ſtands on the little river Agneda, or Agujar, twelve miles from the frontiers of Portugal, and has good ſtrong walls, nine gates, three ſquares, fifty-four ſtreets, two thouſand houſes, eight pariſhes, two monaſteries, two nunneries, ten chapels, and three hoſpitals. The biſhop is ſuffragan to the archbiſhop of St. Jago, and has an annual revenue of ten thouſand ducats. This city is one of the three places of rendezvous for the Spaniards, when they are at war with the Portugueſe.

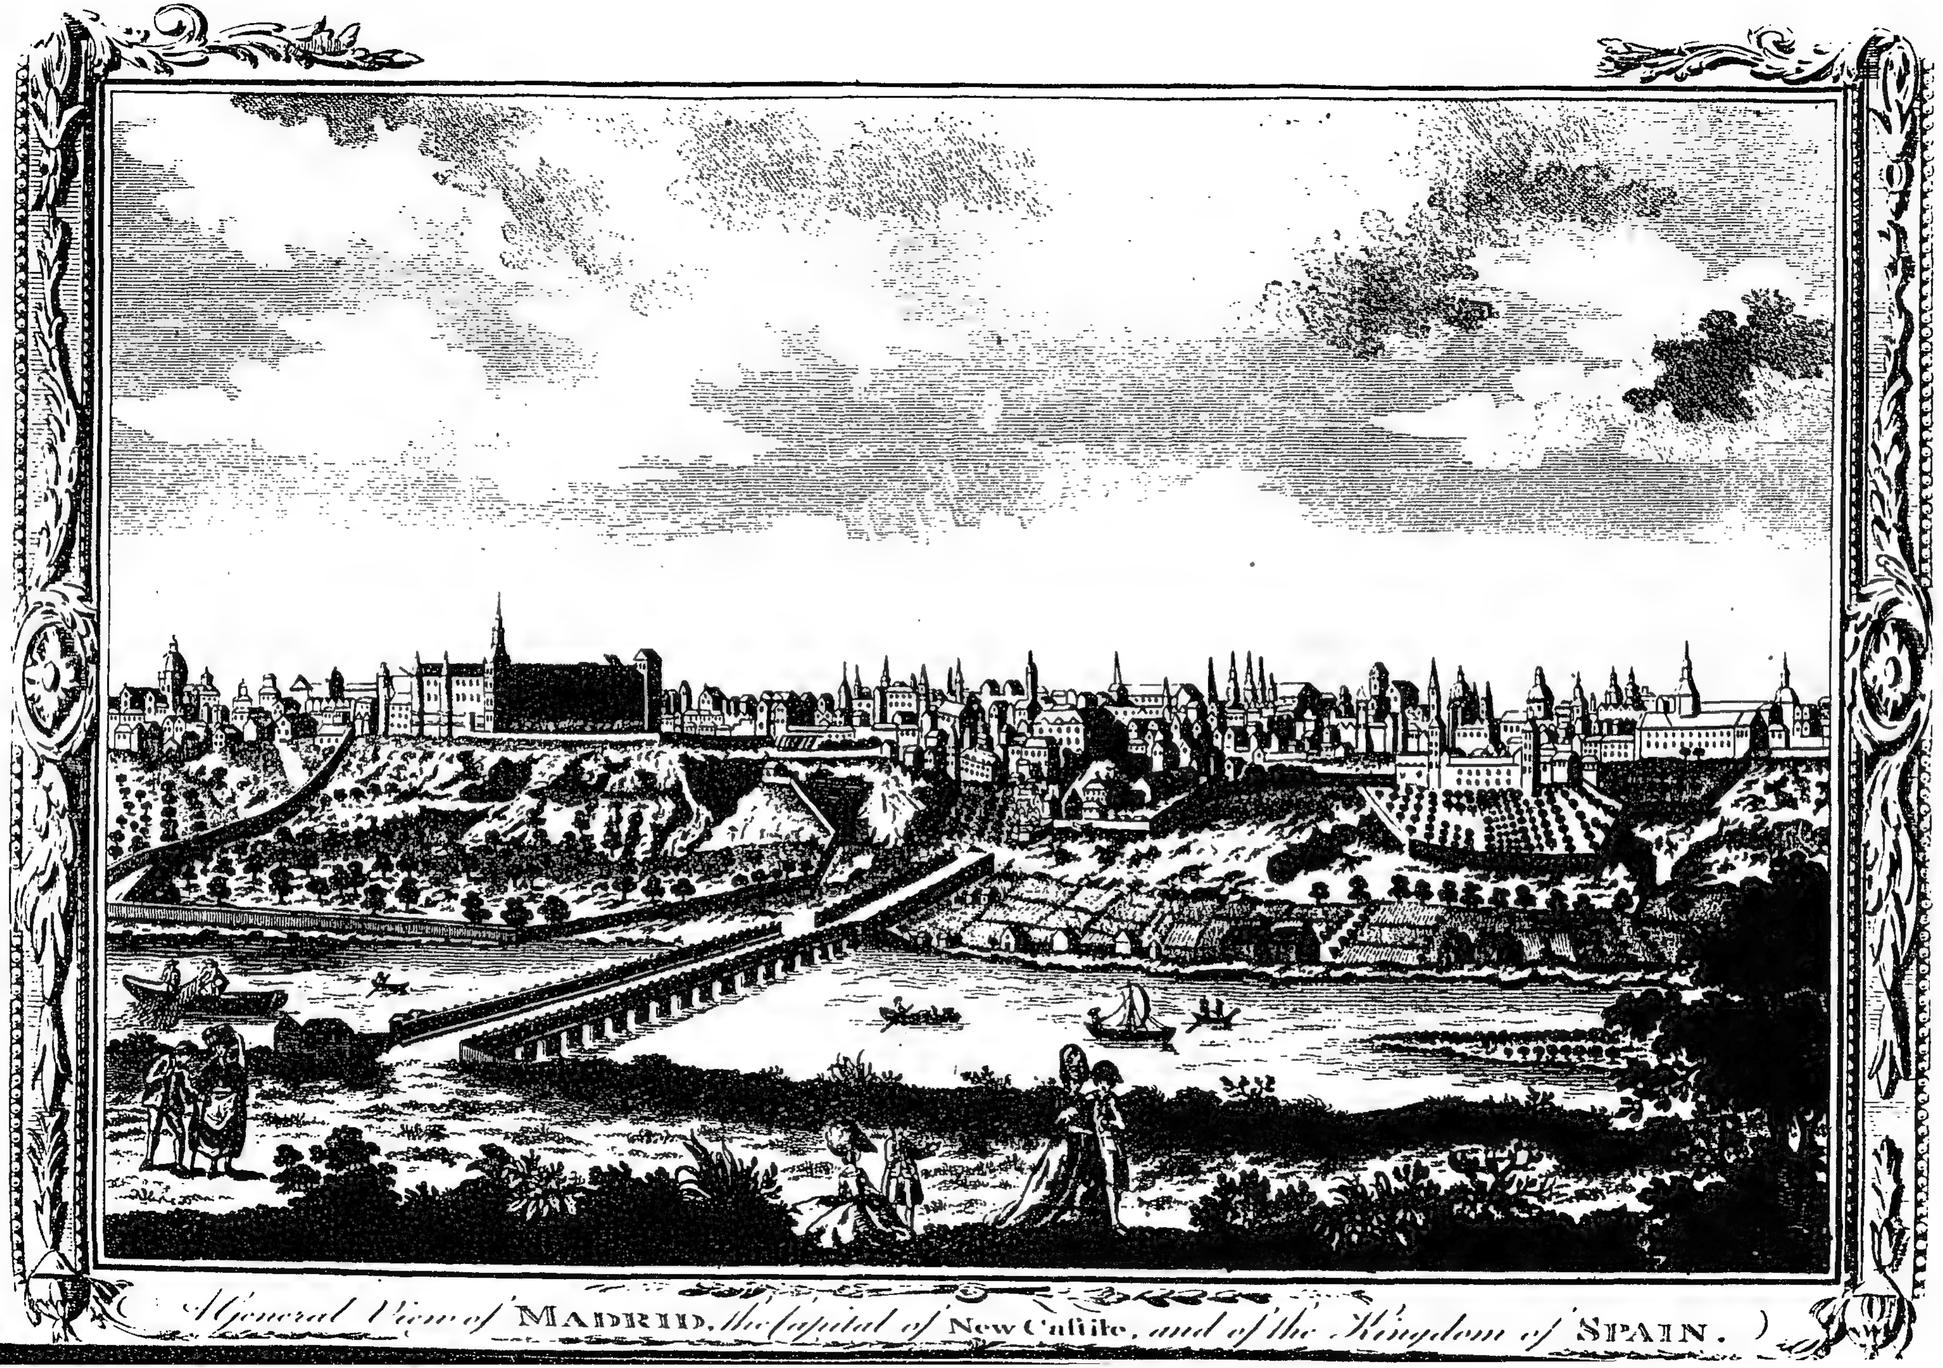
4. Zamora, ſituated on the Douro, over which it has a fine bridge, and ſtands in a fertile country. The biſhop of this place has an annual income of twenty thouſand ducats, and is ſuffragan to the archbiſhop of Toledo. The body of St. Ildefonſo, formerly biſhop of Toledo, is kept in this city.

5. Palenſia, which is a conſiderable walled city, pleaſantly ſituated on the banks of the river Carrion, anciently Nubis, one hundred and twenty miles north-and-by-weſt from Madrid. Here are a great many convents, churches, chapels, and it is the ſee of biſhop, who is ſuffragan to the archbiſhop of Compoſtella, and has a revenue of twenty-four thouſand ducats per annum. This city was deſtroyed by the Romans, but rebuilt by Sancho the Great, anno 1033.

6. Medina del Rio Secco, a flouriſhing town, one hundred and twenty miles north and-by-weſt from Madrid. 7. Medina del Campo, a conſiderable town, about ſeventy-two miles north-weſt from Madrid. 8. Torto, on the Douro, one hundred and five miles north-weſt from Madrid. 9. Zamora, on the ſame river, and at the ſame diſtance from Madrid. 10. Tordeſillas, on the ſame river, about one hundred miles north-weſt from Madrid. 11. Aſterga, on the Aſturias, one hundred and fifty miles north-weſt from Madrid.

VIII. The province of Eſtremadura is bounded by Portugal on the weſt, Leon on the north, Andaluſia on the ſouth, and New Caſtle on the eaſt. It is one hundred and thirty miles long, one hundred and ten broad, is well watered; and the ſoil is ſo remarkably luxuriant, that it is juſtly deemed one of the moſt fruitful places in Europe. This province is now united to New Caſtile; but we ſhall conſider it ſeparately.

The principal places are, 1. Plazencia, or Placenſia, from which the diſtrict takes its name, is a beautiful well-built city, and a biſhop's ſee, on the banks of the little river Xerte, over which it has three bridges; it is about ſeventy miles ſouth-weſt from Madrid, and one hundred and twenty ſouth from Merida. It takes its name from the delightfulneſs of its ſituation, in the midſt of that moſt agreeable ſpot called La Vera de Plazencia, or the Orchard of Plazencia, which is diverſified with beautiful ſeats, villages, gardens, and groves of the fineſt citron, lemon, orange, and fig-trees. Here ſeveral of the ancients placed the Elyſian fields, knowing of no place more agreeable; and here the emperor Charles V. having reſigned all his dominions, retired into the famous monaſtery of St. Juſtus, where, after living two years as recluſe, he ended his days. The biſhop, who has a revenue of fifty thouſand ducats per annum, is ſubject to the archbiſhop of San Jago de Compoſtella. This city is defended by ſtrong walls and a caſtle, and is well-built and handſome.



The other towns and places are, 2, Badajoz, now the largeſt city in the province, and well-fortified, ſtanding on the ſouth ſide of the Guadiana, on the frontiers of Portugal, about one hundred and fifty miles ſouth-weſt from Madrid, and forty weſt from Merida. In the Roman times it was called Pax Auguſta, and Colonia Paconſis, the former of which was corrupted by the Moors to Bax Augus, and afterwards to Badajoz. Here is the ſee of a biſhop, who is ſuffragan to the archbiſhop of Compoſtella, and has a revenue of ſixteen thouſand ducats: in the town are ſome handſome ſtreets, churches, and monaſteries, two modern caſtles, and a fine bridge of ſtone.

3. The town of Merida was originally built by Cæſar Auguſtus, and is ſituated on the Anas, over which it has a bridge. It is ſmall, but well-fortified: here is a triumphal arch called Arco de San Jago, and ſome other fragments of its ancient ſplendor.

4. Medellin, on the Guadiana, is ſuppoſed to be the ancient Colonia Matalmouris. 5. Bejar is only remarkable for a lake in its neighbourhood, which, previous to bad weather, always appears to be unuſually agitated. 6. Alcantara is a ſtrong town ſituated on the Tagus, over which it hath a magnificent bridge, built in the days of the emperor Trajan, and belonging to the knights, who take their names from it. 7. Truxillo, one hundred and thirty miles ſouth-weſt of Madrid, is defended by a ſtrong citadel, and is celebrated for being the native place of Francis Pizarro, the famous conqueror of Peru. 8. Curia, on the Alagon, is the ſee of a biſhop, and belongs to the Alva family. 9. Albuquerque is a walled town near the frontiers of Portugal. 10. Guadalupe is ſituated on a river of the ſame name.

IX. The kingdom or province of Old Caſtile is bounded on the north, by the Aſturias and Biſcay; on the eaſt, by Navarre and Arragon; on the ſouth, by New Caſtile; and, on the weſt, by Leon. Its figure is very irregular, and conſequently its dimenſions extremely different; however, its greateſt length from Valladolid to Tarracona, is about one hundred and twelve Engliſh miles, and its greateſt breadth about one hundred and eighty. Its principal rivers are the Douero and Ebro, the firſt of which is joined by the Attayada, the Andaja, the Arebarillo, and the Piſuerga, which alſo receives the Arlança and Arlançon. The ſources of all theſe rivers are in this province, which is mountainous, and leſs fertile than New Caſtile.

The moſt remarkable places in this province are, 1. Avila, or Avila de Rey, forty miles to the eaſt of Salamanca, is an ancient city, ſeated on a fine plain environed with mountains, and producing excellent grapes and other fine fruits; it is ſurrounded with a wall, on which are eighty-ſix towers, and ten gates. It has nine pariſh-churches,

A General View of MADRID, the Capital of New Castile, and of the Kingdom of SPAIN.

churches, as many monaſteries, ſeven nunneries, eighteen chapels, two colleges, nine hoſpitals, and an annual charitable donation of ten thouſand ducats given by the city, for maintaining poor orphans and other needy perſons. The royal caſtle ſtands on a rock, and is provided with a garriſon and artillery for its defence.

2. Segovia is a city of great antiquity, and ſtill a conſiderable place. It ſtands high between two hills, and is large, populous, and handſome. It has excellent manufactories of cloth and paper, and alſo exports a very fine ſort of wool. It has twenty-ſeven pariſh-churches, as many monaſteries, eight nunneries, five hoſpitals, three chapels, ſeven ſquares, and forty-three ſtreets of the firſt rank, beſides a great number of lanes.

In this city are ſeveral fine churches, beſides the cathedral; that of St. Milan is very old. The arches of this church are all round and large; and the pillars, which are lofty, have carved capitals, containing many figures both of men and animals; ſome with beautiful foliage: the ſhafts are round and plain, placed upon ſquare baſes extremely large. At the entrance is a ſort of alcade, with beautiful ſmall columns of black marble, and a ſort of ſpiral line joins the pillars together. The church dedicated to St. John the Baptiſt is ſaid to be the oldeſt in the city, it being built in 923.

The royal palace, or Alcazar, is ſuppoſed to have been built in the eighth century. The front is about fifty feet long: there are two conic turrets at each wing; and the façade is adorned with ſeveral diminutive turrets in the ſame ſtyle. Above the ſkilling or ſpan-roof of the firſt front, there riſes another ſkilling-roof adorned with turrets in the ſame ſtyle; and between the wings in the middle riſes a lofty ſquare brick tower, ſurrounded with ſmall circular turrets ending in a conſole. Along the front of the firſt building runs a neat, ſmall, open gallery, juſt under the cornice. The whole of the fabric appears to be in the old Mooriſh ſtyle, and is extremely pretty and light.

Here is the famous tower or caſtle of Segovia, ſo celebrated in Gil Blas and other romances, the antient receptacle of ſtate priſoners. There is another large priſon in the middle of the city; but that is only for common malefactors.

Here is a famous univerſity in this city, which is the ſee of a biſhop, who has a revenue of twenty-four thouſand ducats per annum.

Though the town-houſe is a good modern ſtructure, yet the city, upon the whole, has a ſtrange appearance: the buildings look wild and odd, ſometimes being raiſed upon the uneven and craggy parts of the rock, and conſiſting of all the ſtyles of architecture, Roman, Gothic, Spaniſh, Mooriſh, and Saxon.

The moſt remarkable curioſity among the buildings of this city, is the Segovian aqueduct, which exends to a ſmall river, called Rio Frio, which riſes in the ſkirts of a paſs in the mountains, and takes from it as much water as would fill a duct that would contain a human body.

The principal mint of all Spain is in this city: when at work, they can coin thirty thouſand ducats in a day. Here they make a good paper; but the woollen manufacture of this city is the beſt and moſt conſiderable in all Spain; the blankets of Segovia are, perhaps, the fineſt in the world; for they have a vaſt quantity of the fineſt wool, produced from the numberleſs flocks bred in the neighbouring plains. Here are alſo ſeveral other manufactories, particularly of linen, which is carried on very ſucceſsfully.

The city of Valladolid, antiently called Pindia, is large, beautiful, and populous, eighty-ſix miles to the north-weſt of Madrid. It is ſituated in a ſpacious and delightful plain, watered by the Piſuerga, over which it has a ſtately bridge: beſides which, it has about nineteen ſmall ones over the Eſquera, a ſmall river that runs through ſeveral of the ſtreets, and thence through a delightful landſcape of gardens, orchards, meadows, and fields, which it waters in its courſe. The city is walled round, and has ſix gates; but it is a place of no great ſtrength. It has long broad ſtreets, with large and lofty houſes, ſplendid palaces, ſpacious and elegant ſquares, and fountains; ſeventy convents, among which the dominican convent of St. Paul has a magnificent church; the college of the jeſuits is particularly worthy of notice, as is likewiſe that of St. Gregory.

Here is a great ſquare, or piazza, built after the model of that at Madrid, and conſiſts of five hundred arches with gilt balconies, three thouſand windows all in view, and three hundred and thirty gates or doors. It is ſeven hundred paces in circuit, and is capable of containing thirty thouſand perſons. A large well-built ſtreet, chiefly inhabited by gold and ſilver-ſmiths, ſtands near one ſide of this ſquare.

Near the Dominican convent, is a royal palace; here is alſo an univerſity, founded in 1346; a geographical academy, lately erected; a court of inquiſition; and a tribunal of juſtice, compoſed of one preſident, fifteen counſellors, four criminal judges, one ſupreme judge for Biſcay, four judges of nobility, two fiſcals, and an alguazil mayor; yet the revenue of its biſhop, who is ſuffragan to the archbiſhop of Toledo, does not exceed twelve thouſand ducats per annum. The inhabitants of this town not only carry on a conſiderable trade abroad, but are employed in ſeveral manufactures at home, in which they are very ingenious and expert, and are as polite and well-bred people as any in Spain.

3. The city of Burgos, capital of the province, is ſituated on an eminence by the little river Arlançon, one hundred and twenty miles north of Madrid. It has a bridge over the river, and is a large, but not a fine city; though it has ſome handſome ſquares, public buildings, and palaces. It is ſaid to have nine months of winter, and three of fire, on account of their exceſſive heat. Among other convents, here is one for ladies of quality, called Las Huelgas, the revenue of which is ſaid to be eighty thouſand ducats per annum. The abbeſs, who is generally a lady of one of the firſt families in Spain, has ſeventeen other convents, fourteen towns, and fifty villages ſubject to her.

This city, which was built in the ninth or tenth century, on the ruins of Auca, claims the precedence of all others in the cortes or parliaments of Caſtile. The walls are antient, but ſtrong. On the north-ſide, on an almoſt inacceſſible rock, ſtands the citadel. The cathedral here is one of the nobleſt and richeſt in Spain. The archbiſhop has a revenue of forty thouſand ducats per annum; and the king is always the firſt of the canons. There are a great many elegant fountains to ſupply the city with water.

X. The province of New Caſtile, which was formerly a kingdom, has Old Caſtile on the north, from which it is parted by ridges of mountains; Eſtramadura, on the weſt; Andaluſia, on the ſouth; and Valencia and Arragon, on the eaſt. It is two hundred miles long, and in the wideſt place one hundred and ninety broad, well watered, fertile, and has a good air. The inhabitants ſpeak the pureſt Spaniſh.

4. The city of Madrid, which is the metropolis of all Spain, and the reſidence of the court, ſtands in the centre of a large plain, ſurrounded with mountains, and in the very heart of the kingdom, on the banks of the little river Manzanares, which is always very low and ſhallow, except when it is ſwelled by the melting of the ſnow on the mountains. The ſtreets are wide, ſtrait, and handſome, and adorned with ſeveral fine fountains; the houſes are fair and lofty; but built of brick, with lattice-windows, excepting thoſe of the rich, who have glaſs in their windows. There are two ſtately bridges here over the Manzanares, ſeveral beautiful ſquares, ſeveral magnificent churches, convents, palaces, and hoſpitals. The compaſs of the whole city is computed at about nine miles, and the number of its inhabitants at about one hundred and fifty thouſand.

This was formerly a very diſagreeable place, but has been greatly improved of late, and is now one of the neateſt in Europe. It is well ſupplied with proviſions of all kinds at reaſonable rates; and the court, with the reſort and reſidence of the quality, and the high colleges and offices that are kept here, occaſion a briſk trade and circulation of money. There are three royal academies here, one for medicine, another for hiſtory, and the third for the improvement of the Spaniſh language.

The moſt magnificent palace, not only in this country, but perhaps in the whole world, is the Eſcurial, which takes its name from a ſmall village, near which it ſtands, about twenty-two miles north-weſt from Madrid. It was built by Philip II. and is a vaſt ſpacious ſtructure, all of curious white ſpeckled ſtones, with ornaments of various ſorts of marble, jaſper, &c. It was twenty-two years in building, and has the appearance of a town, having, it is ſaid, about eleven thouſand windows, and containing, beſides the royal apartments and offices, a moſt ſplendid church, in which are forty chapels, and as many altars, rich beyond imagination; a convent of jeremites, a college, ſeveral hoſpitals or infirmaries, and a noble library, containing a large and choice collection of books in all languages and faculties. Here is alſo the burial-places of the kings and queens of Spain, called the Pantheon, which, amidſt all its riches and ſplendor, is an affecting monument of the vanity and tranſitorineſs of human grandeur. In fine, it is ſaid, that it would take up above four whole days to go through all the rooms and apartments of this

palace,

palace, which exceeds all that can be imagined for variety of jaſper, marble, and curious ſtones, painting, ſculpture, plate, tapeſtry, guns, &c.

5. The town of Aranjuez, which is about thirty miles ſouth of Madrid, is ſituated on the banks of the Tagus, and was chiefly built within theſe twenty years; whoever chuſes to build houſes here, may have a free gift of the ground from the king, on condition of conforming to the general plan. The ſtreets are broad and parallel, and interſect each other at right angles. The houſes are of two ſtories in height, and are all painted white, with green doors and ſhutters. There are at preſent about five thouſand inhabitants, who live by letting their houſes to perſons who come with the court, and who reſide here annually from the middle of April to the end of July, during which time the number of inhabitants is increaſed to fifteen thouſand.

The royal palace of Aranjuez is a ſquare, and has twenty-one windows in front, and a turret at each end; but there is nothing remarkable either in its exterior or interior parts. Before the palace are three very large walks, each planted with four rows of tall elms. Small canals run between each row, which keep the roots conſtantly ſupplied with water, and make the trees grow to a very great ſize.

The antient fortified city of Toledo is ſituated in fifty-nine degrees forty-ſix minutes north latitude, and in four degrees twenty minutes weſt longitude, and ſtands on a ſteep and craggy rock, encompaſſed by the Tagus, in the form of a horſe-ſhoe, over which it has two ſtately bridges. The land-ſide is fortified by a double wall, in which are one hundred and fifty towers, and five large gates, beſides poſterns. It was formerly eſteemed a place of ſtrength; but in the laſt wars about the ſucceſſion, it always ſubmitted to thoſe who were maſters of the field. The city is divided into twenty-three wards, and has twenty-ſeven pariſhes, about twenty chapels, thirty-eight monaſteries and nunneries, four grand houſes of retirement for women, two large colleges, and twenty-five hoſpitals, one of them for lunatics. The ſtreets are narrow and ſteep; but there are no leſs than ſeven ſquares or market-places. There are here a magnificent and ſpacious old palace taken from the Moors, the ſtables of which can hold at leaſt five hundred horſes. The plain around the city is ſpacious, fertile, pleaſant, and ſo well watered by the Tagus, that it produces corn, wine, oil, fruit, and in ſhort every thing that can contribute to the convenience and delight of man. The air is particularly ſerene and healthy, and there is plenty of proviſions, which are very cheap.

In this city is a large cathedral of gothic ſtructure, rich in carving, but the building is neither light nor in a good taſte. It is three hundred and eighty-four feet long, one hundred and ninety-one broad, and one hundred and ſeven high, all of white ſtone. The roof is ſupported by eighty-eight lofty pillars, which divide it into five leſſer, the middlemoſt of which is very handſome, it being divided into two choirs neatly carved and inlaid. This is one of the richeſt cathedrals in the univerſe; and the archbiſhopric, both in power and revenue, the greateſt next to that of Rome; ſo that the late queen of Spain obtained it from the pope for one of her ſons, though a minor. The lands for the repairs of the church are ſaid to bring in annually thirty thouſand ducats, and for the dignitaries and canons two hundred thouſand more. The whole number of perſons belonging to the cathedral, is ſaid to amount to ſix hundred.

The remains of the alcaſſar, or altar built by Charles V. or according to others, by the archduke Charles, appear very noble; but it was burnt by the allies and Auſtrian party in the partition or ſucceſſion war, leſt it ſhould fall into the hands of Philip V.

One of the greateſt inconveniencies of this city is, the inhabitants having no water but what is brought from the Tagus, or ſaved from the eaves of their houſes, when it rains. There is here a remarkable common ſewer, which is ſaid to run under every houſe, to carry off all the ſoil into the river. Beſides the above ſtructures, there is an univerſity, founded in the year 1475, and a court of inquiſition. The city is populous, and carries on a great trade in wool, ſilk, ſtuffs, and fine ſword-blades.

Beſides the above, here are, 1. The town of Alcala de Henares, on the river Henares. 2. Guadlaara, on the ſame river, about thirty miles to the north-eaſt of Madrid. 3. Talavera la Reyna, on the Tagus, about thirty-ſix miles weſt from Toledo. 4. Cuença, about fifty miles from Madrid, towards the eaſt.

XI. The province of Valentia, which was formerly conſidered as a kingdom, has the Mediterranean ſea to the ſouth and eaſt; Murcia and New Caſtile to the weſt; and Arragon and Catalonia, to the north. It is two hundred miles long, eighty broad, is well watered, has a temperate ſerene air, and a ſoil remarkably fertile.

The moſt conſiderable places in this diſtrict are, 1. Valentia, the capital, one hundred and eighty miles ſouth-eaſt from Madrid: it is ſituated on, and has five bridges over, the Guadalquiver. This is a large, handſome, populous, trading city, and has a poſt within two miles of it. It is the ſee of an archbiſhop, and contains a tribunal or inquiſition, a ſovereign court of judicature, an univerſity, and a flouriſhing manufactory. Almoſt every houſe has a deep wall, and here is a grand common ſewer, ſaid to be the work of one of the Scipios, by which the filth of every houſe is carried off under ground.

2. The ancient city of Segorve, or Segoſbe, in Latin Segobriga, is pleaſantly ſituated on the banks of the Moriedro about one hundred and fifty miles eaſt from Madrid, thirty from the ſea, and as many north from Valentia. It is the ſee of a biſhop, who is ſuffragan to the archbiſhop of Valentia, and has a revenue of ten thouſand ducats per annum: it alſo gives the title of duke.

3. The city of Orihuela, in Latin Orſelis, is the capital of a particular diſtrict, ſituated on the banks of the river Segura, about one hundred and ninety-four miles ſouth-eaſt from Madrid, and eighty ſouth from Valentia. Its preſent name is thought to be a corruption of Auriolla, i. e. the Pot of Gold, as it was called by the Romans, on account of the gold mines that were formerly about it. This place is the ſee of a biſhop, who is ſuffragan to Valentia, and has a revenue of ten thouſand livres: here is now an univerſity.

4. The famous city and ſea-port of Alicant, is ſituated on the Mediterranean, about two hundred and ten miles to the ſouth-eaſt of Madrid, and about ſixty ſouth of Valentia. It has a commodious harbour, from whence a great quantity of delicious fruits, with excellent red and white wine, ſoap, and aniſe, are exported. It has a caſtle, ſtrong walls, and a few baſtions, for its defence.

5. The town of St. Denis, ſtands at the foot of a high hill, called Mongon, about thirty-four miles north-eaſt from Alicant, on the ſea-coaſt, where it has a convenient harbour, with a caſtle, and watch-tower of an extraordinary height. It is alſo well-fortified. This place is ſuppoſed to have been antiently called Diana, from a temple dedicated to that goddeſs.

6. The ſmall town of Morviedro is ſituated on the ſame ſpot where the antient Sagunhun ſtood, on the banks of the river formerly called Palantia, but which now bears the ſame name as the town, independent of the walls which mark the limits of the antient Sagunhun. The remains of an amphitheatre and palace are to be ſeen in this town; they are ſituated about three miles from the ſea, at the foot of a hill, on the ſummit of which is a fort, twelve miles north of Valentia.

7. Cape Arteñues is the antient Artemyſium. 8. Gandia, on the Alcay, gives the title of duke to the noble family of Borgia, contains an univerſity, and is defended by a caſtle. 9. La Mata contains the moſt conſiderable ſalt-work in Spain. 10. Uche is a handſome town, very pleaſantly ſituated near Alicant.

XII. The province of Andaluſia is eſteemed the beſt in all Spain, it abounding in exquiſite fruits of all kinds, honey, excellent wine, grain, ſilk, ſugar, fine oil, numerous herds of cattle, particularly horſes, with metals, cinnabar, and a certain ſpecies of quickſilver. The heat in ſummer indeed is very great; but the inhabitants generally ſleep by day, travelling and following their other employments in the night. The air is, however, in other reſpects, good, and is ſometimes refreſhed with cooling breezes. This province is properly compoſed of three ancient kingdoms, which in the king's title, inſtead of the common names, are expreſſed by that of Andaluſia. Theſe are the kingdoms of Seville, Cordova, and Jead.

The river Guadalquiver, by the antients called Bœtis and Tarteſſus, traverſes the whole country, and the Guadiana ſeparates it to the weſt from the Portugueſe Algarva.

The city of Seville, the ancient Hiſpalis, and capital of the kingdom of the ſame name, is ſeated in thirty-ſeven degrees fifteen minutes north latitude, and in ſix degrees five minutes weſt longitude, two hundred miles to the ſouth-weſt of Madrid, in a large plain on the banks of the Guadalquiver. It is ſaid to be three leagues and a half in circuit, including the ſuburbs, and ſix miles round the walls. The ſtreets in general are very narrow and irregular; and though there are many conſiderable houſes,

yet they do not preſent very ſplendid appearances. The city and ſuburbs, according to Major Dalrymple, contain fourteen thouſand private houſes, and its inhabitants are computed at three hundred thouſand.

There is, in this city, a very celebrated cathedral church built in the gothic ſtile; it was begun in 1401, and finiſhed in 1520: it is immenſely rich in treaſure; the ſilver altar, which is exhibited on particular feſtivals, is moſt magnificent. The Giralda, built by the Moors in the year 1000, is a ſquare tower, which ſerves as belfry to the church, from the top of which is an extenſive and beautiful proſpect. This is an archbiſhop's ſee, with an annual revenue of three hundred thouſand dollars, which is equal to fifty thouſand ſix hundred and twenty-one pounds ſterling, to which belong forty canons, whoſe incomes are very conſiderable.

The city of Cadiz ſtands on an iſland, which is ſeparated from the continent by a narrow channel, or arm of the ſea, over which there is a bridge well-fortified, on the Atlantic ocean, being about three hundred miles to the ſouth-weſt of Madrid, eighty from Seville to the ſouth-weſt, and fifty-eight from Gibraltar. The iſland is about ſixteen or ſeventeen miles long, and about ſix in breadth, producing little grain, but ſome good wine and paſture. This celebrated city is of pretty large circumference; moſt of the ſtreets are narrow, crooked, ill paved, and dirty; but a few of them are broad, ſtraight, and well paved. The houſes are generally three or four ſtories high, and many of them are handſome buildings; but houſe-rent and proviſions are dear, and good freſh water very ſcarce. It contains about thirteen convents, among which the college of the jeſuits is the fineſt in Andaluſia; but has only one pariſh-church, which is the cathedral. Major Dalrymple informs us, that in 1774, this town was ſuppoſed to contain between ſeventy and eighty thouſand inhabitants. The biſhop of this city is ſuffragan to the archbiſhop of Seville, and has an annual revenue of twelve thouſand ducats. Cadiz is the centre of the whole American trade, to which the Engliſh, French, Dutch, and Italian merchants ſend their goods, which are ſhipped off here in Spaniſh bottoms to America, by Spaniſh factors in their own names. Beſides theſe nations, all others who carry on any traffic here by ſea, have alſo their agents, correſpondents, and factors in this city; and the conſuls of thoſe nations make a great figure. The number of inhabitants is computed at forty thouſand.

The harbour and bay of Cadiz are ſpacious and ſecure, the entrance being defended by fort Matagorda, which covers the harbour and bay; and by fort Puntal, which ſtands oppoſite to it, on a point of that neck of land on which the city is built. The Spaniards commonly call both theſe Los Puntales.

As the fortreſs of Gibraltar is of the utmoſt importance to Great Britain, it has been celebrated upon many occaſions in the annals of hiſtory, and, during the late ſiege by the Spaniards, has attracted the attention, and engroſſed the converſation of all Europe, we ſhall therefore give an ample deſcription and account of it from the lateſt, beſt, and moſt authentic information.

Gibraltar is a large promontory in the province of Andaluſia, in Spain, joined by a narrow neck of land, only three thouſand and ninety feet in its narroweſt, and four thouſand five hundred and fifty feet in its wideſt part; in length it is four thouſand four hundred feet from the northern part of the mountain to where the neck widens on the continent. The extreme length of the peninſula from the northern plain to the ſouthermoſt point, is two miles, two thouſand nine hundred and forty-feet: the extreme breadth of its baſe line is four thouſand two hundred and ninety-ſix feet. The town is on the weſt ſide of the mountain, occupying a ſmall inclined plain of five thouſand eight hundred and twenty feet long, and one thouſand one hundred feet broad, which ſize cannot poſſibly be increaſed, as it is bounded on the weſt and north by the bay, and on the eaſt and ſouth by the riſing of the mountain. The ſummit of the rock is about one thouſand four hundred feet perpendicular above the ſea; it riſes not with a ſudden elevation, but by hill placed upon hill.

In July 1773 there were ſeven regiments at Gibraltar, and about ſix hundred men were always on guard at a time: the diſcipline obſerved here is very ſtrict. There are three hundred and forty guns mounted on the fortifications, and there is room for one hundred more: thoſe of the grand battery are of bronze, the reſt of iron. No perſon is allowed to quit the Engliſh territory, either by ſea or land, without a paſs from the governor. Gibraltar has undergone no fewer than twelve ſieges, beſides the late one.

In 1310 Alonzo Perez de Guzman firſt took it from the infidels, which ſo enraged them, that they murdered their king, Mahomet.

The ſecond ſiege was in 1316, when Iſmael, king of Granada, in vain attempted to retake it.

The third commenced in February 1332, under Abamelique, when the Spaniards, after enduring almoſt intolerable fatigue, and ſubſiſting for weeks on the leather of their ſhields, were ſtarved into a ſurrender in the middle of June.

The fourth ſiege was begun by Don Alonzo XI. in the end of the ſame month, he having been within four days march of the place on its ſurrender. This inveſtment was attended with uncommon circumſtances of hardſhip, both to the beſieged and beſiegers. The latter were blocked up in the neck of Gibraltar by the king of Grenada and Abamelique, who marched with an army to the relief of the garriſon. At laſt, on the twentieth of Auguſt, a peace was concluded, and the ſiege was raiſed.

Don Alonzo again ſat down before it in the ſummer 1349, and during this, which was the fifth ſiege, and which continued for nine months, the garriſon was reduced to great ſtraits. But Don Alonzo was carried off by the plague in March 1350.

The emperors of Fez neglecting their Spaniſh territories, Juzaf, third king of Grenada, took it in 1410. This was the ſixth ſiege, but the inhabitants drove out the conquerors, and put themſelves under the protection of Muley Bueld, emperor of Fez.

Juzaf beſieged it in form the January following, with a fleet and army, and the garriſon was ſtarved into a ſurrender. This was the ſeventh ſiege.

The eighth ſiege was in 1438, when Don Enrique de Guzman attacked it with a ſtrong force, but was defeated by the Moors, and drowned; his ſon, however, brought off the remains of his army.

In 1462 the ſon returned with a greater force, and took the place, which ever ſince has remained in the poſſeſſion of the Chriſtians. This was the ninth ſiege.

The tenth was in 1704, when it was torn from the Spaniards by the Engliſh, under the command of Sir George Rooke. Upon this occaſion the conqueſt was particularly aſcribed to the ſeamen, whoſe irregular enterprize hurried them to ſeveral poſts which commanded the garriſon, and which brought the enemy to ſurrender.

The Spaniards were ſorely hurt with the loſs of this important ſtation. They knew its conſequence, and, added to the value conferred by its ſtrength and ſituation, the circumſtance of giving to an antient enemy ſuch a footing in the kingdom, was a mortification which the proud ſpirit of the Spaniards could not bear. An expedition was immediately formed, and the eleventh ſiege commenced under the marquis de Villadarias. The ſiege laſted four months; and finding all their efforts, though vigorous, were vain, it was abandoned in 1705.

Great Britain, fully ſenſible of its importance, hath maintained it at an immenſe coſt, and hath taken ſuch advantage of its natural powers in diſpoſing the works that have been raiſed, as to make it indubitably the ſtrongeſt fortification in the univerſe.

The late ſiege, which was the thirteenth, continued inceſſantly for four years, it having been inveſted by ſea and land in the month of July 1779; by ſea under the command of Don Barcelo, and by land under Don Juan de Mendoza: and the garriſon preſented to Europe a picture of the moſt gallant defence. They reſiſted the efforts of the moſt numerous and beſt equipped band of beſiegers that, perhaps, ever beſet any fortreſs. The Spaniards bent every endeavour to this ſingle object. They ſtarved their marine, and neglected their power in every other quarter of the globe, that they might employ all their reſources, and direct all their attention to this great end. Their works were immenſe, their induſtry, indefatigable. They endeavoured to accompliſh its reduction by the conſtancy of their attack: by their numbers they were able to make their operations inceſſant, that the garriſon might have no relaxation from fatigue, no opportunity for repoſe. All their ſtruggles, however, were rendered abortive. Our fleets have annually relieved the garriſon, and on the only occaſion when they were oppoſed, had the glory to gain a ſignal victory over the Spaniſh ſquadron, commanded by Don Juan de Langara. The Engliſh fleet was commanded by the gallant Admiral Rodney, who took from the enemy the Phœnix, Don Juan de Langara, admiral, commander, eighty guns, and ſeven hundred men: the Minorca, Princeſſa, and Diligente, ſeventy guns, and ſix hundred men each: the San Julian and San Eugenio were alſo

taken; the former went on ſhore, the latter was driven on the breakers, and loſt: the San Juſti and San Lorenzo eſcaped, very much damaged: the San Domingo of ſeventy guns and ſix hundred men, blew up in the action, and all on board periſhed. The loſs, upon this occaſion, on the ſide of the Engliſh, was one hundred and thirty-two men killed, and one hundred and two wounded. The happy conſequence of this victory was, the effectual relief and ſecurity of the garriſon.

Gibraltar, however, continued to be inveſted by the combined forces of France and Spain, till the month of September, 1782, when the enemy made their grand but ineffectual attack on the place, both by ſea and land, of which the following account was publiſhed by authority, on the ſixteenth of November, in the ſame year; in a letter from the right honourable General Elliot, the brave governor, to the ſecretary of ſtate; dated

Gibraltar, September 15, 1782.

"My Lord,

"THE enemy having collected his whole force by ſea and land; forty-four ſail of the line, beſides three inferior two-deckers; ten battering ſhips, five bomb-ketches, ſeveral frigates and zebeques, a great number of guns and mortar boats, a large floating battery, many armed veſſels, and near three hundred boats, purpoſely conſtructed for carrying troops:

"Their land batteries mounted with above one hundred pieces of cannon, and an equal number of mortars and howitzers:

"An army of near forty thouſand men:

"On the thirteenth inſtant, at eight in the morning, all the battering ſhips, commanded by Don Buenventura Moreno, rear-admiral, were put in motion, and came forward to the ſeveral ſtations previouſly determined they ſhould take up: the admiral being placed upon the capital of the King's Baſtion, the other ſhips extending three to the ſouthward of the flag, as far as the church battery; five to the northward, about the height of the Old Mole; and one a very little to the weſtward of the admiral; by a quarter before ten they were anchored in line, at the diſtance of a thouſand to twelve hundred yards: immediately a heavy cannonade began from all the ſhips, ſupported by the cannon and mortars in the enemy's lines and approaches: at the ſame inſtant our batteries opened with hot and cold ſhot from the guns; and ſhells from the howitzers and mortars. This firing continued, without intermiſſion, on both ſides, until noon, when that of the enemy from their ſhips ſeemed to ſlacken, although but little. About two o'clock the admiral's ſhip was obſerved to ſmoke, as if on fire, and a few men buſy on the roof, ſearching for the cauſe. Our batteries never diſcontinued: the enemy's fire from the ſhips gradually decreaſed. About ſeven in the evening they fired from a few guns, and that only at intervals. At midnight the admiral's ſhip was plainly diſcovered beginning to burn; an hour after it was completely in flames: eight more of the ſhips took fire in ſucceſſion. Signals of diſtreſs being now made, the launches, feluccas, and boats of the wole fleet, began to take out the men from on board the burning ſhips. Many ſhots were ſtill fired from thoſe in which the flames had yet made no conſiderable progreſs; and the fire from the enemy's batteries on ſhore did not in the leaſt diminiſh. Brigadier Curtis, who, with his ſquadron of gun-boats lay ready to take advantage of any favourable circumſtance, left the New Mole at two o'clock, and about three formed a line upon the enemy's flank, advancing and firing with great order and expedition; which ſo aſtoniſhed and diſconcerted the enemy, they fled precipitately with all their boats, abandoning the ſhips, in which ſome officers, and numbers of their men, including many wounded, were left to periſh. This unavoidably muſt have been their wretched fate, had they not been dragged from amidſt the flames by the perſonal intrepidity of brigadier Curtis, at the utmoſt hazard of his own life, a life invaluable to his Majeſty's ſervice. For ſome time I felt the utmoſt anguiſh, ſeeing his pinnace cloſe to one of the largeſt ſhips at the inſtant ſhe blew up, and ſpread her wreck to a vaſt extent all round. The black cloud of ſmoke being diſperſed, I was again revived by the ſight of the pinnace, little apprehending that the Brigadier was in the utmoſt danger of ſinking, ſome pieces of timber having fallen into, and pierced the boat, (killing the cockſwain, and wounding others of the men) ſcarce any hope left of reaching the ſhore: providentially he was ſaved by ſtopping the hole with the ſeamens jackets, until boats arrived to their relief. One of our gun-boats was ſunk at the ſame moment.

"In the courſe of the day the remaining eight ſhips ſeverally blew up with violent exploſions: one only eſcaped the effects of our fire, which it was thought proper to burn, there being no poſſibility of preſerving her.

"The admiral's flag remained flying on board his ſhip, till ſhe was totally conſumed."

"Extract of a letter, from Captain Curtis, dated Gibraltar, September 15, 1782.

"At eight o'clock in the morning of the 13th, the ten battering ſhips of the enemy lying at the head of the bay, under the command of admiral Moreno, began to get under ſail, in order to come againſt the garriſon; every thing was in readineſs for their reception. At ten the admiral's ſhip was placed about one thouſand yards from the King's Baſtion, and commenced his fire. The others were very ſhortly afterwards poſted to the north and ſouth of him, at ſmall diſtances aſunder, and began their cannonade. They were all fixed on the ſtations allotted them in a maſterly manner. Our batteries opened as the enemy came before them: the fire was very heavy on both ſides: the red-hot ſhot were ſent with ſuch preciſion from the garriſon, that in the afternoon the ſmoke was ſeen to iſſue from the upper part of the Admiral, and one other, and men were perceived to be uſing fire-engines, and pouring water into the holes, endeavouring to extinguiſh the fire. Their efforts proved ineffectual; by one o'clock in the morning the two before-mentioned were in flames, and ſeveral others actually on fire, though as yet not in ſo great a degree. Confuſion was now plainly obſerved among them, and the numerous rockets thrown up from each of the ſhips, was a clear demonſtration of their great diſtreſs: their ſignals were anſwered from the enemy's fleet, and they immediately began to take away the men, it being impoſſible to remove the ſhips. I thought this a fit opportunity to employ my gun-boats, and I advanced with the whole (twelve in number, each carrying a twenty-four or eighteen-pounder) and drew them up ſo as to flank the line of the enemy's battering ſhips, while they were annoyed extremely by an exceſſive heavy and well-directed fire from the garriſon. The fire from the gun-boats was kept up with great vigour and effect. The boats of the enemy durſt not approach: they abandoned their ſhips, and the men left in them to our mercy, or to the flames. The day-light now appeared, and two feluccas, which had not yet eſcaped, endeavoured to get away; but a ſhot from a gun-boat killing five men in one of them, they ſubmitted. The ſcene at this time before me was dreadful to a high degree, numbers of men crying from amidſt the flames, ſome upon pieces of wood in the water, others appearing in the ſhips where the fire had as yet made but little progreſs, all expreſſing by ſpeech and geſture the deepeſt diſtreſs, and all imploring aſſiſtance, formed a ſpectacle of horror not eaſily to be deſcribed. Every exertion was made to relieve them; and I have inexpreſſible happineſs in informing my Lords, that the number ſaved amounts to thirteen officers, and three hundred and forty-four men. One officer and twenty-nine wounded (ſome of them dreadfully) taken from among the ſlain in the holds, are in our hoſpital, and many of them in a fair way. The blowing up of the ſhips around us, as the fire got to the magazines, and the firing of the cannon of others, as the metal became heated by the flames, rendered this a very perilous employment; but we felt it as much a duty to make every effort to relieve our enemies from ſo ſhocking a ſituation, as an hour before we did to aſſiſt in conquering them. The loſs of the enemy muſt have been very conſiderable, (private accounts make it two thouſands.). Great numbers were killed on board, and in boats. Several launches were ſunk. In one of them were fourſcore men, who were all drowned, except an officer and twelve men, who were floated under our walls upon the wreck. It was impoſſible that greater exertions could have been made to prevent it, but there is every reaſon to believe that a great many wounded periſhed in the flames. All the battering ſhips were ſet on fire by our hot ſhot, except one, which we afterwards burnt. The admiral left his flag flying, and it was conſumed with the ſhip."

By the late treaty of peace between England, Spain, and the other belligerent powers, which was concluded in the begining of the year 1783, this important place, ſo gallantly defended, is allowed ſtill to remain in the hands of the Engliſh, no ſtipulation having been made concerning it.

The town of Algeziras is at preſent but a mean, old place in the Streights, and has a decayed harbour, with only a few ſhattered houſes. The Moors firſt landed here, and held the place almoſt ſeven hundred years. The word Algezira, in Arabic, ſignifies an iſland; and the harbour being formed by two iſlands, it has been called in the plu-

ral

ral number Algeziras. This port was, however, ſerviceable to the Spaniards, for ſheltering and repairing their ſhips of war during the ſiege of Gibraltar.

The next kingdom included in the province of Andaluſia, is Cordova, which though much ſmaller than that of Seville, is equal to it in fertility.

Cordova, the city, anciently called Corduba and Colonia Patricia, lies in thirty-ſeven degrees fifty minutes north latitude, and in four degrees fifty-three minutes weſt longitude. It is a very ancient city, ſituated in a beautiful and very ſpacious plain on the banks of the river Guadalquiver, over which there is a ſtone bridge of ſixteen arches. On the north ſide of the town runs the Siera Morena, a remarkable chain of mountains that ſtretch themſelves from the ſea above two hundred miles inland. The walls are in many places entire, partly Roman, partly Mooriſh. It is at preſent a conſiderable city, but badly built, the ſtreets narrow and irregular: the houſes are chiefly ſtone, conſtructed in the Mooriſh taſte, on each ſide of a ſquare court-yard. The biſhop, who is ſuffragan to the archbiſhop of Toledo, has an annual revenue of forty thouſand ducats. The cathedral is a large antique and magnificent ſquare building. The eſpiſcopal palace is a large ſtructure. The Alcazar, or Mooriſh palace, is now made uſe of for the inquiſition. In 1586 Cordova ſuffered very much by an earthquake. This town has been famous for its leather; whence the Engliſh word cordwain, from Cordovan. There is alſo a conſiderable ſilk manufactory carried on in this place.

The neighbouring mountains are covered with delightful gardens and plantations of olives, oranges, lemons, and figs. They are alſo interſperſed with pleaſant valleys, refreſhed with ſprings of good water. When the abovementioned trees are in bloſſom, they diffuſe a fragrancy all over the country. Beſides the excellence of the wine, and the plenty of fruits and vegetables, there is the fineſt breed of Spaniſh horſes in this country.

The town of Andujor, one hundred and fifty miles ſouth of Madrid, is ſituated in a fertile ſoil, and has a bridge over the Guadalquiver; Lucena, forty-five miles ſouth-weſt from Seville, is a conſiderable city, very pleaſantly ſituated; and Vaena is a large pleaſant town belonging to the town of Sexi.

Jean is the ſmalleſt of the three kingdoms comprehended in the province of Andaluſia. The principal city it contains is Jean, which ſtands at the foot of a mountain, and is defended by a caſtle. It is populous, and has ſome fine churches and monaſteries; but the greateſt devotion is paid here to St. Veronica. Its biſhop, who is under the archbiſhop of Toledo, has a yearly income of twenty thouſand ducats. It was once the capital of a Mooriſh kingdom; and the country particularly abounds in ſilk, beſides producing great plenty of corn, wine, oil, and fruit.

The other towns of leſs note, are, 1. Ubeda, the Ubea, or Vetala of the Romans, a ſmall city, one hundred and fifty miles ſouth from Madrid, and fifty-ſeven north from Grenada. 2. Baeza, anciently Vatia, Beathia, and Beatia, a conſiderable city, three miles from the Guadalquiver, and about fifteen ſouth-weſt from Ubeda.

Beſides the above-mentioned, there are ſeveral other places of ſome note in the province of Andaluſia; namely, 1. Alcantara, between Seville and St. Lucar, which has a fine Roman bridge over the Moraſus. 2. Oſſuna. 3. Medina Sidonia, twenty-ſeven miles eaſt of Cadiz. 4. Traigueros, about thirty miles north of Palos. 5. San Lucar de Barameda, at the mouth of the Guadalquiver, forty-five miles below Seville. 6. Port St. Mary's, a walled town, at the mouth of the river Guadalete. 7. Palos, at the mouth of the Trino, about thirty miles north of St. Lucar. Chriſtopher Columbus ſet out from hence, in the year 1492, on the diſcovery of America. 8. Xeres de la Frontera, a pretty conſiderable town on the river Guadalete, ſix miles from the ſea, and fifty ſouth of Seville. The horſes bred here are reckoned the beſt in all Spain.

XIII. The province or kingdom of Granada, which is ſometimes called Upper Andaluſia, is bounded to the ſouth and eaſt by the Mediterranean; to the weſt and north by Lower Andaluſia; and to the north-eaſt by Murcia. Its extent, from weſt to eaſt, is two hundred and ten miles; but its greateſt breadth is about eighty.

The air is temperate and healthy; and though there are many mountains in the province, and ſome of them very high, yet they are almoſt every where covered with vines and fruit trees, together with laurel, myrtle, ſweet baſil, thyme, lavender, marjoram, and other aromatic herbs, which give an excellent taſte to the fleſh of their cattle and ſheep. The vallies are extremely beautiful, and the whole is well watered. This was the laſt of the Spaniſh kingdoms poſſeſſed by the Moors, who did not reduce it till the year 1492. The principal places are the following, viz. 1. Granada, the capital, which is ſituated at the conflux of the Zemland Daro, one hundred and eighty miles ſouth of Madrid. It ſtands in the midſt of a fruitful country, has a fine air, is capacious and populous, being one of the largeſt cities in Spain, and containing upwards of ninety thouſand inhabitants. It is of a circular form; and the ſnowy tops of the Sierra Nevada mountains, which are ſeen at the diſtance of three leagues, greatly diverſify and add to the verdure of the circumjacent ſcene. The cathedral is very large; and the inſide, within theſe fifteen years, has been incruſted with the fineſt marble highly poliſhed, and enriched with ornaments of bronze; but though the whole is expreſſive and coſtly, the workmanſhip is executed in a deſpicable manner. In the adjoining chapel royal ſeveral crowned heads, and other great perſonages, lie buried. The church of St. John of God has a handſome ſtone front, and elegant cloiſters, which, in 1749, were painted in freſco.

The royal palace of the Alhumbra is one of the moſt entire, as well as moſt magnificent of any of the edifices which the Moors erected in Spain. It is ſituated on a hill, which is aſcended by a road bordered with hedges of double or imperial myrtles, and rows of elms. On this hill, within the walls of the Alhumbra, the emperor Charles V. began a new palace in 1658, but which was never finiſhed; the ſhell of it remains; it is built of yellow ſtone; the outſide forms a ſquare of one hundred and ninety feet. The inſide is a grand circular court, with a portico, of the Tuſcan, and a gallery of the Doric order, each ſupported by thirty-two columns, made of as many pieces of marble. The Alhumbra is a maſs of many houſes and towers walled round, and built of large ſtones of different dimenſions. Almoſt all the rooms have ſtucco walls and ceiling, ſome carved, ſome painted, and ſome gilt. All the floors are either marbled or tiled.

The ſilk manufactory in Granada is very conſiderable, and the arſenal is the beſt furniſhed of any in Spain. There is likewiſe a theatre, which is but mean and dark; a circular amphitheatre for bull-feaſts, built of brick, with wooden ſeats, and conſiſting of two rows of boxes ſixty-eight in each row; the inner area being one hundred and eighty-five feet in diameter; a court of inquiſition, a royal tribunal, &c. There is a large plain without the city, called La Vega de Granada, which is full of hamlets, villages, and other ſmall buildings.

2. The ancient city of Malaga is large, well-built, ſtrongly fortified, and populous: it has a fine harbour on the Mediterranean, two hundred and ſixty miles ſouth of Madrid, and ſeventy-five ſouth-weſt from Granada. The city is encompaſſed with a double wall, and defended by two caſtles. So great is the exportation from hence of wines, raiſins, almonds, figs, lemons, oranges, and other fruits, beſides wool and oil, that the duties on them are ſaid to yield to the king eight hundred thouſand ducats per annum. The harbour runs up into the town five hundred and thirty common paces, with a good breadth, and four ſtairs to take water at, and twenty-four pillars of jaſper ſtone to faſten the ſhips to. The biſhop is ſubject to the archbiſhop of Seville, and has a revenue of twenty thouſand ducats per annum.

3. Seventy miles ſouth-weſt from Granada ſtands Antiquera, which is a pretty large and handſome town, with a caſtle. Near it is a famed ſalt-pit, which ſupplies the whole territory with that commodity; with a ſpring, which is ſaid to be an excellent lithontriptic, or diſſolvent for the ſtone in the urinary paſſages: here are alſo a parcel of rocks, called El Torcal, which at a diſtance repreſent men, beaſts, buildings, &c. and ſome caverns, that are ſaid formerly to have contained gold. This place is ſuppoſed to be the Singilium of Pliny, and the Antiquaria of the Itinerary.

4. The ſmall city of Almeria, on the Mediterranean, is ſituated two hundred and ten miles ſouth-eaſt from Madrid, and ſixty-four ſouth-eaſt from Granada. It is the ſee of a biſhop, who is ſuffragan to Granada, and has a revenue of four thouſand ducats: this place has a ſafe and commodious harbour.

5. Guadix, twenty-four miles eaſt of Granada, is the ſee of a biſhop. 6. Alhama, twenty-eight miles ſouth-eaſt of Granada, has ſome admirable warm baths. 7. Gueſcar, between the Guadadar and Dravate, belongs to the duke of Alva, and has a great trade in wool. Loxa Santa Fé,

Fé, Baza, Velez-Malaga, and Ronda, are too inconſiderable to merit attention.

XIV. The laſt province we have to deſcribe is Murcia, which was anciently a kingdom: it has New Caſtile on the north; Andaluſia on the weſt; Valentia on the north-eaſt; Granada on the ſouth-weſt; and the Mediterranean on the ſouth. It is one hundred miles long, ninety in the broadeſt part, well watered, and tolerably fertile.

This province contains, 1. Murcia, from which it takes its name, ſituated in a ſpacious and delightful plain, on the river Segura, about two hundred miles ſouth-eaſt from Madrid, and about twenty north from Carthagena. This is a large and populous city, having a great many convents, churches, ſquares, and gates, with a good wall, a court of inquiſition, a ſtately palace, and a caſtle. It hath often ſuffered by the inundations of the Segura. The adjacent country abounds in mulberry trees, olives, ſugar canes, and fine fruits.

2. The town of Carthagena has a noted ſea-port on the Mediterranean, at the mouth of the river Guadalantin, not far from Cape Palos, one hundred and eighty miles ſouth-ſouth-eaſt, from Madrid, and forty-two ſouth-weſt from Murcia. It is ſaid to have been built by Aſdrubal, the Carthaginian general, two hundred and twenty-five years before Chriſt, and called Carthage Nova, or New Carthage.

The air here is temperate in ſummer, and ſo mild in winter, that the roſes blow as fair and freſh at Chriſtmas, as in England in June. Both city and harbour are well fortified. The bay on which it ſtands abounds in fiſh, eſpecially mackarel; and the neighbouring country affords diamonds, rubies, amethyſts, garnets, agates, and mines of allum. The city is pretty large, and its harbour one of the beſt in Spain. The biſhop is ſuffragan to the archbiſhop of Toledo. Under the Romans and Carthaginians this was one of the moſt flouriſhing cities in all Spain; for, from hence they ſhipped off thoſe vaſt quantities of gold and ſilver which they dug in the Pyrenees and other mountains.

3. Almaçaſon, a little ſea-port at the mouth of the Guadalantin, is celebrated for the mines of allum in its neighbourhood.

4. Lorca, forty-two miles ſouth-weſt from Murcia, is pretty populous: it is ſituated on the Guadalantin.

SECT. III.

Deſcribing the Manners and Cuſtoms of the SPANIARDS; their Language, Religion, Diverſions, Bull-feaſts, Plays, &c.

THE inhabitants of Spain are grave and ſolemn in their behaviour; they are remarkable for frugality, love of pomp, fidelity, valour, intrepidity, and abhorrence of drunkenneſs: they are very jealous of their honour, when once engaged; and a celebrated author obſerves, that "the Spaniards have been, in all ages, famous for their honeſty." Juſtinian mentions their fidelity in keeping whatever was entruſted to their care: they have frequently ſuffered death rather than reveal a ſecret, and have ſtill the ſame fidelity for which they were formerly diſtinguiſhed.

The Spaniards, however, on the other hand, are univerſally too much given to women; and their jealouſy, where either their wife, daughter, ſiſter, or even miſtreſs is concerned, ſeldom fails to end in bloodſhed; for they think no means too cruel, baſe, or unjuſt, to wipe off any ſtain that is caſt upon their honour, or to gratify their revenge. Pride of birth is no where carried to a greater height; and the inſinuation, that a man is deſcended from the Moors, is ſufficient to make him ſtab the ſlanderer, or procure his being privately aſſaſſinated. In ſhort, they have a mixture of the moſt amiable virtues and the moſt ſhocking vices; and while they affect a haughty air to ſtrangers, no people in the world are more courteous to thoſe with whom they are intimately acquainted.

They are very moderate in their diet, and can make a meal of olives, a ſallad, a little garlic, or a few roots; but perſons of fortune have ſeveral expenſive diſhes. The men dine by themſelves, and their wives and children at ſeparate tables.

The Spaniſh women are for the moſt part very lean, and very amorous; they have black eyes, flat boſoms, ſmall feet, and long garments. They ſit croſs-legged on carpets, a cuſtom which they derived from the Moors. They are much addicted to painting, though their huſbands, through jealouſy, keep them very much at home.

It is computed, that the kingdom of Spain contains about ſeven millions and a half of inhabitants; but it would ſupport more than twice that number, were it properly cultivated. In the time of the Goths and Moors, it was ſuppoſed to contain between twenty and thirty millions of people; and might yet be very powerful, if it had no poſſeſſions in America, but now it is thinly inhabited.

The number of inhabitants is but ſmall, yet their poverty is remarkable, for they not only live in a country capable of ſupporting many millions more than it does, in the greateſt plenty, but have prodigious ſums poured in from America. Davala computes that, from the year 1492 when America was diſcovered, to 1731, above ſix thouſand millions of pieces of eight in regiſtered gold and ſilver have been imported into Spain, excluſive of far greater ſums unregiſtered, beſides thoſe received by foreign merchants from the Spaniſh dominions in America. It even appears that one year with another, Spain receives from their American colonies above twenty-ſix millions of pezos, or pieces of eight: yet Uſtariz computes, that all the coined and wrought gold and ſilver in Spain, including that belonging to churches and private perſons, ſcarcely amounts to one hundred millions of piaſtres of four ſhillings and ſixpence each.

The poverty of the Spaniards is generally aſcribed to two cauſes; the firſt of which is their want of induſtry in agriculture, handicrafts, and manufactories, which occaſion the country to be annually drained of many millions for corn and foreign goods: and ſecondly, to the inſatiable avarice of the clergy, who practiſe a thouſand arts to obtain the poſſeſſion of the wealth of the country.

Moſt of the provinces uſe what they call the Caſtellano, and Eſpannol, or Spaniſh, which has the neareſt affinity to the Latin, both in the words and the compoſition, of any language in Europe: but in Catalonia and Valencia the common people uſe a dialect of the Old French, or rather Gaſcon; but ſo mixed and corrupt, that none of the other provinces underſtand it.

In Spain the popiſh religion is practiſed with the greateſt ſcrupuloſity and pomp. In no country is there more praying and ceremony, and leſs real Chriſtianity. The Virgin Mary is more reſpected and adored among the Spaniards than God himſelf, as appears even from their compliments. The Spaniards are mere ſlaves to the clergy, who ſo artfully hoodwink them, that they do not perceive the chains of their ſlavery, or, if they do perceive them, bear them willingly: and when they gall them, dare not ſo much as vent a ſigh after freedom. Under any diſappointment, either in views of avarice or ambition, the clergy have their dreadful inquiſition at hand, which ſeizes both on honour and life; ſo that perſons of the moſt unſpotted innocence eſteem it a particular favour to come off only with the loſs of their fortunes. This infernal court was firſt introduced in 1478, by king Ferdinand the Catholic, and queen Iſabella, at the ſuggeſtions of John de Torquemada, a dominican, who was the firſt inquiſitor. At Madrid it conſiſts of an inquiſitor-general and ſix counſellors, one of whom is always a dominican, two judges, one fiſcal, and ſeveral other officers and aſſiſtants. The number of the families who are diſperſed all over Spain, as ſpies and informers, are computed at about twenty thouſand. Under this ſupreme court are others in the principal cities in the kingdom, and even in the Canary iſlands, Mexico, Carthagena, and Lima. But according to the lateſt accounts the power of this tribunal is now declining very viſibly, and ſeems haſtening to its fall.

It is neceſſary, however, to obſerve, that, amidſt the great decreaſe of the inhabitants in Spain, the body of the clergy have ſuffered no diminution; but has rather been gradually increaſing, inſomuch that Uſtariz computes the number of eccleſiaſtics and their ſervants at two hundred and fifty thouſand. The king nominates all biſhops and archbiſhops, who are afterwards confirmed by the pope.

A ſtranger finds many inconveniencies in this country, from the miſerable accommodations to be met with on the public roads; for, it ſeems, you muſt abſolutely carry your proviſions and bedding along with you; and even then, without you can bear fatigue well, lie down in your clothes, eat eggs, onions, and cheeſe; unleſs you can ſleep when your mules reſt, riſe the moment you are called, and ſet out early in the morning before the heat comes on, you will fare ill as a traveller. It is a good method to carry dried tongues with you, hard eggs, ſome portable ſoup, tea, ſugar, and ſpirituous liquors, not forgetting even pepper and ſalt; and whenever you meet with good bread, meat, fowls, and wine, always to buy them, whether you want them, or not, becauſe you know not what to-morrow may produce. A knife, fork, and ſpoon, are abſolutely neceſſary,

neceſſary, for you will find none; nor ſhould you omit a pair of ſnuffers, a candleſtick, and ſome wax-candles; but great care muſt be taken to carry neither tobacco nor rum, for they are contraband, and may occaſion the detention, if not the ſeizure of your baggage. You ſhould likewiſe have but few books, leſt they ſhould be ſeized.

In deſcribing the diverſions and paſtimes of the Spaniards, we ſhall firſt take notice of the bull-feaſt exhibited in the Plaça Mayor at Madrid as related by Carlton:

The ſport being to laſt three days, on the firſt, all the gentry of the place, and the neighbouring country, in their richeſt habits, reſorted to the great ſquare, and took their place on the ſcaffolds, while the populace, having provided themſelves with ſpears and darts, ſtood ready for the encounter; for the bull does not only fight with the tauriro (who is a perſon uſually hired on theſe occaſions, in the leſſer cities) but with the whole multitude, who throw their darts at him as often as they have opportunity. As ſoon as the door of the ſtall is opened, and the bull perceives the light, he comes out, ſnuffing the wind, and ſtaring about him, ſtamps on the ground, as in defiance of his enemies. Soon after the tauriro, cloathed in white, and holding his cloak in one hand, and a ſword in the other, enters the liſts; on whom, when the brute has ſet his eyes, he moves at firſt gently towards him; then gradually mending his pace till he comes within twenty yards of the tauriro, he ſprings forward and runs at him with all his force. The tauriro having ſlipt on one ſide, and avoided him, throws the cloak over his horns, and cuts him over the neck if he can, there being one particular place, which if he hits, he eaſily brings him to the ground. Carlton alſo ſays, he ſaw a bull ſo ſtunned with one ſtroke that he could not move, and the blood flowing plentifully out of the wound, after a violent trembling, the creature fell down dead. But this rarely happens, for he uſually receives a great number of wounds by ſwords and darts before he dies; and whenever he feels a freſh wound, he redoubles his fury againſt the tauriro, who having avoided him again, ſeldom fails to give him another wound. When the tauriro is wearied out, they bring in their dogs, hamſtring the beaſt, and pierce him till he expires; after which he is carried out of the barrier, with the loud acclamations of the people, as if ſome ſignal victory had been obtained. Our author relates, that he ſaw the tauriro, who was hired on this occaſion, and was eſteemed one of the beſt in Spain, mount one of theſe bulls, cutting and ſlaſhing him, till he had wearied the beaſt out, and then diſmounting, killed him with eaſe, to the great ſatisfaction of the multitude, who made the air ring with their ſhouts; and on ſuch occaſions, money is thrown to the tauriro, by the ſpectators, for his encouragement. On the third day of the feaſt, a young gentleman of quality, named don Pedro Ortega, performed the part of a tauriro, on horſeback, when the ſeats were covered with people of faſhion, who came from diſtant places to ſee the encounter. He entered the liſts, finely mounted on a managed horſe, attended by four footmen in rich liveries, who after their maſter had rode round the ſquare, and paid his compliments to the company, withdrew from the danger. Then the bull was let out, and having ſtood a little while ſtaring about, fixed his eyes upon his adverſary, and run at him with the utmoſt fury. The cavalier having dexterouſly avoided the brute, wounded him with a dart in the ſhoulder, whereupon the people ſhouted, their vivas were repeated, and the lady of his affections waved her handkerchief, as a mark of her ſatisfaction. The cavalier endeavoured always to keep his horſe on the ſide of the bull, for the advantage of ſtriking him, and throwing another dart, fixed it in his flank: but notwithſtanding the gentleman behaved to admiration, and often received the vivas and huzzas of the people; the bull, at length, getting his horns between the horſe's hinder legs, threw both man and horſe to the ground, and it was expected he would have killed them both, when, to the ſurprize of every one he withdrew to the farther ſide of the ſquare, and ſtood ſtaring about him. In the mean time the cavalier was carried off not much hurt.

The foot tauriro hereupon entered the liſts again, imagining he ſhould have met with an eaſy conqueſt; but the ſame bull made him frequently retreat into the places contrived for the ſecurity of footmen; nor was he able to diſpatch the creature at laſt, without the general aſſiſtance, the bull having near one hundred darts ſtuck in him before he fell, beſides many cuts and gaſhes in his fleſh. This ſport ſeemed to be ſo very barbarous to the late king, that he has been heard to ſay, it deſerved very little encouragement: at the ſame time, his ſubjects were ſo enchanted with the diverſion, that he did not think fit entirely to aboliſh it. Theſe entertainments, however, are of late much leſs frequent than they were formerly.

The court never exhibit the bull-feaſt in the Plaça Mayor but upon ſome extraordinary occaſion, as the acceſſion or marriage of their kings, for it is attended with very great expence, both to his majeſty and the city. But there is a theatre built without the walls, where there are bull-feaſts every fortnight, which to connoiſſeurs are greatly preferable to the others, the bulls being more furious, and the danger greater to thoſe who fight them; but their manner of engaging them is pretty much alike.

The theatrical exhibitions in Spain are generally abſurd. The prompter's head appears through a trap door above the level of the ſtage, and he reads the play loud enough to be heard by the audience. There are two theatres in Madrid for the performance of Spaniſh plays. Rope dancing is exhibited in one of them, which was called El Theatro de la Cruz (the theatre of the Croſs), where there are three rows of boxes, fifteen in each row. Part of the pit has benches, with arms dividing them into diſtinct ſeats. The Spaniſh tragedies are for the moſt part ridiculous bombaſt, yet contain ſome elevated ſentiments: and their comedies are a jumble of religion and buffoonery mingled together in a moſt whimſical and inconſiſtent manner, though much humour and many ſtrokes of wit are diſcernible through their manifeſt abſurdities.

The Spaniards ſeem to give a military turn to many of their diverſions, and even in the very terms and language they uſe at cards: hombre in Spaniſh ſignifies a man, and from thence we derive our game at ombre; the four principal cards are called matadores, or murderers, becauſe they win all others. Spadillo is the little ſword, or, as we call it, the ace of ſpades; for ſpado, in Spaniſh, ſignifies a ſword, and their cards are painted with a figure of that weapon.

The Spaniards uſually breakfaſt and ſup in bed; their breakfaſt is frequently chocolate, tea being ſeldom drank by them. Their dinner is generally a pochero, or beef, veal, mutton, pork, bacon, and greens, &c. all boiled together. If it be a richer or more expenſive mixture of meats and delicacies, it is then termed an olla podrida, or what we call an olio. They are fond of garlic; and it is a proverb among them, that olives, ſallad, and radiſhes, are food for gentlemen. After dinner they commonly ſleep.

Men and women all wear the ſame dreſs in the ſtreets and at maſs; but on other occaſions, and in their private viſits, the ladies wear as great a variety of dreſs, and of a much richer ſort than thoſe of England. The ſpirit of jealouſy is ſo far worn out, that the married ladies of Madrid have each their profeſſed lover, like the cicisbeo of the Italian ladies.

With reſpect to their evening's airing, it is to the laſt degree inſipid: you ſee nothing but a ſtring of coaches following one another, filled with people of faſhion; here a duke and his confeſſor; there a couple of ſmart young abbés; here a whole family grouped together, huſband, wife, and children. When they take their airing on gala or court days, all their footmen wear plumes of feathers in their hats, and are dreſſed in laced liveries.

The grandees, and people of the firſt faſhion, keep a great number of ſervants. Some of them have three or four hundred domeſtics, and the Engliſh embaſſador, in compliance with the taſte of the country, keeps near a hundred. As their coaches are uſually drove with four mules, they have two poſtillions; with generally four and ſometimes ſix footmen behind their coaches. They take out the ſides and backs of their coaches, for the ſake of the air, in hot weather.

The Spaniards ſeldom uſe ſedans; and when they do they have always two footmen who go on each ſide the hindmoſt chairman, in order to hold him up leſt he ſhould fall: there are two on each ſide of the ſedan, and two who follow behind with lanterns, though it be in the middle of the day. Thus, excluſive of thoſe who go before, they have generally nine ſervants with a coach, and ten with a ſedan.

SECT. IV.

Of the Genius, Learning, Religion, Trade, and Commerce, Coins, Weights, and Meaſures, Conſtitution, Orders of Knighthood, Revenue, Forces, &c. of the SPANIARDS.

THOUGH the inhabitants of Spain are not wanting in capacity for the ſciences, yet little progreſs can be expected from them while they are debarred the uſe of their

natural talents. The clergy not being very learned themſelves, it is a point of policy with them to ſuppreſs all ſcientifical knowledge among the laity; and in order to keep them in ignorance and ſubjection, they brand all literary reſearches with the name of hereſy.

The preſent ſtate of divinity conſiſts much as it formerly did, in the ſtudy of the fathers, councils and decrees of the popes and their canons, and in ſyſtems of Thomatic and Auguſtine theology. The knowledge of the learned languages, and explication of the text of the ſacred writings, have little to do with it. To this tract of criticiſm they are almoſt utter ſtrangers, though they are well verſed in caſuiſtry, which makes a conſtant part of the ſtudies preparatory to the office of a clergyman.

The Spaniards have had many valuable writers in hiſtory; but it is dangerous to deſcend too near to the preſent time; beſides, his preſent majeſty has abſolutely forbid any of his ſubjects to write the hiſtory of Charles V. of Spain.

They are ſaid to be at leaſt two centuries behind the Engliſh, in phyſic and ſurgery; but where the people are perſuaded that ſaints, miracles, and charms can be procured to cure the moſt inveterate diſeaſes, there muſt be little inclination to have recourſe to art. However, they ſtill practiſe copious bleeding in moſt diſeaſes, and botany is much ſtudied among them.

They have many writers in poetry, beſides the celebrated Lopez de Vega, who wrote the Jeruſalem Conquiſtada, tragedies, comedies, &c. Their ſongs have a wonderful air of ſimplicity, and in ſome of them are much ſentiment as well as dignity: thoſe upon love are exceedingly chaſte; and ſome have a pleaſing air of romance, but like the people, are moral, grave, majeſtic, and penſive.

Cervantes and Guevara are their moſt celebrated writers of humour in proſe: the moſt famous work of the latter is the El Diablo Caxuelo, which la Sage modernized into a romance, known in Engliſh by the title of the Devil on two Sticks; and Diable Boiteux, in French.

Here is a want even of the moſt neceſſary trades; and of the few they have, the greateſt part are in the hands of the French, who are very numerous in this country: for the natives, beſides their averſion to work, diſdain to ſtoop to laborious employments. They are not, however, entirely without manufacturers, eſpecially of ſilk and wool; but theſe fall far ſhort of that flouriſhing condition to which they might be brought: and as tradeſmen and merchants are looked upon with contempt, they have no ſooner amaſſed a competent fortune, then they leave off trade, procure a title, and ſet up for perſons of quality.

This kingdom is extremely well ſituated for trade and navigation; they might be their own carriers; but this advantage they neglect, and leave it to other maritime nations, who turn it to a very good account. The Spaniards indeed deny them all acceſs to their poſſeſſions in America, and are ſo jealous of having that trade confined only to themſelves, that no foreign ſhips muſt even approach their coaſt: yet of this commerce, which is carried on in their own ſhips, they have the leaſt profit, they being little more than factors for the French, Engliſh, Dutch, and Italians, who ſend their goods to America by them, and have the greateſt ſhare in their returns of gold, ſilver, and other valuable merchandize.

The Spaniſh trade to America was formerly carried on by the flota and galleons; but ſince the years 1735 and 1737, the flota and galleons have been diſcontinued, and the trade to America carried on in regiſter ſhips, which any merchants may ſend, on obtaining permiſſion from the council of the Indies. Theſe ſail from Cadiz directly to Lima, Buenos Ayres, Maracaibo, Carthagena, Honduras, Campeche, Vera Cruz, &c.

The Spaniards alſo carry on a very conſiderable trade to the coaſts on the South ſea, between the town of Manilla, in the iſland of Luconia, and the harbour of Acapulco on the coaſt of Mexico.

The Spaniſh money is not eaſily underſtood; for the Spaniards make up moſt of their accounts, and form their calculations chiefly in theſe two ſpecies, the real de vellon, and the marevedi. The latter is the loweſt of the denominations of their copper money, and in this the king's accounts are kept; conſequently the revenues of Spain, and the wealth brought from Peru and Mexico, are annually computed by an integer of copper, that is three times leſs than our farthing. The real de vellon is the ſmalleſt piece of their ſilver money, and equals our two-pence half-penny, and two thirds of a farthing.

Our Engliſh merchants traffic chiefly in pieces of eight, and compute uſually by the piaſtre, an old diſuſed piece of eight, conſiſting of fifteen reals and two maravedis: or if they recon by piſtoles, they mean the piſtole of ſixty reals, which is the common piſtole, and not the gold one of ſeventy-five and ten maravedis, called the doubloon effectivo de oro by the Spaniards.

That the reader may form a more perfect idea of the Spaniſh coin, we have reduced it to the Engliſh weights and value, as follows: The old Engliſh piſtole, four penny weights, eight grains: ſeventeen ſhillings and four-pence. The new Seville piſtole, four penny weights, eight grains; ſeventeen ſhillings and four-pence. The old double doubloon, ſeventeen penny weights, eight grains; three pounds nine ſhillings and four-pence. The old double piſtole, eight penny weights, ſixteen grains; one pound fourteen ſhillings and eight-pence. The new Seville double piſtole, eight penny weights, ſixteen grains; one pound fourteen ſhillings and eight-pence. And the half and quarter of theſe in proportion.——The piaſtre of Spain, or Seville pieces of eight, four ſhillings and ſix-pence. The new Seville piece of eight, three ſhillings and ſeven-pence. The Mexico piece of eight, four ſhillings and five-pence. The pillar piece of eight, four ſhillings and five-pence. The rial, or bit, ſeven-pence.

The weights commonly uſed in Spain, are, the arrobe, which is exactly twenty-five pounds Engliſh weight, four of which make a quintal or hundred: but as the pound of Cadiz and Seville are much larger than thoſe of Caſtile, conſequently the arrobe is not the ſame throughout all Spain.

Almoſt every thing in Spain, whether dry or liquid, is ſold by the averdupoiſe pound of ſixteen ounces, and conſequently by the arrobe, thus wood, coals, corn, wine, oil, bread, and ſalt, are ſold by the pound, and by the arrobe in large quantities.

The weights uſed by the gold and ſilver-ſmiths are, 1. The quilate, or carat, of four grains. 2. A tomin, equal to three carats, twelve grains. 3. A caſtillan, equal to eight tomins. 4. The ounce, equal to ſix caſtillans and two tomins. 5. The mark is equal to eight ounces.

The Spaniſh liquid meaſures are, 1. Dos açumbres, or a gallon. 2. An açumbre, or two quarts. 3. Half an açumbre, one quart. 4. A quartillo, equal to a pint.

Spain is, at preſent, with reſpect to its conſtitution, an abſolute hereditary monarchy, where the females inherit in default of the male line. The king, in his title, enumerates moſt of the provinces, and particular parts of the dominions he has been, or is poſſeſſed of. In ſpeaking of him, he is commonly called his Catholic majeſty, or the Catholic king. The hereditary prince is commonly ſtyled prince of Aſturias, and the other royal children infantas. The kings of Spain are never crowned; they ſeem to have a power to diſpoſe of the crown to what branch of the royal family they pleaſe, of which we have an inſtance, when Charles II. gave his dominions to the duke of Anjou.

Here are ſeveral councils and tribunals for the adminiſtration of the government and of juſtice; as, the junta or cabinet council, the privy council, the council of war, the council of Caſtile, the council of the inquiſition, the council of the finances, the council of the Indies, the ſeven courts of royal audiences, the great court of the civil law, &c. Since the beginning of the ſeventeenth century, the cortes, or parliaments of this kingdom, have been diſcontinued.

The higher nobility of Spain conſiſts of counts, marquiſſes, and dukes. The grandees, who have precedence of all others, next the king and princes of the blood, are named out of theſe. Like thoſe of Portugal, they have the privilege of being covered in the king's preſence, who ſtyles them, in his letters, Illuſtrious; and in ſpeaking to them, or of them, their Eminences; but there are others, beſides the grandees, who are covered before the king, namely, cardinals, nuncios, archbiſhops, the grand prior of Caſtile, and the grand prior of Malta; the generals of the order of St. Dominic and St. Francis, ambaſſadors of crowned heads, the knights of the golden fleece, and of the three military orders of St. James, Calatrava, and Alcantara, when the king aſſiſts at their reſpective chapters, in quality of grand maſter. The inferior nobility ſtyle themſelves cavalleros and hidalgos. No grandee can be apprehended for any crime, but by the expreſs order of the king; and they have many other privileges beſides theſe.

With reſpect to the orders of knighthood in Spain, that of the golden fleece is the principal, which was inſtituted in 1430 by Philip the Good, duke of Burgundy, and is common now to the kings of Spain and the houſe of

Auſtria. The order of Jago de Compoſtella was inſtituted in 1175, by Ferdinand II. king of Leon. The order of Calatrava was founded by Sancho III. of Caſtile. The order of Alcantara owes its inſtitution to Ferdinand II. king of Leon. The three laſt orders have large commanderies, or eſtates, annexed to them. The maſters of them were once ſo powerful, that they diſputed the king's authority over them: whereupon the king procured thoſe maſterſhips to be conferred on himſelf by the pope, that they might no longer aſſume an independency of the ſtate. Beſides theſe, here is the order of Charles III. which was inſtituted September 1771, in honour of the birth of his majeſty's grandſon, the order of Santiago, and the order of Monteſa.

The dominions of the crown of Spain in Africa are, the towns of Cetua, Oran, and Maſalquiver, on the coaſt of Barbara; in Aſia, the iſlands of St. Lazarus, the Philippines, and Ladrones: the greateſt part of the main land of South America; and in North America, Mexico, New Mexico, California, the iſland of Cuba, part of Hiſpaniola, Porto Rico, the two Floridas, &c. &c.

The royal revenue ariſes principally from the tenth of every thing ſold, to which may be added, the tithes and fourths of a hundred; the exciſe on wine, oil, tallow, ſoap, paper, ſalt-fiſh, &c. the uſual aid of four hundred and forty-one thouſand one hundred and ſeventy-ſix crowns, paid by all under the rank of nobility; the wine-gauge money; the ſtamp-duties, and the half-annetes; the duties on proviſions, which is fourteen per cent. thoſe on ſalt, tobacco, the poſt-office, the regulations of the crown of Arragon, and the bull of the cruſado, by virtue of which the clergy and laity pay a contribution towards carrying on a war with the infidels, even whether there be any ſuch war or not; indulgencies; licenſes for eating butter, cheeſe, milk, and eggs in Lent; the ſubſidies and tithes of church and abbey-lands; the money paid by thoſe orders in lieu of the lances and galleys they were bound to furniſh; the taxes on downs, commons, and other paſtures; the Madrid exciſe; the thirds, tenths, and patrimonial rents of Catalonia, Arragon, Valencia, and Majorca; the eccleſiaſtical payments for the military hoſpitals; the quickſilver, and other American revenues; the Weſt-India trade; the coinage, &c. all which together amount at preſent to about three million three hundred ſeventy-three thouſand two hundred and eighty-eight pounds ſterling.

The land forces of Spain conſiſt of ninety-ſix thouſand five hundred and ninety-ſeven men. The kingdom is well defended on all ſides: towards France it has a ſecure fence in the Pyrenean mountains: and the ſea-coaſts are lined with redoubts, forts, and towers; and up the country the army of an enemy would, for want of forage, be put to very great inconveniencies, particularly the horſe.

The Spaniſh naval forces conſiſted, in the late war, of upwards of fifty ſhips of the line, twenty-one frigates, fourteen xebecs, four packet-boats, and ſeventeen bomb-veſſels; the complement of all which amounts to about fifty thouſand nine hundred and ſixty men.

CHAP. XIII.

THE NEW HISTORY AND DESCRIPTION OF

PORTUGAL.

SECT. I.

Containing the natural Hiſtory and Geographical Deſcription of the Country, its Towns, Rivers, Climate, Soil, Produce, &c. alſo of the Inhabitants, their Trade, Manufactures, Religion, Laws, Cuſtoms, &c.

THIS is the moſt weſtern kingdom in Europe; it is bounded, on the north, by the province of Leon, Eſtremadura, and Andaluſia; and on the ſouth and weſt by the Atlantic ocean; extending from the thirty-ſixth degree fifty minutes, to the forty-ſecond degree three minutes north latitude, and between the ſeventh and tenth degrees of weſt longitude from London. Its length from Valença, the moſt northern town in it, to Sagres, the moſt ſouthern, near cape St. Vincent, is about three hundred and ten miles; and its greateſt breadth, from Peniche, a ſea-port in Eſtremadura, to Salvaterra, on the frontiers of Spain, is one hundred and twelve miles.

Here the climate is much more temperate than in Spain, though it is a little different in the ſeveral provinces. The northern parts feel a kind of painful cold in winter, though this is chiefly owing to the rains which fall at that ſeaſon, and in the ſouthern the ſummer heats are very great. However, both winter and ſummer are very ſupportable: for cooling ſea-breezes during the latter refreſh the country, which is extremely delightful in the ſpring ſeaſon.

Portugal is, in many parts, a mountainous country, and theſe mountains contain the ores of ſilver, copper, tin, and iron, but the Portugueſe being ſupplied with metals from their poſſeſſions in other parts of the globe, and particularly with abundance of gold from America, no mines are worked in their own country. Gems of all kinds, as turquoiſes and hyacinths, are alſo found in the mountains; and particularly a beautiful variegated marble, with many other curious foſſils of the lapidary kind, of which ſeveral ſorts of work are made; here are alſo very good mill-ſtones, and here is a remarkable ſalt-petre mine on the hill of Alcantara, not far from Liſbon.

The ſoil is very fruitful, but as agriculture is much neglected, above half the country lies waſte, and the inhabitants are ſupplied with a great part of their corn by the Engliſh and Dutch, and have alſo Indian corn from Africa. Portugal, however, abounds in excellent wine and oil; the greateſt part of the latter is made in the province of Alentejo, for the olive-trees thrive better here, near the ſea, than up in the country. Here are alſo abundance of oranges, lemons, figs, pomegranates, raiſins, almonds, cheſnuts, and other fruit. Great plenty of fine honey, and conſequently of wax, is likewiſe produced here.

The principal rivers in Portugal have their ſources in Spain; there are the Minho, the Luna, or Lethe, the Douro, the Tajo, or Tagus, the largeſt in the kingdom, the Guadiana and Cavado; which laſt riſes in the mountains of Trazos, and diſcharges itſelf into the ſea below Barcelos. The three principal, namely, the Tagus, the Douro, and Guadiana, divide the kingdom into three parts. All theſe rivers abound in fiſh.

Portugal contains the ſix following provinces, viz. I. Entre Douro E Minho. II. Tralos Montes. III. Beira. IV. Alentejo. V. Algarve. VI. Eſtremadura.

I. The province of Entre Douro E Minho is ſo called from its ſituation, which is between the rivers Douro and Minho; having Galicia on the north; a ridge of mountains on the eaſt; Beira on the ſouth; and the ocean on the weſt. It is ſeventy miles long, fifty broad where wideſt, and is remarkable for its fertility.

The principal places are, 1. Broga, between the rivers Cavado and Deſte: here is the ſee of an archbiſhop who is primate of Portugal, and ſpiritual and temporal lord of the city and neighbouring country. In this town are, a ſtately cathedral and archiepiſcopal palace, a great many convents, ſeveral pariſh churches, about twelve thouſand inhabitants, a noble hoſpital, a large college, and a houſe of mercy, which is a charitable foundation for the relief of good fami-

lies

lies fallen to decay, and for marrying young maidens, and putting boys to employments. There are ſome remains of antiquity in this place, particularly of an amphitheatre and an aqueduct. The archbiſhop's revenue is ſaid to be forty thouſand cruſadoes, or ſix thouſand pounds ſterling.

2. The town of Porto, or Oporto, on the river Douro, which, a little below, falls into the ſea. Here is a commodious harbour, much frequented by the Engliſh; but the bar at the entrance into it is ſomewhat dangerous. Next to Liſbon, it is a city of the greateſt opulence, beauty, and trade in the kingdom. At the mouth of the river is a caſtle to guard it, called St. John's. Here are above twenty thouſand inhabitants, ſeveral hoſpitals and pariſh churches, beſides the cathedral, a great many convents, a mint, ſeveral courts of juſtice, and is the ſee of a biſhop, who ſtiles himſelf Epiſcopus Portucalenſis, and has a revenue of fifteen thouſand cruſadoes, or two thouſand pounds. The city is fortified only with an old wall and towers. It had formerly its particular lords; but now belongs to the crown, and ſtands one hundred and twenty miles north of Liſbon. Here is an Engliſh conſul, and an Engliſh factory concerned in the wine trade, conſiſting of about thirty families, that maintain a clergyman, who performs ſervice on Sundays at each houſe alternately. The church Dos Clerigos, which is ſituated on the higheſt part of the city, ſerves as a land-mark to ſailors. A gate and priſon have lately been erected; chairs and horſe litters are common; the merchants aſſemble in the ſtreets to tranſact buſineſs, being ſhielded from the rays of the ſun, or from rain, by means of ſail-cloths; and the principal trade is in wine, corruptly called port wine by the Engliſh.

Oppoſite the town, on the other ſide the river, is Gaya, a ſmall place, which was antiently called Cale; and Oporto, when firſt built, was called Portucale, or the harbour of Cale: hence alſo, as ſome think, the kingdom derived its name.

3. The ſmall, but antient town of Guimarenes, belonging to the crown, is ten miles eaſt of Broga, and about one hundred and fifty north of Liſbon. It is encompaſſed with a good wall, and defended by an old caſtle; contains about five thouſand inhabitants, ſeveral convents, hoſpitals, and courts of juſtice, and has manufactories of linen and fine thread.

4. The town of Viana de Fez de Lima is pleaſantly ſituated near the mouth of the Lima, thirty miles north of Liſbon. It contains about ſeven thouſand inhabitants, ſeveral courts of juſtice, churches, convents, and a ſpacious magazine. This place has a conſiderable trade; it is large, well built, ſtrong, and has a commodious harbour.

5. Villa Nova de Porto, oppoſite to Oporto, on the ſouth ſide of the river Douro. 6. Villa Nova de Carveira, on the Minho. 7. Pont de Lima, one hundred and eighty miles north of Liſbon. 8. Villa de Conde, a ſea-port at the head of the mouth of the Ave. 9. Caminha, at the mouth of the Minho. 10. Valença, a ſtrong town on the ſame river.

II. The province of Tra Los Montes has Leon to the eaſt, Beira ſouth, Galicia north, and ſome mountains weſt. It is one hundred and twenty miles long, eighty broad, abounds in game and fruits, produces but little corn, and is watered by the Douro.

The principal places are, 1. Braganza, a city near the river Fervença, at the extremity of the province, and near the borders of Leon and Galicia, about one hundred and twenty miles northward from Liſbon. It contains about three hundred inhabitants, ſeveral convents, and a good caſtle; has a variety of ſilk manufactures, and is well fortified. This town is ſuppoſed to have been the antient Cælia Briga Brigantia, or Brigantium. The anceſtors of the preſent royal family, were dukes of Braganza, before they were advanced to the throne, in the perſon of John, the eighth duke and fourth king of that name.

The town of Chaves, on the river Tamega, is about ſix miles from the borders of Galicia, and two hundred north-eaſt from Liſbon. It was built by the emperor Flavius Veſpaſian, anno 78, and called Aquæ Flaviæ: it is well fortified, and contains about two thouſand ſouls. There is ſtill a Roman bridge of ſtone over the Tamega, with other marks of its antient grandeur.

3. Miranda de Douro, ſtands on the frontiers of Spain, about one hundred and twenty miles ſouth from Braganza, and one hundred and eighty north-eaſt from Liſbon, belongs to the king, and contains about ſeven hundred inhabitants. It is well-fortified, pleaſantly ſituated on the north ſide of the Douro, and is the ſee of a biſhop who has a revenue of ten thouſand cruſadoes, or one thouſand four hundred pounds.

4. The town of Villa Real, or the Royal Town, was ſo called becauſe founded by king Dennis, anno 1289: it ſtands between the rivers Corgo and Ribira, about one hundred and fifty miles north of Liſbon. This is the beſt and largeſt town in the province, and belongs to the infanta. 5. Torre de Moncorvo, containing about one thouſand inhabitants, is ſurrounded with a wall.

III. The province of Beira is the largeſt in the kingdom, has Tra los Montes, and Entre Douro e Minho north; Portugueſe Eſtremadura ſouth, Spaniſh Eſtremadura eaſt, and the ocean weſt. It is about one hundred and forty miles each way, well-watered, and naturally fertile; but the inhabitants are remarkably lazy.

The moſt conſiderable places are, 1. Coimbra, on the Munda, or Mundego, over which it has a ſtately bridge about ten miles from its mouth, and ninety north from Liſbon. It was antiently a famed Roman colony. Here are now a great many convents, colleges, and churches, beſides the cathedral, courts of juſtice, one of the tribunals of the inquiſition, an univerſity, and the ſee of a biſhop, who is count of Arganil, and has a revenue of forty-three thouſand two hundred cruſadoes, or ſix thouſand pounds. The monks of the convent of the Holy Croſs here are all noblemen, and of the order of St. Auguſtine. The univerſity is a very magnificent ſtructure: the profeſſors belonging to it are ſaid to be about fifty, and the ſtudents about two thouſand. The cathedral is admired for its architecture, its ornaments, and riches. The number of inhabitants is about twelve thouſand.

The other places are, 2. Lamego, a city near the Douro, about one hundred and forty miles north-eaſt from Liſbon. 3. Guarda, a ſtrong city, one hundred and forty miles north-eaſt of Liſbon. 5. Caſtello-Branco, a town with a caſtle. 5. Pentrel, two hundred miles north of Liſbon. 6. Almeida, a fortified town near the river Coa. 7. Penamacor, a ſtrong town on the Spaniſh frontiers. 8. Figueta, a ſmall port, eight miles from Liſbon. 9. Aveiro. 10. Viſeu, a city on a ſmall river, which falls into the Mundego, about one hundred and twenty miles north-eaſt of Liſbon. The biſhop of this place is ſuffragan to the archbiſhop of Braga, and has a revenue of eighteen thouſand cruſadoes, or twenty-five hundred pounds ſterling.

IV. The province of Alantejo borders to the north, on Eſtremadura and Beira; to the ſouth, on Algarve; to the eaſt, on Spain; and to the weſt, on the ſea. It is one hundred and twenty miles long, nearly the ſame broad, and has a very fertile ſoil.

The principal places are, 1. Portalegre, formerly Portus-Alacer, a fortified city, about ninety miles eaſt-north-eaſt from Liſbon, and ten from the Spaniſh frontier. Here are betwixt five and ſix thouſand inhabitants, ſeveral courts of juſtice, fountains, convents, and churches, beſides the cathedral, a manufactory of coarſe woollen cloth, and the ſee of a biſhop, who has about five hundred pounds ſterling a year.

2. The city of Evora, ſixty-ſix miles ſouth-eaſt of Liſbon. Here are ſeveral churches, hoſpitals, courts of juſtice, convents, a cathedral, an univerſity, and twelve thouſand inhabitants. It is the ſee of an archbiſhop, who has a revenue of about ſixty thouſand cruſadoes, or eight thouſand pounds ſterling.

3. Elvas, antiently called Helva, and by Pliny Alba, is a city with a caſtle, and other fortifications, one hundred and twenty miles eaſt of Liſbon. Here are ſeveral convents, churches and courts of juſtice, with a noble aqueduct, extending ſeveral miles, and ſupported in ſome places by a triple arch. This is the ſee of an archbiſhop, who has a revenue of about ten thouſand cruſadoes, or one thouſand four hundred pounds ſterling. The neighbouring country is pleaſant, very fruitful in wine and oil, and the number of the inhabitants about three thouſand.

The other places of leſs note are, 4. Beja, about ſeventy-eight miles ſouth-eaſt from Liſbon, 5. Eſtremaz, one hundred and five miles eaſt of Liſbon. 6. Villa-Viçoſa, or the Delightful Town, alſo about one hundred and five miles eaſt of Liſbon. 7. Serpa. 8. Moura, a fortified town, near the Guadiana. 9. Campo-Mayor, one hundred and ſeventeen miles eaſt of Liſbon. 10. Avis, ſixty miles eaſt of Liſbon. 11. Ourique. 12. Crato. 13. Barbo, contain nothing remarkable.

V. The little kingdom of Algarve is bounded, to the eaſt, by the Guadiana, which parts it from Andaluſia; to the ſouth and weſt, by the ocean; and to the north, by the mountains called Serra de Algarve, or Caldeirao, and

The Governor of BATAVIA's PALACE, *in the* EAST INDIES.

Leake sculp.

Serra de Monarchique, which divide it from Alantejo; its greateſt length being about one hundred miles, but its breadth only about twenty-eight. There was formerly comprehended under it a much larger extent of country than at preſent. Though very mountainous, it is extremely fertile in corn, wine, oil, and all ſorts of fruits; and contains four cities, twelve leſſer towns, ſixty villages, ſixty-ſeven pariſhes, and about ſixty thouſand inhabitants.

The moſt conſiderable places are, 1. Faro, ſituated on a bay, and well fortified, with a harbour and a caſtle, not far from cape St. Mary, called by Pliny Promontorium Cunium. It contains ſeveral convents, about four thouſand five hundred inhabitants, and is the ſee of a biſhop, whoſe income amounts only to five thouſand cruſadoes, or ſeven hundred pounds. The queens of Portugal are entitled to the juriſdiction of it.

2. The town of Lagos, about one hundred and ten miles ſouth from Liſbon, and twenty-five eaſt from cape St. Vincent, has a harbour on a large bay, with two forts to defend it. Here are ſeveral convents and courts of juſtice, and about two thouſand ſix hundred inhabitants.

3. The city of Tavira, ſituated on a bay at the mouth of the river Sequa, one hundred and twelve miles ſouth-eaſt from Liſbon. Beſides walls, it has a caſtle for its defence, and a harbour guarded by two forts: here are ſeveral convents, and near five thouſand inhabitants.

The other places of inferior conſequence are, 4. Sylves, a ſmall town belonging to the queen, and containing about one thouſand ſix hundred inhabitants. 5. Villa Nova de Portimao, in the diſtrict of Lagos; it is defended by two forts, and contains about one thouſand ſix hundred inhabitants. 6. Loule, a walled town, with a caſtle, in the diſtrict of Tavira, containing above four thouſand inhabitants, and ſeveral convents.

VI. The province of Eſtremadura is bounded, on the weſt, by the ſea; on the ſouth, by Alantejo, and on the north and eaſt, by Beira. It is one hundred and twenty miles long, ſixty broad, well watered, and fertile, producing corn, wine, oil, millet, pulſe, and fruits of all ſorts, eſpecially citrons, lemons, oranges, pomegranates, figs, dates, almonds, &c. The climate is alſo very pleaſant and mild, the heat being qualified by the breezes from the weſtern ocean. The people are more induſtrious, have more trade, and a greater variety of manufactures, and conſequently live better than in the other provinces, which this ſurpaſſes alſo in reſpect of its ſoil, commodious ſea-ports, the inland navigation of the Tagus, its metropolis being the reſidence of the court, &c. It contains three cities, one hundred and eleven ſmall towns, three hundred and fifteen pariſhes, and above two hundred thouſand ſouls.

The city of Liſbon, anciently called Oliſippo, is the capital both of the province and kingdom, and ſtands near the mouth of the river Tagus, on the north-ſide. It firſt became conſiderable in the reign of king Emanuel: from that time it hath been the chief city, and the reſidence of its monarchs, the ſeat of the chief tribunals and offices, of the metropolitan, contains a noble univerſity, and is the receptacle of the richeſt merchandize of the Eaſt and Weſt Indies. Its air is excellent, being refreſhed by the delightful ſea-breezes, and thoſe of the Tagus.

This city extends about two miles along the Tagus; but its breath is conſiderable. Like Old Rome, it ſtands on ſeven hills; but the ſtreets, in general, are narrow and dirty, and ſome of them are very ſteep, neither are they lighted at night. The churches in general are very fine; but the magnificence of the chapel-royal is amazing. Here is one of the fineſt harbours in the world; and there were a great number not only of fine churches and convents here, but alſo of other public buildings, and particularly of royal palaces, and others belonging to the grandees, but the greateſt part of them, and the city alſo, were deſtroyed by a dreadful earthquake on Nov. 1, 1755, which calamity we ſhall here give an account of, as related by Mr. Barretti, and two other gentlemen, who ſucceſſively viſited this ill-fated capital in 1760, 1761, and 1774.

"It is computed (ſay they) that Liſbon, before the earthquake, contained twenty-four thouſand houſes, many of which were ſix or ſeven ſtories high: Mr. Barretti ſuppoſes that two thirds of the city were levelled with the ground, and ſuch as withſtood the ſhock, received very conſiderable injury. Beſides theſe, abundance of large churches were thrown down or conſumed, two royal palaces, and many convents, nunneries, hoſpitals, and other public edifices. The king and royal family were in their carriages paſſing to a palace in the country, and happening to be in an open ſpace, were reſcued from the miſerable fate which they beheld on all ſides of them. Many, who had lived in opulence, eaſe, and ſplendor, were reduced to the moſt diſtreſſing want, even of the common neceſſaries of life; whilſt lingering and tormenting deaths awaited thouſands who were overwhelmed by the falling buildings, or conſumed by the ſpreading flames which burnt from the numerous fires, and formed an almoſt general conflagration. Thoſe of the wretched inhabitants, who eſcaped deſtruction in theſe horrid ſhapes, were forced to reſide in the moſt inclement ſeaſon of the year in the open air, ſcarce able to procure a ſufficient ſubſiſtence for their almoſt exhauſted bodies. Mr. Barretti ſays, that ninety thouſand are ſuppoſed to have been loſt on that fatal day. Imagination can ſcarcely form to itſelf a ſcene of confuſion, horror, and death, more dreadful than this. After the ſhocks of the earth had ſubſided, the fire continued raging for many weeks, by which the peſtilential air produced from the numerous dead bodies, was purified, and the ſurviving remnant of the inhabitants thereby preſerved their health, although ſurrounded by putrefaction." The number of people before this event did not, at moſt, exceed one hundred and fifty thouſand. The government of the city is lodged in a council, conſiſting of a preſident, ſix counſellors, and other inferior officers. The harbour has water enough for the largeſt ſhips, and room enough for ten thouſand ſail, without being crowded. For its ſecurity, there is a fort at the mouth of the river on each ſide, and a bar that runs acroſs it, and is very dangerous to paſs without pilots. Higher up, at a place where the river is conſiderably contracted, there is a fort, called Torre de Belem, or the Tower of Belem, under whoſe guns all ſhips muſt paſs in their way to the city; and on the other ſide are ſeveral more forts.

Before the earthquake, moſt of the private houſes were old and unſightly, with lattice-windows; and the number of convents and colleges amounted to fifty, namely, thirty-two for monks, and eighteen for nuns. The king's principal palace ſtands on the river, and is large and commodious. Of the hoſpitals, that called the Great is obliged to receive all perſons, of what degree, nation, or religion ſoever, without exception. At the village of Belem, near Liſbon, is a noble hoſpital for decayed gentlemen who have ſerved the king, and have not wherewithal to maintain themſelves. That called the Houſe of Mercy is alſo a noble charity. In the centre of the city, upon one of the higheſt hills, is the caſtle, which commands the whole, being large and ancient, and having always a garriſon of four regiments of foot. The cathedral, a heavy gothic edifice, contains great riches. The large ſquare, called Roſſo, is ſurrounded by magnificent buildings, and the whole city is under the eccleſiaſtical juriſdiction of the patriarch. The univerſity is inferior to that of Coimbra.

The famous aqueduct of Alcantara, which ſupplies the city of Liſbon with water, is a noble work, and deſerves the attention of every traveller; it is compoſed of two different kinds of arches, the one Roman, the other Gothic, by which the uniformity of the building is deſtroyed. During the earthquake, this building ſtood, though many of the key-ſtones fell ſeveral inches, and hang, only becauſe a ſmall part of the key-ſtone was catched by the centres cloſing again. At the neighbouring village of Belem are a handſome royal palace, and a magnificent monaſtery dedicated to St. Jerom; and the whole circumjacent country is extremely pleaſant, abounding in olives and other fruit-trees. On or about the ſpot where the royal palace ſtood before it was demoliſhed by the earthquake, there are many new ſtreets built, interſecting each other at right angles, parallel and ſtrait, eſpecially that called the Rua Auguſta. On each ſide of the new ſtreets is a foot-path, elevated ſomewhat above the pavement, and defended from carriages by ſtone-poſts.

Here is a theatre for Italian operas, and another for Portugueſe plays, in which there are four rows of boxes, twenty-ſeven boxes in each row; the ſeats in the pit are appropriated ſolely to the men. The admittance-money to the opera is a cruſado novo, or two ſhillings and eight-pence halfpenny. It muſt be confeſſed, that the Portugueſe ſtage has made but little progreſs towards refinement, and it is only ſince the earthquake that plays in the Portugueſe language have been allowed, the tranſlation of an Engliſh comedy being one of the firſt. There are two long rooms, where the Britiſh factory aſſemble twice a week during the winter to dance and play at cards.

About the year 1716, Liſbon was divided into two, under the names of the Oriental and Occidental part.

The other towns of this province are, 1. Leiria, a populous place, at the conflux of the Lis and Lana. 2. Setuval,

Setuval, a ſtrong well-fortified town, twenty miles ſouth of Liſbon. 3. Sintra, ſituated by the cape that bears the ſame name, is ſuppoſed to have the moſt ſalubrious air of any place in Portugal. 4. Santerem, on the Tagus, is a place of good trade.

By the decretals of the church, ſound learning and liberal ſcience are baniſhed Portugal: there are, indeed, univerſities at Coimbra and Evora, and at Siſton is a royal academy for the Portugueſe hiſtory; at Santarem is an academy of hiſtory, antiquities, and languages; and at St. Thomas an academy of ſciences, on the ſame footing as that of Paris; but all attempts to diffuſe uſeful knowledge are defeated by the tyrannical ſway of ſuperſtition, the parent of ignorance.

They pay little attention to the cultivation of their lands, and to manufactures; but carry on a very extenſive foreign trade, yet from this they reap little profit. The chief commodities of the Portugueſe conſiſt of imports from their own colonies, particularly from Brazil, as tobacco, cocoa-nuts, ſugars, ſpices, drugs, ivory, ebony, brazil-wood, hides, gold, pearls, diamonds, and other valuable gems.

Their ſhips ſeldom frequent the other countries of Europe or the Levant, their voyages rather lying to the coaſts of Africa, particularly the Gold Coaſt, whence they carry negroes to Brazil, and alſo purchaſe ſome gold and ivory. They likewiſe trade to their Eaſt-India colonies of Goa, Diu, and Macao; but this traffic, though once very important, is now greatly declined. Brazil, however, is ſtill a plentiful treaſury to Portugal, and foreigners are entirely excluded from all commerce with that country.

The Portugueſe long meaſure conſiſts of barros and cavidos; an hundred barros make one hundred and ſixty-four cavidos, or one hundred ninety-five and an half Hamburg ells; but an hundred cavidos are only equal to ſixty-one barros, or about one hundred and ninety Hamburg ells.

Sums of money are reckoned in Portugal by reis and cruſadoes, which are not real, but only imaginary coins. The gold coins of Portugal are the double moedas of one pound ſeven ſhillings value, the quarter of which is called a millrei, or a thouſand reis, and has therefore the number of one thouſand marked upon it; and the Johns, worth three pounds twelve ſhillings, which are ſubdivided into halves, quarters, eighths, and ſixteenths. The ſilver coins are the vintain of twenty reis; the half teeſtoon of fifty, and the whole teeſtoon of one hundred reis.

With reſpect to the weights in Portugal, an anoba is thirty-two pounds, and four anobas make a quintal.

The Popiſh is the only religion tolerated in Portugal: yet there are many concealed Jews, and thoſe too even among the nobility, biſhops, prebends, monks, and nuns; and the very inquiſitors themſelves. The inquiſition, beſides puniſhing Jews and reputed hereticks, who broach or maintain any doctrines contrary to the religion of the country, takes cognizance of all pretenders to ſorcery and the black art, apoſtates, blaſphemers, perjured perſons, impoſtors, hypocrites, &c. The burning of thoſe condemned by the inquiſition is called an auto de ſe, or act of faith. There are ſeveral tribunals of the inquiſition, one of which is at Goa in the Eaſt Indies; but there are none at Brazil. The reader may ſee a particular account of the popiſh inquiſition, and the various puniſhments inflicted by it, together with the dangerous tenets of popery, &c. in a work lately publiſhed, entitled, The Proteſtant Alarm, or Popiſh Cruelty fully diſplayed; written by Mr. Fellows, and ſold in a neat volume, price three ſhillings bound, by the publiſher of this work, and other booksellers. Though the power of the inquiſition was exerciſed with infernal fury and barbarities for many years in this kingdom and Spain, we are happy to inform our readers, that its authority has of late been greatly circumſcribed.

In Portugal, the being an ancient chriſtian, or, in other words, of an ancient chriſtian race, is eſteemed a very high degree of pre-eminence, and far ſuperior to what they call a new converted chriſtian, or a half new converted chriſtian; by which laſt they mean thoſe whoſe new converted anceſtors have married chriſtians of the ancient race.

Portugal is ſaid to have in it nine hundred convents, and moſt of them are very rich; but the jeſuits, who, in multitude and opulence, ſurpaſſed all the other orders, have lately been baniſhed that country.

Among their eccleſiaſtics, there is a patriarch of Liſbon, who muſt always be a cardinal, and of the royal family. Next to him are three archbiſhops, who rank with marquiſſes, and the firſt of them is the archbiſhop of Braga, who is primate of the kingdom, and lord ſpiritual and temporal of his city and neighbouring country. The biſhops hold the rank of counts. The Portugueſe have archbiſhopries and biſhoprics in the other three parts of the world, beſides thoſe in Europe.

Beſides the nomination of all biſhops, the king of Portugal receives a fourth of their revenue. The pope confirms the biſhops, publiſhes his bulls in the kingdom without the king's previous conſent, and, by his legate, governs the clergy, who, with reſpect to taxes and contributions, depend on him. He has alſo the gift of many ſmall prebends. The pope's nuncios have here ſo lucrative a poſt, that they never fail of raiſing vaſt fortunes before they return to Italy.

The Portugueſe, like the Spaniards, are extremely fond of their bull-feaſts, or bull hunting, which are generally exhibited on a Sunday afternoon in a capacious amphitheatre about four miles from Liſbon, at a place called Campo Pequeno. The king, royal family, and court of Portugal, are frequently preſent on theſe occaſions. This inhuman diverſion is ſo far from being diſcountenanced by the clergy, that great numbers of prieſts and friars are conſtantly to be ſeen among the ſpectators, and expreſs great pleaſure at the ſight.

The language of the Portugueſe is a compound of the Latin, Spaniſh, French, and Mooriſh.

With reſpect to the conſtitution of Portugal, it is an abſolute monarchy. Both here and in Spain there were antiently cortes, ſtates, or parliaments, but they have long ſince entirely loſt their ſhare in the legiſlature. For the adminiſtration of the civil government, there is a council of ſtate, and ſeveral ſecretaries; for military affairs, a council of war; for the finances, a treaſury-court; and, for the diſtribution of juſtice, ſeveral high tribunals, with others ſubordinate to them, in the ſeveral diſtricts into which the kingdom is divided. The proceedings of the courts are regulated by the Roman law, the royal edicts, the canon law, and the mandates of the pope. The cities have their particular magiſtracy.

The cuſtoms and other taxes run exceſſively high. Beſides the royal demeſnes, the hereditary eſtates of the Houſe of Braganza, the monopoly of Brazil ſnuff, the coinage, the money ariſing from the ſale of indulgencies granted by the pope, the fifth of the gold brought from Brazil, the farm of the Brazil diamonds, the maſterſhips of the orders of knighthood, and other ſources, yield very large ſums. The forces, however, of this nation, both by ſea and land, are very inconſiderable: their land forces are accounted the worſt militia in Europe, and their navy far from being reſpectable.

The titles of the king are, "King of Portugal and the Algarves, on this ſide and the other ſide the ſea of Africa; lord of Guiney, and of the navigation, conqueſts, and commerce in Ethiopia, Arabia, Perſia, India," &c. The king's eldeſt ſon is ſtiled prince of Brazil. The king of Portugal was dignified, in the year 1749, with the title of his Moſt Faithful Majeſty, by pope Benedict XIV.

Here are ſeveral orders of knighthood, which are, 1. The order of Chriſt, the badge of which is a red croſs within a white one, and the number of commanderies four hundred and fifty-four. 2. The order of St. James, the badge of which is a red ſword, in the ſhape of a croſs: there are a great number of towns and commanderies of this order. 3. The order of Aviz, whoſe badge is a green croſs, in form of a lily, and the number of its commanderies forty-nine. Though theſe three orders are religious, yet the knights are at liberty to marry. 4. The order of St. John; to which alſo ſeveral commanderies belong.

SECT. II.

Containing an Account of the firſt peopling of SPAIN; together with the antient and modern Hiſtory of SPAIN and PORTUGAL, to the Diviſion of the two Monarchies.

HISTORIANS tell us, that Spain was firſt peopled either from Gaul, to which it is contiguous, or from Africa, from which it is only ſeparated by the narrow ſtrait of Gibraltar. The Phœnicians ſent colonies thither, and built Cadiz and Malaga. Afterwards, upon the riſe of Rome and Carthage, the poſſeſſion of this kingdom became an object of contention between thoſe powerful republics; but at length the Roman arms prevailed, and Spain remained under their power until the fall of that empire, when the Goths poſſeſſed themſelves of it. Theſe, in

in their turn, were invaded by the Saracens, who, about the end of the ſeventh century, had made themſelves maſters of the fineſt kingdoms of Aſia and Africa; and, not content with the immenſe regions that formerly compoſed great part of the Aſſyrian, Greek, and Roman empires, they croſſed the Mediterranean, and ravaging Spain, eſtabliſhed themſelves in the ſoutherly provinces.

Don Pelago was the firſt Spaniſh prince mentioned in the hiſtory of this country: he diſtinguiſhed himſelf againſt theſe infidels, (afterwards known by the name of Moors,) and, about the year 720, took upon himſelf the title of king of Auſtria. His ſucceſſes animated other chriſtian princes to take arms likewiſe, and the two kingdoms of Spain were for many ages perpetually embroiled in bloody wars. In the mean time every adventurer was entitled to the conqueſts he made upon the Moors, till Spain was at laſt divided into twelve kingdoms; and about the year 1095, Henry of Burgundy was declared, by the king of Leon, count of Portugal; but his ſon Alphonſo threw off his dependence on Leon, and declared himſelf king. A ſeries of brave princes gave the Moors repeated overthrows in Spain, till about the year 1475, when all the Spaniſh kingdoms, Portugal excepted, were united by the marriage of Ferdinand, king of Arragon, and Iſabella, the heireſs, and afterwards queen of Caſtile, who took Granada, and expelled the Moors and Jews, to the number of one hundred and ſeventy thouſand families, out of Spain. This expulſion tended greatly to depopulate the country of artiſts, labourers and manufacturers; and the diſcovery of America (which happened a few years after) not only added to that calamity, but rendered the remaining Spaniards moſt deplorably indolent. To complete their misfortunes, Ferdinand and Iſabella introduced the popiſh inquiſition, with all its horrors, into their dominions, in order to prevent the return of the Moors and Jews into the country.

Charles V. of the houſe of Auſtria, afterwards emperor of Germany, ſucceeded his grandfather Ferdinand. The extenſive poſſeſſions of the houſe of Auſtria in Europe, Africa, and particularly in America, began to alarm the jealouſy of the neighbouring princes, but could not ſatisfy the ambition of Charles: he was almoſt conſtantly engaged in foreign wars, or with his proteſtant ſubjects in Germany, whom he in vain attempted to bring back to the catholic faith. At length, after a long and troubleſome reign, he reſolved to withdraw himſelf entirely from any concern in worldly affairs, in order that he might ſpend the remainder of his days in retirement and ſolitude. In conſequence of this reſolution, he reſigned Spain and the Netherlands to his ſon Philip II. but could not prevail on the princes of Germany to elect him emperor, which they conferred on Ferdinand, Charles's brother, dividing the dangerous power of the houſe of Auſtria with two branches. Spain, with all its poſſeſſions in Africa and the New World, alſo the Netherlands, and ſome Italian ſtates, remained with the elder branch, whilſt the younger had for his ſhare the empire, Hungary and Bohemia.

Though Philip II. inherited all his father's vices, yet he poſſeſſed few of his good qualities. He was auſtere, haughty, immoderately ambitious, and through his whole life a cruel bigot in the cauſe of popery. He married Mary queen of England, an unfeeling bigot like himſelf; and, after her death, he paid his addreſſes to her ſiſter Elizabeth, but without ſucceſs. His reſentment on this account produced very diſadvantageous wars with that princeſs, which occaſioned the revolt and loſs of the United Provinces. But in Portugal he was more ſucceſsful. That kingdom, after having been governed by a race of wiſe and brave princes, fell to Sebaſtian about the year 1557. Sebaſtian loſt his life and a fine army, in a headſtrong, unjuſt, and ill-concerted expedition againſt the Moors in Africa, and ſoon after Philip united Portugal to his own dominions, though the Braganza family of Portugal pretended to a prior right. By this acquiſition, Spain became poſſeſſed of the Portugueſe ſettlements in India, and ſtill retains ſome of them.

Philip's deſcendants proved to be very weak princes; but Philip and his father had ſo totally ruined the ancient liberties of Spain, that they reigned almoſt unmoleſted in their own dominions. Their viceroys, however, were at once ſo tyrannical and inſolent over the Portugueſe, that, in the year 1640, the nobility of that nation, by a well-conducted conſpiracy, expelled their tyrants, and placed the duke of Braganza on the throne by the title of John IV. ever ſince which, Portugal and Spain have been diſtinct kingdoms. Charles II. who left no iſſue, being the laſt king of Spain of the Auſtrian line, Philip, duke of Anjou, ſecond ſon to the dauphin of France, and grandſon to Louis XIV. mounted the throne, by virtue of his predeceſſor's will, in the name of Philip V. anno 1701; and after a long and bloody ſtruggle with the German branch of the houſe of Auſtria, ſupported by England, he was confirmed in his dignity at the concluſion of the peace of Utrecht in the year 1713. And thus Louis XIV. through a maſterly train of politics, accompliſhed his favourite project of transferring the kingdom of Spain, with all its rich poſſeſſions in America and the Eaſt Indies, from the houſe of Auſtria to that of his own family of Bourbon; an event which proved fatal to the commerce of Great Britain; eſpecially in the American ſeas, where a glaring partiality has been ſhewn to the French nation ever ſince, and renders the Engliſh being poſſeſſed of a port in the ſouth ſeas of equal importance to that of Gibraltar, which ſerves as a curb on the united ſtrength of France and Spain. Philip, after a long and turbulent reign, died in 1746, and was ſucceeded by his ſon Ferdinand VI. who died in 1759 without iſſue. Ferdinand was ſucceeded by his brother Charles III. the preſent reigning monarch of Spain, by whom he hath iſſue, by his late queen Maria Amelia of Saxony, 1. Maria Joſepha Infanta; 2. Maria Louiſa; and, 3. Charles, prince of Aſturias, preſumptive heir to the crown, born November 11, 1748, and married to princeſs Louiſa of Parma.

It would have been impoſſible for the Portugueſe to ſupport themſelves under their revolt from Spain, had not the latter powers been engaged in wars with England and Holland; and upon the reſtoration of Charles II. of England, that prince having married a princeſs of Portugal, prevailed with the crown of Spain, in 1668, to give up all pretenſions to that kingdom. Alphonſo, ſon to John IV. was then king of Portugal. He had the misfortune to diſagree with his wife and his brother Peter, and they uniting their intereſts, not only forced Alphonſo to reſign his crown, but obtained a diſpenſation from the pope for their marriage, which was actually conſummated. They had a daughter; but Peter, by a ſecond marriage, had ſons, the eldeſt of whom was John, his ſucceſſor, and father to his late Portugueſe majeſty. John, like his father, joined the grand confederacy formed by William king of England; but neither of them were of much ſervice in humbling the power of France. On the contrary they had almoſt ruined the allies, at the great battle of Almanza in 1707, the loſs of which was owing to their miſconduct.

John IV. dying in 1750, was ſucceeded by his ſon Joſeph, who in 1760 was attacked by aſſaſſins, and narrowly eſcaped with his life. From this conſpiracy is dated the expulſion of the jeſuits (who were ſuppoſed to have been the authors of it) from all parts of the Portugueſe dominions. Joſeph, having no ſon, his eldeſt daughter, Maria Frances Iſabella, was married by diſpenſation from the pope, to her uncle, Pedro Clement, brother to the late king Joſeph. This marriage was perfectly conſiſtent with the Levitical law, though contrary to the canons of the Chriſtian church; however, ſeveral children have ſprung from this marriage, the eldeſt of whom was the prince of Beira, (born Auguſt 21, 1761, and married February 21, 1777, to his aunt Maria Franciſca Benedicta); he bore the above title till his mother aſcended the throne, and then he aſſumed that of prince of Brazil, peculiar to the heir apparent. The queen immediately conferred the title of king on her huſband, as did our Mary the firſt on her huſband king Philip, but retained the ſovereignty in her own hands.

In the year 1762, when the war broke out between England and Spain, the Spaniards and their allies the French, pretended to force Joſeph into their alliance, and to garriſon his ſea-towns againſt the Engliſh with their troops. The king of Portugal rejected this propoſal, and declared war againſt the Spaniards, who, without reſiſtance, entered Portugal with a conſiderable army, while a large body of French threatened it from another quarter: but, by the mediation of the Engliſh, an effectual ſtop was put to the invaſion; and in 1763 a peace was concluded at Fontainbleau between the contending powers.

On the twenty-third of February, 1777, Joſeph died, and was ſucceeded by his daughter Maria Frances Iſabella, princeſs of Brazil. She was born in 1734, and married her uncle don Pedro in 1760; and the Portugueſe dominions at preſent remain in the hands of theſe joint ſovereigns.

CHAP.

CHAP. XIV.

THE NEW HISTORY AND DESCRIPTION OF FLANDERS.

SECT. I.

General Deſcription of that Part of FLANDERS, *which is included in the* BRABANT *Quarter; with its Boundaries and Situation, Extent, Towns, Places, Inhabitants, their Trade, Manufactures, Cuſtoms, &c.*

THE country of which we now propoſe to treat, is a province of the Netherlands, being bounded by the German ocean and United Provinces, on the north; by Brabant, on the eaſt; by Hainault and Artois, on the ſouth; and by another part of Artois, and the German ocean, on the weſt. It is ſixty miles long, fifty broad, is level, fertile, has a good air, and contains thirty walled towns, one thouſand one hundred and fifty-eight villages, forty-eight abbies, &c. The men are heavy and laborious, but love good living; the women are induſtrious and handſome; the inhabitants are papiſts in all parts, except thoſe belonging to the Dutch; and the manufactures are linen, lace, and tapeſtry.

The ſeveral diſtinct diſtricts contained in this part of Flanders, are, 1. Brabant, which is bounded, on the north, by the United Provinces; on the ſouth, by Hennegan and Namur; on the weſt, by Flanders, properly ſo called; and, on the eaſt, by Liege. The air is good, and the ſoil fruitful. It is watered by ſeveral rivers, the chief of which is the Demer, or Rupel. There are two fine canals in it, one of which joins the Senne and the Rupel, and coſt eight hundred thouſand florins; the other runs from Louvain to the Rupel. Between Louvain and Bruſſels is a fine ſtone cauſeway, and another reaching from Thieren and Liege. The ſouthern part, called Walloon Brabant, is mountainous, but not unfruitful.

In Auſtrian Brabant are reckoned nineteen walled towns, beſides a great many boroughs and villages. The ſtates of the province conſiſt of the clergy, nobility, and repreſentatives of the chief towns. Theſe ſtates meet four times a year at Bruſſels. In them, and the viceroy, the legiſlative power, and that of levying money, is veſted, but the whole aſſembly muſt be unanimous in paſſing an act. They appoint a kind of committee of two clergymen and two noblemen, to meet daily during their receſs.

There are four hereditary officers of ſtate for this province, viz. the ſeneſchal, the chamberlain, the marſhal, and the guidon: beſides which, there is alſo a great huntſman, a great falconer, a great foreſter, a chief juſtice in eyre, and maſter of the wolf-hunters. The high council of Brabant, which is divided into two chambers, or courts, is chiefly held at Mechlin, where moſt of the provincial cauſes are tried. The Roman catholic is the only religion of this country; and the number and opulence of the eccleſiaſtics is very great. At Mechlin is the ſee of an archbiſhop, to whom are ſubject the prelates of Antwerp, Ghent, Boiſledu, Bruges, Ypreſs, and Ruremonde. There are fourteen collegiate churches, and two hundred and three cloiſters in the archbiſhopric.

This country, with many others, came to the houſe of Auſtria, by the marriage of Maria, daughter of Charles the Bold, duke of Burgundy, with Maximilian, archduke of Auſtria. The principal manufactures are, lawns, cambricks, lace, and tapeſtry. The Walloon language, which is ſpoken here, is a mixture of German, French, and Spaniſh. The arms of the duchy are a lion, or; in a field, ſable.

Auſtrian Brabant is divided into ſeveral quarters. In the quarter of Louvain, the principal places are as follow:

1. Louvain on the Dyle, thirteen miles eaſt of Bruſſels. It was formerly the capital of the duchy; but at preſent Bruſſels is conſidered as ſuch. Louvain is a place of great antiquity, having been founded by the emperor Aſnulphus, as a check againſt the Normans. The emperor Charles V. was educated in the caſtle, which long continued the reſidence of the dukes of Brabant. Many aſſemblies of the ſtates have been kept in it.

The churches and cloiſters are very numerous and fine, both within and without the town, which is very large, but not populous: for there are many meadows, vineyards, gardens, and orchards, within the walls. The Stadthouſe and the church of St. Peter are very beautiful. The trade of Louvain hath long ſince been upon the decline, and at preſent is inconſiderable, conſiſting chiefly in the excellent beer which they brew, a great quantity whereof is ſent to the neighbouring cities, eſpecially to Bruſſels.

With a view to reſtore this city to its former luſtre, an univerſity was founded in it, in 1426, by John IV. duke of Brabant, which enjoys great privileges, granted to it both by the popes and dukes. There are above forty colleges; and in the hall, where the public exerciſes are performed, are three ſpacious rooms, where lectures are read every morning in divinity, law, and phyſic, to which the ſcholars, in every college, may reſort. The Hollanders have a college here for their Roman catholic fellow-ſubjects: the Engliſh, one of Auguſtine monks; and the Iriſh, one of Dominicans, and another of Recollects. To give encouragement to learning, Pope Sextus IV. granted to the univerſity, A. D. 1483, the privilege of preſentation to all the livings in the Netherlands.

The church which belonged to the jeſuit's convent is admired for the elegance of its architecture; and the pulpit, made of oak, is ſuppoſed to be the moſt beautiful in the univerſe. The convent for Engliſh ladies is very capacious and elegant, and more richly endowed than any other in the Low Countries. The burghers of Louvain boaſt, that their city was never taken by force. In 1710, indeed, the French entered it by ſtratagem, but were ſoon repulſed with great loſs by the citizens. To reward their fidelity and bravery, Charles, then ſtyled king of Spain, and afterwards emperor, preſented them with a golden key, which is ſtill preſerved in the town-houſe, to commemorate the event.

2. The town of Tienen, on the Ghete, is ſeven miles eaſt of Louvain. It was formerly a very conſiderable city, but is now greatly decayed. Here are two collegiate churches, the canons of one of which are permitted to marry; but if they become widowers, they are not allowed to have a ſecond wife, unleſs they reſign their prebends.

3. The town of Gembloux is ſeated on the river Orne, ſix miles diſtant from Namur to the north-weſt, and twenty-one from Louvain to the ſouth. It ſtands upon a ſteep hill, encompaſſed on all ſides with precipices, except towards the eaſt, where a little hill hangs over it. It is conſiderable only by its abbey of St. Hubert, of the Benedictine order: the abbot is the firſt nobleman of Brabant.

Gembloux is famous in hiſtory by the victory which Don John of Auſtria gained near it, January 31, 1578, over the army of the States-General, commanded by Antony de Coignies, who loſt all his cannon, and was himſelf taken priſoner: this defeat was imputed to the abſence of the chief officers of the ſtate, who were then at Bruſſels, and to the jealouſy ſome others had conceived againſt the prince of Orange. King William, during a great part of his

his wars with France, took up his head quarters in this town.

Towards the north-weſt, and at the diſtance of about five miles from this city, ſtands an abbey of the Ciſtercian order, called the abbey of Villers, in a wood of the ſame name; and the abbey of Argenton, or Ciſtercian nuns, is ſituated at about three miles diſtance, towards Namur.

4. The town of Montaigno, in Flemiſh Scherpe-Heuvel, or Sharp-Mount, and in Latin Mons Auctus, is thus called from its ſituation upon the top of an hill: it ſtands between Dieſt and Sichem; and, though ſmall, is very regularly built, of an heptagon figure.

5. Seven miles from Tienen, on the Ghete, ſtands Leeuwe, a ſtrong town: it is in a marſhy ſituation, which renders it almoſt inacceſſible. The ſovereigns of the country uſed formerly to baniſh hither thoſe whom they had a mind to puniſh, as the air is extremely bad.

6. The little city of Dieſt ſtands upon the banks of the river Demer, thirteen miles diſtant from Louvain to the north-eaſt, and about forty miles from Bois-la-duc to the ſouth. The town is not large, but noted for the woollen cloths, hoſe, and other manufactures; as alſo by the excellent beer brewed here, which is ſold in all the neighbouring towns. This city, with its territory, has the title of a barony, which belonged to king William, and is claimed at preſent by ſeveral of his heirs. There are at Dieſt two collegiate churches, and ſeveral convents of friars and nuns. They keep a fair here for horſes, on every Aſh-Wedneſday.

7. The ſmall town of Landen is not very conſiderable in itſelf, but was rendered famous by a deſperate battle fought near it in the year 1693, between the confederates under the command of king William, and the French commanded by the dukes of Luxemburg, Villeroy, and Berwick, in which the latter was victorious.

8. The little town of Sichem, which belongs to the barony of Dieſt, ſtands between Aloſt and Dieſt. There is in that town a convent of regular canoneſſes of the order of St. Auguſtin. 9. Heverle, is a town with a ſtrong caſtle belonging to the duke of Aremberg and Arſchot. 10. Limale, is a fine borough town. 11. Ramilies is a ſmall village, near eleven miles from Namur, where, in the year 1706, the duke of Marlborough obtained a ſignal victory over the French. 12. Arſchot, on the Demer, capital of the duchy of the ſame name, ſituated ſeven miles from Louvain, is a ſmall, but ſtrongly-fortified town.

The principal places in the Bruſſels quarter of Brabant, are, 1. Bruſſels, which gives name to the territory. This city, though but ſecond in rank, is not only the capital of Brabant, but of the Netherlands in general. It is thirteen miles weſt of Louvain, and one hundred and ſeventy-two eaſt of London, ſituated on the brow of a hill, and watered by the little river Senne, latitude fifty degrees fifty-one minutes north; longitude two degrees thirty minutes weſt. The proſpect of it, at a diſtance, is admirable; but, on entering it, the irregularity of it is rather diſguſtful to a ſtranger. It is ſeven miles in circumference, has ſeven ſtrong gates, and is ſurrounded by a double brick wall, and deep ditches. It is exceedingly populous, and the houſes are very handſome. Here are ſeven beautiful ſquares; in particular, the great ſquare or market-place is one of the moſt noble in Europe; around it are the halls of the different trading companies, and the town-houſe. The latter occupies one quarter, and the fronts of the whole are embelliſhed with ſculptures, gilding, Latin inſcriptions, &c. The town-houſe, which is an elegant ſtructure, contains the apartments for the aſſembly of the ſtates of Brabant. They are ſpacious and ſuperb, finely adorned with tapeſtry in gilt frames, and many original paintings. On the top of the ſteeple, which is three hundred and ſixty-four feet high, is the ſtatue of St. Michael killing the dragon, of gilt copper, ſeventeen feet high, which ſerves for a weather-cock.

The public buildings in general, particularly the palaces and courts of the ſeveral princes, counts, and other perſons of diſtinction; together with the churches and cloiſters, are large and magnificent. Behind the Imperial palace, that ſtood in the higheſt part of the city, but was burnt down ſeveral years ago, is a park well-ſtocked with deer, and planted with trees like that of St. James's in London, for the inhabitants to walk in. At the farther end of it is a fine pleaſure-houſe, built by the emperor Charles V. after his abdication. Of the other palaces, thoſe of the prince de la Tour and Taxis, and of the Engliſh earl of Ayleſbury, are very fine; and of the gardens, thoſe of the duke of Bournonville are the moſt delightful. In all the palaces are collections of original paintings, by the moſt eminent maſters, both Italian and Flemiſh. The arſenal is well worth ſeeing, on account of the curious antique arms.

The opera-houſe was built in the year 1700, by the duke of Bavaria. This is one of the nobleſt and largeſt in the world, it being erected in the Italian manner, with rows of loges, or cloſets, moſt of them with chimneys in them, which the nobility generally take by the winter, for the conveniency of their families and friends, and keep the keys.

There are, in this city, twenty public fountains, adorned with ſtatues, at the corners of the moſt public ſtreets; and a famous canal that was cut from Willibrook, a village on the Scheld, fifteen miles diſtant from Bruſſels; it was finiſhed in 1601, by the celebrated architect George Rinaldi, and coſt the city one million eight hundred thouſand florins: The churches of this city are very magnificent; ſeven of theſe are parochial, and among them the church of St. Gedula, which is alſo collegiate, is the largeſt and fineſt.

Beſides the college of jeſuits, which has a very fine church, here are eleven monaſteries, and twenty-one nunneries; among which are two Engliſh, one of Dominican ladies, founded by cardinal Howard in the reign of Charles II. king of England, of which one of the houſe of Norfolk is always abbeſs, the other is of Benedictine nuns.

The foundation of pious maids, called the Beguinage, reſembles a little town, and is ſurrounded by a wall and ditch, and divided into pretty little ſtreets, where every Beguine has her own apartment. The number generally amounts to ſeven or eight hundred, and ſometimes more. They are governed by four elderly women, whom they chooſe out of their own body, and have a confeſſor, or chaplain, appointed by the archbiſhop of Antwerp. Their church lately built is a fine piece of architecture.

In this city is the mount of Piety, which is a public office for lending money upon pledges at a moderate intereſt, and was eſtabliſhed by the archduke Albert, and Iſabella his wife, in the year 1617. It is a vaſt building, like a monaſtery; and there are private paſſages for going in, without being ſeen from the public ſtreets.

The inhabitants of Bruſſels ſeem to have had a ſingular fondneſs for the number ſeven; for here are ſeven principal ſtreets that enter into the great market-place, in which are ſeven ſtately houſes; ſeven pariſh-churches; ſeven noble families, eminent for their antiquity and great privileges; ſeven midwives, ſworn and licenſed by the ſenate to viſit the poor as well as the rich, whenever called; ſeven public gates of the doric order, remarkable for leading to ſo many places of pleaſure or different exerciſes, namely, one for hunting, a ſecond for fiſhing, a third for fowling, a fourth leads to pleaſant fields, a fifth to paſture gounds, a ſixth to ſprings and vineyards, and a ſeventh to pleaſant gardens. This city is ſaid to have entertained at one time ſeven crowned heads, beſides the dukes of Savoy and Lorrain, with nine thouſand horſe belonging to their retinues.

The inns, or eating-houſes, at Bruſſels, are equal to any in the world; and a ſtranger has the advantage of dining any time between twelve and three, on ſeven or eight diſhes of meat, for leſs than an Engliſh ſhilling. The wines here are alſo very good and cheap; and for an Engliſh ſix-pence every hour you may have a coach that will carry you wherever you pleaſe to order.

This city is the ſeat of the council of ſtate, the privy council, the council of finances, the war-councils, and the chamber of accompts of the chancery and feodal court of Brabant, the court of the grand-foreſter, and a particular chamber of accompts for the province of Brabant. Here is a ſtatue of gilt marble erected by the company of brewers to prince Charles of Lorrain, governor-general of the Auſtrian Netherlands. In the year 1695 this city ſuffered much by a French bombardment; in 1706, the allies made themſelves maſters of it; and the French in 1746. Its trade conſiſts in camblets, bone-lace, laces, and tapeſtries, manufactured here, and ſent all over Europe.

2. The city of Nivelle is fifteen miles diſtant from Bruſſels to the ſouth, and twelve from Charleroy to the north. It contains two collegiate and five parochial churches, and ſeveral convents and nunneries; alſo a chapter of canoneſſes, who muſt all be the daughters of princes or counts, or at leaſt of noblemen, by four deſcents both of the father and mother's ſide. The abbeſs is ſtyled princeſs of Nivelle, and is appointed by the ſovereign, who muſt chooſe one out of three canoneſſes named to him by the chapter. The abbeſs is ſpiritual and temporal lady of the city, and its diſtrict, in the latter of which are ſeventeen villages. A great quantity of fine linen is made here, equal to that of Cambray, and the place enjoys large privileges.

3. Vilverden; it is ſituated ſeven miles from Bruſſels, to the north. It is a poor, paltry town, but ſtrong both by nature and art. It ſtands on the canal of Bruſſels, has an old caſtle, in which are kept the archives of Brabant, and is the capital of a diſtrict, containing eighteen villages beſides. The famous William Tindal, who firſt tranſlated the New Teſtament into Engliſh, ſuffered martyrdom here, contrary to the law of nations, he being an Engliſh ſubject.

4. The village of Senef, ſtands about five miles to the ſouth of Nivelle. This place was famous for a battle fought near it in 1674, between the Dutch under the prince of Orange, and the French commanded by the prince of Condé; in which the French claimed the victory, but the Dutch kept the field: above fourteen thouſand men were killed on both ſides.

The moſt remarkable places in the Brabant quarter of Antwerp are, 1. Antwerp, called by the natives Antworpen, by the French Anvers, and in Latin Antwerpia or Andoverpum. It is the capital of a marquiſate of the ſame name, and is ſeated on the Scheld, twenty-five miles north of Bruſſels. It is the third in rank in Brabant, extenſive, elegantly built, contains two hundred wide ſtreets, and twenty-two capacious ſquares. The houſes are lofty, built of free-ſtone, and have courts before, and gardens behind them. At one end of a noble ſtreet, called More-ſtreet, there is a brazen crucifix thirty-three feet in height. The cathedral, dedicated to the Virgin Mary, and the Stadthouſe, are very magnificent ſtructures.

The exchange for merchants has four ſpacious gates oppoſite to each other, and always open. The walks round it are ſupported by thirty-three pillars of blue marble, all carved with different figures, not two of them being alike. This ſtructure is ſaid to be one hundred and eighty feet long, and one hundred and forty broad. Underneath are vaults, or magazines, well ſtored with merchants goods; and above is an academy for painting, ſculpture, architecture, and the mathematics. The building of this exchange coſt the city of Antwerp three hundred thouſand crowns. From this ſtructure, which was the firſt of the kind in Europe, Sir Thomas Greſham took the hint of building the Royal Exchange in London, as did alſo the burghers of Amſterdam that of erecting theirs, which drove the merchants of Antwerp to turn their heads to jewelling, painting, and banking, which they have continued to this day, to the greateſt perfection.

This city is the ſee of a biſhop, who, as abbot of St. Bernard, is the ſecond prelate in Brabant. The biſhopric is of great extent, and the cathedral a moſt noble pile, with one of the fineſt ſteeples in the world. Here is a market, called the Friday's market, becauſe it is held every Friday, where all ſorts of houſhold goods, pictures, and jewels, are ſold by auction.

Here are four collegiate churches, three other pariſh-churches, four abbies; and about ſixty cloiſters of the firſt rank. The cathedral of Our Lady, which is alſo a parochial church, is a very grand pile, upwards of five hundred feet long, two hundred and thirty broad, and three hundred and ſixty high. Its ſpire is four hundred and ſixty-ſix feet in height, the croſs at the top one hundred and fifty-one, the diameter of the clock thirty feet, and its circumference ninety. In its belfry are thirty-three great bells, and two ſets of chimes.

On the banks of the river near the ramparts ſtands the noble and rich abbey of St. Michael, where all ſovereign princes lodge on their coming to this city. There are alſo nineteen nunneries in this city, among which is an Engliſh one of the order of St. Thereſa; but the nuns wear no linen, eat no fleſh, and lie upon ſtraw; even the grates have ſuch a diſmal appearance, that they give the place the reſemblance of a priſon.

In the Carmelite church is a large ſilver ſtatue of the Virgin Mary. As to the fortification of this city, it is environed with a fine wall, planted with rows of trees on each ſide, with walks between, broad enough for two coaches to go abreaſt, being alſo defended by a very ſtrong, large, regular citadel, in form of a pentagon, erected by the duke of Alva in 1568, which commands the town and the neighbouring country. The magiſtracy of this city is choſen only out of the ſeven patrician families, and conſiſts of two burgo-maſters, and eighteen echevins, beſides inferior magiſtrates. Among the privileges granted to it by its princes, there is one, by which every perſon born in it is a citizen, though both his parents were foreigners.

The duke of Parma, governor of the Netherlands for the king of Spain, took Antwerp in 1585, after a ſiege of twelve months, which was one of the moſt remarkable in hiſtory. He re-eſtabliſhed the Roman catholics, who had been but lately baniſhed the city, and reſtored it to the crown of Spain. It was ſeized by the French on the death of Charles II. in the year 1700; but though it was provided with a ſtrong garriſon, it ſurrendered to the duke of Marlborough in 1706, about a month after the memorable victory that great general obtained over the French at Ramillies. In ſhort, the barrier treaty between the emperor and the republic of the United Provinces was concluded here in 1715; and the French made themſelves maſters of this city in 1746, but reſtored it, together with Bruſſels, to the emperor, at the peace of Aix-la-Chapelle. The territories belonging to this city are very extenſive. The celebrated geographer Abraham Ortelius was born here.

2. The ſmall town of Lier, on the conflux of the Greater and Leſſer Nethe, and ten miles from Antwerp, is ſtrong both by art and nature. A paved road leads from hence to Antwerp. Here is a ſpacious market-place, where they keep a famous market for black cattle once every week, from St. John's day to St. Martin's. They brew an excellent ſort of white beer, called caveſſe, which is very much eſteemed all over the Netherlands: they alſo make lace, which is reckoned equal to that of Mechlin.

The chief church which is a collegiate one, is a fine building, adorned with an harmonious chime of bells. Here are ſeveral convents and nunneries; among the latter, is that of Engliſh bare-footed Carmelite nuns. The Carthuſians have a monaſtery, the largeſt in the Netherlands: the circumference of the walls, that incloſe the cells and kitchen-garden, is a full Engliſh mile, and the monks have a larger privilege granted them by the pope than the other monaſteries of that order.

3. Turnhout, twenty-one miles diſtant from Antwerp to the eaſt, is a ſmall city with the title of a lordſhip: it was built by Henry IV. duke of Brabant, about the year 1212. Here is a college dedicated to St. Peter, the chapter of which is compoſed of a dean and twelve canons. The regular canons of the priory of Corſendonk have here a college, where they teach polite literature.

II. The lordſhip of Mechlin is no more than eight miles in length, and about five in breadth. The town of Mechlin, ſituated on the Demer, is fifteen miles from Antwerp. It is pretty large, and well built, with broad, clean ſtreets, driving a conſiderable trade in corn, blankets, and thread; but their chief manufacture is of thoſe fine laces famous throughout all Europe. Here is a ſtately arſenal, and a noble hoſpital for wounded or ſuperannuated ſoldiers. The cathedral is a large and magnificent ſtructure. The clock upon the four ſides of the tower or ſteeple is one hundred and forty-four feet in circumference, each figure being above a yard long; and yet ſo high is the ſteeple, that, from the market-place, it ſeems but an ordinary clock. Beſides a great number of convents of men and maidens, there is in this city a large beguinage, containing generally ſeven hundred beguines, and ſometimes more, who make ſome of the fineſt Mechlin lace. The archbiſhop takes the title of primate of the Netherlands and abbot of Affligem, one half of the revenues of the abbey being appropriated to his ſee. His ſuffragans are the biſhops of Antwerp, Ghent, Ypres, Bruges, and Ruremonde; and there are ſeventeen cities and four hundred and fifty-five villages within his archiepiſcopal juriſdiction. St. Rombant, who was an Iriſhman, and biſhop of Dublin, is patron of this city. It is the ſeat of a governor, a provincial court, and alſo of a parliament or ſovereign council, to which appeals lie from moſt of the courts of juſtice in the Auſtrian Netherlands; but there lies no appeal from it, except in the cauſes of the knights of the golden fleece, to the ſovereign of the order.

III. The duchy of Linſburg is ſurrounded by Juliers, Luxemburg, and Liege. The country is pleaſant, populous, and fruitful; abounds in cattle, mines of iron, lead, and calamy; and is well watered. The ſtates conſiſt of the nobility, clergy, and commons.

The principal places are, 1. Linſburg, which ſtands on an eminence, is well fortified, has one large ſtreet, two ſtrong gates, and a capacious ſuburb called Dahlem. 2. Roleduc, or Rodeleduc, is a ſmall town defended by a caſtle, and capital of a diſtrict. At about a mile diſtance from the city, ſtands the famous abbey of Roleduc, of the order of St. Auguſtin; it is called Cloſterrode by the people of that country. The abbot is temporal lord of the villages of Markſtein, Kerkenrode, and other places.

IV. The duchy of Luxemburg is bounded, on the north, by Liege; on the weſt, by Champagne; on the eaſt by Treves; and on the ſouth, by Lorrain. It is nearly ſquare, and extends about eighty miles each way. It lies in the centre of the foreſt of Ardenne. The air is pure, the land well watered, the ſoil fruitful, and the country

populous. Three different languages are ſpoken in this duchy, viz. German, French, and Walloon. The ſtates conſiſt of the clergy, nobles, and deputies, and the religion is Roman catholic.

The principal places are the following; viz. Luxemburg, the capital of the province, twenty-three miles from Triers to the ſouth-weſt. It is divided into Upper or Old Town, and Lower or New Town. The former is ſurrounded by rocks; the latter contains two ſuburbs. Here is a ſtrong caſtle, and regular fortifications. The city is governed by a richter, or judge, and ſeven echevins, or aldermen, who judge both in civil and criminal matters. The richter is choſen every year, on the eve of St. Andrew's feſtival; that office is held alternately by a citizen, and by one of the aldermen. The chief church here is that of St. Nicholas, a parochial one, but not very conſiderable. Here are alſo three convents of men, and as many of maidens. In this city are three other pariſhes, one of which belongs to the abbey of Munſter, of the Benedictine order, found by Conrade I. count of Luxemburg, in the year 1083.

2. The town of Arlon lies on an eminence, twelve miles from Luxemburg to the north-weſt, and was formerly a conſiderable place, well peopled and fortified, but hath ſince ſuffered by the wars, and been diſmantled. It derived its name from an altar ſacred to the moon, which the antient inhabitants worſhipped as a deity.

3. Baſtogne is ſituated in the county of Chiny, near the foreſt of Ardenne, twenty-eight miles diſtant from Luxemburg, to the north-weſt; and thirty-one from Limburg, almoſt to the ſouth. It is ſo well peopled, has ſuch a good trade, and is ſo well built, that the people of that country call it Paris in Ardenne; though it is conſiderably decayed from what it once was. There are in this city two convents of men, and one of maidens. It is the ſeat of a provoſtſhip, containing one hundred and forty-five villages or hamlets within its diſtrict.

4. Marche is a ſmall city, ſituated on the little river Marſette, on the borders of the county of Namur, and the biſhopric of Liege, ſeven miles diſtant from Rochefort to the north-eaſt, twenty-three from Liege to the ſouth-weſt, and fifty from Luxemburg to the north. It is the ſeat of a proveſtſhip, which has nineteen villages under its juriſdiction. The parochial church, which is dedicated to St. Remcalus, is a very fine building. Here is a convent of Carmelite monks, and another of nuns, of the ſame order, and a college of jeſuits, where they teach polite literature.

5. Chiny on the Semois, though at preſent a poor place, gives name to a county and provoſtſhip, containing thirteen cities, with a great number of villages. 6. Roche, or Roche-en-Ardenne, is ſituated twelve miles from Marche to the eaſt, and thirty-eight from Luxemburg to the north. This town is ſurrounded with ſtrong bulwarks, and broad ditches full of water, that come from the river Ourte, which runs acroſs the city; it is alſo defended by a caſtle built on rocks, and which commands the town. 7. Verton is a ſmall, well-fortified town. 8. Biedburg gives name to a diſtrict. 9. Epternmach on the Sour is twelve miles from Treves. 10. Grave Macheren, on the Moſelle, is famous for its Moſelle wine. 11. Igel contains a pyramidal pagan monument. 12. Dicknip is the capital of a provoſtſhip.

The following places are in the marquiſate of Le Pont D'Oye: 1. Rochefort, a ſmall fortified town, with a caſtle, ſurrounded by rocks, and ſituated ſixty-ſix miles north-weſt of Luxemburg. 2. St. Vit, the capital of a ſeigniory. 3. St. Huber, the ſeat of a very rich Benedictine abbey. 4. Veandew, the capital of a county, but very inconſiderable in other reſpects.

That part of the duchy of Gueldres, belonging to Auſtria, contains only the little cities of Elmpt and Swalm, with their villages and ſeigniories, and the ſtrong town of Ruremonde, at the conflux of the Roer with the Maeſe. It is twenty-five miles from Maeſtricht, is the largeſt town in Gueldres, and ſubject to the archbiſhop of Mechlin. There are many convents, and a charter-houſe in the town; and a toll is levied here.

SECT. II.

Containing a Deſcription of FLANDERS, *properly ſo called, with Diſtricts, Cities, and Towns, thereto belonging: alſo an Account of the Inhabitants, their Trade, Manufactures, Religion, Cuſtoms, &c.*

THE province of Flanders, is bounded, on the weſt, by Artois; on the ſouth by Hennegau and Artois; on the eaſt, by Brabant; and, on the weſt, by Artois. It is ſeventy-five miles long, fifty-five miles broad, has a good air, and perhaps the moſt fruitful ſoil in Europe. The population is ſuch, that it looks like one continued city. The ſtates conſiſt of the nobles, clergy, and commons. The firſt claſs conſiſts of certain families, who have hereditary offices, or baronies; the ſecond includes the biſhops and abbots; and the third is formed of the deputies of cities and diſtricts, the burgo-maſters and penſioners. Moſt of the Flanderkins are fat, clumſy, and dull, but induſtrious, honeſt, and great lovers of liberty. The women are fair and virtuous, but not remarkable for wit, or the affectation of it. Both ſexes, however, are fond of public diverſions; and almoſt every city, town, or village, has a kermiſſe, or fair, in which public ſhows are exhibited. The manufactures conſiſt of ſilk, cotton, linen, lace, woollen, brocades, tapeſtries, and camblets. The principal rivers are the Scheld, Lys, Scharp, and Dender.

From the ninth century to 1369 this country had counts of its own, but at the above period, it went by marriage to the dukes of Burgundy; and afterwards, from them, by a ſubſequent marriage, to the houſe of Auſtria. France ſeized ſome of the ſouthern parts in 1667; and the ſtates-general, in 1715, obtained ſome part of the northern diſtricts. The arms of this country are, a lion, ſable, in a field, or.

The principal places in Auſtrian Flanders, are: 1. The city of Ghent, the capital of Flanders, called by the natives Gent, or Ghendt, by the French Gand, and in Latin Gandavum: it lies thirty-five miles to the north-weſt of Bruſſels, and thirty-three eaſt from Oſtend, in fifty-one degrees twelve minutes north latitude, and in the third degree thirty-ſix minutes eaſt longitude. On account of the many running waters which unite near this city it has great advantages, both with reſpect to trade and ſtrength; for not only the Scheld receives the Lys in this town, but from hence to Damme runs the Livre, which is properly a canal, the digging of which was begun in the year 1228, and, beſides ſeveral rivulets, receives into it the Caele. The canal, which extends from hence to Bruges, and from thence to Oſtend, was begun in 1613, and is very remarkable. From another canal, which runs to the north, a branch extends from Rodenuyſen to Sas Van Ghent. Beſides theſe, here are ſeveral other canals and rivers. The city of Ghent is of conſiderable extent, its compaſs within the walls being computed at forty-five thouſand ſix hundred and forty Roman feet.

The cathedral, dedicated to St. John the Baptiſt, is a fine, large, and antient ſtructure. There are alſo a collegiate and ſix pariſh churches; two abbies for monks, two colleges of Jeſuits, ſeven other monaſteries, and what is called the Templehof, which belongs to the order of St. John, with twenty-two nunneries, two beguine-houſes, a ſeminary belonging to the biſhopric of Ghent, with ſeveral chapels and hoſpitals.

In this city are thirteen market-places, ſeven of which are large, particularly that called the Friday's-market is the moſt extenſive, and remarkable for a noble ſtatue of the Emperor Charles V. dreſſed in his imperial robes, and ſtanding on a pedeſtal in the middle of the ſquare. And upon a bridge built over the Lys ſtand two braſs ſtatues, repreſenting a man ready to cut off the head of another. The ſame figures are alſo painted in the town-houſe.

This city is the ſeat of the council of Flanders, from which an appeal lies to the grand council of Mechlin. The town-houſe is a double building, with two fronts, one of ancient architecture, and the other in the modern taſte, and very beautiful. The trade of Ghent principally conſiſts in cloths, ſtuffs, and ſilks, of which ſuch quantities are made here, that among the fifty companies of tradeſmen, thoſe concerned in theſe commodities are ſaid to form a third part. The magiſtracy conſiſts of burgomaſters, echevins or aldermen, and counſellors annually choſen from among the principal inhabitants: and theſe have at their head an high-bailiff. The inhabitants of this city are exceedingly fond of chimes or carillons, which are played with a kind of keys communicating with bells, as thoſe of the harpſichord and organ do with ſtrings and pipes.

The ſtates-general of the Netherlands, except thoſe of Luxemburg and Limburg, concluded, in 1576, the famous treaty, called the pacification of Ghent, the principal articles of which were, that the Spaniſh, and all other foreign troops, ſhould evacuate the Netherlands; that Holland and Zealand ſhould continue united with the other provinces; and that the Roman Catholic religion, and the antient privileges of the country, ſhould be maintained; but

but in 1584 they again ſubmitted to the king of Spain. This city, after ſeveral times changing its maſters, ſince the year 1678, when it was taken by the French, was at length in 1745, ceded to the emperor at the treaty of Aix-la Chapelle.

Ghent is a very conſiderable diſtrict, and contains the county of Aloſt, with its capital; Oudenard, celebrated for the glorious victory obtained near it over the French, in 1708, by the duke of Marlborough; the town and caſtellany of Courtray; the county of Waes; the town and lordſhip of Dendermonde; the towns of Bornheim, Furnes, Warneton, Dixmude, &c.

2. Bruges is ſeated in the thirty-firſt degree ſixteen minutes north latitude, and in the third degree fifteen minutes eaſt longitude. Here are ſeveral canals, one of which leads to Oſtend, Newport, Furnes, and Dunkirk; and can carry veſſels of four hundred tons, which come up to the baſon of Bruges. The ſtreets of this city are large and ſtraight; it has alſo ſeveral fine ſquares, particularly the Friday's market-place, from whence ſix great ſtreets lead to ſix principal gates. At one end of this ſquare ſtands a fine ſteeple, five hundred and thirty-three ſteps high, with a curious chime of bells. Several rows of trees are planted in this ſquare.

Here is another ſquare called the burgh, from the caſtle of that name; it is ſurrounded with many fine buildings, as the town-houſe, which is a handſome Gothic ſtructure, adorned with the pictures of many earls and counteſſes of Flanders; the cathedral; the biſhops palace, and the chapel of the holy blood of our Saviour. The cathedral is a very ancient building, and has thirty-two canons. Here are alſo two other collegiate churches, one of which is dedicated to Our Lady, and has a chapter compoſed of a provoſt and twelve canons; the other is the church of St. Saviour, and has a chapter conſiſting of a dean and ſixteen canons; the former of theſe two laſt ſtructures is very beautiful, and has a fine ſteeple, ſo high that it may be ſeen at ſea in ſailing to Oſtend. Beſides the above, here are five parochial churches, fourteen chapels, a college of jeſuits, twelve monaſteries, and nineteen nunneries.

There is in this city a large monaſtery of the Carthuſians, and the circuit of their kitchen-gardens, cells, and little gardens, is about an Engliſh mile. The Carmelite church is one of the fineſt in the city, and has a beautiful monument of Henry Jermyn, lord Dover, a peer of England; but the moſt noble monument in the city is that of the Bernardines. The abbot's apartment is very magnificent, and thoſe of the monks very neat. Among the many nunneries in this city are two Engliſh, one of Auguſtine nuns, who are all ladies of high rank. The other Engliſh nunnery, called the Pelicans, is a ſtricter order, and the nuns wear a coarſer dreſs than the others.

Few cities provide ſo comfortably for the poor and orphans as Bruges; for here are ſeveral alms-houſes and hoſpitals for their maintenance, among which is one called the ſchool of the Orphans, founded in 1421, where one hundred and thirty orphan boys are educated and brought up to learning, or ſome trade, according to their genius or inclination.

A conſiderable trade is carried on here in worked cottons, fine woollen ſtuffs, linen and lace; and there are many perſons employed in manufacturing fuſtians and tapeſtries. Here are ſixty-eight companies of tradeſmen in various branches.

Since the cities of Antwerp and Amſterdam have enlarged their commerce, that of Bruges has been declining; ſo that it is far from being ſo populous as formerly. There are ſtill, however, in Bruges, ſeveral very rich merchants, who meet daily in the great market-place, which ever ſince the year 1715 has been their exchange.

Several courts are eſtabliſhed here for the adminiſtration of juſtice, both in civil and criminal affairs; the principal is that of the magiſtrates of Bruges, compoſed of two burgomaſters, twelve echevins or aldermen, twelve counſellors, ſix penſioners, and two treaſurers. Theſe have the government of the city, and adminiſter juſtice among the inhabitants. There is another court for the government of the liberty, which has a magiſtracy of its own, conſiſting of four burgomaſters, twenty-ſeven echevins, ſix penſionaries, and two treaſurers. The two laſt hold their employments for life. This court is held at Bruges in an old caſtle called the Burg or Fortreſs. In the hall where they meet are ſeveral good pictures, particularly the laſt judgment, by a diſciple of Rubens, named Backer.

3. Ypers or Ipres, in Latin Ipra, which is ſeated on the little river Ipre or Iperlee, in the fiftieth degree fifty-ſeven minutes north latitude, and in the ſecond degree fifty-one minutes eaſt longitude. The buildings make a pretty handſome appearance, though the fronts are of timber. Its public ſtructures are the cathedral of St. Martin, five pariſh churches, one college of jeſuits, ſix monaſteries, one epiſcopal ſeminary, eight nunneries, and ſome hoſpitals and alms-houſes. Here is alſo a ſchool for poor boys, and another for poor girls, where they are taught what trade they like beſt; and, when able to get their living, are ſent out with a certain ſum of money to ſet them up. One third part of this town conſiſts of churches, convents, and other religious houſes. It is the ſee of a biſhop, under the archbiſhop of Mechlin, and one of the barrier places which was ceded to the States-General in 1715.

4. Oſtend, in Latin Oſtenda, is called by the Flemings Ooſtende, and is ſeated in the fifty-firſt degree fourteen minutes north latitude, and in the ſecond degree fifty-nine minutes eaſt longitude, in a marſhy ſoil, among a variety of canals; it being almoſt ſurrounded by two of the largeſt of them, into which ſhips of great burthen may enter with the tide. It is well fortified, and has a ſtrong rampart, a deep ditch, and eight regular baſtions; and the ſea may be let in round the town for a conſiderable extent of ground, by which means it is rendered almoſt impregnable. The city is alſo defended by ſeveral forts which encompaſs it. The buildings are but low, but are pretty uniform, and the ſtreets are ſtraight and regular. Its principal church is that of St. Peter. Here are ſeveral convents of friars and nuns, and an hoſpital founded by the citizens in 1403.

5. Newport, which is a ſtrong ſea-port town on the Iperlee, is one mile from the ſea, and nine from Oſtend. It contains ſeveral convents and monaſteries, particularly one of the Engliſh Carthuſian friars. The chief buſineſs of the inhabitants is rope-making, net-making, and fiſhing. The harbour is tolerably good; its ſtrength conſiſts in its ſluices, by which all the country round may be laid under water.

6. The city of Tournay is eleven miles ſouth-eaſt from l'Iſle. It is defended by a ſtrong caſtle, is a large trading place, and famous for ſeveral manufactories, particularly for admirable ſtockings; this is a biſhop's ſee; the cathedral church, and the abbey of St. Martin's, are very magnificent ſtructures. This place was ceded to the houſe of Auſtria by the treaty of Utrecht.

II. The province of Hainault, or Hennegau, has Flanders to the north, Namur and Liege to the weſt; Brabant to the eaſt, and Champagne and Picardy to the ſouth. It is forty-eight miles long, forty-five broad, fruitful in paſturage and corn, breeds abundance of black cattle and ſheep, is well watered with many rivers and lakes, and abounds with timber, coals, iron, lead, marble, ſlate, &c. It is ſubject, in ſpirituals, to the archbiſhop of Cambray, and the biſhops of Liege and Arſas. The ſtates conſiſt of the clergy, nobility, and commons. The arms are four lions in a field, or.

The principal places are, 1. Mons, the capital of Hainault, which is large and well fortified, twenty-ſeven miles ſouth of Bruſſels, and ſtands on the banks of the river Trouille. The public ſtructures are noble, the buildings in general handſome, and the ſtreets ſpacious. Polite literature is taught in two colleges; beſides which, here are ſeveral convents and nunneries, and an abbey. St. Waudrau, ſiſter to the celebrated St. Aldegonide, founded a chapter of canoneſſes here. They are thirteen in number, muſt prove their nobility by ſixteen deſcents, and are in the nomination of the ſovereign.

2. The city of St. Ghiſlain, or St. Guiſlain, ſtands on the river Haine, about five miles below Mons to the weſt, eight from Condé to the eaſt, thirteen from Mauberge to the north, and as many from Ath to the ſouth: it is pretty ſtrong by its ſituation on the banks of the river, and by the marſhes that ſurround it.

3. The city of Binch is ſituated on the river Haine, which has its ſpring in the neighbourhood. It is nine miles diſtant from Mons to the eaſt, and twenty-ſix from Bruſſels to the ſouth; is the capital of a provoſtſhip, which extends along the Scheld to the borders of the county of Namur, and contains fifty-one boroughs or villages, but no cities. This is an antient and pleaſant city, built in a fruitful country, which abounds in all ſorts of game, and the air is very wholeſome. Here is the caſtle of Marimont, which is now the hunting-ſeat of the governor of the Netherlands. This city was reſtored to the Spaniards by the peace of Nimeguen, ſince which time it has continued in the poſſeſſion of the houſe of Auſtria.

4. The ſmall city of Soignies, ſituated on the banks of the

the river Senne, is nine miles distant from Mons to the north-east. Near this city is the little wood called the wood of Soignies. Here is a monastery of Benedictine monks, surrounded with walls, and now changed into a secular chapter, composed at present of a provost, a dean, a treasurer, and thirty canons; they are spiritual and temporal lords of the city, and appoint the bailiff of it. There are also in this city a convent, a nunnery, an hospital, and an house of the fathers of the oratory, established in 1629.

5. The town of Braine-le-Compte was so called to distinguish it from Braine-Laleus, and Wanter-Braine, two boroughs in Brabant: it is situated on the paved road, which was made in 1705, and is twelve miles distant from Mons to the north-east, and sixteen from Brussels to the south-west. In 1652, the king of Spain gave this city to the house of Aremberg, in exchange for the manor of Sevenbergen; so that the duke of Aremberg is now lord of this city, and of the castleward, which contains eleven villages. There was formerly a fortress on the spot where the parochial church now stands, and over against it an antient tower, but nothing now remains of them but the ruins.

The other places of inferior note are, 6. Roeux, a small neat town, eight miles from Mons. 7. Malplaquet a village about the same distance from the above city. In 1709 the French army, commanded by the marshals Villars and Boufflers, were attacked here in their triple entrenchments, and entirely defeated with great slaughter. 8. Ath, or Aeth, on the Dender, fourteen miles from Mons, is a strong, but handsome town. 9. Lecose, a small town. 10. Lessines, on the banks of the little river Dender, near the borders of Flanders, seventeen miles distant from Mons towards the north-west, and four from Aeth to the south. It is a fortified town, famous for its linen manufactory. 11. Chievres is a small open city, and a lordship, about nine miles distant from Mons towards the north-west, and four from Aeth to the south. 12. Hall, or Halle, on the Senne, seven miles from Brussels, is famous for an image of the virgin Mary, enshrined in gold, with a crown of the same on the head. In one hand is an image of our Saviour, and in the other a rose gilt. 13. The abbey of Bonne Esperance, or Good Hope, at a mile and a half distance from Binch: it is inhabited by monks of the order of the Præmonstratenses; and in this neighbourhood there is also an abbey of Cistercian nuns, called the abbey de l'olive, or of the olive. 14. Braine-le-Chateau is a village, which, in 1681, was raised to a principality, under the name of Tour and Taxis. 15. Ligne is a considerable village, which gives name to a principality. 16. Fontenoy is a village on the Scheld, where the French, under marshal Saxe, gained a victory over the allies in 1745. 17. Anguien, or Enghien, stands in a valley, and is fourteen miles distant from Mons to the north. The eldest son of the prince of Condé is now always stiled duke of Anguien. 18. The village of Steenkirk, or Steenkerken, is famous for the battle fought here, Aug. 3, 1692, between the army of the allies commanded by king William, and by Maximilian Emanuel, elector of Bavaria, governor of the Netherlands, and the French under the command of the duke of Luxemburg; in which the French claimed the victory, though they lost more men than the allies.

III. The district of Namur is surrounded on all sides by Brabant and Liege, except towards the west, where it is partly bounded by Hainault. It is thirty miles long, twenty-eight broad, well watered, and very fertile. The states consist of the clergy, nobles, and deputies of the town; but an appeal lies from the council of the province to the grand council of Mechlin. There are a lion, sable, in a field, or, with a dexter, fesse, drawn over the whole shield.

The principal places are, 1. Namur, the capital, at the conflux of the Maese and Sambre, over which there is a bridge. It is situated thirty miles from Brussels, and is one of the strongest towns in Europe, being defended by a formidable castle, more than a dozen forts, and other important fortifications. Besides the provincial council and town magistracy, a feudal court, called baillage, is held here, from which an appeal lies to the grand council at Mechlin. It is the see of a bishop, suffragan to the archbishop of Mechlin: the diocese contains eight cities, three hundred villages, and innumerable abbies, churches, religious houses, &c.

2. Charleroy, in Latin Caroloregium, is a small, but strong city and fortress, fifteen miles distant from Namur to the west, eighteen from Mons to the east, and twenty-six from Brussels to the south. It stands on a hill, near the conflux of the Sambre and the little river Pieton. It was formerly but a fine village, and sovereign lordship, called Charnoy, belonging to the prince of Isenghein. The marquis of Castel-Rodrigo, governor general of the Netherlands, made a city of it in 1666, fortified it, and called it Charleroy, after the name of his master Charles II. king of Spain. In the neighbourhood of this city stands the abbey of Soleilmont, consisting of nuns of the Cistercian order, founded in the year 1088 by Philip, count of Namur.

3. Charlemont, in latin Carolomontium, is eighteen miles distant from Charleroy to the south-east, and sixteen from Namur to the south. It stands on the top of a mountain, at the foot of which runs the river Maese. It was yielded to the French by the treaty of Nimeguen in 1678; but by the treaty of Utrecht the French were obliged to surrender it to the late emperor.

4. Fleurus, Flerus, or Fleurs, in latin Fleurus, is about six miles distant from Charleroy to the north-east, and eleven from Namur to the west. It is but a borough, but pretty considerable, since it sends deputies to the states. Here is also an abbey. Bat this place is chiefly famous for two battles fought in its neighbourhood; the first happened on August 30, 1622, between the Spaniards and the Germans; and the second on July 1, 1690, between the Germans and French.

5. Bouvines, Bovines, or Bovignes, in latin Bovinæ, or Boviniacum, is a small city on the left bank of the river Maese, over-against Dinant, twelve miles distant from Namur to the south. This is no strong place, and is considerable only for being a pass between the provinces of Namur and Luxemburg. There is but one parochial church in this city, and two convents; the one of Augustine monks, in which they teach philosophy, and another of nuns of St. Sepulchre.

Near Bouvines are to be seen the ruins of an antient city called Chevremont, which was very strong, the inhabitants of which made themselves famous by their robberies.

The small town of Walcourt is situated on the rivulet called the Hevre.

In addition to the several historical facts already taken notice of in describing the various districts, cities, and towns, in the Austrian Netherlands, it may be necessary also to observe, that formerly that part of Germany, which lies west of the Rhine, with the seventeen provinces, went under the general name of Gallia Belgica among the Romans. Upon the decline of the Roman empire, the Goths made themselves masters of these provinces, and divided them into a number of small governments, till at length they came into the possession of the house of Burgundy. Afterwards the emperor Charles V. as heir of the house of Burgundy, classed them as part of the empire under the title of circle of Burgundy; but the tyranny of his son Philip occasioned the inhabitants to throw off the yoke. The prince of Orange, and the counts Hoorn and Egmont, appeared at the head of the confederacy; the two latter, however, were taken and beheaded, but the former being elected stadtholder, retired into Holland, when that and the adjacent provinces entered into a treaty at Utrecht, for their mutual defence, in 1579; and, by the assistance of England, compelled Spain to acknowledge their independency; and about the year 1609, were deemed independent states by all Europe, under the title of the United Provinces. The Spaniards, however, remained possessed of the other ten provinces, till the great duke of Marlborough gained the battle of Ramilies in the year 1706; after which, Brussels, the capital, and most of the other provinces, acknowledged the emperor of Germany. These still continue in the possession of the house of Austria, except such parts as were conquered by the French in the continental war before last, and are usually comprehended under the general title of French Flanders, already described in our accounts of France.

CHAP. XV.

THE NEW HISTORY AND DESCRIPTION OF

HOLLAND, OR THE UNITED NETHERLANDS.

SECT. I.

Containing a General Account and Natural History of the UNITED NETHERLANDS.

ALL the ſeventeen united provinces are diſtinguiſhed by the name of Netherlands, or Low Countries, which is doubtleſs derived from their low ſituation. They are ſituated between two and ſeven degrees of eaſt longitude, and between fifty and fifty-three degrees thirty minutes north latitude. The extent from north to ſouth is three hundred and fifty miles; the breadth, in the wideſt part, from eaſt to weſt, is three hundred. The boundaries are, the circle of Weſtphalia, with the biſhoprics of Liege and Triers, and the duchies of Juliers and Cleves on the eaſt; the Britiſh ocean on the weſt, France on the ſouth, and the German ocean on the north.

Thoſe called the United Provinces, or the United Netherlands, of which we are here to treat, are, I. Holland. II. Zealand. III. Frieſland. IV. Groningen. V. Overyſſel. VI. Gelderland. VII. Utrecht. The principal of theſe ſeven provinces, and that which uſually gives appellation to the reſt is Holland. They are ſituated between three degrees twenty minutes, and ſeven degrees thirty minutes eaſt longitude, and between fifty-one degrees thirty-five minutes, and fifty-three degrees forty minutes north latitude, are about one hundred and fifty miles in length, and nearly the ſame in breadth.

The low ſituation of this country near the ſea, together with the numerous bogs and marſhes, occaſions a damp air, and renders the whole unwholeſome. Rains and fogs are frequent; and the gout, ſcurvy, rheumatiſm, &c. are common and inveterate. The territory in general would be overwhelmed by the ſea, were it not for the dykes and dams, which exhibit aſtoniſhing proofs of human induſtry, and are ſtupendous works deſigned to repreſs the inundations of the ſea, and drain the waters from the land. The marſhes are aſtoniſhingly fertile, and feed abundance of cattle. The milk being exceedingly rich, great quantities of butter and cheeſe are made, not only for home conſumption, but for exportation. The breed of ſheep is good, and produces excellent wool. The other natural productions of the country are, tobacco, madder, turf, fruit, iron, &c.

All the provinces either lie open, or communicate with the north ſea, by means of the Zuyder ſea. This Zuyder ſea, or ſouth ſea, was formed originally by a branch of the Rhine, increaſed afterwards by a ſtream of the Vecht, and at length rendered very capacious by an inundation of the ſea, which happened in the thirteenth century.

The principal rivers are, the Rhine, Maeſe, Scheld, and Vecht. The former of theſe we have already deſcribed. The Maeſe, after dividing itſelf into two branches, and again uniting theſe, falls into the north ſea below Rotterdam. The Scheld, below Antwerp, divides itſelf into two branches, called the Weſtern and Eaſtern Scheld: the firſt ſeparating Flanders from Zealand, and the other running north by Bergen-op-zoom, and afterwards eaſt, between the iſlands of Beveland and Schonen, falls into the ſea a little below. The Vecht runs from eaſt to weſt through the province of Overyſſel, and falls into the Zuyder ſea. There are many ſmaller rivers that join theſe, and a vaſt number of canals; yet there are few good harbours in the provinces. The beſt are thoſe of Rotterdam, Helvoetſluys, and Fluſhing. As to the harbour of Amſterdam, it is indeed one of the largeſt and ſafeſt in Europe; but there is a bar at the entrance of it, over which large veſſels cannot paſs, without being lightened or unloaded. There are no mountains in theſe provinces; and the only lake, properly ſo called, is that of Harlem. The provinces are extremely well cultivated, and very populous, eſpecially that of Holland, which, in this reſpect, perhaps has not its equal in the univerſe. The towns are very agreeable, being kept exceedingly clean, and having canals in the middle of the ſtreets, planted with trees. The number of inhabitants is computed at about two millions. The animals here are much the ſame as in England; but their horſes and horned cattle are of a much larger ſize. It is ſaid that neither oyſters nor herrings are to be found upon the coaſt; but they have ſeveral ſorts of other fiſh, both in their ſeas and rivers. Storks build and hatch in their chimnies; but, being birds of paſſage, they leave the country about the middle of Auguſt, with their young, and return the February following.

It has been remarked of the Seven United Provinces, that though they do not produce corn enough for the hundredth part of the inhabitants, yet they are conſidered as the granary of Europe; though here are no vineyards, yet more wine may be procured than in any other country in the world. Though woods are unknown, yet here are more carpenters and joiners than any where elſe; and, in fine, though the people have few ſtaple or native commodities, yet they import a great variety of merchandizes, and are as fully furniſhed with all the products of the world, both natural and artificial, as any nation whatever.

SECT. II.

Containing a Geographical Deſcription of the Provinces of HOLLAND, ZEALAND, and FRIESLAND; their Situation, Boundaries, and Extent; Cities, Towns, and Places; Rivers, Climate, Produce, Inhabitants, their Trade, Manufactures, &c.

WE ſhall begin our ſurvey of theſe provinces with the principal, the name of which is frequently applied to the whole; namely, the province of Holland, which is bounded, on the ſouth, by Brabant; on the eaſt, by the provinces of Gelderland, Utretcht, the Zuyder ſea, and the north ſea; on the latter of which its whole weſtern frontiers lie. This is the largeſt of all the ſeven provinces, and, according to the computation of the celebrated John de Witt, contains four hundred thouſand acres; but later authors ſuppoſe that it contains four hundred and forty thouſand. Its ſituation is, in general, very low, and ſome part even lower than the ſea, from which it is ſecured by dykes and dams, and interſected by innumerable ditches and canals, through which the water is carried off at the time of ebb.

The air is foggy and unwholſome; however, the greateſt part of the province conſiſts of fine paſture lands, and therefore the principal employment of the country people is in making butter and cheeſe; for which purpoſe they keep a number of milch cows. The more ſouthern parts of the province, which lie near Zealand, and alſo the weſt lands, as they are called, are excellent corn countries. The middle part of the province conſiſts almoſt entirely of grounds covered with turf.

There are ſeveral large rivers common to the Netherlands in general, beſides which, there are ſome ſmaller ſtreams; as the Vecht, the Amſtel, the Zaan, and the Spaaren.

Spaaren. In ſeveral parts of the country theſe rivers are joined by navigable canals, which afford a cheap communication between the ſeveral towns and villages of this populous province. The broad water, which paſſes by Amſterdam from the Zuyder ſea, and divides the province into South and North Holland, or into Holland and Weſt Frieſland, is called the Y, or, as it is pronounced, the Ey, and forms the Wykermeer at Beverwick.

Holland abounds in the moſt extraordinary improvements, and is amazingly populous, the number of its inhabitants being computed at one million two hundred thouſand. The buildings in the towns are moſtly of brick, and for handſome villages and cleanlineſs in their houſes, it exceeds every other country; but in North Holland, neatneſs is carried on to an aſtoniſhing pitch. In that province are villages in which the houſes, together with the rooms and furniture, are clean and bright beyond imagination. Their ſtreets too, being paved with brick, very carefully waſhed, and ſtrewed with fine white ſand, have a very decent appearance.

This province, though conſiſting of two parts, is under one joint regency, called the States of Holland and Weſt Frieſland, compoſed of the nobility and voting towns. The number of nobility admitted into the aſſembly of the States is not limited, and therefore not always the ſame. The nobility elect their ſeveral members by a majority of votes, but they ſeldom exceed ten. The voting towns, at the firſt foundation of the republic, were only the ſix following: Dort, Harlem, Delft, Leyden, Amſterdam, and Gouda: but William I. prince of Orange, added twelve more; ſo that at preſent they are eighteen, that is, eleven in South Holland, and ſeven in North Holland. The ſmalleſt of theſe cities has an equal voice in the provincial ſtates with Amſterdam, which pays almoſt half the charge of the whole province.

All the ſtates of Holland meet four times a year, in February, June, September, and November. In the three former ſeſſions they fill up the vacant employments in their diſpoſal, conſult about the common affairs of the province, and determine particular differences that may happen between the towns. In November they meet for raiſing ſuch ſupplies as may have been granted by their deputies to the States General, for the ſervice of the ſubſequent year. The reſolutions of the States are generally determined by a majority of voices; but in very important affairs they muſt be unanimous: ſo that the oppoſition of one of the ſmalleſt cities can prevent a reſolution being taken; in which caſe the aſſembly is adjourned for a day or two, that the deputies may have time to return for farther inſtructions to their reſpective cities.

The office of grand penſionary of Holland is occupied by a perſon of great dignity; he has no deciſive vote; he propoſes the ſubjects of debate to the aſſembly of the ſtates of that provence, collects the ſuffrages of the nineteen repreſentatives, pronounces the reſolutions, and dictates the terms in which they are to be regiſtered; he is alſo the conſtant deputy to the States General, and keeps the public regiſters and great ſeal of the province. He is elected by a majority of ſuffrages in the aſſembly of the ſtates; and his office is properly only for five years, at the expiration of which a new election muſt be obtained, or rather a confirmation of the former.

The court of the greateſt authority, next to the States of Holland, is the provincial council of ſtate, which, from the two parts of this province, is divided into two aſſemblies; that of South Holland conſiſts of ten repreſentatives, of which one always repreſents the nobility, and has the precedence of all the reſt. Theſe take cogniſance both of the revenue and military, and, when neceſſary, convene a general aſſembly of the ſtates of the province. The aſſembly of North Holland is compoſed of ſeven deputies of the towns of that part of the province. Theſe hold a joint aſſembly every year in the month of November, to ſettle, in conjunction with the deputies of the States General, the neceſſary funds to be levied for the ſervice of the army in the ſubſequent year.

There are two courts held at the Hague for the adminiſtration of juſtice, which are, the court of Holland, and the high council. The provinces of Holland and Zealand have always been ſo ſtrictly united, as to have but one common high court of juſtice, and accordingly the court of Holland is compoſed of a preſident, with eight counſellors of that province, and three for Zealand; a ſolicitor, two attornies, a regiſter, and ſix ſecretaries: Holland chuſes the preſident two years, and Zealand the third. The members of this court are excluded from being magiſtrates of cities, directors of trading companies, or enjoying any poſt, or any other ſalary than what is annexed to their office. The nobles of Holland, and the city magiſtrates, are ſubject to the juriſdiction of this court, which decides appeals from the judgments of the magiſtrates.

The provinces of Holland and Zealand have a high council compoſed of a preſident and ſix counſellors for Holland, and three for Zealand, a regiſter, and a ſubſtitute. This court judges definitively in all caſes brought before them by an appeal from the court of Holland, and gives judgment, from which, except by way of reviſion, there is no farther appeal.

Amſterdam has a ſenate conſiſting of thirty-ſix members, part of whom have the direction of political affairs, and others the adminiſtration of juſtice. The dignity of a ſenator is for life, unleſs forfeited by mal-adminiſtration. The ſenate has the power of filling up vacancies, and directing all other affairs, with a ſupreme and abſolute authority, independent of the people. They chooſe the burgomaſters and ſchepens, or aldermen of every city. Theſe firſt are always part of their own body; and, in order to become a burgo-maſter, it is neceſſary that a perſon ſhould firſt bear the office of a ſchepen. There are twelve burgomaſters in Amſterdam, four of whom have the adminiſtration of affairs, and are from thence called regent burgomaſters. Three of theſe are annually changed, and the fourth continues in office a ſecond year, to inſtruct thoſe who ſucceed to it; he likewiſe preſides for the firſt quarter, and then gives place to his colleagues, who preſide in the ſame manner three months alternately, till the expiration of the year.

The chief court of juſtice in every city is formed of the ſchepens or aldermen. There are nine in Amſterdam, ſeven of whom are annually elected, and two remain a ſecond year. Theſe adminiſter juſtice both in civil and criminal affairs; but, before they condemn a perſon to ſuffer death, they always conſult the burgo-maſters on the merits of the cauſe; but are not obliged to conform to their opinion, and ſometimes they give judgment contrary to it. Where the puniſhment is capital, not only the proof of the crime is required to be extremely evident, but the priſoner himſelf; for which purpoſe they employ the rack and other tortures; but this is never done, except when the evidence is ſo ſtrong againſt the criminal as to leave no room to queſtion his guilt; whence it is ſaid, that an innocent perſon is never put to the rack. There lies no appeal from the ſentence of this court, in criminal cauſes.

Beſides the above, there is another court, inferior to it, but worthy of being imitated by all Chriſtian nations, ſince it ſeems founded on the very ſpirit of Chriſtianity. This court conſiſts of eight or ten members, ſtiled peacemakers, who are generally young gentlemen of fortune, that muſt be houſe-keepers, and married. Their buſineſs is to make up all quarrels, and to prevent or diſſuade people from going to law. They, with one experienced magiſtrate, at their head, alſo take cognizance of civil cauſes amounting to a ſum not exceeding ſix hundred guilders or about fifty-five pounds ſterling. They proceed by way of citation: the creditor ſummonſes his debtor to appear, and, after the fact has been ſtated, and both ſides heard, the peace-makers determine what ought to be done, and order the parties to comply with it: but there lies an appeal to the ſchepens from the deciſion of this court.

Very large credit is given to all ſorts of perſons in Holland, and there never was any country where ſo few languiſh in priſon. Whenever any perſon acquaints the magiſtrates of his inability to pay his creditors, and lays before them an exact account of his circumſtances, they immediately order the commiſſioners of bankrupts to take poſſeſſion of his effects, and exempt his perſon from all arreſts for ſix weeks, which time is allowed him to compound with his creditors. In the mean time his books are laid before the commiſſioners to be examined, and all letters directed to him are delivered to them before he peruſes them. If his endeavours to compound with his creditors prove ineffectual, and his failure appears to be owing to loſſes and misfortunes, the commiſſioners, when the ſix weeks are expired, ſell his effects, and make a dividend, after which the magiſtrates exempt him from all claim, whether foreign or domeſtic; and when the failure is not fraudulent, it is not in the power of any or all of his creditors to hinder this.

Another ſtill more expeditious method of obtaining abſolute freedom in Holland, is, for the debtor to apply to the provincial high court of juſtice, repreſenting his condition, and ſurrendering all he has, upon oath; after which he is acquitted, as before, from all future claims, and may again engage in trade; but if the debtor here takes a falſe oath, the magiſtrates are authorized to puniſh him as they

they pleaſe, and even ſentence him to ſuffer death for the crime.

The eccleſiaſtical government of Holland is divided into two parts, each of which has its particular ſynod. The ſynod of South Holland is compoſed of eleven claſſes, under which are three hundred and thirty-one miniſters: the ſynod of North Holland has only ſix claſſes, in which are two hundred and twenty-one miniſters. Beſides theſe miniſters of the eſtabliſhed, there are aſſemblies of Engliſh preſbyterians at Amſterdam, Rotterdam, Dort, Leyden, and Harlem; and at Amſterdam is an Engliſh epiſcopal church. The remonſtrants amount to thirty congregations, and thirty-eight miniſters. The Lutherans compoſe nineteen congregations, and have twenty-ſeven preachers. Here is the metropolitan church of the Moravians, and alſo a Quaker's meeting. The Roman catholics have about two hundred and fifty churches, and two hundred and thirty-five prieſts, among which are about forty churches and ſixty prieſts of Janſoniſt principles.

The following are the moſt conſiderable cities and places in Holland, viz. 1. Dort, or Dordrecht, in Latin Dordracum, ſeated on an iſland in the Morwe, that was formed in 1421 by a terrible inundation, which deſtroyed no leſs than ſeventy-two villages, and about one hundred thouſand perſons. This city ſtands fifteen miles to the eaſt of Rotterdam; and its ſituation is naturally ſo ſtrong, that, though deſtitute of fortifications, it has never yet been taken. The number of houſes in 1732 amounted to three thouſand nine hundred and fifty-four. The harbour is very commodious, and its trade conſiderable, eſpecially in grain, Rheniſh and other wines; as alſo in timber, which, in ſummer-time, is brought from Germany down the Rhine and the Waal, and here ſawed in mills, of which there are great numbers about the city. This is the ſeat of the mintage for South Holland, and has a ſeminary.

2. The city of Harlem ſtands on the river Spaaren, which runs through it, and is the only paſſage for the many ſhips and other veſſels coming from Frieſland and other parts, in their way to the towns of Holland and Zealand. Harlem ſtands fourteen miles to the weſt of Amſterdam, and enjoys a communication with that city and Leyden, by means of two ſpacious canals. The houſes, which are neat brick buildings, in 1732 amounted to ſeven thouſand nine hundred and ſixty-three; but very few of them are built in the modern taſte, or make an elegant appearance. There are, in this city, four Dutch Calviniſt churches, one of French, one of Lutheran, and ſeveral maſs-houſes, the papiſts being here much more numerous than the proteſtants. Its manufactures of ſilk and linen, though ſtill conſiderable, are greatly declined. The bleaching of thread, and linen, for which this city is famous, employs a great number of hands.

The invention of printing is attributed by the inhabitants to Lawrence Coſter, of this city; on whoſe houſe, which ſtood about the middle of the town, was a Latin inſcription, that he invented it about the year 1440: a ſtatue was alſo erected to him on the ſame account; and in the town-houſe is kept, in a ſilver caſe, wrapped up in ſilk, the firſt book that Coſter printed. Here is an academy of ſciences, founded in 1751.

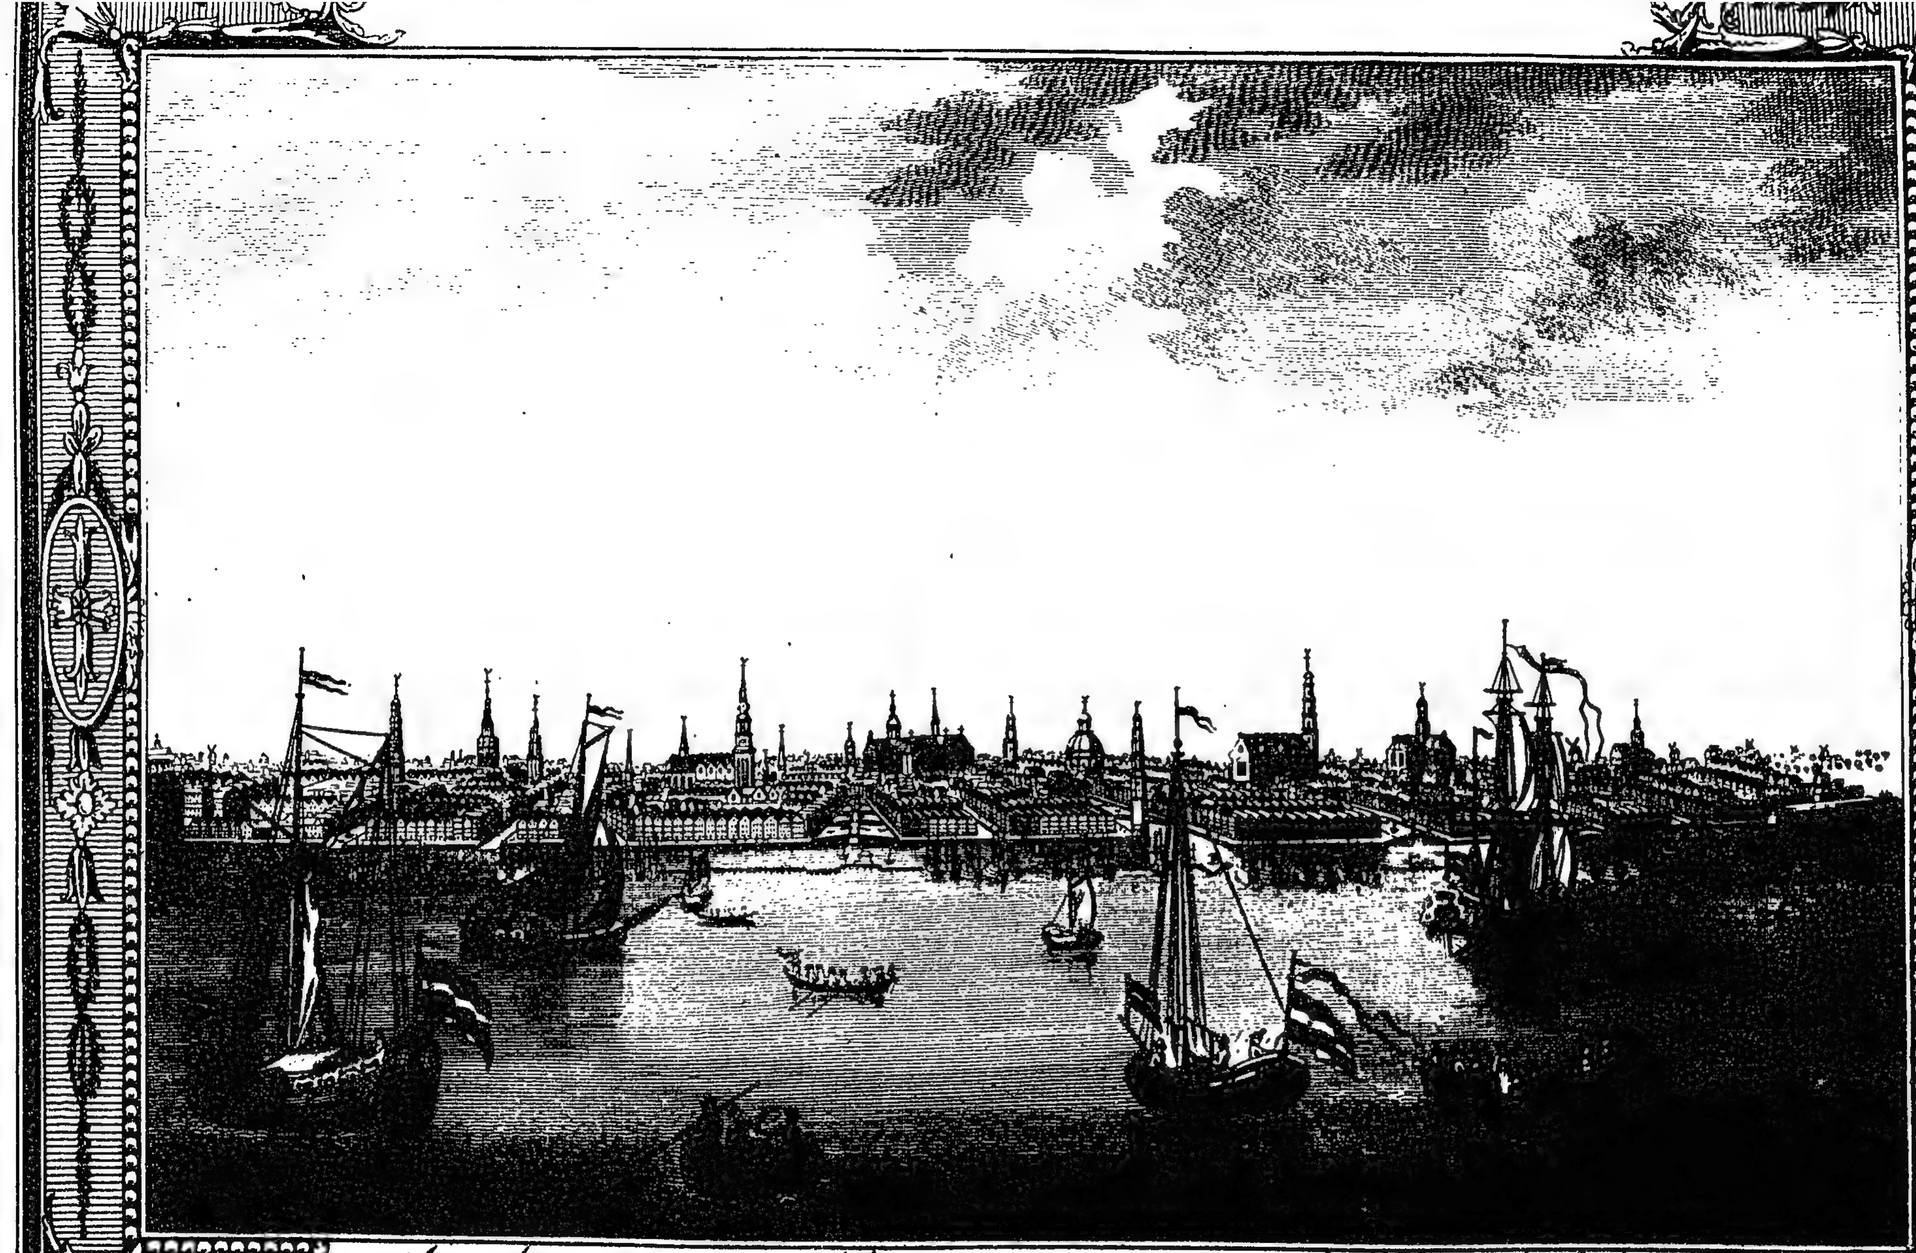
Several beautiful ſeats, and a wood cut out into delightful walks and viſtas, lie to the ſouth of the town.

3. The city of Leyden, in Latin Lugdunum Batavorum, is ſeated on the Rhine, in the fifty-ſecond degree fifteen minutes north latitude and in the fourth degree ten minutes eaſt longitude, and, next to Amſterdam, is the largeſt and fineſt city in all Holland. The ſtreets are long, broad, neat, and adorned with beautiful canals. Here are ſome fine churches belonging to the Dutch Calviniſts, with a Lutheran, an Engliſh, a French, and a Mennonite meeting: as alſo ſeveral maſs-houſes, the papiſts conſtituting the majority of the inhabitants. The univerſity founded in 1575 by William I. prince of Orange, is the largeſt and moſt ancient in all the United Netherlands, and has a valuable library.

The celebrated city of Amſterdam, or Amſteldam, is ſituated in the fifty-ſecond degree twenty minutes north latitude, and in the fourth degree ninety minutes eaſt longitude, at the influx of the Y and the Amſtel, where is a ſluice, by means of which that river continues its courſe through the town. This is one of the greateſt trading towns in Europe, and the harbour is one of the largeſt and ſafeſt; and has this advantage, that the other towns of the province can eaſily ſend their goods thither, and receive returns; and with a fair wind it is but a few hours paſſage to or from all the ports of North Holland, Frieſland, Overyſſel, and Gelderland.

The ground hereabouts is naturally marſhy, and the buildings founded on oaken piles, which occaſioned the facetious Eraſmus to ſay, that in his country vaſt multitudes of people lived on the tops of trees. The middle of the town is interſected by a great number of navigable canals, which while they conduce to the pleaſantneſs and cleanlineſs of the place, are at the ſame time a great convenience to trade.

The city of Amſterdam forms a ſemicircle on the Y, and is fortified on the land ſide with ramparts and twenty-ſix regular baſtions, and on that ſide the neighbouring country may be laid under water. On the ſide next the Y it is ſecured by a double row of piles driven into the river, projecting ſome feet above the ſurface; but in ſome places openings are left for ſhips to paſs in and out, and in the night theſe openings are fenced with a boom. The Amſtel divides the town into two parts; and in 1732, when the houſes were numbered, they were found to amount to twenty-ſix thouſand eight hundred and thirty-five; but the inhabitants do not exceed two hundred thouſand.



This city has ſeveral very fine gates, particularly that of Harlem, which is adorned on each ſide with large columns, and a lion's head on the top of each; in the middle is the city's preſent arms, and on the frieze of the inſide of the gate towards the town is the ancient coat, which was a ſhip without a rudder. On each ſide of this gate is a guard-houſe, one for the burghers, and the other for the ſoldiers of the garriſon. There are four other principal gates; before which is a bridge of ſeveral arches, with draw-bridges, and another ſtone gate, which is ſhut every night.

The ſtreets are, in general, extremely clean; but, except thoſe that have canals, they are much too narrow. They are, however, rendered leſs incommodious by the hired coaches being ſet on ſledges drawn by one horſe. Merchandiſe is alſo drawn on ſledges, which are not only the moſt uſeful vehicles for the inhabitants and their trade, but are calculated to preſerve the houſes, which, from their being built on piles, might in time be damaged in their foundations, by having a great number of wheel carriages. The principal ſtreets, or rather quays of the canals, are agreeably planted on each ſide with trees. The houſes are rather neat than elegant or commodious. The entrance of them is for the moſt part by ſteps, which riſe four or five feet from the ground; and the paſſage into the rooms, which runs very deep, is floored and pannelled with marble, which has an air of grandeur in miniature.

The town-houſe is the moſt diſtinguiſhed of all the buildings in Amſterdam. It is two hundred and eighty-two feet in front, two hundred and thirty-two deep, and one hundred and ſixteen high, excluſive of the cupola. It coſt three millions of guilders, or three hundred thouſand pounds ſterling, when money was more valuable than it is now: which will be leſs ſurpriſing, if we conſider that it ſtands upon one hundred and thirty thouſand ſtrong wooden piles. This is a very grand and uſeful building, and yet it is neither elegant nor agreeable. It contains the offices and tribunals for the execution of the laws in the ſeveral branches of the military, as well as civil government. The inſide is ſaid to be very beautifully ornamented with marble, jaſper, ſculpture, and paintings. In ſome of their vaults, or cellars, are kept the treaſures of the celebrated bank of Amſterdam; in others are confined criminals under ſentence of death, and others again ſerve as apartments for officers of ſeveral claſſes. In the upper part is an arſenal, as it is called, though it is rather a collection of old faſhioned armour and weapons. Near the arſenal is the dock, which is above five hundred feet long. The chimes of the tower are incomparable, and it commands a fine proſpect of the city and its environs, as far as the Zuyder ſea.

Among the other public buildings are the admiralty and India-houſe, which are large and beautiful. On the harbour ſtands the arſenal for military ſtores both for ſea and land-ſervice. Among ſeveral things remarkable in this magazine, is a reſervoir on the top of the houſe capable of containing one thouſand ſix hundred tons of water, which, by means of leaden pipes, may be conveyed, in caſe of fire, to ſixteen different parts of the city.

There are eleven churches of Dutch Calviniſts in this city, two of which are parochial, with two of French, two of Engliſh, one of Arminians or Remonſtrants, two of Lutherans, and three of Mennonites. The Armenian Chriſtians have likewiſe a church here; but the papiſts have a greater number of places of worſhip than all the above-mentioned ſects put together, and in particular have twenty-four very large maſs houſes. The ſynagogue of

An Accurate View *of* AMSTERDAM, *the Capital of the*
Dutch Netherlands

Lodge sculp.

A perspective View of the New Drawbridge, Canal, & Great Orphan House, at the HAGUE, a celebrated Town in Holland.

the Portugueſe Jews is a ſpacious and ſtately building, of a quadrangular form, and the inſide is extremely neat: the other Jews have alſo their diſtinct ſynagogues. The number of poor houſes is conſiderable; their incomes, and their conveniencies and cleanlineſs are worthy of admiration. Here is an hoſpital for aged men and women, conſiſting of ſeveral buildings; a new edifice for aged people of both ſexes; the diaconie for old women, which is the moſt ſtately ſtructure of them all, and in which old men alſo receive a comfortable ſupport; with a receptacle for lunatics, and ſeveral orphan-houſes, as the eleemoſynary houſe, in which are frequently two thouſand children, the diaconie orphan-houſe, the burgher orphan-houſe, &c. Beſides the above, there is in this and moſt of the conſiderable cities in Holland, a public office, where all poor travellers, that give any ſatisfactory account of themſelves, may go and take a loaf, a penny, and a paſſport, by virtue of which they are received gratis into the boats that carry paſſengers and goods from one town to another.

In Amſterdam are alſo ſome houſes of correction, as the raſp-houſe, where felons raſp Brazil wood for three, four, ſeven, ten years, or for life, according to the nature of their crimes. When they are incorrigible, and too lazy to work, they are often put for an hour or two into a dungeon, where water comes in; ſo that they muſt be continually labouring at the pump, in order to avoid being drowned. Here are alſo ſome ſpin-houſes, where proſtitutes, and other women of bad character, are kept to ſpinning. Here are officers who take up all vagabonds, and convey them directly to houſes provided for that purpoſe, where they are forced to work, every man in his own buſineſs, in proportion to his ſtrength and ability. The poor who want work, and offer themſelves, are received here. All theſe foundations, and the good police of this city, have ſuch an effect, that there are no beggars in the ſtreets.

A charitable foundation is eſtabliſhed here, which is extremely remarkable. As perſons of all nations reſort hither, many of whom have not much to ſpend, and the taverns are generally very dear, they have ſpacious edifices, where all poor ſtrangers, of both ſexes, who are obliged to make any ſtay in this city, are received, neatly lodged, and have bed, board, and waſhing, for three days and nights, during which time if any of them fall ſick, they are removed into a neighbouring hoſpital; but after the expiration of three days, they muſt quit the place, and are not allowed to return for ſix weeks, on pain of being ſeverely puniſhed for ſo doing.

There are great numbers of artificers and manufacturers in Amſterdam: beſides which, this city is alone in poſſeſſion of half the immenſe trade which the Dutch carry on to the Eaſt Indies, and governs the whole. They alſo engroſs almoſt the whole northern trade carried on by the Dutch to Norway, and the countries ſituated near the Baltic. Their commerce with Spain and the Spaniſh Weſt Indies is very great, nor is it leſs conſiderable to the Levant, Italy, and Portugal.

The city of Rotterdam ſtands fourteen miles to the ſouth-eaſt of the Hague, is in the fifty-ſecond degree ten minutes north latitude, and the fourth degree twenty-ſix minutes eaſt longitude. It is ſeated on the Maeſe, here called the Merwe, which at this place receives the Rotter, after it has taken its courſe through the city. This river is very broad, and of a depth ſufficient to admit ſhips of tolerable burden; but if they draw above fifteen feet water, they are obliged to take the way of Helvoetſluys to Rotterdam. The canals within the town are ſo deep, that the largeſt ſhips come up and take in, or deliver their cargoes at the very doors of the warehouſes: accordingly, this city, next to Amſterdam, is the place of greateſt trade, eſpecially to England and Scotland. The mouth of the Merwe is five German miles to the weſt of Rotterdam, where it gradually becomes ſhallow by the gathering of the ſands. Its houſes, in 1732, were computed at ſix thouſand ſix hundred and twenty-one.

The fineſt ſtreet in Rotterdam is called the Haaringſliet: moſt of the houſes are noble ſtone buildings. The Boomties, or Boomquays-ſtreet, extends delightfully along the Merwe, (which is here near a mile and a half in breadth) upwards of half a mile in length. Here is a row of lofty trees, and the houſes reſemble palaces; on the other ſide runs the river, which has ſhips continually ſailing in or out, or lying at anchor. This place ſerves as a mall for people of condition, who in general reſort to it.

The chief of their public buildings are the bank, the Eaſt and Weſt-India houſes, the arſenal, and the Exchange; but, among others, we muſt not omit to mention the great bridge acroſs the Morwe, in the middle of which is a fine braſs ſtatue of the celebrated Eraſmus, who was a native of this city. The firſt admiralty college of the United Provinces, under the direction of twelve commiſſioners, has its ſeat here.

In this city are four churches belonging to the Dutch, one of French, and one of Engliſh preſbyterians, with an Engliſh epiſcopal church, whoſe miniſter has one hundred pounds ſterling per annum from the king of Great Britain, beſides ſurplice fees, ſaid to amount to two hundred pounds more; there are alſo a Scots and Lutheran church, the latter of which is new and handſome. The ſynagogue of the Portugueſe Jews is a very fine ſtructure, though not ſo magnificent as that in Amſterdam.

The Hague, or Gravenhage, is a moſt beautiful place, ſituated in a very delightful country, ten miles north-weſt of Rotterdam; but, from its having neither gates nor walls, is called a village. It is, however, ſurrounded by a moat, bordered with a walk of lofty and ſhady trees, and at the avenues of the town is paſſed by means of drawbridges. The ſtreets are broad, ſeveral of them are without canals, and the houſes are, for the moſt part, extremely well-built. The number of coaches belonging to the noblemen and gentlemen, and the gay appearance in point of dreſs, give a very different idea of life here from that in the trading cities. The people here are more polite and eaſy in their behaviour, than in other parts of Holland; the moſt conſiderable perſons in Europe meeting here, as well as the aſſembly of the ſtates general, which alſo draws hither the greateſt part of the people of the firſt diſtinction in the United Provinces.

The environs of the Hague are extremely delightful; and in its neighbourhood is a fine pleaſure-garden, in imitation of that of Vauxhall; on the eaſt ſide the town is bounded by beautiful meadows; the ſouth by ſplendid ſeats; on the weſt by ſand hills along the North Sea, on which ſide is a ſtraight avenue paved with brick, and a walk for paſſengers, planted with ſeveral rows of trees leading to the village of Scheveling, which is at two miles diſtance; and on the north is a delightful wood, in which the ſtadtholder has a ſeat known by the name of the Houſe in the Wood; two miles from which is the village of Ryſwick.

The towns and places of inferior note, in South Holland, are, 1. Gouda, ſeated on the ſmall river Gow; and the Yſſel, which about five miles lower, falls into the Maeſe. It is about five miles diſtant from Schoonhoven towards the north-weſt, and ſeven from Rotterdam to the north-eaſt. 2. Gorchum, on the other ſide of the Maeſe, and on the mouth of the little river Ling, which runs through it, and falls there into the Maeſe: it is a neat, well built city, ſtrongly fortified by art and nature. 2. Hoekelen, or Heukelen, on the river Ling, ſix miles above Gorcum. 3. Aſperen, a ſmall walled town, belonging to the family of the Boetſelaars. 4. Leerdam, a ſmall city with the title of county: it ſtands on the river Ling, three miles below Aſperen to the north-weſt, and ſeven above Gorcum to the north-eaſt. The celebrated Cornelius Janſenius was born here. 5. Schiedam, on the river Schie, a ſmall, but populous city. 6. Schoonhoven, at the conflux of the Leck and Vliet, and eleven miles from Rotterdam. 7. Briel, in the iſle of Voorn, near the mouth of the Maeſe: the celebrated admiral Van Tromp was born here. The iſland on which this town ſtands is twenty miles long, and ſix broad; the air is thick, and the ſoil fruitful. 8. Goree, on a ſmall iſland of the ſame name; it is about eight miles from Briel. 9. Naorden, a ſtrongly fortified town on the Zuyder ſea. 13. Muyden, a well-fortified town at the mouth of the Vecht, on the Zuyder ſea. 11. Nieuwpoort on the Leck. 12. Gertruydenburg. And 13. Der Khindert, all belong to the houſe of Naſſau. 14. Wezep. 15. Nieuwerſluice, on the Vecht. 16. Wooerden, on the Old Rhine.

In North Holland, the principal places are, 1. Monikendam, on the Zuyder ſea, about eight miles diſtant from Amſterdam to the north-eaſt. 2. Edam, near the Zuyder ſea. 3. Alkmaer, twenty-three miles north of Amſterdam: this is a beautiful village and pleaſant town, ſurrounded with gardens, walks, and meadows. 4. Hoorn, on a bay of the Zuyder ſea, twelve miles from Alkmaer to the eaſt, and ſeventeen from Amſterdam to the north: it is a pleaſant, rich, and large town, encompaſſed with ſo many dikes and canals, that it is reckoned impregnable. 5. Enchuyſen, on the Zuyder ſea, eleven miles from Hoorn to the north-eaſt, and twenty three from Alkmaer towards the eaſt: this is the firſt town that revolted from Spain, after the taking of Briel by the confederates. 6. Medenblick, on the Zuyder ſea, ſeven miles from Enchuyſen:

ſon; the neighbouring country abounds in excellent paſtures, where are bred a prodigious number of cattle. 7. Schagen, fourteen miles to the weſt of Medenblick. 8. Egmond, ſix miles from Alkmaer to the weſt. 9. Beverwick, ſeven miles farther to the ſouth of Egmont.

10. Broek is a large and handſome village of North Holland. The houſes are all built of boards; they ſeldom exceed one ſtory, and the roofs are tiled. The village is watered by canals, which are kept with the greateſt care, and all the ſtreets paved with bricks, which in ſome places are diſpoſed in the form of flowers, and are frequently waſhed. That theſe ornaments may not be defaced, or their cleanlineſs interrupted, the ſtreets are deſignedly made too narrow for carriages to paſs through. The cattle, inſtead of being admitted into the village, are kept by the meaner ſort of peaſants, who dwell among the paſtures, and all paſſengers muſt put up at the inns without the village. Not only the wooden furniture in the houſes, but the very broomſticks are painted, as are alſo the gates and rails in the meadows. The inhabitants either trade, or ſubſiſt on their eſtates, and among the latter are frequently many merchants, and tradeſmen of Amſterdam, who retire hither to enjoy in tranquillity the fortunes they have acquired by their induſtry.

A row of iſlands lie acroſs the mouth of the Zuyder ſea; the firſt of which, named the Texel, is disjoined from the north cape of North Holland, by a very narrow channel; nor are the diſtances between the reſt much larger.

The Texel is defended from the ſea by ſand-hills, and ſtrong banks; is about eight miles long, and five broad. This iſland contains ſeveral fine villages, and a large town on the eaſt ſide, called Bunk, which enjoys the privileges of a city. The inhabitants apply themſelves to agriculture, and herring-fiſhing; and the ſtates, becauſe of the importance of this place, which lies at the mouth of the Zuyder ſea; have built a ſtrong fortreſs here, where they keep always a good garriſon. Moſt of the ſoil is applied to feed ſheep, of which they have large flocks; and the cheeſe made of their milk vies with the Parmeſan.

The iſland of Flieland, or Vlieland, lies towards the north-eaſt of the Texel, and is about nine miles long, and but two broad: it has only two ſmall villages.

North-eaſt of Flieland lies Schelling, or Der Schelling, which is about ten miles long, and three broad. It has two villages with churches, and three without: the chief of them, containing above one thouſand houſes, was burnt, with one hundred merchant ſhips, by Sir Robert Holmes, with an Engliſh ſquadron, in 1666.

Theſe iſlands lying along the mouth of the Zuyder ſea, do, with ſeveral large banks of ſand, break the rage of the ocean, and form two good harbours at the Texel and Vlie, the firſt being a noted ſtation for ſhips bound to the ſouth, and the other for thoſe bound northward.

A number of little iſlands, called the Wierengen, from the great quantity of ſea-weed called Wier, lie more to the ſouth, on the coaſt of North Holland: the chief of them is five miles long and two broad, has ſeveral good villages, a rich ſoil, and their flocks of ſheep are very numerous.

II. The province of Zealand has Holland to the north, Flanders to the ſouth, Brabant to the eaſt, and the German ocean to the weſt. It conſiſts of iſlands, is guarded againſt the ſea by dykes, has a fruitful ſoil, but is without fuel, except what England and Scotland ſupply. The aſſembly of the ſtates conſiſts of ſeven members, is held at Middleburgh, and has the prince of Orange for its preſident. To the aſſembly of the ſtates-general, Zealand ſends four deputies, who hold their office for life. Two high courts of juſtice, a college of admiralty, and a chamber of accompts, are the principal tribunals. The clergy are divided into four claſſes, and make together ſixty-three miniſters. The province is populous and wealthy, but the air is not wholſome. Sheep are numerous, and the wool fine, and fiſh may be had in great plenty. The principal places in Zealand are,

1. Middleburg, the capital of Walcheren, and of the whole province, is a large, handſome, rich, and ſtrong town, which ſtands nearly in the centre of the iſland, to which ſituation it owes its name. A canal a mile and a half in length, affords this city a communication with the Weſt Scheld, and is capable of receiving the largeſt ſhips. Middleburg is fortified with a wall, ſtrengthened with thirteen baſtions. Here the ſtates of the province hold their meetings, as alſo the deputies who aſſemble in St. Nicholas's abbey. It is likewiſe the ſeat of the admiralty college, the mint, and the chamber of accompts.

Several fine ſquares and ſtately public buildings adorn this city, particularly the town-houſe, which is a noble pile, with a very high tower and clock, which laſt coſt an hundred and fifty thouſand guilders. It contains ſeven Calviniſt churches, with an academy, an Engliſh, French, Lutheran, Mennonite, and Popiſh church, and a Jewiſh ſynagogue. It is a place of great trade, particularly in wines.

2. Fluſhing, in Dutch Vliſſingeu, is a well-fortified town at the mouth of the Hondt, or Weſtern Scheld, and defends not only the paſſage into that river, but alſo that to the other iſles of Zealand, and even into Flanders by ſea. It lies eight miles to the ſouth of Middleburg. Its harbour, which is large and ſecure, lies between two moles, or dykes, and on the ſouth-eaſt of the iſle of Walcheren, and two canals. The ſea runs quite up to the other end of the town; ſo that loaded veſſels come up to the very doors of the merchants. The houſes are in general well-built, and, beſides other fine ſtructures, the town-houſe is a magnificent and regular pile. In the town are three churches of Dutch Calviniſts, one of French, one of Engliſh, and one of Mennonites.

3. Weſt Capelle, lies on the weſtern coaſt of the iſland, and is famous for the maritime laws uſed in the Seven Provinces, and called by its name. 4. Domburg, about ſix miles to the north-weſt of Middleburg, it enjoys large privileges. 5. Rammekens, four miles diſtant from Fluſhing to the eaſt, and as many from Middleburg to the ſouth, is a ſtrong fort, built by Mary queen of Hungary, and governeſs of the Low Countries, for Charles V. This was alſo one of the cautionary towns given to queen Elizabeth. 6. Arnemuydon, originally ſituated near the mouth of the Arne. 7. Hoak, a fort which commands the Veer Gat.

8. Veer, or Teer Veer, four miles from Middleburg, is well-fortified, and has a good trade, eſpecially to Scotland, the natives of which enjoy particular privileges here. The arſenal is the beſt furniſhed in the province, and the harbour a very good one. The Calviniſts alone are allowed the public exerciſe of their religion in this town; whence the Veres, antiently earls of Oxford, are ſaid to have derived both their origin and name.

South Beveland is the pleaſanteſt of all the Zealand iſlands, and contains the town of Ter-Goes, on the northern part of the iſland, not far from Eaſt Scheld. This is the only town in the iſland that ſends deputies to the ſtates: it is ſmall, but neatly built, ſtrongly fortified, and carries on a good trade.

The town of Monſter, or Borſelen, belongs to the Borſelen family, and is built near a place where a town formerly ſtood, which was deſtroyed by an inundation in the year 1732.

Kortgene, a ſmall village in North-Beveland, is the only place worth mentioning there.

The iſland of Schowen is ſeventeen miles long, about eight broad, tolerably fertile, has many rich farms and gentlemen's ſeats, and contains the town of Zirkſee, thirteen miles from Middleburg, which ſends deputies to the ſtates; and Broniverſhaven, a ſmall ſea-port town.

Duiveland iſle took its name from the great number of duives, or pigeons, which formerly abounded in it: there are only a few villages in it.

The iſland of Tholen is eight miles long, and four broad, but does not contain any place worth naming, except Tholen, which ſtands on the Earidracht, is well fortified, has a toll-houſe, and ſends deputies to the ſtates.

The iſland of St. Philip has only one village of the ſame name, which is not very conſiderable.

III. The province of Frieſland is bounded by the Flie to the weſt, by Groningen and Overyſſel to the eaſt, by the German ocean to the north, and by the Zuyder ſea to the ſouth. It is thirty-two miles long, twenty-ſeven broad, has a ſoil and air reſembling thoſe of Holland, rich paſtures that feed large quantities of cattle, ſheep, horſes, &c. and in the higher grounds are good corn lands. It produces turf and wood, has many lakes, and is guarded from the ſea by conſiderable dykes. Here are many canals which facilitate commerce; the inhabitants are chiefly Anabaptiſts; their language approaches the neareſt to the old Engliſh of any other in Europe. Several courts and chambers belong to this province, and the Calviniſt miniſters are two hundred and ſeven in number, divided into ſix claſſes, and holding ſynods annually and alternately. The aſſembly of the ſtates here conſiſts of about eighty-two perſons, who ſend five deputies to the aſſembly of the ſtates general. The linen manufactured here is the fineſt perhaps in the univerſe, and the woollen is much eſteemed.

1. Leuwarden, the capital of this province, is thirty-

eight

eight miles distance from Campen to the north, twenty-six from Groeningen to the west, about sixty from Amsterdam to the north-east, and seven from the German ocean to the south. It is the largest, richest, best built, and most populous of the province, though not so ancient as some others: it is the seat of the provincial states and the sovereign council, and the residence of the stadtholder. The streets are clean, the houses splendid, the bridges well paved, and the gardens pleasant. The churches, the governor's palace, that where the states meet, and the houses of the noblemen are fine structures. The figure of the city is an oblong square, encompassed with strong ramparts, a broad deep ditch, five bulwarks of earth, with a ditch each. It stands in a fruitful soil; and by its navigable canals, the largest of which runs to the ocean, they have a good trade with Hamburg, Bremen, Embden, and Holland; and are plentifully supplied with necessaries from the neighbouring countries. They have two hospitals; and the city is governed by good laws under three burgomasters, and nine aldermen.

2. The town of Francker, which is about ten miles from Leuwarden, and four from the Zuyder sea, is neither large nor fortified, but has an university, which was opened in the year 1585, and a physic-garden. The salaries of the professors are paid out of the revenues of the old monasteries; and the students, neither in this, nor the other universities of the provinces, pay any tax for their wine and beer. They make here great numbers of fine blue glazed tiles and bricks.

3. Harlingen, which is the largest town in the province next to Leuwarden, stands on the coast of the Zuyder sea, at the mouth of a large canal. The town is pretty well fortified towards the land, and the adjacent country may be easily laid under water. Its manufactures are salt, bricks, and tiles. The admiralty college of Friesland has its seat here.

4. The town of Dokkum, about eleven miles from Leuwarden, and about four or five from the north sea, with which it has a communication by a canal, called Dokkum Diep, through which the largest ships may pass at high water. A great deal of salt is made in this town, which stands in a fruitful country, abounding in corn, pasture, villages, and gentlemens seats.

5. The small town of Staveren, which stands on the banks of the Zuyder sea, within three leagues of West Friesland, was formerly a place of great trade, which hath much dwindled of late years. 6. Sneck, situated on a lake of the same name, which supplies it with plenty of fish, both for consumption and sale. 7. Stoten, a small town, almost surrounded with lakes. 8. Workum, a small town near the Zuyder sea. 9. Ylst, which sends deputies to the states. 10. Makkum. 11. Rinlopen, which has a harbour on the Zuyder sea.

12. The village of Molkweren, which is situated in a marshy ground. They speak here a particular language, which none of the other inhabitants of the country understand. It is a remainder, or dialect of the ancient Saxon; so that the people of the village, and the English, understand each other pretty well. The houses here are placed so irregular, that when a stranger comes into this village, he must have a guide to shew him the right way.

On the coast of Friesland are two little islands, called Ameland and Schiermonnigkoog, the former of which belongs to the prince of Orange, as a free, independent lordship. At Wykeb village, in the quarter of the Seven Forests, are interred the remains of the celebrated general Coehorn.

SECT. III.

Describing the Provinces of GRONINGEN, OVERYSSEL, GELDERLAND, and UTRECHT, with the Country of DREANTHE, the Generalité Lands, &c. with a particular Description of their respective Cities, Towns, and Rivers; also of the Trade, Manufactures, &c. of the Inhabitants.

IV. THE province of Groningen is bounded, on the east, by Munster; on the west, by Friesland; on the south, by Dreanthe; and on the north, by the German ocean. It is forty-seven miles long, and the greatest breadth is about thirty-three miles. The number of canals and dykes are very considerable; and the principal river is the Hunse. The states consist of the deputies; of the town of Groningen, and of the neighbouring country six deputies are sent to the states-general: the number of established clergy are one hundred and sixty ministers, divided into seven classes. The air and soil resemble those of Friesland.

The principal places are, 1. Groningen, the capital, twenty-seven miles from Leuwarden, fifty-eight from Deventer, twenty-four from Embden, eighty from Amsterdam, and twelve from the nearest shore of the German ocean, at the conflux of several rivulets, which form the Hunse and Fivel. Ships of considerable burden can come up to the city, in consequence of which it enjoys a pretty good trade. It was formerly very strong, but its fortifications are now much neglected. The university here was founded in 1615, and is well endowed out of the revenues of the antient monasteries. The town, which was formerly one of the Hanse, and has still great privileges, is large and populous, being the seat of the high colleges, and containing three spacious market-places, and twenty-seven streets, in which are many fine houses, besides churches, and other public structures. By the river Fivel, and the Eems, it has a communication with Westphalia. In 1672 it made such a gallant resistance against the bishop of Munster, that he is said to have lost ten thousand men before it. A considerable district, called the Gorecht, is under the jurisdiction of this city. Rodolphus Agricola, and Vesalius, two of the most learned men of the age in which they lived, were born here.

2. The town of Dam, or Damme, stands on the river, or channel, called Damsterdiep, about three miles from the mouth of the Eems to the south, and thirteen from Groningen to the south-west. Though this is an open place, it has all the privileges of a city, and sends deputies to the states of the province. It has suffered very much of late by inundations. The Imperialists, it is said, took this city by storm in 1536, when those of Gelderland were lords of it; and that it was agreed, that the walls should never be re-built, nor the town fortified.

3. The strong fortress of Winschoten stands near the Dollert, sixteen miles distant from Groningen to the south-east. It was taken and plundered by the troops of Munster in 1674.

4. The town of Delfzyl stands on the Damster-Diep, otherwise called Fivel, three miles from Dam to the north-east, at the mouth of the river Eems. It has a very good harbour, which, for situation, and other advantages, exceeds that of Embden. It is a place of such importance, that it was always well fortified by those who were in possession of it. The duke of Alva designed to have built a good city here, but was prevented by the wars, to which his bloody government gave rise. It is a strong place, surrounded with good ramparts, and seven bastions, and defended by a citadel encompassed by broad and deep ditches.

5. Twenty-eight miles from Groningen to the south-east stands Bortanger fort, in the middle of a large marsh, which is almost impassable, on the borders of the bishopric of Munster, and the county of Embden.

V. The province of Overyssel is bounded, on the east, by the county of Bentheim, and the bishopric of Munster; on the west by the Zuyder sea; on the south by Zutphen, and on the north by Friesland and Dreanthe. It has the name of Overyssel from its situation in respect of Holland, Utrecht, and part of Gelderland. Its greatest extent from north to south, including the territory of Dreanthe, is about fifty-seven miles, and from east to west about forty-three. The soil is in general far inferior to that of the other provinces, being full of sand, heaths, and marshes; yet in some places they have good corn lands and pasture. The states consist of the nobility, and the towns of Deventer, Campen, and Zwol, in which their annual assemblies are alternately held. Here are high tribunals and colleges, answering to those of the other provinces; and five deputies are commonly sent from hence to the assembly of the states-general. The clergy of the established religion, who are divided into four classes, making in all eighty-four ministers, hold their annual synods alternately in the chief towns. This province was long subject to the bishops of Utrecht, till bishop Henry of Bavaria transferred it to Charles V. and in 1580, it acceded to the union of Utrecht.

The principal places are, 1. Deventer, in the quarter of Salland, on the Yssel, over which it has a bridge of boats, eight miles from Zutphen, forty-four from Utrecht, and about eighteen from the Zuyder sea. This was formerly an imperial and Hanse town, and also, for a short time, a bishop's see. It is now a neat, populous, well built, and well fortified city, containing several churches belonging to different sects, a magnificent gymnasium, a mint,

and an iron foundery: five annual fairs are held here. They have a good trade, and along the river ſide is a fine quay, adorned with rows of trees.

2. The town of Campen, on the Yſſel, is ſtrong from its ſituation, and may be eaſily laid under water. This place was once a free imperial city, has ſtill a mint, but its trade is greatly decayed. The wooden bridge is a curious ſtructure, ſtanding upon vaſt piles. 3. Zwol, though not chief in dignity, is the handſomeſt and moſt wealthy town in the province, ſixteen miles north of Deventer. It is ſtrongly fortified, contains ſeveral churches and hoſpitals, an arſenal, a college, and a granary. The provincial ſtates meet here, at Deventer, and Campen alternately; and the celebrated Thomas à Kempis was prior of a monaſtery near this town. 4. Woollenhoven, on the Zuyder ſea. 5. Hoſſelt, a fortified town on the Blackwater. 6. Genemunden. 7. Amels, famed for its manufactures of fine linen.

VI. The province of Gelderland is called North-Gelderland, to diſtinguiſh it from Upper Gelderland, or Gelders, belonging to the king of Pruſſia. It is bounded, on the eaſt, by Munſter and Cleves; on the north by Overyſſell and the Zuyder ſea; on the ſouth by the Maeſe, which ſeparates it from Brabant; and, on the weſt, by Utrecht and Holland. It is forty-ſeven miles from north to ſouth, and upwards of forty from eaſt to weſt. The land lies higher, and the air is much clearer than in the maritime provinces, and the ſoil in moſt parts is fruitful. Gelderland is divided into three diſtricts, viz. Nimeguen, Zutphen and Arnheim, each of which has its diets and ſtates. Thoſe for the province are held twice a year, and nineteen deputies are ſent to the ſtates-general. Here are two hundred and eighty-five Calviniſt miniſters, four Lutheran, fourteen Roman Catholic, and three anabaptiſt congregations. This province is watered by the Rhine, and its three branches, the Yſſel, Leck, and Waal, ſeveral canals, &c.

The moſt remarkable places in the diſtrict of Nimeguen are, 1. Nimeguen, which ſtands on the Waal, nine miles from Cleves, and fifty-two from Amſterdam, and is the capital of the quarter to which it gives name. It is a large antient city, ſtrongly fortified, and pleaſantly ſituated where the Oppidum Batavorum is ſuppoſed by ſome to have ſtood. It was formerly an Imperial or Hanſe town. On the eaſt ſide of it ſtands an old caſtle, called the Falkenhof, where are pleaſant walks of lime-trees, and it contains ſeveral churches belonging to different ſects. The provincial ſtates, and thoſe of the diſtrict, aſſemble in the ſtadthouſe. This city carries on a good trade with the duchy of Cleves, and makes great profit by its white beer, which is much eſteemed throughout the provinces. In the town-houſe is kept the ſword with which the counts Egmont and Hoorn were beheaded by the duke of Alva's order. The turgrave, who reſides in the caſtle, is one of the chief nobles of the provinces, and preſides in its diets. In the higher part of the city there are three large ponds, fed from hidden ſprings; and through the whole there are many deep wells, which are obſerved to riſe and fall, as does the Maeſe, ſix miles diſtant from this city; whereas the Waal runs cloſe by it, but in a valley, towards which the deſcent is conſiderable.

2. The town of Bommel (the capital and only conſiderable place of an iſland of the ſame name, otherwiſe called Bommel-waert) ſtands on the river Waal, ten miles diſtant from Cuylenburg to the ſouth, and eight from Bolduc to the north. It is a pleaſant watered city, with broad and regular ſtreets. It is very ſtrong, being fortified with good curtains, baſtions, and towers, a double wall and double ditches. It ſtands in a low marſhy ground, which can be overflowed from the Waal and Maeſe. The town chuſe their own magiſtrates, under whoſe juriſdiction is the whole iſland of Bommel, in which are many good villages, and which is about thirteen miles long, and four miles broad, between the Waal and the Maeſe. This place ſurrendered to the French in 1672, who ſpent fourteen days in deſtroying its fortifications, carried off the artillery and ammunition, and obliged the town to pay thirty-ſix thouſand guilders to prevent its being burnt.

3. The ſmall city of Batenburg is ſituated on the northern bank of the Maeſe, twelve miles diſtant from Nimeguen towards the ſouth-weſt. It is the chief place of a little country or diſtrict, called Maas and Waal, becauſe it lies between theſe two rivers near their conflux. The town has the title of barony; and two brothers, lords of Batenburg, were beheaded at Bruſſels, in the year 1569, by the duke of Alva's orders. From that family the counts of Hoorn were alſo deſcended.

4. In this diſtrict is alſo the town of Tiel on the Waal, ſeventeen miles weſt of Nimeguen; it is ſtill populous, and hath a tolerable trade, but is much decayed from its priſtine ſplendor.

The village of Panderen is in the bailliage of Upper Betrewe, where begins the new canal, through which the Rhine at preſent paſſes. In the ſame bailliage ſtood formerly the Schenken-Schanze, a very ſtrong and ſpacious fort, built in 1586 by general Martin Schenk; and the Tolhaus, a caſtle where the dukes of Gelderland frequently reſided, and where veſſels ſtill pay toll, as they formerly did. The Betrewe is that tract of land lying between the Rhine and the Waal. It is called the Upper and Lower, or Eaſtern and Weſtern Betrewe, and divided into two bailliages.

In the ſecond diſtrict is the town of Zutphen, on the right bank of the Yſſel, giving name to a country, which conſtitutes another of the three quarters into which the province is divided. This place is large, and ſtrongly fortified, and has a bridge over the Yſſel, which divides the town into two parts. Here are ſeveral churches belonging to different ſects, with hoſpitals for the aged, ſick, orphans, and ſtrangers, and a gymnaſium. There are pleaſant walks about the town, eſpecially on the ramparts. The citizens are noted for their courteſy and politeneſs, to which the many gentlemen who live here greatly contribute. The great Sir Philip Sidney died of the wounds he received at the ſiege of this city; and Gerard Van Zutphen, maſter to the famous Thomas a Kempis, was born here. The whole neighbouring country may be laid under water by means of Borkel, a river which here joins the Yſſel.

In this diſtrict are alſo, Breedevoort on the borders of Munſter and Heerenburg, a town which gives name to a lordſhip; Doeſburg, a fortified town, at the conflux of the Old and New Yſſel; Deutichen, on the Old Yſſel, Lochem on the Borkel, Grol on the Slink, and Borkelo, on the Borkelo.

The third diſtrict of this province, called Arnheim, contains a town of the ſame name, which is not only the capital of this diſtrict, but of the whole province. It ſtands on the Rhine, at the foot of the Veluwe hills, ſix miles from Nimeguen, and forty-eight from Amſterdam, and is ſtrongly fortified. There is an antient palace, in which the dukes of Gelderland, and after them the ſtadtholders of the province, uſed to keep their court. The walls, being delightfully planted with lime-trees, make a pleaſant walk. In the great church are the monuments of ſeveral counts and dukes of Gelderland; and near the city is the village of Ooſterbeck, where the emperor Henry III. was born in 1627. This town has a commodious harbour, and is the ſeat of the ſupreme council of Gelderland, and the chamber of accounts. In that tract of land, called the Veluwe, is the lordſhip of Loo, belonging to the prince of Orange, and has a beautiful ſeat on it.

The other places of note in this diſtrict are, 1. Harderwyk, ſituated on the Zuyder ſea, twenty-ſix miles from Arnheim, and thirty from Amſterdam. Here is an univerſity, which, till 1648, was only a famous ſchool. The trade of the town is conſiderable, eſpecially in fiſh, of which its red herrings are much admired. The ſteeple of St. Mary's church, a moſt ſtately ſtructure, is ſo high, that it ſerves for a land-mark, being ſeen at a great diſtance, both by ſea and land. The provincial mint is in the city, the fortifications of which are in the antient manner. The celebrated lawyer Gerardus Voetius is ſaid to have been a native of this place. Prodigious quantities of blue-berries are gathered in the neighbouring woods, and carried to Amſterdam, and other towns. 2. Elburga, a ſmall town on the Zuyder ſea; whoſe ramparts, planted with lime-trees, form a delightful walk. Its inhabitants ſubſiſt chiefly by fiſhing, and catching wild ducks. 3. Wageningen, a ſmall town on the Rhine, with a commodious harbour: tobacco is much cultivated in the neighbourhood.

VII. The province of Utrecht is wholly ſurrounded by Holland and Gelderland, except a ſmall part which borders on the Zuyder ſea. The length is about thirty-two miles, the breadth about twenty. This country enjoys a good air, and in moſt parts the ſoil is fruitful. The rivers are, the Rhine, Leck, Vecht, and ſome ſmaller ſtreams. This province is divided into four quarters.

There are five cities in the province of Utrecht, and ſixty-five towns and villages. Its ſtates are compoſed of the clergy, the nobility, and the towns: indeed the former are merely nominal, and conſiſt of nobles and citizens of

the Calviniſt religion, and not of eccleſiaſtics. They are, however, elected from the chapters of the five churches at Utrecht, and ſtill in the aſſembly of the ſtates repreſent the antient clergy of the country. The college of the deputies of this province conſiſts of twelve members, each claſs of the ſtates ſending four commiſſioners, and the provincial court of juſtice is compoſed of a preſident, ſix ordinary and three extraordinary aſſeſſors.

The chief city, Utrecht, in latin Ultrajectum, and the capital of the province, ſtands in a delightful corn country, in the fifty-ſecond degree ten minutes north latitude, and in the fifth degree ſeven minutes eaſt longitude. It is ſituated on the river Rhine, which here divides itſelf into two branches, called the Old and New Rhine, both of which traverſe the city through its whole length, after which they unite again. This city is pretty large, it being about an hour and a half's walk in circuit, and is alſo very populous, though it has no other defence than a wall on the old canal. The Dutch Calviniſts have ſeven churches, the principal of which is the cathedral, dedicated to St. Martin, and ſtands in the centre of the city; but only conſiſts of the choir, the greateſt part of the old cathedral being deſtroyed by a terrible ſtorm in 1674, ſince which the tower has always remained ſeparate from the body of the church. The chapter belonging to this cathedral is compoſed of forty members, who purchaſe their places, for which they generally pay between ſix and ſeven thouſand guilders. The other chapter churches in this city are the Old Minſter, or that of St. Salvator, St. Mary's, St. Peter's, and St. John's. Over the church is a muſeum, which contains a variety of curioſities and antiquities. St. Peter's church has been aſſigned to the French Calviniſts, who conſtitute a numerous congregation. The Lutherans, the Remonſtrants, and the Mennonites, have each of them a church, whilſt the papiſts meet in houſes, of which they have ſeveral appropriated for that purpoſe. In this city alſo reſides the chief of the Janſeniſts in the Netherlands, who ſtiles himſelf archbiſhop of Utrecht, and is elected by the nominal chapter, which, including the dean, conſiſts of eight canons. The ſtates of the province meet in a building, called the ſtates chamber, which is alſo the ſeat of the other provincial colleges.

The memorable union was formed in this city between the Seven United Provinces, in the year 1579. In 1672 the French took this city without the leaſt reſiſtance, and in 1712 a congreſs of plenipotentiaries was opened here from all the ſtates in Europe, which terminated in a general peace about two years afterwards.

Amersfort, or Amersfoort, is ſituated fourteen miles to the north-eaſt of Utrecht, on the river Eems, which has its riſe in theſe parts from the confluence of ſeveral rivulets, and firſt receives that name here, where it becomes navigable. It is a ſtrong town, ſituated at the foot of a hill, in a pleaſant and fertile country. The buildings, particularly thoſe of the old town, are very neat. It has three churches, one of which is a large and ſtately ſtructure. The hoſpitals of Amersfort reſemble thoſe of the larger cities; and here is a public ſchool, where ſeveral perſons of eminence have had their education.

The town of Rhenen is ſituated on the Rhine, about ſeven miles above Wick-te-Overſtede to the eaſt, nineteen from Utrecht towards the ſouth-eaſt, and thirteen from Amersfort to the ſouth. Montfort, the chief place of a little diſtrict, is ſituated on the little river Yſſel, near the borders of the province of Holland, ten miles above Gauda to the eaſt, ſix from Utrecht towards the ſouth-weſt, and three from Oude-water to the ſouth-eaſt.

The country of Dreanthe is bounded, on the eaſt, by Munſter; on the north by Groningen; on the weſt by Frieſland, and on the ſouth by Bentheim and Overyſſel. It is tolerably fertile; the ſtates conſiſt of the nobles and freeholders; the aſſembly is annually held at Aſſen, but no deputies are ſent from thence to the ſtates-general. Aſſen, the capital, is ſmall, well built, and the ſeat of the high colleges; and Coeverden, though a ſmall town, is very ſtrongly fortified.

By the Generalité Lands are meant thoſe parts of the Netherlands that appertain to the united provinces in general. The hereditary ſtadtholder is governor of them all. The high tribunals are held at the Hague, Middleburg, and Veulo, and the eſtabliſhed religion is Calviniſm. Theſe lands conſiſt of part of the duchies of Brabant and Limburg, of the upper quarter of Gelderland, and part of Flanders.

The principal places in Brabant, belonging to the ſtates, are the following: 1. Bois le Duc, called in Latin Silva Ducis: it is ſituated at the confluence of the rivers Dommel and Aa, which, after their junction, are called the Dieſt. At about an hour's diſtance from hence, this river loſes itſelf in the Maeſe. The city is pretty large, and interſected by many canals; it has three churches belonging to the Dutch Calviniſts, with one of the French, one of Lutherans, and ten maſs-houſes; the majority of the people being of the Romiſh religion. The trade and ſhipping of Bois le Duc are conſiderable.

2. Twenty miles to the weſt of Breda is Bergen-op-zoom, or Bergen upon the Border, the capital of a marquiſate of the ſame name; through it runs the rivulet or rather moat of Zoom. The ſouth ſide of the town ſtands on a ſmall eminence. It has been long celebrated as a ſtrong fortreſs; and its wall, which is about an hour's walk in circuit, is defended by five baſtions and ten horn-works. Beſides the other fortifications on the north ſide, a ſtrong line was drawn there in 1727, that has a communication with Moermont, Pinſen, and Rover forts, and the South or Water fort of five baſtions commands the entrances of the old and new harbour. The adjacent country may alſo be laid under water; and as long as Zealand continues clear of enemies, ſupplies and reinforcements may be thrown into it by means of the Scheld. It contains about eleven hundred houſes, with an old palace, called the Hof, that is at preſent the chamber of accounts; and the feudal court belonging to the marquiſate, are kept in it. Here is a Dutch Calviniſt church, and another divided into two partitions, which is aſſigned to the French Calviniſts and the Lutherans. The papiſts have likewiſe a chapel. This town was firſt walled in 1287. The ſtates general keep a good garriſon here, and the governor is always a perſon of diſtinguiſhed reputation.

3. Breda, the capital of the barony of the ſame name, is ſeated on the river Merk, which at this place receives the Aa. The latter of theſe two ſtreams being a little before increaſed by the Byloop, is here rendered navigable, and has a communication with the German ocean. Its fortifications, without very great improvements, are unable to ſtand a long ſiege, though the city itſelf is partly covered by a moraſs, and, by means of the Merk and Aa, the inhabitants are able to lay a part of the country under water. It conſiſts of about fifteen hundred houſes, is well built, and contains a regular caſtle encompaſſed with a moat; and fronting the entrance is a ſquare delightfully planted with trees. The great church, now in the hands of the Proteſtants, has ſeveral very fine monuments, and a handſome ſpire three hundred and ſixty-two feet high: the Dutch have alſo another church, and the French have one, as have likewiſe the Lutherans; but though the Roman catholics are more numerous, they are allowed only three chapels. The town-houſe is a large ſtructure, and there are four ſpacious market-places; but the commerce and woollen manufactures of this town are greatly declined.

4. The town of Maeſtricht, on the Maeſe, is ſituated twelve miles from Liege, and forty-eight from Bruſſels. The ſtates-general, to whom it was yielded up by the treaty of Munſter, are ſovereigns of it, jointly with the biſhop of Liege, as having ſucceeded to the rights of the dukes of Brabant. Here are many popiſh convents, and churches belonging to different ſects, and a ſtrong garriſon is maintained by the ſtates; the magiſtracy conſiſts partly of Calviniſts, and partly of Roman catholics, and the latter muſt be natives of the biſhopric of Liege; in a hill in the neighbourhood is a horizontal quarry full of long winding paſſages, in which, in time of war, the country people ſecure their cattle and valuable effects; forty thouſand men, it is ſaid, might lodge in it with great convenience. The town contains about three thouſand houſes, and thirteen thouſand inhabitants, beſides the garriſon. Here is a Calviniſt gymnaſium and grammar-ſchool, the maſters and profeſſors of which are paid by the ſtates; and, beſides other buildings, here is alſo a large college, a commandery of the teutonic order, a ſtately town-houſe, and governor's houſe.

The part of the duchy of Linſburg, which belongs to the ſtates-general, contains, 1. Valkenburg, the Falcon's mountain, or caſtle, which ſtands on the river Geul, and though but a ſmall open place, is the capital of a country. 2. Dalem, otherwiſe called St. Gravendal, a ſmall town on the river Berwine. The former of theſe places is exempted from all taxes by a particular privilege.

The ſtates general have the following places in the upper part of Gelderland, viz.

3. Venlo has its name from its ſituation among low meadows, which is the meaning of its name in Dutch. It ſtands on the right bank of the Maeſe, ſeven miles diſtant from Geldre to the ſouth, and ſeventeen from Ruremonde to the north. It is not well enough fortified to be able to hold out a long ſiege. Its rampart is about three miles in compaſs, and on the ſide of the Maeſe it conſiſts of a wall, formerly flanked with ſeveral towers, moſt of which have been demoliſhed.

The city of Venlo is of a ſquare figure, and pretty large, having two ſquares: the town-houſe ſtands in one, where they alſo keep a market three times a week; the other is the parade, and place of arms. There are between eight and nine hundred houſes here, and about four thouſand inhabitants, moſt of whom are Roman catholics, who enjoy the free and public exerciſe of their religion. The magiſtracy is compoſed of a ſchout, a burgomaſter, ſeven ſcheepen, three counſellors, and two ſecretaries. The burgo-maſter is changed annually by the ſtates general, and choſen among the ſcheepen from a nomination of three preſented to them by the counſellors.

4. Stevenſweert is a ſtrong fortreſs with ſeven baſtions. It ſtands in an iſland of the Maeſe, near the borders of the duchy of Cleves and the biſhoprick of Liege, three miles below Maeſyck, and nine above Ruremonde.

The following are alſo the principal places, of which the ſtates general are poſſeſſed in Flanders, viz.

1. Hulſt, a ſtrong fortified town, ſituated in a fruitful plain, which may be laid under water. The commodity it chiefly deals in is corn, having a canal, or harbour, which communicates with the Weſt Scheld. The forts and lines by which it is ſurrounded, render the approaches to it very difficult; but the air is none of the beſt, and moſt of the inhabitants are papiſts. It gives name to a bailliage of conſiderable extent. 2. Sluys, on the German ocean, the harbour of which is now almoſt choaked up. The fortifications are remarkably ſtrong; but the air is ſo bad, that the garriſon muſt be changed every year. All the other Dutch governors in Flanders are ſubordinate to the governor of this town. 3. Sas van Ghent is a ſmall but ſtrong town on the bay of the Weſt Scheld. Its name ſignifies the Sluice of Ghent; for the inhabitants having dug a canal from hence to that city, erected a ſluice here for keeping up the waters. About a mile from the town is a fort, called St. Anthony's, which was built for the defence of the ſluice. 4. Philippine, a ſmall, but well fortified town, on the weſtern arm of the Scheld, called Prackman-water. It had its name from Philip II. king of Spain, who cauſed it to be built. 5. Not far from Sheys is a fort, called St. Donnaas.

The iſland of Kadſand, or Catſand, is in this part of Flanders: this, as well as many other places, whoſe names begin with Cat, is ſuppoſed to have been ſo called from the Catti, who formerly inhabited part of the Netherlands. It lies over againſt Sluys, and is very fertile. Strong dykes have been erected, and are kept in repair at a vaſt expence, to defend it againſt the ſea, to which it is much expoſed in ſtormy weather. The Saltzburghers have a congregation in this diſtrict.

SECT. IV.

Of the Perſons, Diſpoſitions, Dreſs, Genius, Cuſtoms, Manners, &c. of the DUTCH; their Religion, Conſtitution, Trade, Commerce, Revenues, Forces, &c.

THESE people are, in general, tall and ungain, having good complexions, and are ſtrong but aukward. The boors are heavy, and ſlow of underſtanding. Their ſeamen are a plain, blunt, rough, ſurly, and ill-mannered ſort of people. Their tradeſmen are ſomewhat ſharper, and make uſe of all their ſkill to circumvent thoſe they deal with. Every claſs of men are extremely frugal: all appetites and paſſions (avarice excepted) run lower and cooler here than in other countries. Their reſentment is uſually unmanly and ſavage. They are, however, patient, ſteady, wary, calm, and have ſeldom any difference with each other; but when they are irritated to quarrel, they grow exceedingly brutiſh.

Their dreſs is plain, and they change faſhions as rarely as the Spaniards. Their men wear coats without ſhape or plaits, with long pockets placed as high as the ribs. The womens dreſs is ſtill more ſingular, for their coats reach only to the middle of their legs. They are neat to exceſs in their houſes and furniture, and the ſtreets themſelves are kept amazingly clean. Mr. Hanway, in ſpeaking of the women, ſays, that the dirtieſt thing in a Dutchman's houſe is his wife. The pavement of the chambers is generally of marble.

The people of this country are divided into five claſſes; namely, boors or huſbandmen; ſeamen and watermen; merchants and tradeſmen; thoſe who have a competency; and, fifthly, gentlemen and officers. The poorer ſort live upon ſour milk, pulſe, and herbs; but people of a ſuperior ſtation imitate their neighbours, and aim at the moſt luxurious mode of living. They are addicted to drinking; and, when they treat their friends, do it ſumptuouſly, though they pinch themſelves for it a month afterwards. Their principal enjoyment is good eating and hard drinking. One of their winter amuſements is ſkaiting, in which they excel; ſo that in a hard froſt it is aſtoniſhing to ſee the crowds of both ſexes that paſs from place to place upon the ice, and dart along with amazing velocity. Many of the Dutch excel in painting and engraving, ſome have been good ſtatuaries, and a few have been remarkable for their wit and ingenuity, as Eraſmus, Grotius, &c.

The common mode of travelling in the United Provinces, and indeed throughout the Auſtrian and French Netherlands, is in treckſcoots, or draw-boats, which are large covered boats drawn by a horſe at the rate of three miles an hour, the fare of which does not amount to more than a penny a mile. The rate of theſe boats, and alſo of the poſt waggons, is fixed; and you are permitted to carry a portmanteau and proviſions, ſo that you are not under the neceſſity of expending any thing at public-houſes. The carriage of the baggage is not ſettled by law, therefore an agreement ought to be made, otherwiſe the driver will charge according to the dictates of his avarice; and the money muſt be paid him, if a previous bargain is not made.

At the inns and public-houſes on the road, a perſon is ſure to meet with clean linen and ſoft beds; but their bedſteads, or rather cabins, in the ſides of the walls, are placed ſo high, that a man may break his neck if he happens to fall out of them. Beſides, as there is no diſputing with a Dutch inn-keeper, either about the reckoning or any other particular, therefore a traveller muſt be content to lie in the ſame room with half a dozen people, or more, and be diſturbed all night long by ſome body or other, if the churl of a landlord pleaſes to have it ſo.

In the United Provinces, their eccleſiaſtical concerns are governed by a preſbytery, where all the miniſters are equal. The preſbytery, or conſiſtory, as they call it, is compoſed of all the miniſters of the town, and of the lay-elders, who are choſen amongſt the moſt eminent inhabitants, and even ſometimes among the magiſtrates. They take care of all the affairs of the church within the city or town, and have the government of the flock, according to the diſcipline eſtabliſhed by the national ſynod held at Dort in the year 1618. The deacons, who are laymen, have the care of the poor, and the diſpoſal of all the money deſigned for charitable uſes.

They have eccleſiaſtical aſſemblies called claſſes, compoſed of the deputies of five or ſix neighbouring churches, more or leſs, who ſend each a miniſter and an elder. Another eccleſiaſtical aſſembly is the provincial ſynod, of which there are two in Holland, one for South Holland, and the other for North Holland. The whole province being divided into a great many claſſes, each claſs ſends four deputies to their reſpective ſynods, two miniſters, and two elders. All the more important affairs of the church, all that regards the ſtate of religion in general, cenſures, and degradations, are managed by theſe ſynods.

With reſpect to their eccleſiaſtical hiſtory, it is neceſſary to obſerve, that, at the time of the Reformation, the inhabitants declared for Lutheraniſm, adhering only to the Auguſburg confeſſion; but in 1562, a different ſyſtem of articles, correſponding with thoſe of Geneva, was drawn up for the Netherland churches; at the union of Utrecht in 1579, the States agreed to maintain and defend it; and in 1651, the Calviniſt doctrines, as ſet forth by the ſynod of Dort, received the ſanction of the ſtates of each particular province. Hence the Calviniſts alone are admitted to any ſhare of the government, and deemed capable of holding the principal employments. The number of Calviniſt miniſters in the Seven United Provinces, and the countries belonging to them, amount to one thouſand five hundred and ſeventy. However, in matters of religion, an univerſal toleration is allowed.

Beſides the eſtabliſhed religion, the different ſects are, 1. The papiſts, who have three hundred and fifty churches in the United Provinces: they are computed to make one third of the inhabitants, and are admitted only to military employments.

with their Diversions during the Winter Season.

employments. 2. The Lutherans, whoſe places of worſhip have all the appearance of churches: they are incapable of holding poſts and employments. 3. The Remonſtrants, ſo denominated from a remonſtrance which they preſented to the aſſembly of the ſtates in 1610, are alſo called Arminians, from the learned Jacob Arminius, who taught the doctrine of univerſal redemption: there are thirty-four congregations of this ſociety, which is rather on the decline. 4. The Mennoniſts, or baptiſts, are divided into various ſects, the principal of which are the Flemiſchers and Waſſerlanders: they have about one hundred and eighty-ſix congregations. 5. The Rheinburghers, or collegiants, who are not very numerous. 6. The Quakers, who are few in number. 7. The Moravians, who form a conſiderable body. 8. The Armenian Chriſtians, who in many reſpects reſemble thoſe of the Greek church. 9. The Jews, tolerated here ever ſince the year 1619, have many rights and privileges, but are excluded from moſt trades at Amſterdam, &c. There are ſeveral other ſects that have no ſettled congregations.

The principal cities, as alſo the nobles, ſend deputies to the States General. Thus the number of the repreſentatives are very conſiderable, and all are maintained at the expence of their reſpective provinces; the deputies of Holland being allowed four florins a day, and thoſe of the other ſtates ſix. But whatever be the number of the deputies from each province, be they nobles or commoners, they have altogether but one voice; and therefore in the aſſembly of the States General there are but ſeven voices. Beſides this, being properly the aſſembly of the repreſentatives of the ſeven ſovereignties which compoſe the ſtates of the United Provinces, their power is limited either expreſsly or tacitly by this inſtruction: "Not to ſuffer the leaſt wound to be given to the ſovereignty of that province which deputes them." The States General, however, not only make peace or war in their own name, but ſend and receive ambaſſadors and other public miniſters. The commander in chief, and all other military officers, take an oath of fidelity to them; and, during a war, ſome of their members, or of the council of ſtate, follow the army, ſit in the council of war, and without their conſent nothing of importance can be undertaken. In time of war the States likewiſe grant licences and protections. Thus the States General appear at firſt view to be the ſovereigns of the country: but moſt of theſe deputies are appointed only for a few years; and though they have the power of debating on the moſt important affairs that may tend to ſecure or promote the preſervation and happineſs of the ſtate, yet they have not power to conclude any point of great conſequence, without previouſly communicating it to their reſpective provinces, and receiving their expreſs conſent. This renders the reſolutions of the republic very tedious and dilatory.

The provinces preſide weekly in their turn, in the aſſembly of the States General, beginning with Gelderland, who had the precedency before the union; then Holland, Zealand, Utrecht, Frieſland, Overyſſel, and Groningen. He who is firſt named in the deputation of his province preſides, and is from thence called the Preſident of the Week. He propoſes the ſubject to be debated, and collects the votes of the aſſembly, upon which he forms his concluſion, dictates to the regiſter, and afterwards ſigns the reſolution. Their meetings are always held at the Hague; and they ſit throughout the whole year without adjournment.

The ſtadtholder is the principal officer in this country, for he is at the ſame time governor-general of the Seven United Provinces, captain-general, and grand-admiral; but his power is extremely limited.

The States aſſume the title of High and Mighty Lords, or the Lords the States General of the United Netherlands; and in public addreſſes they are ſtyled their High Mightineſſes. Their arms are, gules, a lion rampant, holding in one paw a ſword, and in the other a bundle of ſeven arrows; beneath the ſhield, which is ſurmounted with a ducal coronet, the motto CONCORDIA RES PARVÆ CRESCUNT is inſcribed.

The Dutch council of ſtate conſiſts of twelve deputies of the ſeveral provinces; and their office is either triennial, or during the pleaſure of their principals. In this council the deputies of Holland have the greateſt weight, that province being poſſeſſed of three votes, while none of the others have more than two, and ſome of them only one. The preſidentſhip indeed is held alternately by the twelve members, each in their week. The council of ſtate aſſembles every day in the ſame court with the States General. The principal affairs which come under the deliberation of this council, are, thoſe of the army and revenue; and in conjunction with the deputies of the States General, they alſo provide every thing neceſſary for the defence of the country, both in time of peace and war. The title of this council is Noble and Mighty Lords. The treaſurer-general is alſo honoured with this title, as being aſſeſſor in the council of ſtate, and may deliver his opinion; but has no definitive voice. In this council the receiver-general has a ſeat.

The general chamber of accounts is compoſed of fourteen deputies, each province ſending two. Their chief employment is to receive, ſtate, and balance the accounts of the ſeveral provinces. The members of this chamber are alſo ſtyled Noble and Mighty Lords. The general chamber of finances is ſubordinate to the former, and conſiſts of four commiſſioners and a ſecretary. The mint-office conſiſts of three counſellors, aſſiſted by a mint-maſter-general, a general aſſay-maſter, and an under ſecretary. All theſe ſeveral colleges meet at the Hague.

The proceedings of the ſeveral courts, for the adminiſtration of juſtice, are regulated by the particular laws of the reſpective towns and provinces where they are tried, the edicts of the ſtates and the civil law.

The inhabitants of the United Provinces, and thoſe of the conquered lands, have been rendered liable to many taxes, by the long and ſevere wars which the republic has ſuſtained, and the number of them, eſpecially in Holland, where they are always the heavieſt, is ſo great, that a certain great writer aſſerts, that the only thing which has eſcaped taxation is the air they breathe. The principal ordinary taxes are the duties on exports and imports, levied by the admiralty offices, and appropriated to defray the expences of the navy. The taxes on houſes, lands, horned cattle, &c. and on the purchaſe-money of all immoveables, under which are comprehended veſſels of above eighty tons burthen, for which the fortieth penny is paid; and this alone in Holland annually brings in above ſeven hundred thouſand golden florins. The twentieth penny levied on inheritances in the collateral and aſcending line. A poll-tax, which obtains only in ſome provinces. The exciſe on all kinds of proviſions, neceſſaries, and liquors; and here the money levied on bread and beer is eſteemed at above one-third, that on wine at ſomewhat leſs, and that on turf for firing alſo at one third. There is likewiſe a duty on horſes, coaches, and ſervants. The duty on the ſtampt paper, uſed in all their ſeveral inſtruments, contracts, and bonds, is ſaid to produce annually above four hundred thouſand golden florins.

Their land-forces, in time of peace, ſeldom exceed forty thouſand, and very often fall ſhort of that number. They employ a great many foreigners, eſpecially Swiſs and Scots, in their ſervice; and, in time of war, hire whole regiments of Germans. The chief command of the army is veſted in the ſtadtholder, under whom is the field-marſhal general. In 1756 the expences of the army amounted only to nine millions ſeven hundred and ſixty-five thouſand and four guilders. No nation in the world can fit out a more formidable fleet than the Dutch, having always vaſt quantities of timber prepared for building of ſhips, and alſo great numbers of ſhip-carpenters and mariners: however, in times of peace, they uſually have no more than thirty in commiſſion, for the protection of their trade in the Mediterranean, and to convey their homeward-bound Eaſt Indiamen, and other fleets.

The monopoly of the ſpice-trade has been in the hands of the Dutch Eaſt-India company much above a century; hence it is, perhaps, the moſt opulent trading company in the univerſe. Though the United Provinces of themſelves produce very few things, yet all the commodities and products of the globe may be procured here. The Dutch alſo acquire great riches by their herring, cod, and whale-fiſheries; by their manufactures of linen, paper, earthenware, &c. and by ſhip-building. The fiſhery in the ſeveral ſtreams, rivers, and lakes of this country, though very conſiderable, ſerves only for home conſumption; but that of the North-ſea is of vaſt produce, and divided into the leſſer and greater. The former is that carried on along the coaſt, eſpecially on the Dogger-bank, between England and Jutland, on which are caught cod, haddock, turbots, whitings, ſoals, and other ſea-fiſh. The cod caught here is either carried freſh and alive to market to the neareſt towns of the Netherlands, or is ſalted at ſea, and thus forms a branch both of domeſtic and foreign commerce. The great fiſhery is that of herrings, from which the Dutch reap immenſe profits: for though it cannot, as formerly, be termed the golden mine of Holland, yet it ſtill affords a comfortable ſubſiſtence to at leaſt thirty thouſand ſix hundred families.

The ſeaſon for catching the herrings along the coaſts of Scotland,

Scotland and England, is from the twenty-fourth of June to the twenty-fifth of November. The veſſels employed in this fiſhery are termed buſſes, and carry from twenty-five to thirty laſts, which one with another ſell for about one hundred and twenty guilders.

Every province has the right of coinage, but all the pieces muſt be of a ſimilar intrinſic value; the following is an exact account of the Dutch gold and ſilver coin: their gold coin are, the ryder, valued at one pound five ſhillings and ſix-pence. The half ryder, twelve ſhillings and nine pence. The double ducat, nineteen ſhillings and one penny. The ducat, nine ſhillings and ſix pence half-penny. The ſilver coin are, the three guilder piece, five ſhillings and five pence half-penny; rix-dollar, four ſhillings and ſix-pence halfpenny; dollar, two ſhillings and eight pence halfpenny; twenty-eight ſtiver piece, two ſhillings and ſix-pence; ſix-ſtiver piece, ſix-pence halfpenny; pieces of five ſtiver and a half, ſix-pence halfpenny; two-ſtiver pieces, eleven of which make two ſhillings: ſilver pieces, eleven of which make one ſhilling. The ſmalleſt coin, or doit, is worth about half a farthing; and Engliſh, French, and German coin, paſs for their intrinſic value in this country.

CHAP. XVI.

THE NEW HISTORY AND DESCRIPTION OF

SWITZERLAND.

SECT. I.

Of the Boundaries and Situation, Natural Hiſtory, and Geographical Deſcription of the Country, with an Account of the Cities, Towns, and remarkable Places; the Inhabitants, their Trade, Manufactures, Manners, Cuſtoms, Government, Laws, Religion, &c.

THIS country is bounded by Burgundy, Sandgace, and the country of Gooe, weſt; Savoy, the Milaneſe, and Venetian territories, ſouth; Swabia, north; and Tyrol and Auſtria, eaſt, and lies between the ſixth and eleventh degree of eaſt longitude, and the forty-fifth and forty-eighth degree of north latitude, being two hundred and ſixty-miles long, and one hundred broad. It contains many ſtupendous mountains, whoſe inacceſſible and craggy ſummits are continually covered with ſnow, and the vallies are filled with lakes, or rivers and ſtreams that are repleniſhed by waters from the rocks. The weather is ſometimes wintry on the one ſide of a mountain, and reſembles the ſummer on the other. Prodigious quantities of ice and ſnow fall down and diſſolve in the winter, and dreadful inundations are frequent. There are, indeed, ſome fertile ſpots, but the principal part is dreary. The country is well-watered, produces ſome minerals, and abounds in cattle, ſheep, chamois and other goats, horſes, Alpine mice, wild-fowl, &c. it is not very populous; and the popiſh cantons are no leſs ſo than the proteſtant.

Switzerland is divided into thirteen cantons, or republics; which are, I. Bern. II. Zurich. III. Lucern. IV. Uri. V. Schweitz. VI. Underwald. VII. Zug. VIII. Glacis. IX. Baſil. X. Friburg. XI. Solothurn. XII. Schaffhauſen. XIII. Appenzel.

I. The canton of Bern, which is the richeſt, largeſt, and moſt fruitful, is one hundred and eighty miles long, and thirty broad. It is well watered by rivers, and contains ſeveral lakes. The principal of theſe is that of Geneva, the length of which is about eighteen leagues, and the greateſt breadth between three and four. The depth in ſome places is near four hundred fathom, in others not above forty. The Rhone enters it at the eaſt end, near Bouveret, and iſſues out again at the weſt, cloſe by Geneva. In ſummer its waters are much ſwelled by the melting of the ſnow on the mountains. The prevailing religion is Calviniſm, and miniſters are here kept in greater dependence on the civil power, than in any other of the cantons. The prevailing language here is the German; though people of condition ſpeak French and Italian.

The capital city, of the ſame name, is almoſt ſurrounded by the river Aar. The houſes are moſtly built of white free-ſtone, and, in the principal ſtreets, have piazzas, or arches, under them, for the convenience of walking dry in wet weather. Moſt of the ſtreets of Bern are paved with flints, and traverſed by a canal lined with free-ſtone, which is brought from a conſiderable diſtance, and is very uſeful in carrying off the filth of the city, extinguiſhing fire, and other purpoſes.

The city is large, ſtanding almoſt in the middle of the canton, and containing ſeveral churches, of which one is called the Great Church; and the firſt miniſter thereof is the dean, who is the head of the city clergy. Here are likewiſe a college, public library, muſeum, granaries, guildhall, arſenal, ſeveral hoſpitals, a handſome ſtone-bridge, a platform with a fine proſpect, &c.

The great council, in which alſo the ſovereignty of the cantons is veſted, conſiſts, when full, of two hundred and twenty-nine, but is generally much ſhort of that number, eighty or more often dying before their places are filled up. The leſſer council ſenate, or, as it is called, the daily council, (becauſe it meets every day, Sundays and holidays excepted) conſiſts of twenty-ſeven members, including the two prætors, or advoyers, the four tribunes of the people, the two treaſurers, and the two heim-lichers, or ſecreſy-men, ſo called, becauſe to them all ſecrets relative to the ſtate are diſcovered. The vacancies that happen in theſe two colleges are mutually filled up by the members of the great and little councils.

The village of Haſzli gives name to a territory or valley of conſiderable extent, in which are fine woods of beech and pine, excellent roots, wild fowl of all kinds, chamois and other mountain animals; together with mines, particularly of lead and iron, and fine cryſtals. The inhabitants of this diſtrict put themſelves under the ſovereignty of Bern in 1333, but with a reſerve of their antient rights and uſages. They have a particular dialect of their own.

The country called the Pais de Vaud, is twenty-four leagues in length from Geneva to Morat, being bounded on the weſt, by the county of Gex and Franche-Compté; and, on the ſouth, by the Valais and Savoy. Its capital, Lauſanne, which is the ſecond city of the whole canton, ſtands one mile from the lake.

Here is a college, founded in 1537, for the inſtruction of youth intended for the miniſtry. The cogniſance of criminal affairs belongs entirely to one quarter of the town, called St. Francis, and in that is one ſtreet, of which we are told, that if any of the inhabitants are guilty of a capital crime, the others have the ſole power of condemning or acquitting them. The whole town conſiſts of ſteep aſcents and deſcents, and takes its name from its ſituation betwixt the brooks Laws and Anna. In the college here, Theodore Beza tranſlated the pſalms into French verſe, and the firſt profeſſor of law eſtabliſhed in it, was the late learned Barbeyrac, who died a profeſſor in one of the Dutch univerſities. This place gives name to a bailiwic, the bailiff of which reſides in the caſtle, which was formerly the biſhop's palace, and has ſome juriſdiction in the town.

II. The canton of Zurich, though it ranks as the firſt, is inferior to that of Bern in extent, power, and wealth. It is ſituated to the eaſt of the free bailiwics, and extends

ſixty miles in length, and forty-eight in breadth. With reſpect to its face and appearance, this canton is an epitome of, and repreſents all the others. Of the bailiwics into which it is divided, eighteen are called the inward, and eighteen the outward. Over each of the former there are two bailiffs, who hold their employments during life, officiate by turns, and reſide in the city, viſiting their bailiwics only at certain times for the holding of courts. In the latter the bailiffs reſide conſtantly, and hold their office only for ſix, nine, or at moſt twelve years. Here are alſo twenty ſecularized convents that are called bailliages, but without any juriſdiction annexed to them. The reformation was introduced here in 1517: religious matters are under the juriſdiction of an eccleſiaſtical council and ſynod, and the canton contains ten deaneries, with one hundred and fifty miniſters. Its quota, for the national defence, is one thouſand four hundred men; it nominates one of the two commanders in chief, and has a revenue of about one hundred and fifty thouſand crowns per annum.

The capital city, Zurich, gives name to the canton: it ſtands in a pleaſant country, near where the river Aar iſſues from the lake that derives its name from the town, twenty-three miles from Schaffhauſen. After having been ruined by Attila the Hunn, it was reſtored by Thuricus, ſon of Theodoric, king of the Goths, from whom it took the name of the Thuricum, corrupted afterwards into that of Zurich. The river divides it into two parts, and has two bridges over it. It is fortified in the modern way, and has wide ditches, faced with free-ſtone. There are five arſenals in it, well ſtored with arms and artillery; an academy or college, having fifteen profeſſors; a muſeum, or chamber of rarities; a ſtately town-houſe, the pillars in the front of which are of black marble, ſtreaked with white; here is alſo a town library. The ſovereignty and adminiſtration of all affairs are lodged in the greater and leſſer council, out of which are choſen the city officers, as the councils are out of the thirteen companies of burghers. There are ſeveral other colleges, each of which has its particular department. Here are a great variety of ſilk, woollen, linen, cotton, and other manufactures, this being the place of the greateſt trade in all Switzerland.

The ſtreets of Zurich are neat, and the houſes well built, but not magnificent. The college here hath produced ſome learned men, particularly Zuinglius, (who began the reformation here in 1517) and Bullinger. The hoſpitals are very neat, and well endowed. The cathedral is large and collegiate, and the miniſters here all preach covered. The neighbouring lake is about twenty-four miles in length, and near three in breadth.

No perſons, whatever their rank or office may be, are exempted from the ſumptuary laws. The burgo-maſters, who are the ſame as the advoyers at Bern, have the title of Excellence. If a burgher goes out of town, or a peaſant enters it, without a ſword, they are liable to be fined. The unmarried women here are diſtinguiſhed from the married by a particular knot of ribbands on their heads, and the men are generally dreſſed in black; for the young only are allowed to wear coloured ſtuffs, and thoſe quite plain, gold, ſilver, and jewels being prohibited, and luxury and vanity of every kind carefully guarded againſt. When they go to church, the men all wear bands, and, when in mourning, bonnets made of paſte-board covered with crape. Both men and women are ſo fond of muſic, that moſt of them can play on ſome inſtrument.

III. The canton of Lucern, the moſt powerful of the popiſh cantons, is about forty-eight miles long, and thirty-two broad. The mountainous parts abound with ſheep and cattle, and the level diſtricts are fruitful in corn. Pilate's hill, in this country, is one of the higheſt in Switzerland, and has a lake on the top. Lucern acceded to the Helvetic alliance in the year 1322. Its government is ariſtocratical, and its chief revenue ariſes from the eſtates of the extinct nobility.

The chief place is Lucern, from which it has its name, ſtanding on a branch of the Four Foreſt-towns lake, called alſo the lake of Lucern, where the Ruz iſſues from it, twenty-two miles from Zurich. It is a conſiderable thoroughfare to Italy, and contains an arſenal, a magnificent college and town-houſe, ſeveral convents, with a cathedral or collegiate church, in which is an organ ſo large, that an ordinary man may creep into the greater pipes. The town is ſuppoſed to have had its name from Lucerna, or a lantern, ſet up here to direct paſſengers on the lake in the night. The government of the town and canton is veſted in a great and a little council, choſen out of the burghers. The catholic cantons uſually have their particular diet here. Both town and canton are in the dioceſe of Conſtance. A nuncio from the pope uſually reſides here.

IV. The fourth canton is Uri, which is ſixty miles long, and twenty broad, abounds with mountains, the chief of which, called St. Gotthardſberg, is the higheſt in Switzerland, if not in Europe. A road runs through it to Italy: it extends twenty-four miles, and is practicable not only to horſes, but carriages. In one part of this mountain, near the highway, is a capuchin convent, in which two fathers conſtantly attend, and, for a ſmall conſideration, accommodate travellers with whatever they want. Many thouſand head of cattle graze on this and the other mountains here in ſummer, and great quantities of cheeſe are made on them. The vales between theſe mountains are exceedingly hot in ſummer, and yield great crops of graſs; and among them moſt beautiful cryſtals are found. The inhabitants are a hardy, vigorous, and brave people, but noted for their blind zeal and bigotry. Moſt part of the income of this ſtate ariſes from the impoſts on goods carried between Italy and Germany, and the annual penſions they receive from the kings of France and Spain. They have no wine, little corn, and few or no manufactures, but plenty of wood, fiſh, black cattle, butter and cheeſe, with which they purchaſe what neceſſaries they want.

The number of people in this canton is computed at about twenty thouſand in number, of which thoſe of better faſhion live by the flocks and herds they keep in their grounds, and the meaner ſort by attending theſe herds, or hawking and pedling German and Italian wares. The government here is democratical, as in all other inferior cantons, where they have hardly any towns, but live diſperſed in villages. In eccleſiaſtical matters, they are ſubject to the biſhops of Conſtance, Coire, or Como. The landes gemeine, or general aſſembly of the cantons, is held annually on the firſt Sunday in May, where every male, above ſixteen, has a vote.

The two following are the only remarkable places in this canton, viz. Altorf, i. e. the old village, which is a well built town, being the ſeat of the government, and the place where moſt of the gentry reſide. It contains an arſenal, a granary, an handſome town-houſe, with a houſe for cutting and poliſhing cryſtal, three churches, and two convents. 2. Urſerenthal, or Urſeren Valley, which is about nine miles in length, and one in breadth, and yields good paſturage. In eccleſiaſtical matters, the inhabitants are ſubject to the biſhop of Coire. They are a free people, and rather allies than ſubjects of the canton of Uri.

V. The canton of Scheveitz is about thirty miles in length, and twenty in breadth. The land, for the moſt part, is paſture ground, yielding little corn, and no wine; but they have plenty of fiſh from their lakes and rivers, with black cattle, game, butter, and cheeſe. With reſpect to their government and religion, they are much the ſame as thoſe of Uri; and its inhabitants too, like thoſe of that canton, are hardy, bold, and vigorous. They are ſubject, in ſpirituals, to the biſhop of Conſtance.

The principal places in this canton, or under its ſovereignty, are, 1. Scheveitz, which gives name to it, and is its capital, and the ſeat of the regency. It is ſituated ten miles from Lucern, in a pleaſant valley, and contains, beſides a pariſh church, three convents, a town-houſe, a mine, an hoſpital, an arſenal, and ſeveral handſome private houſes. 2. Einſidlen, a ſmall town near the river Meuſe, ten miles north-eaſt from Scheveitz. Here is a rich Benedictine abbey, the abbot of which has the title of prince, and is lord of the town and its territory, under the ſovereignty, or rather the protection of the canton. The treaſure of the abbey is of immenſe value. The church of Our Lady is embelliſhed with maſterly paintings, with gildings, and moſt delicate ſtucco work.

VI. The canton of Underwald is divided by a foreſt into two parts, diſtinguiſhed by the name of Ober and Underwald, i. e. above and below the foreſt; but it bears only the name of the latter. It extends about eighteen miles from north to ſouth, and fifteen from eaſt to weſt. Here are fine paſtures, fruits, woods, and cattle, with lakes, mineral ſprings, and quarries of marble. The two parts make two communities, which have each their reſpective chief, diet, council, ſeal, banner, and officers; but as they both conſtitute only one canton, they have alſo a common council. Both are of the popiſh religion, and in the dioceſe of Conſtance.

VII. The canton of Zug is ſmall, reaching about twelve miles either way; but it is very populous and fruitful, yielding wine, wheat, cheſnuts, and other fruits, and its mountains produce excellent paſture. It lies in the dioceſe of Conſtance, and its government is democratical. There are two lakes in it, abounding with fiſh, particularly

large carp, pike, and a ſpecies of trout called rotels; and the woods produce great plenty of game. The inhabitants are all ſtaunch Roman Catholics.

The only place in this canton worth mentioning is Zug, which gives name to it, and is its capital. It is a ſtrong, neat town, containing a priory and two convents, and ſtands on the eaſt ſide of a lake of the ſame name, about ſeven miles long.

VIII. The canton of Glaris, or Glarus, is ſurrounded on all ſides, except towards the north, with lofty mountains, one of which, called Todiberg, is almoſt impaſſable. The principal valley extends from north to ſouth above twenty miles, and is ſaid to be very ſubject to earthquakes. The other vales yield good paſturage, but little corn or pulſe. Vaſt numbers of horſes, black cattle, goats, and ſheep, graze both on the mountains, and in the vallies, and great quantities of butter and cheeſe are made in both. The mountains yield alſo wood, ſlate, cryſtal, mineral waters, and baths; and the rivers and lakes abound with fiſh. The government, like that of the preceding petty cantons, is democratical; but the greater part of the inhabitants are proteſtants. Beſides the general diet of both religions, held annually in a field without the town of Glaris, there are particular diets of each religion held alſo annually; that of the Calviniſts at a ſmall town, called Schumden, and that of the papiſts in a field between Netſtall and Naffels. Here, as in the other democratical cantons, beſides the diets, is a council of regency, with ſeveral courts of juſtice for civil, criminal, and eccleſiaſtical affairs. The towns in this canton are very inconſiderable.

IX. The canton of Baſil, which is twenty miles in length, and about eighteen in breadth, contains twenty-ſeven pariſhes, and ſeven bailiwicks; and its inhabitants are all proteſtants. The lower parts of it are fruitful in paſture, corn, and wine, but the mountains are very barren. There are many medicinal ſprings and baths in it, and the air is wholſome and temperate. Its government is ariſtocratical, and its revenues ariſe chiefly from ſecularized abbies, and impoſts on goods carried through the country to and from France, Italy, and Germany. Both men and women, for the moſt part, wear the French dreſs; but the language commonly ſpoken is High Dutch, though the French alſo is much uſed.

Baſil, which gives name to the canton, is the capital city. It is the largeſt in all Switzerland, having two hundred and twenty ſtreets, and ſix market-places, or ſquares. Its environs are exceeding beautiful, conſiſting of a fine level track of fields and meadows. The city is divided into two parts by the Rhine, over which there is a handſome bridge. It is fortified with walls, moats, towers, and baſtions, and contains ſeveral churches, beſides the cathedral, which is an old gothic ſtructure; a commandery of the order of St John, and another of the teutonic order; a public granary and arſenal, a ſtately town-houſe, an univerſity, which was founded in 1459, and has a curious phyſic-garden, library, and muſeum, a gymnaſium, a ſtately palace belonging to the margrave of Baden-Dourlach, beſides a chamber of curioſities, ſeveral hoſpitals, &c.

St. Peter's ſquare, planted with elm and lime-trees, makes a pleaſant walk; but a ſpot regularly planted with trees, cloſe by the river, and near the minſter, makes ſtill a finer, it commanding a moſt beautiful and extenſive proſpect. Trade ſtill flouriſhes here, eſpecially in ſilk, ribbands, and wines; and the police is under excellent regulations. The two Buxtorffs, father and ſon, and the famous painter Holbein, were natives of this place. The celebrated Eraſmus died here in 1536, in the ſeventieth year of his age, and was buried in the great church.

X. The canton of Friburg, which is near forty miles in length, and twenty in breadth, is partly mountainous, and partly level; and, beſides ſome mines, yields plenty of paſturage, grain, fruit, cattle, and cheeſe. It is divided into three inner bailiwics, and ſixteen outer, beſides the territory of the city. The inhabitants are chiefly papiſts, and the language principally German.

The only place of note in this canton is Friburg, which gives name to it, and ſtands among rocks, in a valley, on the river Saone, ſix leagues ſouthward from Bern. Here are ſeveral churches, convents, and hoſpitals, with a handſome college, a mint, a granary, an arſenal, a commandery of St. John, and a council-houſe, which ſtands on a rock, and commands a grand proſpect. The government reſembles that of Bern, except that here it is confined to ſeventy families or patricians, excluſive of all others. The town is tolerably fortified.

XI. The canton of Solothurn is ſituated on the river Aar; is about twelve miles long, and ten broad; and is tolerably fertile, yielding corn, wine, and fruits, and contains fine woods and paſtures. The government is ariſtocratical; and the religion profeſſed in it is the Roman catholic, except in one bailiwic.

The principal place in this canton is Solothurn, which gives name to it, and is ſituated in a pleaſant, fertile country. The government is much the ſame as that of Bern and Friburg, and the language chiefly ſpoken is French. Here are a collegiate church, a large college, a well furniſhed arſenal, and two convents.

XII. The canton of Scaffhauſen, which lies entirely on the German ſide of the Rhine, is the moſt northern of all the Swiſs cantons. It is about twenty miles long, and twelve broad; and is in general fertile, yielding corn, fruit, paſture, plenty of fiſh, mineral ſprings, and a good red wine. The inhabitants are Calviniſts, and the government ariſtocratical.

The only town in this canton, that merits deſcription, is, Schaffhauſen, which is pleaſantly ſituated on a plain on the Rhine, and is very handſome, the ſtreets being broad, and the houſes magnificent. Here are ſeveral handſome churches, an arſenal, an academy, a noble cabinet of rarities, and a good fortreſs. The city carries on a conſiderable trade by the Rhine, over which it has a handſome ſtone bridge.

XIII. The canton of Appenzel is about thirty miles long, and twenty broad. It yields good paſturage, and conſequently is not deſtitute of cattle, milk, butter, or cheeſe. Conſiderable quantities alſo of wheat, rye, barley, oats, beans, peas, flax, and wine, are produced in it; beſides a great deal of fruit, wood, and turf, with mineral waters, and warm baths. There are many mountains in the canton, the higheſt of which is that called the Holieſantis, or the Hohe-meſzmer, which commands a proſpect of prodigious extent. There are alſo ſeveral lakes and rivers. Of the twenty-three pariſhes in the canton, four are popiſh, and nineteen proteſtant. In ſpirituals, the papiſts are ſubject to the biſhop of Conſtance, but the proteſtants to their own conſiſtory. The inhabitants ſubſiſt chiefly by their manufactories of linen, crape, fuſtian, and thread, or by bleaching, and the ſale of their cattle, butter, cheeſe, horſes, wood, and coal.

The firſt eight of theſe cantons are called the old ones, becauſe they were, for the ſpace of one hundred and thirty years, the only members of the Helvetic body.

We ſhall now proceed to divide the ſeveral bailiwics that belong in common to certain cantons; which are as follow:

I. Thergau, whoſe name is derived from the river Thur that runs through it. It is very large and populous, and, though ſomewhat mountainous, is in general tolerably fertile. About one third of its inhabitants are papiſts, and the reſt calviniſts. The eight old cantons, who are ſovereigns of it, alternately appoint a bailiff every two years.

The chief places of note in it are, 1. Frauenfeld, the capital, which ſtands on the river Mark, eleven miles weſt of Conſtance. The bailiff reſides here in a caſtle, on a rock, at one end of the town; and here the deputies of the eight cantons meet to audit the annual accounts of their common bailiwics. 2. Diſſenhoſen, a conſiderable town on the Rhine, over which it has a bridge. It enjoys great privileges; for the bailiffs have no authority in it, or its precinct; but appeals, in civil cauſes, lie from it to the cantons, or their deputies. Both papiſts and proteſtants compoſe the magiſtracy of this bailiwic.

II. Rheinthal is about twenty miles long, and five where broadeſt, and is fruitful both in corn and wine, eſpecially the latter. Here is a cryſtal pit, in which a vaſt deal of yellow, brown, and white tranſparent cryſtal is found. Moſt of the inhabitants are proteſtants, and their miniſters are always taken from the academy at Zurich. The ſovereignty of this bailiwic belongs to nine cantons, viz. Bern, Zurich, Lucern, Schweitz, Glaris, Uri, Underwald, Zug, and Appenzel, who alternately appoint a bailiff every two years; but the abbot of St. Gall has not only a ſhare of the juriſdiction, but a great revenue from it. It is divided into five communities, each of which has two chiefs or ammons, of whom the canton nominates one, and the abbot the other. The towns are too inconſiderable to merit particular deſcription.

III. Sargans is about twenty-four miles in length, and about ſix in breadth. Its mountains feed great numbers of cattle, and its vallies produce corn and fruit. This bailiwic, which is divided into the Upper and Lower Sargans, belongs to the eight old cantons, who ſend a bailiff to it in their turns. The inhabitants are partly papiſts,

papiſts, and partly proteſtants. The latter have their miniſters from the academy at Zurich, and the former under the biſhop of Coire. The principal place is Pfeffers, a rich benedictine abbey, whoſe abbot is a prince of the empire. About a mile and half from the convent is a famous hot bath belonging to the abbey, the water of which is hot in the ſecond degree, and good for many diſtempers, being impregnated with ſpirit of ſulphur, nitre, vitriol, and metals of various kinds.

IV. Gaſter is chiefly mountainous, notwithſtanding which it is far from being unfruitful. This diſtrict has a diet held every two years, and a council, with two courts of juſtice, one for civil, and another for criminal cauſes, in all which the bailiff preſides. The chief places here are Wiſen and Scharris. In the latter there is an abbey for ladies, the abbeſs of which is reckoned a princeſs of the empire, and is obliged to live a ſingle life, though her nuns, if they chuſe it, may marry. The inhabitants of this bailiwic are all papiſts, under the biſhop of Coire and Conſtance.

V. Utznach bailiwic was purchaſed in 1469, by the cantons of Schweitz and Glaris, by whom a bailiff is appointed alternately every two years; but when it is the turn of the latter, he is nominated by the papiſts alone, of whoſe religion moſt of the inhabitants are.

VI. Gambs is a very ſmall and inconſiderable bailiwic; is ſubject to the ſame cantons, and enjoys much the ſame privileges as the two former.

VII. Rapperſchweil town, with its diſtrict, lie thirteen miles ſouth-weſt of Zurich, on the lake, towards Chur. It is a tolerable good town, well fortified, and has a ſtrong caſtle. The wooden bridge, which extends from hence to a point of land in the lake, is ſaid to be very near two miles in length; yet it is entirely open, there not being any rails on either ſide. The inhabitants, who are Roman Catholics, and under the ſovereignty of Zurich and Bern, ſtill enjoy their antient privileges.

VIII. Baden, which in general is a fertile diſtrict, yields plenty of fruit and grain, and in ſome places it produces wine and iron. It is well watered by three navigable rivers, the Limmar, the Reuſz, and the Aar, which abound with fiſh. The cantons of Bern appoint a bailiff ſucceſſively, each for ſeven years, and then Glaris for two. Moſt of its inhabitants are papiſts.

The only remarkable place in this bailiwic is Baden, which gives name to it, and is its capital: it is ſituated on the Limmar, and is otherwiſe called Upper Baden, to diſtinguiſh it from another town of the ſame name in Swabia. In its neighbourhood are ſeveral hot baths, the waters of which are good for various diſorders. The inhabitants are partly proteſtants, and partly papiſts. Here are two caſtles, one of which is the reſidence of the bailiff; a bridge over the river, but without rails, a council-houſe, and ſeveral churches and convents.

IX. Thoſe territories called the Free Amts or Provinces, are divided into Upper and Lower, in both of which the ſoil is very fruitful, and the inhabitants all Roman Catholics, under the biſhop of Conſtance. The only place in them worth mentioning is Muri, an opulent and celebrated Benedictine abbey, on the river Bunz, the abbot of which, who is immediately under the pope, is alſo a prince of the empire.

The towns of Brangarten and Mellingon are under the joint ſovereignty of Zurich, Bern, and Glaris; the former of which carries on a good trade, eſpecially in the manufacture of paper; but the latter is too inſignificant to merit deſcription.

The remaining four common bailiwics in Switzerland, viz. Schwarzenburg, Morat, Grandſon, and Eſchalons, are under the joint ſovereignty of Bern and Friburg. The inhabitants of the laſt are a mixture of proteſtants and papiſts; but thoſe of the three firſt are proteſtants.

At the foot of the Alps, in Italy, lie the Italian bailiwics, which are ſeven in number, namely, Ballenz, Riviera or Poleſe, Valle di Bregno, Lauis, Lugganes, Myathal or Val Maggia, and Mendin. They are all mountainous, and tolerably fertile: the inhabitants ſpeak the Italian language, and are all papiſts.

Emgelberg abbey and the borough of Gerſau are under the protection of the four foreſt towns of Lucern, Uri, Schweitz, and Underwalden.

The allies of the Swiſs are united to the cantons by a ſolemn league, in conſequence of which they have a vote in their aſſemblies. Theſe are as follow:

St. Gall, an abbey, whoſe abbot is ſovereign of that called the patrimony of St. Gall, ſituated between Zurich and the lake of Conſtance. The abbey, which is of the Benedictine order, is very ſpacious, and contains a palace, a conventual church, and a library. The number of monks is ſixty, by and from among whom the abbot is choſen, who is immediately ſubject to the pope, and is a prince of the empire; but he has no ſeat nor vote in the diet thereof, nor furniſhes any quota or tax, though he takes the inveſtiture of his territories, and the regalia, from the emperor. He has the diſpoſal of all benefices in his territories, and the nomination of all judges and officers. As an ally of the cantons, his deputies have a ſeat and voice in the general diets and meetings of the confederacy.

In the Upper Thurgau, near the river Steinach, is ſituated the town of St. Gall, which is large and populous, and its inhabitants are all Calviniſts. The government is ariſtocratical. Here are ſeveral churches, a gymnaſium, a public library, a town-houſe, an alms-houſe, and an arſenal. The town was formerly ſubject to the abbot, but it is now a republic, and ſends deputies to the general diet.

Beil, a town ſituated on the lake to which it gives name, is under the ſovereignty of the biſhop of Baſil, who, on his acceſſion to the regency, ſigns an inſtrument by which he engages to maintain the inhabitants in all their rights and liberties. This town has a vote in all the general diets of the cantons.

The Griſon Leagues territory is divided into three parts, viz. 1. The Griſon or Grey League. 2. The League of the Houſe of God. And, 3. The Ten Juriſdictions. The length of the whole is about ſeventy miles, and the breadth ſixty. It is in general a mountainous country, but produces moſt of the neceſſaries of life. Each of the Leagues is ſub-divided into ſeveral leſſer communities, which are ſo many democracies, every male above ſixteen having a ſhare in the government of the community, and a vote in the election of magiſtrates. Deputies from the ſeveral communities conſtitute the General Diet of the Griſon Leagues, which meets annually and alternately, at the capital of each League, but they can conclude nothing without the conſent of their conſtituents. About two thirds of the inhabitants are Calviniſts, and the reſt papiſts.

1. That called the Griſon or Grey League is divided into eight diſtricts, called councils, and twenty-three communities, of which eighteen are popiſh. Theſe diſtricts contain ſeveral ſmall villages, which are too inconſiderable to merit particular attention.

2. The moſt conſiderable of the three is the League of the Houſe of God, which contains ſome very high mountains. The chief of this diſtrict has the title of preſident, and is elected annually. It is divided into two great communities, and thoſe again into twenty-one ſmaller, called Juriſdictions.

The place of chief note here is Coire, or Chur, the capital not only of the League, but of the whole republic. It is tolerably large and populous, and its neighbourhood is beautifully diverſified with hills, plains, vineyards, corn fields, and orchards. Here are ſeveral churches, an arſenal, a college, a grammar-ſchool, a granary, and a town-houſe, in which is held, once in three years, the general diet, and alſo the extraordinary diets, and the congreſſes. The biſhop is a prince of the empire, and has a revenue of one thouſand pounds ſterling per annum.

3. The League of the Ten Juriſdictions, which is the ſmalleſt of the three, is divided into ſeven communities, out of which the chief is annually choſen by turns. To make up the Ten Juriſdictions, three of the great communications are ſub-divided each into two. The greater part of the inhabitants are proteſtants; and the language ſpoken in general is the German. The country conſiſts, for the moſt part, of rugged mountains, yielding neither corn nor fruit, except on the banks of the Rhine, and a few other places, but abounding in horſes, cattle, fiſh, milk, butter, and cheeſe, of all which there is a conſiderable exportation.

Thoſe territories or countries which are ſubject to the three Griſon Leagues lie at the foot of the Alps, near the entrance of Italy, and conſiſt of the Valteline, and the countries of Boinio and Chiavenna, all of which are very fertile. The language is a corrupt Italian, and the religion popery. Theſe places do not contain any thing remarkable.

Haldenſtein barony is under the protection of the Griſon League, and takes its name from the village of Haldenſtein, which has a palace in it, and a ſmall caſtle. The Calviniſt religion prevails throughout this barony.

Valais, another ally of the Swiſs cantons, is a valley among the Alps ſurrounded by lofty mountains. This country

country is exceedingly fertile, producing moſt kinds of grain, and a great variety of the choiceſt fruits. It abounds alſo in cattle, game, and veniſon. It is divided into the Upper and Lower: but the inhabitants of the latter are vaſſals to the former. The government is much the ſame as that of the Griſons, and the religion popery. Not only the German, French, and Italian, but alſo the Latin is ſpoken here, and that too by the common people.

Muhlhauſen is a large, well-built, and populous town; and is adorned with ſeveral churches, and other good ſtructures. The inhabitants are Calviniſts. This town ſends no deputy to the general diet, though it is in alliance with the proteſtant cantons.

Geneva, which is a famous republic, conſiſts of the city and a ſmall territory. The former is ſituated on an iſland on the Rhone, ſixty-five miles from Bern, ſeventy-five from Lyons, and one hundred and ſix from Turin. It is a large, handſome, and well-fortified city. The Treille is a moſt beautiful place: it is planted with linden-trees, and commands a fine proſpect of ſeveral ranges of mountains and rocks riſing behind each other, ſome of which are covered with vineyards and herbage. Immediately below the city the Rhone is joined by the Arve. Over the former of theſe rivers are four bridges. Of the ſix churches, the cathedral of St. Peter is the principal, in which is a monument to the memory of Henry duke of Roham. The ſervice in ſome of theſe churches is in French, in others Italian, and in others German. In all the ſtreets are fountains and canals to ſupply the inhabitants with water, which is raiſed by engines from the river Rhone.

The town-hall is a ſtately free-ſtone edifice, ſituated on an eminence, the aſcent to which is without any ſteps, ſo that a perſon may not only walk, but ride from the top to the bottom. Here is an arſenal, which is ſaid to contain arms for twelve thouſand men; and an univerſity, which has twelve profeſſors belonging to it, with a very valuable library. The library belonging to the city is well furniſhed with excellent books, beſides a curious collection of medals and petrifactions, and ſome antient and valuable manuſcripts.

The trade of the city is very conſiderable, it being a great thoroughfare, and having a variety of manufactories, with a number of induſtrious and ingenious artificers, particularly in the watch-making branch. At the general hoſpital, beſides the city poor, indigent travellers are maintained for one day, and then diſmiſſed, with ſome money in their pockets, to proceed on their journey. The government is much like that of Zurich and Bern. The number of burghers is about one thouſand five hundred, and the principal magiſtrates are the four ſyndics. Here are no leſs than four councils, viz. the general council of the citizens and burghers, the council of two hundred, that of ſixty, and that of twenty-five. Of the laſt, two perſons of the ſame family cannot be members at the ſame time. The religion of moſt of the inhabitants is Calviniſm.

No marriages are permitted here, unleſs both parties are of the proteſtant religion. A woman of forty years of age muſt not marry a man of leſs than thirty; if ſhe exceeds forty, her huſband muſt be at leaſt thirty-five; nor muſt a man above ſixty marry a woman who is not at leaſt thirty. A widow muſt not alter her condition in leſs than ſix months after her huſband's deceaſe. A very ſingular cuſtom prevails in Geneva, and is peculiar to it: the parents form ſocieties for their children at a very early period of their lives. Their ſocieties conſiſt of ten or a dozen, or more children of the ſame ſex, and nearly of the ſame age and ſituation in life. They aſſemble once a week in the houſes of the different parents, who entertain the company by turns with tea, coffee, biſcuits, and fruit, and then leave the young aſſembly to the freedom of their own converſation. This connection is ſtrictly kept up through life, whatever alterations may take place in the ſituations or circumſtances of the individuals; and although they ſhould afterwards form new or preferable intimacies, they never entirely abandon their ſociety: to the lateſt periods of their lives, they contrive to paſs a few evenings every year with the companions of their youthful and earlieſt friendſhip.

The lake, to which the city gives name, reſembles a half-moon, whoſe convex ſide lies towards Switzerland. The territories of five ſtates border upon it; viz. the kingdom of France, the duchy of Savoy, the republic of Geneva, the canton of Bern, and the biſhoprick of Sion.

4

SECT. II.

Of the Character, Perſons, military Forces, Government, Language, Religion, Manufactures, Revenues, Revolutions, &c. of the SWISS.

THE inhabitants of Switzerland are allowed to have a national character equal to that of any people in Europe. They are brave, honeſt, hardy, ſincere, friendly, and humane. Their perſons are tall, robuſt, and well made, but their complexions are very indifferent. The women are genteel, ſenſible, modeſt, and agreeable.

The cantons never keep any ſtanding troops, except for a few garriſons, but the militia is the beſt regulated of any in Europe. Every male from ſixteen to ſixty is enrolled, and near one third of them regimented. They are allowed to engage in the ſervice of foreign princes for any time they think proper, at the expiration of which they are at liberty to return home. Hence Switzerland is never unprovided with experienced officers and brave ſoldiers.

We have already, in our deſcription of the ſeveral cantons, taken notice of their reſpective governments, and ſhall therefore only add, in this place, that the commonwealths of Switzerland endeavour to ſuppreſs every thing that may introduce vanity and luxury; they prohibit gaming, balls, and all extravagances of dreſs; and their magiſtrates, in their public aſſemblies, appear in the plaineſt garb imaginable, to ſet an example to the reſt. Perſons of different qualities, are diſtinguiſhed by their ornaments; but they are ſuch as may be purchaſed at a moderate price.

The German language is generally ſpoken here, in which alſo all public affairs are tranſacted: but in thoſe parts of the country that border on Italy and France, a corrupt French or Italian prevails. Calviniſm and popery are the two predominant religions.

Their principal manufactures are ſnuff and tobacco, linen of ſeveral ſorts, lace, thread, ſilk and worſted ſtockings, neckcloths, cotton ſtuffs, gloves, handkerchiefs, ſilks of ſeveral ſorts, gold and ſilver brocades, a variety of woollen manufactures, hats, paper, leather of all ſorts, earthen wares, porcelain, toys, watches, clocks, and other hardwares, &c. The trade of Switzerland is greatly promoted by many navigable lakes and rivers. In ſome of the above manufactures, and in cheeſe, butter, ſheep, horſes, black cattle, hides and ſkins, the exports are conſiderable; and as the imports are chiefly grain and ſalt, with ſome American and Aſiatic goods, the balance of trade is probably much on their ſide.

In general, the public revenues are very inconſiderable, and ariſe chiefly from the uſual regalia appropriated every where to the ſovereign, the demeſnes and public granaries, voluntary contributions, the ſale of ſalt, and a land-tax: in the proteſtant cantons, from the church lands alſo that were ſeized at the reformation; except in Zurich, Bern, Bazil, and Schaffhauſen, where the people are more induſtrious, have a greater trade, and are richer than in the others, they only defray the ordinary charges.

The people of this country were antiently called Helvetii. After they were defeated by Marius, they retired into their own country, where they lived peaceably till the time of Julius Cæſar, who obliged them again to ſubmit to the Roman yoke, under which they continued till the declenſion of that empire, when they became a part of the kingdom of Burgundy. After that, they fell under the dominion of the Franks; then of the Germans; but being oppreſſed by the latter, they threw off the yoke, and erected ſeveral ſtates or republics, which were recognized as free and independent at the treaty of Weſtphalia, in 1648, at the ſame time as the United Provinces were declared independent by Spain. The five popiſh cantons of Lucern, Switz, Zug, and Underwald, have never had a good underſtanding with the cantons of Zurich and Bern, ſince their yielding up theſe territories. On the contrary, they ſeem ready to call in the French, or any other power to aſſiſt them, to be revenged of their enemies, without regarding what the conſequences may be to their own country. This proved to be the caſe with reſpect to Geneva, where, in April 1782, the citizens took up arms, overpowered the republic guard, and, having taken poſſeſſion of the arſenal and magazines, carried off and impriſoned the magiſtrates. But this inſurrection, which at firſt appeared very formidable, was in the following June ſuppreſſed without bloodſhed, by the united efforts of the kings of France and Sardinia and the canton of Bern, who aſſembled a body of twelve thouſand men, and obliged the repreſentants to ſurrender; whereupon the peace of the republic was reſtored.

CHAP. XVII.

THE NEW HISTORY AND DESCRIPTION OF

ITALY.

Comprehending the ſeveral KINGDOMS, STATES, and TERRITORIES thereunto belonging.

SECT. I.

Situation and Boundaries, with the Natural and Geographical Hiſtory and Deſcription of ITALY; alſo a particular Account of the Popedom or Eccleſiaſtical State, and the ſeveral Cities, Towns, and Places therein contained.

ITALY is acknowledged, by the moſt reſpectable and antient hiſtorians, to have been once the miſtreſs of the world, the chief of empires, the ſeat of the Muſes, the nurſery of arts, and the centre of opulence; but at preſent retains only the ſhadow and remnants of its priſtine power and grandeur. This country is ſituated between the ſeventh and tenth degrees of eaſt longitude, and thirty-ſeventh and forty-ſixth degrees of north latitude, being about ſix hundred miles in length, and in ſome places near four hundred broad; but in other parts the breadth does not exceed twenty-five miles. Its form reſembles that of a boot. It is bounded, on the north, by France, Switzerland, and Germany; on the eaſt, by the Adriatic; and on the ſouth and weſt, by the Mediterranean ſea.

The dominions in Italy, ſubject to ſeveral princes and ſovereigns, are as follow: I. The Popedom; II. Naples; III. Piedmont; IV. Milan; V. Montſerrat; VI. Modena; VII. Parma and Placentia; VIII. Mantua; IX. Genoa; X. Venice; which we ſhall treat of in the order here laid down, after giving the natural hiſtory of the country.

Italy well merits the appellation which it has obtained, viz. the Garden of Europe. The air is very different, according to the different ſituations of the ſeveral countries contained in it. In thoſe on the north of the Apennines it is more temperate, but in thoſe on the ſouth generally warm. The air of the Campania of Rome and of the Ferrareſe, is unhealthful, which is owing to the lands not being duly cultivated, nor the marſhes drained: that of the other parts is generally pure, dry, and healthy. In ſummer, the heat is generally very great in the kingdom of Naples, and would be almoſt intolerable, were it not ſomewhat alleviated by the ſea-breezes.

The ſoil is, in general, very fertile, being watered by a great number of rivers, the principal of which are the Po, which riſes in Piedmont, and diſembogues itſelf into the Adriatic: the Tyber, which has its ſource in the Apennines, waters Rome, and diſcharges itſelf into the Tuſcan ſea; the Adiga, Arno, Adda, &c. beſides which, and ſome other rivers, great numbers of lakes are ſpread throughout the whole country, which produces a variety of wines, and the beſt oil in Europe, excellent ſilk in abundance, corn of all ſorts, but not in ſuch plenty as in ſome other parts; oranges, lemons, citrons, pomegranates, almonds, raiſins, ſugar, mulberry-trees without number, figs, peaches, nectarines, apricots, pears, apples, filberds, cheſnuts, &c. Moſt of theſe fruits were at firſt imported by the Romans from Aſia Minor, Greece, Africa, and Syria, and were not the natural products of the ſoil. The tender plants are covered in winter on the north ſide of the Apennines, but on the ſouth ſide they have no need of it. This country alſo yields good paſture, and abounds with cattle, ſheep, goats, buffaloes, wild boars, mules, and horſes. The foreſts are well ſtored with game of various kinds.

The Apennines and Alps are the principal mountains; the former run the whole length of the country from north-weſt to ſouth-eaſt; the latter extend from the river Var, near Nice, to the Adriatic. The mountains yield not only mines of iron, lead, allum, ſulphur, marble of all ſorts, alabaſter, jaſper, porphyry, &c. but alſo gold and ſilver, with a great variety of aromatic herbs, trees, ſhrubs, and ever-greens, as thyme, lavender, laurel, and bays, wild olive-trees, tamarinds, juniper, oaks, pines, &c.

The eccleſiaſtical ſtate, or popedom, ſituated in the middle of Italy, is two hundred and forty miles long, but its breadth greatly varies. The ſoil, in general, is excellent, but badly cultivated, the people being remarkably idle, and groſsly ſuperſtitious. The tyranny of the government, the pride of the prelacy, the numerous herds of monks and friars, and the natural indolence of the people, have greatly depopulated and impoveriſhed one of the moſt fertile ſpots in the univerſe. The ſpiritual power of the pope received a great blow by the Reformation; but, though far ſhort of what it formerly was, it is ſtill very conſiderable.

The Roman pontiff ſtill poſſeſſes his temporal dominions. The Campania of Rome is under his immediate government, but the other provinces are governed by legates and vice-legates, and there is a commander in chief of the pope's forces in every province. The pope is choſen by the cardinals in the conclave, who are ſeventy in number when complete, and conſiſt of three claſſes, namely, cardinal-biſhops, prieſts, and deacons: the cardinal that is choſen pope muſt be an Italian, and at leaſt fifty-five years of age: the cardinals conſider themſelves as on a footing with crowned heads, and have the title of Eminentiſſimi. The pope holds a conſiſtory of them on eccleſiaſtical affairs; but the cardinals do not meddle with his civil government. The pope's chief miniſter is the cardinal-patron, who amaſſes an immenſe eſtate, if the reign be of long duration.

The pope's revenue, as a temporal prince, is, one million of pounds ſterling, ariſing principally from the monopoly of corn and duties on wine: but, independent of this, he receives conſiderable ſums for indulgences, diſpenſations, canonizations, &c. He has a conſiderable body of regular troops tolerably well cloathed and paid; his life-guards are forty Swiſs, ſeventy-five cuiraſſiers, and the ſame number of light horſe: his fleet, however, is but deſpicable, conſiſting only of a few gallies. It is computed that the monks and regular clergy ſcattered through the pope's and other countries, who are at his abſolute devotion, amount to two millions, and the revenues which ſupport them are eſtimated at twenty millions of pounds ſterling.

Bologna was once a republic, and afterwards annexed to the papal dominions. This territory contains only one place worthy of deſcription; namely, Bologna, its capital, the ſecond city in the eccleſiaſtical ſtate, and the ſee of an archbiſhop.

The city of Bologna is waſhed by the river Savona, and interſected by the river Reno. The latter has a canal which communicates with the Po, and is uſeful for the conveyance of various commodities. A brick wall adorned with towers defends it, and the people carry on a few manufactories. All kinds of proviſions are in great plenty, and the inns the beſt in Italy. The women enjoy as much liberty here as in any city of Italy; thoſe of the higheſt rank dreſs entirely after the French mode.

In the centre of this city, like a maſt in a ſhip, ſtands a very high tower, called Degli Aſinelli, from Gerardo Aſinelli, who built it in 1109: the height is three hundred and ſeventy-one feet. Near it is a leaning tower, called Gariſenda, but not ſo high as the other. The pa-

lace where the governor reſides, and the courts of juſtice are held, ſtands in the great market-place, and is two hundred and eight common paces in length. There are in Bologna, a great many convents, fine palaces, and churches, adorned with a variety of fine paintings, ſculptures, &c. The church of St. Petronius is the largeſt; the emperor Charles V. was crowned in it, in the year 1530. From Bologna runs a covered walk to the nunnery of Madonna de St. Lucca, three Italian miles from the city.

The duchy of Ferrara was annexed to the eccleſiaſtical ſtate in 1597. The principal place in it is Ferrara, one hundred and ninety miles from Rome. This town is regularly built, has a citadel, caſtle, ſtately cathedral, and ſome other churches and convents.

The fertile province of Romagna was given to the ſee of Rome by Pepin, king of France. The chief places are, 1. Rovena, thirty-eight miles eaſt of Bologna, now a decayed city, but formerly the moſt celebrated of all the ſea-ports. In the large market-place are two lofty pillars of granate, on which are the ſtatues of St. Victor and St. Apollinaris; and alſo a braſs ſtatue of pope Alexander VII. ſitting, the uſual attitude of the pope in all ſtatues and public monuments. The cathedral is a ſtately old fabric, adorned with four rows of marble pillars, a roof of Moſaic work, and a pavement of porphyry of various colours. The church of St. Vitalis, and others, are alſo very beautiful.

2. The town of Rimini, the antient Ariminum, on the Adriatic, is now greatly declined, though ſome remains of its antient ſplendor are ſtill to be ſeen. Without the town, towards Peſauro, is a triumphal arch, built by Auguſtus, all of marble, the front of which is decorated with two beautiful corinthian pillars, and two buſts. Behind the capuchins convent are ſome remains of an amphitheatre; and over the Marecchia is a ſtately bridge of marble, built or repaired by Auguſtus and Tiberius. The ſplendid library of count Gabalonga is well worth a traveller's notice. Here was formerly an excellent harbour lined with marble, but it is now, in a great meaſure, choaked up with ſand.

Urbino is one of the leaſt fertile dutchies in Italy, and does not contain any remarkable place except Urbino, celebrated for having given birth to Polydore Virgil, the hiſtorian, and Raphael the celebrated painter.

Ancona, on the Adriatic, has a groſs air, but fertile ſoil. This marquiſate contains Ancona, ſituated as above; and, though a biſhop's ſee, is but a mean place. The harbour is commodious, but the traffic inconſiderable. The exchange is handſome, and near the harbour is a triumphal arch erected in honour of the emperor Trajan. The Jews live in a particular ward, have a ſynagogue, and are obliged to wear a piece of red cloth in their hats.

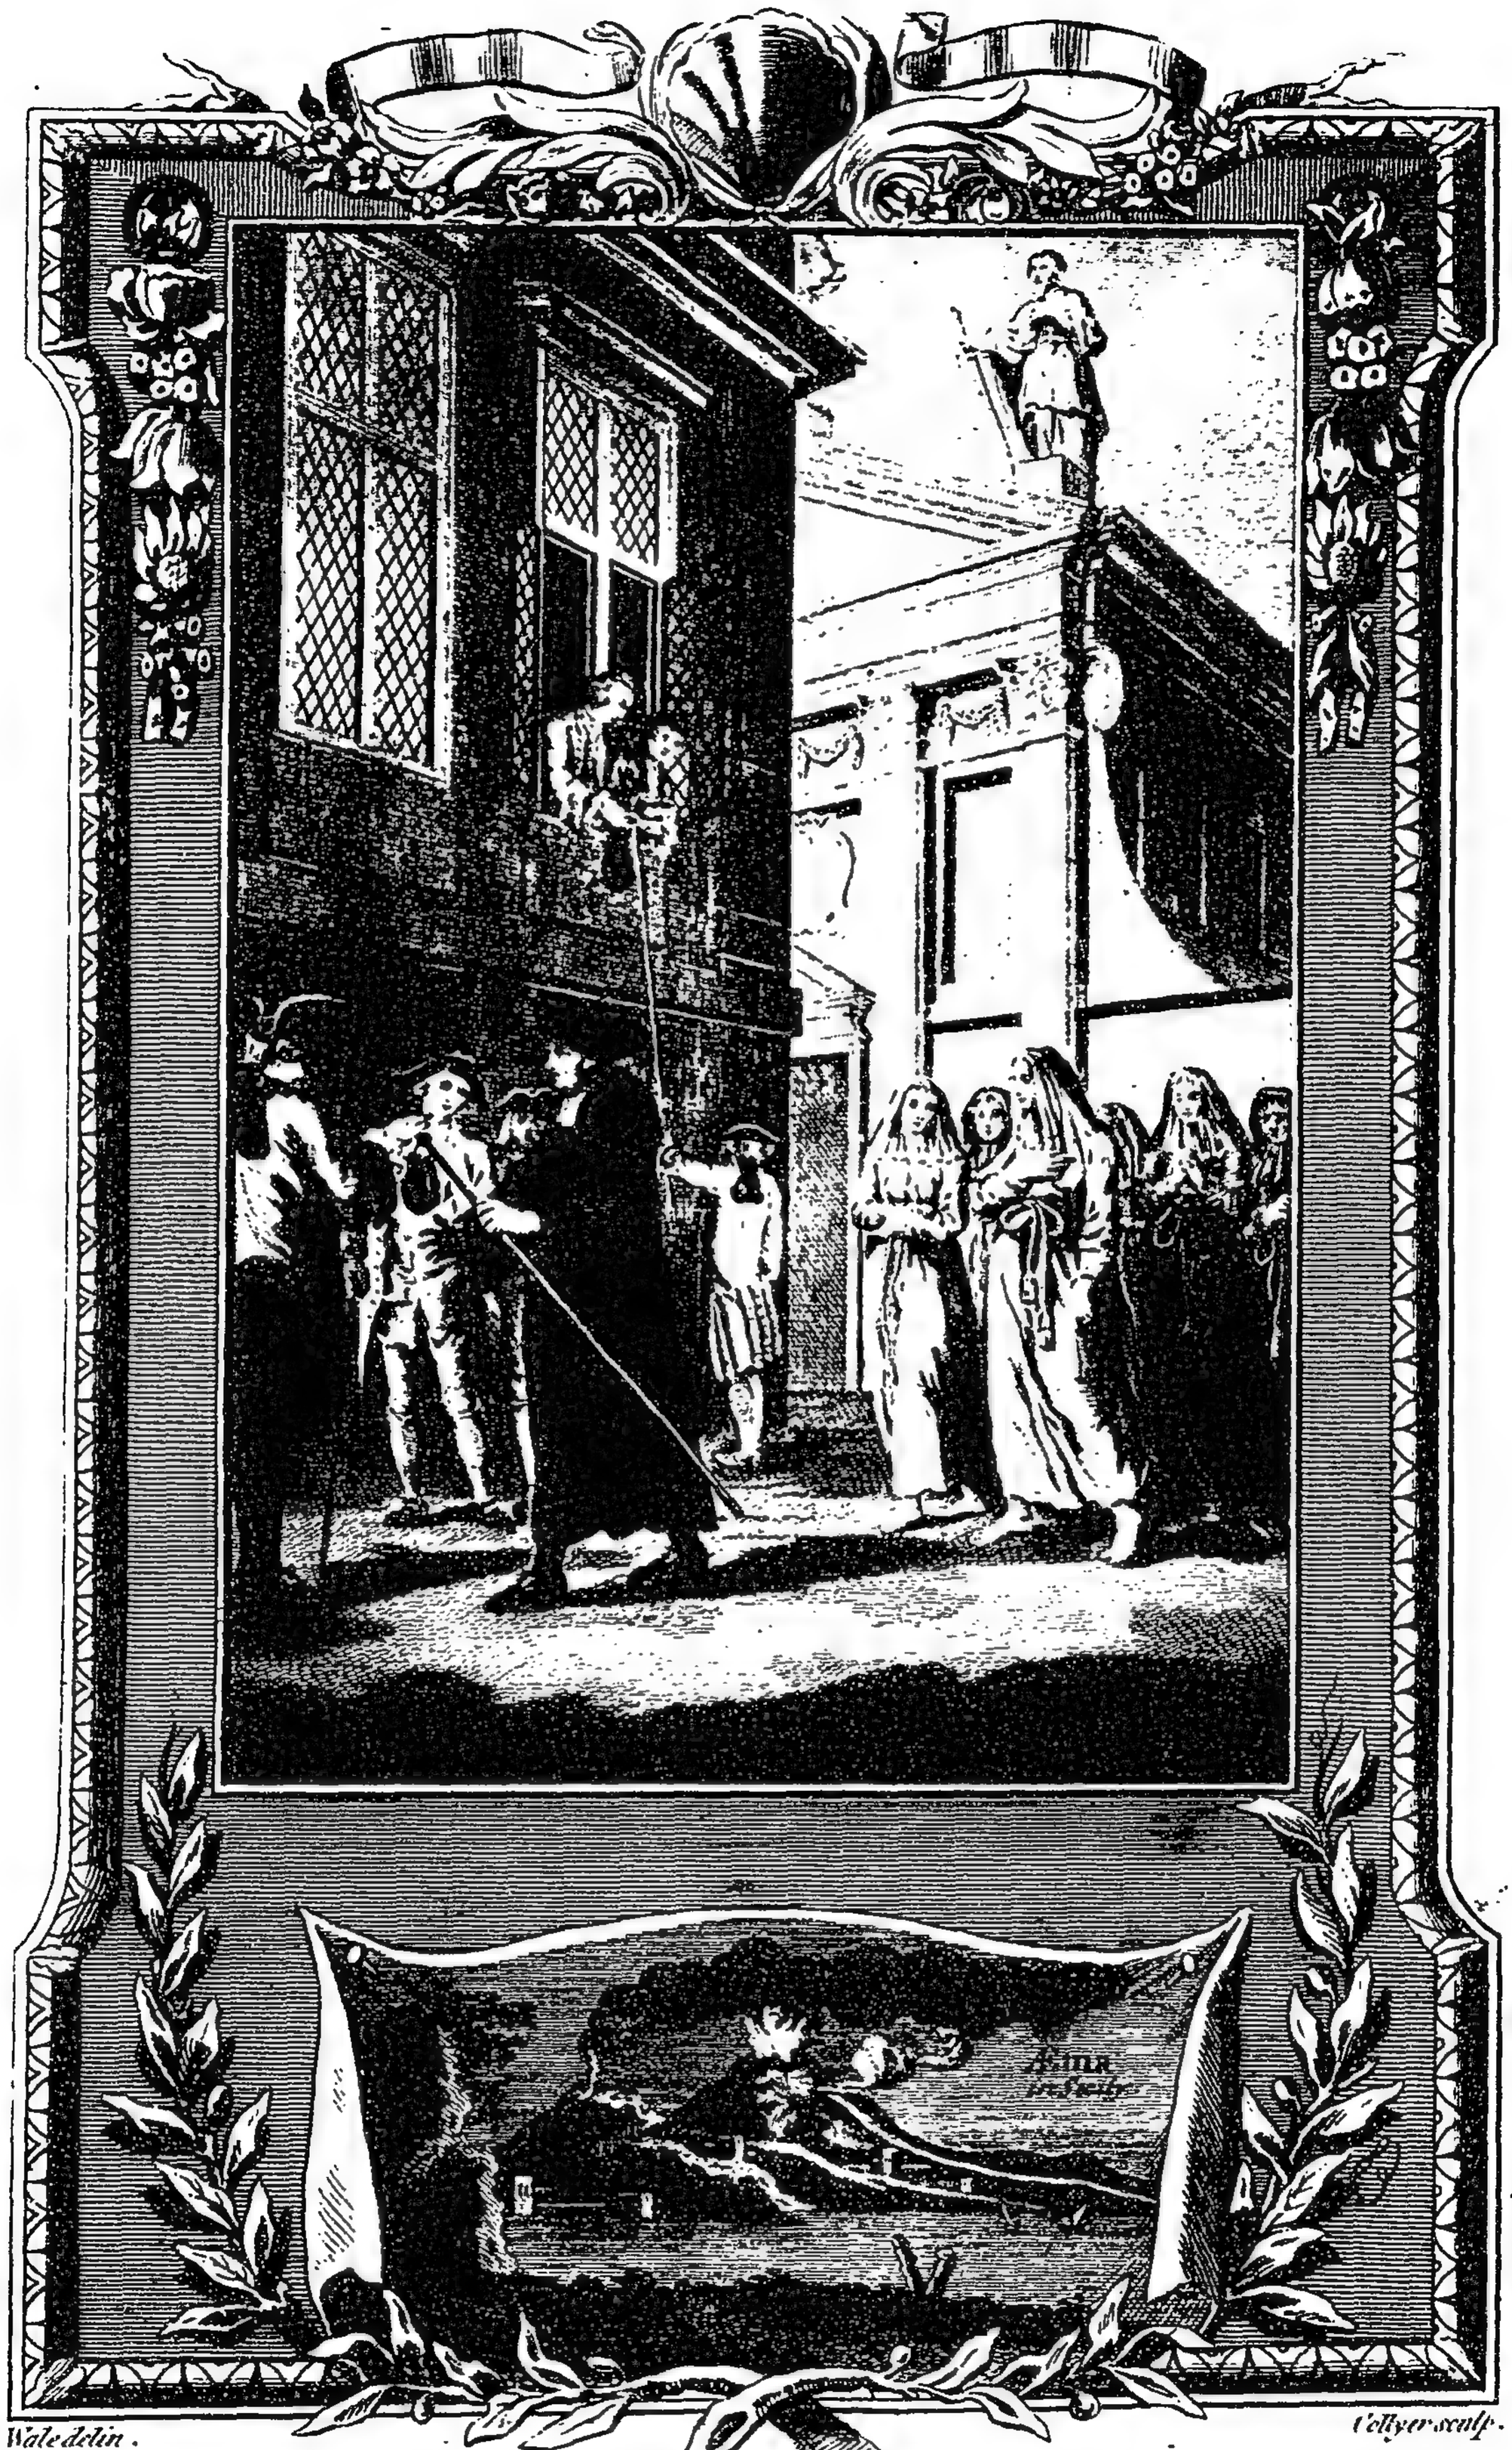
The ſmall city of Loretto, fifteen miles from Ancona, is the ſee of a biſhop. Its name is derived from Lauretta, the lady in whoſe field the ſanta caſa was firſt pitched. The circumſtance which renders this city the moſt remarkably famous, is, the ſanta caſa, or holy houſe, which it is ſaid the virgin Mary dwelt in at Nazareth. This houſe, according to the Roman legend in the thirteenth century, was conveyed hither by angels, but has been many times ſince repaired. It is at preſent thirty-one and three-quarter feet long, thirteen one quarter feet broad, and eighteen three quarter feet wide. It has two doors for the people, and one for the clergy, and is built of bricks of unequal ſizes. On it is a ſmall tower, with two little bells, which are only rung in ſtormy weather. On the weſt ſide is the window where the angel is ſaid to have entered the houſe, and the place where the Virgin was then ſitting is ſeparated from the reſt by a ſilver baluſtrade. The images of the Virgin and Infant are made of cedar, and richly ornamented; particularly on their heads are triple crowns of gold, ſuperbly decorated with diamonds, pearls, &c. To give a particular detail of all the votive pieces and jewels, in the holy houſe and treaſury, would fill a volume: let it ſuffice to ſay, that they are of immenſe value.

Perugia territory contains the lake near which Hannibal defeated the Romans under the conſul Flaminius; and the town of Perugia is only noted for having been once taken by the Goths, after they had beſieged it ſeven days.

Orvieto territory contains a town of the ſame name, which a well, cut into a rock two hundred and fifty cubits deep, ſupplies with water.

Spoleto is ſixty-five miles long and forty-ſeven broad, and is tolerably fertile. This dutchy contains Spoleto, antiently one of the moſt celebrated municipal towns in Italy, and even now the capital of the dutchy. It is ſeventy miles north of Rome; and has a famous aqueduct, by which water is conveyed to the city and caſtle from mount St. Francis, over a valley.

The town of Terni is pretty well built and inhabited, and the ſee of a biſhop, ſituated about twenty-two miles ſouth from Spoleto. Not far from hence is the famous caſcade formed by the fall of the river Velino, which ruſhes down a precipice one hundred yards high: the ruins of an antient theatre are ſtill viſible here.



St. Peter's Patrimony is ſo called from a pretended grant of it made by Conſtantine the Great to Sylveſter biſhop of Rome, in 324, for the maintenance of the church of St. Peter, and its biſhops: but this grant, in fact, is ſaid to have been made by the counteſs Matilda, in the year 1077.

The principal places in this Patrimony, are, Viterbo, the capital, thirty-three miles north-weſt of Rome. It is pretty large, well built, and contains a great number of churches and convents; but that of the inhabitants is but ſmall, conſidering its extent. It is the ſee of a biſhop, who is immediately under the pope. The number of the inhabitants is ſaid to be about ſixteen thouſand, a conſiderable part of which conſiſts of prieſts and monks of all orders. Not far from the town is a warm mineral ſpring. Here are two academies of wits, the one called Gli oſtinati, and the other Gli ardenti.

The territory called Campagna di Roma, antiently Latium, has many lakes, and a rich but uncultivated ſoil, and contains Rome, the capital and ſeat of the Roman empire, and now the head of the Roman Catholic religion. One may walk quite round the city in three or four hours at moſt, the circumference being reckoned about thirteen Italian miles. With regard to the number of inhabitants, modern Rome is greatly inferior to the antient. In external ſplendor the modern is ſuppoſed to ſurpaſs the antient Rome. The neighbouring country appears almoſt like a deſart, through the indolence and ſuperſtition of the inhabitants.

A ſmall part of this city is ſeparated from the other by the Tyber, and is therefore called Traſtevere, or beyond the Tyber. There are ſeveral bridges over the river, a great number of towers on the walls, and twenty gates. The Tyber is ſubject to frequent inundations, by which it often does great damage. Rome is well paved, but not well lighted, nor kept very clean. Two-thirds of the houſes are the property of the churches, convents, and alms-houſes. Proteſtants are not obliged to kneel at the elevation of the hoſt, or at meeting the euchariſt in the ſtreets; and they may have fleſh meat always at the inns, even during Lent. Here are a great many academies for promoting arts and ſciences, beſides the univerſity. The carnival is only during the eight days before Lent, and there are no ſuch ſcenes of riot as at Venice. To maintain good order, a body of three hundred halberdiers, under their colonel, attend. Very little trade is carried on in Rome, though great ſums are ſpent by travellers. The remains of Rome's antient grandeur conſiſt of ſtatues, coloſſuſſes, temples, palaces, theatres, naumachias, triumphal arches, cirques, columns, obeliſks, fountains, aqueducts, mauſoleums, thermæ, or hot-baths, and other ſtructures. Of modern buildings, the ſplendid churches and palaces are the moſt remarkable. Next to the ſtatues, there is nothing more ſurpriſing than the amazing variety of antient pillars of ſo many kinds of marble.

The city of Rome abounds with a variety of magnificent ſtructures, both antient and modern; the principal of which are as follow: the churches of St. Peter and St. Martin; the aqueducts and fountains; the vatican, and the other palaces; the campidolio, where the Roman ſenate reſides; the pila miliaria of fine marble; the equeſtrian braſs ſtatue of Marcus Aurelius Antoninus; the marble monument of the emperor Alexander Severus; marble buſts of the emperors and their conſorts; three brick arches of the temple of peace, built by the emperor Veſpaſian, and that of Concord; the coliſco, or amphitheatre, built by the emperor Veſpaſian; the triumphal arch of Septimus Severus, of Titus, of Galienus, and the temple of Antoninus; ſome parts of the cloaca Maxima; the columna Antonina, repreſenting the principal actions of Marcus Aurelius; the columna Trajani, or Trajan's pillar; ſome fragments of the Baſilica, or palace of Antoninus Pius, now the cuſtom-houſe, and of Narva's forum; the mauſoleum of Auguſtus, in the Strada Pontifici; the remains of the emperor Severus's tomb without St. John's gate; the pyramid of Caius Ceſtus, near St. Paul's gate; the porphyry coffin of St. Helen, and the original ſtatue of Conſtantine the Great; an Egyptian obeliſk, near the church of St. Maria Maggiore; the ſtately remains of Dioclefian's baths; the celebrated pantheon;

theon; the obeliſks of Seſoſtris and Auguſtus by the Clementine college; the church of St. Paulo fuori della Mura, ſaid to have been built by Conſtantine the Great; the mauſoleum of Adrian; Marcellus's theatre; the Tarneſe Hercules, of white marble, of a Coloſſean ſize and exquiſite workmanſhip, in a court of the Farneſe palace, and an admirable group cut out of one block of marble, in another court of the ſame palace.

No city in the world equals Rome for the multiplicity of fine fountains, noble edifices, antiquities, curioſities, paintings, ſtatues, ſculptures, &c. The catacombs were places where the Chriſtians, who never burned their dead, and ſuch of the Pagan Romans, whoſe friends could not afford the expence of burning, were buried; they are long, narrow alleys, ſcarcely broad enough for two perſons to go abreaſt, but ſufficiently high for the talleſt man to ſtand upright. They extend a prodigious way under ground. On each ſide are three holes or cavities, each of which will contain the coffin of a full-grown perſon. Oſtia, the antient part of Rome, being twelve miles ſouth thereof, is at preſent a mean village: this is owing to the channel becoming dry, from the Tyber's having changed its courſe.

About twenty-three miles eaſt of Rome, on the brow of a hill, ſtands Tivoli, which is now but a mean place, but is the ſee of a biſhop, holding immediately of the pope. In its neighbourhood are many remains of Roman villas, ſome quarries of free-ſtone, and the caſcade or water-fall of the river Tiverone, formerly Anio, which makes an aſtoniſhing noiſe. Near it is alſo the Lago di Bagni, or Solfatara, whence the river Solfatara iſſues. The water of the lake and river are ſtrongly impregnated with ſulphur, and pretty hot, eſpecially towards the bottom.

St. Marino, which is a ſmall republic, conſiſts only of a mountain, and contains about five thouſand inhabitants. The mountain yields good wine, but they have no other than rain or ſnow water. The founder of the republic was a Dalmatian, and a maſon, who upwards of one thouſand three hundred years ago turned hermit, and retired to this mountain. Here his devotion and auſterity, and in conſequence of that, his reputation for ſanctity were ſuch, that the princeſs of the country made him a preſent of the mountain, on which many, out of veneration for the ſaint, ſoon after took up their abode. Thus was the foundation laid of the town and republic, which ſtill bears the name of the ſaint, whoſe aſhes and ſtatue it contains.

SECT. II.

Containing Deſcriptions of NAPLES, PIEDMONT, MILAN, MONTSERRAT, and the other States of ITALY; with an Account of their Cities, Remarkable Places, Structures, Antiquities, &c.

NAPLES is the largeſt kingdom or ſtate in Italy. It was formerly called Sicily on this ſide the Pharo of Meſſina, whence the king, who likewiſe poſſeſſes Sicily, is called King of the Two Sicilies. Towards the north-eaſt it is bounded by the eccleſiaſtical ſtate, and in all other parts by the Mediterranean and Adriatic ſeas. Its length is two hundred and eighty miles, but its breadth not above one hundred and twenty where broadeſt. The air is hot, and the ſoil fertile; but the number of inſects, reptiles, &c, and the frequent earthquakes, render the country unpleaſant and even dangerous to the inhabitants.

This is an hereditary monarchy. The high colleges are, the council of ſtate, the privy-council, the treaſury, the Sicily council, the council of war, &c. This kingdom is a papal fief; and the king, in acknowledgment of the pope's feudal right, ſends him every year a white palfry, and a purſe of ſix thouſand ducats. The title of the king's eldeſt ſon is prince of Calabria. The higher nobles conſiſt of princes, dukes, marquiſſes, and barons. The general aſſemby of the States, conſiſting of the nobility and commons, is ſummoned every two years, to meet at the capital, to deliberate on the cuſtomary free gift to the ſovereign.

Naples, the capital of the kingdom, is ſituated in the province called Terra di Lavora, which is the richeſt and beſt inhabited in the whole kingdom, and comprehends a part of the antient Campania Felix, or the Happy. This city is advantageouſly ſituated, having a beautiful country on one ſide, and a noble bay of the Mediterranean on the other, with an excellent harbour. The circumference, including the ſuburbs, is eighteen Italian miles, and the number of the inhabitants four hundred thouſand. The houſes are of ſtone, flat rooſed, and in general lofty and uniform; but many of them have balconies, with lattice windows. The ſtreets are well paved, but they are not lighted at night, and, in the day-time are diſfigured in many places by ſtalls, on which proviſions are expoſed to ſale.

There are, in this city, ſeveral magnificent churches, convents, fountains, and palaces of the nobility, many of whom conſtantly reſide here. The cathedral, though gothic, is a very grand, ſplendid edifice. It is uſual to walk on the tops of the houſes in the evenings, and to breathe the ſweet, cool air, after a hot ſultry day. Here are ſwarms of monks and nuns of all ſorts to ſuch a degree, that there are no leſs than nineteen convents of the Dominicans alone, eighteen of the Franciſcans, eight of the Auguſtines, and in proportion of the reſt. In the cathedral the head and blood of St. Januarius, the tutelary ſaint of Naples, are kept, the latter in two glaſs or cryſtal vials. The nunnery for ladies of quality is ſaid to be the largeſt in the whole world, containing no leſs than three hundred and fifty nuns, beſides ſervants.

The climate here is ſo mild and warm, even in winter, that plenty of green peas, artichokes, aſparagus, and other vegetables, may be had ſo early as the beginning of the new year, and even all the winter. The fortifications of the city are very ſtrong both by ſea and land. The bay is one of the fineſt in the world, being of a round figure, and thirty miles in diameter. The walls of the city conſiſt of hard, black, quarry ſtones, called piperno. There are five piazzas or ſquares in the city, appropriated to the nobility, viz. Capuana, Nido, Montagna, Porto, and Porta Nova. Of all the palaces, that of the king is not only the moſt magnificent, but alſo in the beſt ſtyle of architecture. Here is an univerſity and two academies; the one called Gli Ardenti, and the other Gli Otioſi. The mount of Piety, or the office for advancing money to the poor, on pledges, at a low intereſt, or without any, has an income of upwards of fifty thouſand ducats. The arſenal contains arms for fifty thouſand men. Many of the common people prefer begging or robbing to labour, yet ſome manufactures are carried on. Luxury here is reſtrained by ſumptuary laws, and the women are more cloſely confined than in any other city of Italy. Inſtead of ice, vaſt quantities of ſnow are uſed for cooling their liquors, not ſo much as water being drank without it. Water is conveyed to the city from the foot of mount Veſuvius by means of an aqueduct.

Five miles from Naples ſtands the celebrated mount Veſuvius. The ſouth and weſt ſides, as well as the tops, are covered with black cinders and aſhes, though ſome of the other declivities produce ſeveral ſorts of wine. It is about three miles from the foot of the mountain to the ſummit, but the aſcent is very toilſome. The neighbouring peaſants, for a trifling reward, ſerve as guides to, and aſſiſt travellers in climbing up: they wear leather belts, which ſtrangers take hold of, in order to render the aſcent more eaſy. A ſtream of lava often iſſues from the volcano, conſiſting of melted metal, ſulphur, minerals, &c. It runs like a river, bears all before it, and does incredible miſchief. As we approach the volcano, if the mountain is actually belching out matter, the aſhes grow hotter and hotter; at the ſame time a horrid noiſe is heard, like the exploſion of a whole battery of cannon, and a rumbling under foot, like the continual boiling of a large cauldron. Not a tree or ſhrub is to be ſeen on the top of the mountain: the hollow, whence the eruptions iſſue, is very large, and goes ſhelving down on all ſides. When the mountain is quiet, this hollow may be ſafely looked into; but even then it is generally filled with ſmoke. During the eruptions, it is filled with glowing and melted matter, which, as it boils over in any part, runs down the ſides of the mountain like a torrent. At theſe times alſo vaſt quantities of aſhes, cinders, and huge ſtones are thrown out.

Not far from this mountain is the village of Portici, where is a royal palace, with an amazing collection of antiquities, moſtly dug out of the ruins of the antient city of Heraclea, or Herculaneum, which ſtood near the ſpot, and was deſtroyed partly by an earthquake, and partly by an eruption of mount Veſuvius. Several volumes, giving accounts of theſe antiquities, have been publiſhed, and the people ſtill continue to dig for more.

The grotto of Pauſilippo is a broad, ſtraight, ſubterraneous road, hewn through a mountain. Two holes on each ſide admit air and light. This cave is one hundred feet high at the entrance, but diminiſhes afterwards; and the whole, which is paved with broad ſtones, is about half a mile long. At coming out, the road leads to the lake

Agano, which is circular, and a mile in circumference. In the midſt are the ſudatories of St. Germano, being ſtone apartments, where the hot ſteams which ariſe produce a profuſe perſpiration: hence they are much frequented in various diſorders.

The town of Puzzuolo, or Puteoli, tho' formerly a flouriſhing city, is now reduced only to an inconſiderable place. It is, however, the ſee of a biſhop; and the cathedral, which was formerly a pagan temple, is built of large blocks of marble. Puteoli glories in being the place where the firſt Chriſtian community in Italy was formed; for we are told that St. Paul, in his journey to Rome, found brethren in it. Here is a very commodious harbour, in which are fourteen piers, or pillars, riſing above the ſurface of the water. The earth of Puteoli has this peculiar property, that it hardens in the water, and, after lying in it ſome time, looks more like ſtone than earth. In the neighbourhood are what the antients called the Elyſian Fields, from the ſweetneſs of the climate, the verdure and fertility of the ſoil, &c. But its former beauties are all defaced, as the whole place is now covered with buſhes, briars, ruins, &c.

The city of Salerno, capital of the principality on this ſide the Apennines, is ſituated on the gulph to which it gives name, about twenty-ſix miles ſouth-eaſt from Naples. It is well fortified, has a pretty good harbour and caſtle, but little trade: here, however, is the ſee of an archbiſhop, with an univerſity, and ſeveral annual fairs, which are much reſorted to, and very profitable to it.

About twenty miles to the ſouth of Salerno lies Campaccio, near which are the ruins of the antient city of Pœſtum, or Poſſidonia. Here are the remains of a theatre, amphitheatre, and three temples. The walls of this place ſtill remain: they are compoſed of very large cubical ſtones, and are in ſome parts no leſs than eighteen feet thick.

The city of Otranto, antiently called Hydruntum, is well fortified, and the ſee of an archbiſhop: it ſtands on an iſland at the mouth of the Adriatic, which is joined by a bridge to another iſland, and that by a bridge to the continent. It gives name to, and is the capital of a province, which with thoſe of Bari and Capitanata, conſtitute the country of Apulia, a tract in general flat, dry, and ſandy.

Piedmont, which is part of the antient Lombardy, has its name from its ſituation at the foot of the Alps, being about one hundred and fifty miles long, and ninety-four broad. There is a moſt extenſive and romantic proſpect from the mountain Rochemelon, which takes a whole day to aſcend. Annually, on the 5th of Auguſt, vaſt crowds go to hear maſs ſaid before a ſtatue of the Virgin Mary on the ſummit. The inhabitants, and even horſes and dogs, are ſubject to the ſame kind of wens in the throat as the people in Savoy. This is a very fruitful country, and the Piedmonteſe ſilk is deemed the beſt in Italy.

At the conflux of the Po and Doria ſtands Turin, the capital of Piedmont. It is ſmall, but ſtrong, and very populous. Within the city are forty-eight churches and convents, and ſome very fine ſtreets, particularly Rue Neuve and Rue de Po, which are deemed the moſt elegant in Europe. Here are likewiſe many fine ſquares, ſeveral magnificent palaces, beſides that of the king, a ſuperb opera-houſe, an arſenal, royal printing-houſe, an univerſity, which is a quadrangle, and one of the fineſt buildings in the city. The king's palace, for the beauty of its apartments, the richneſs of the furniture, the elegant paintings, cabinet of curioſities, and library, is ſcarcely to be paralleled. The chapel of the Holy Sunday, built of blackiſh marble, is particularly admired.

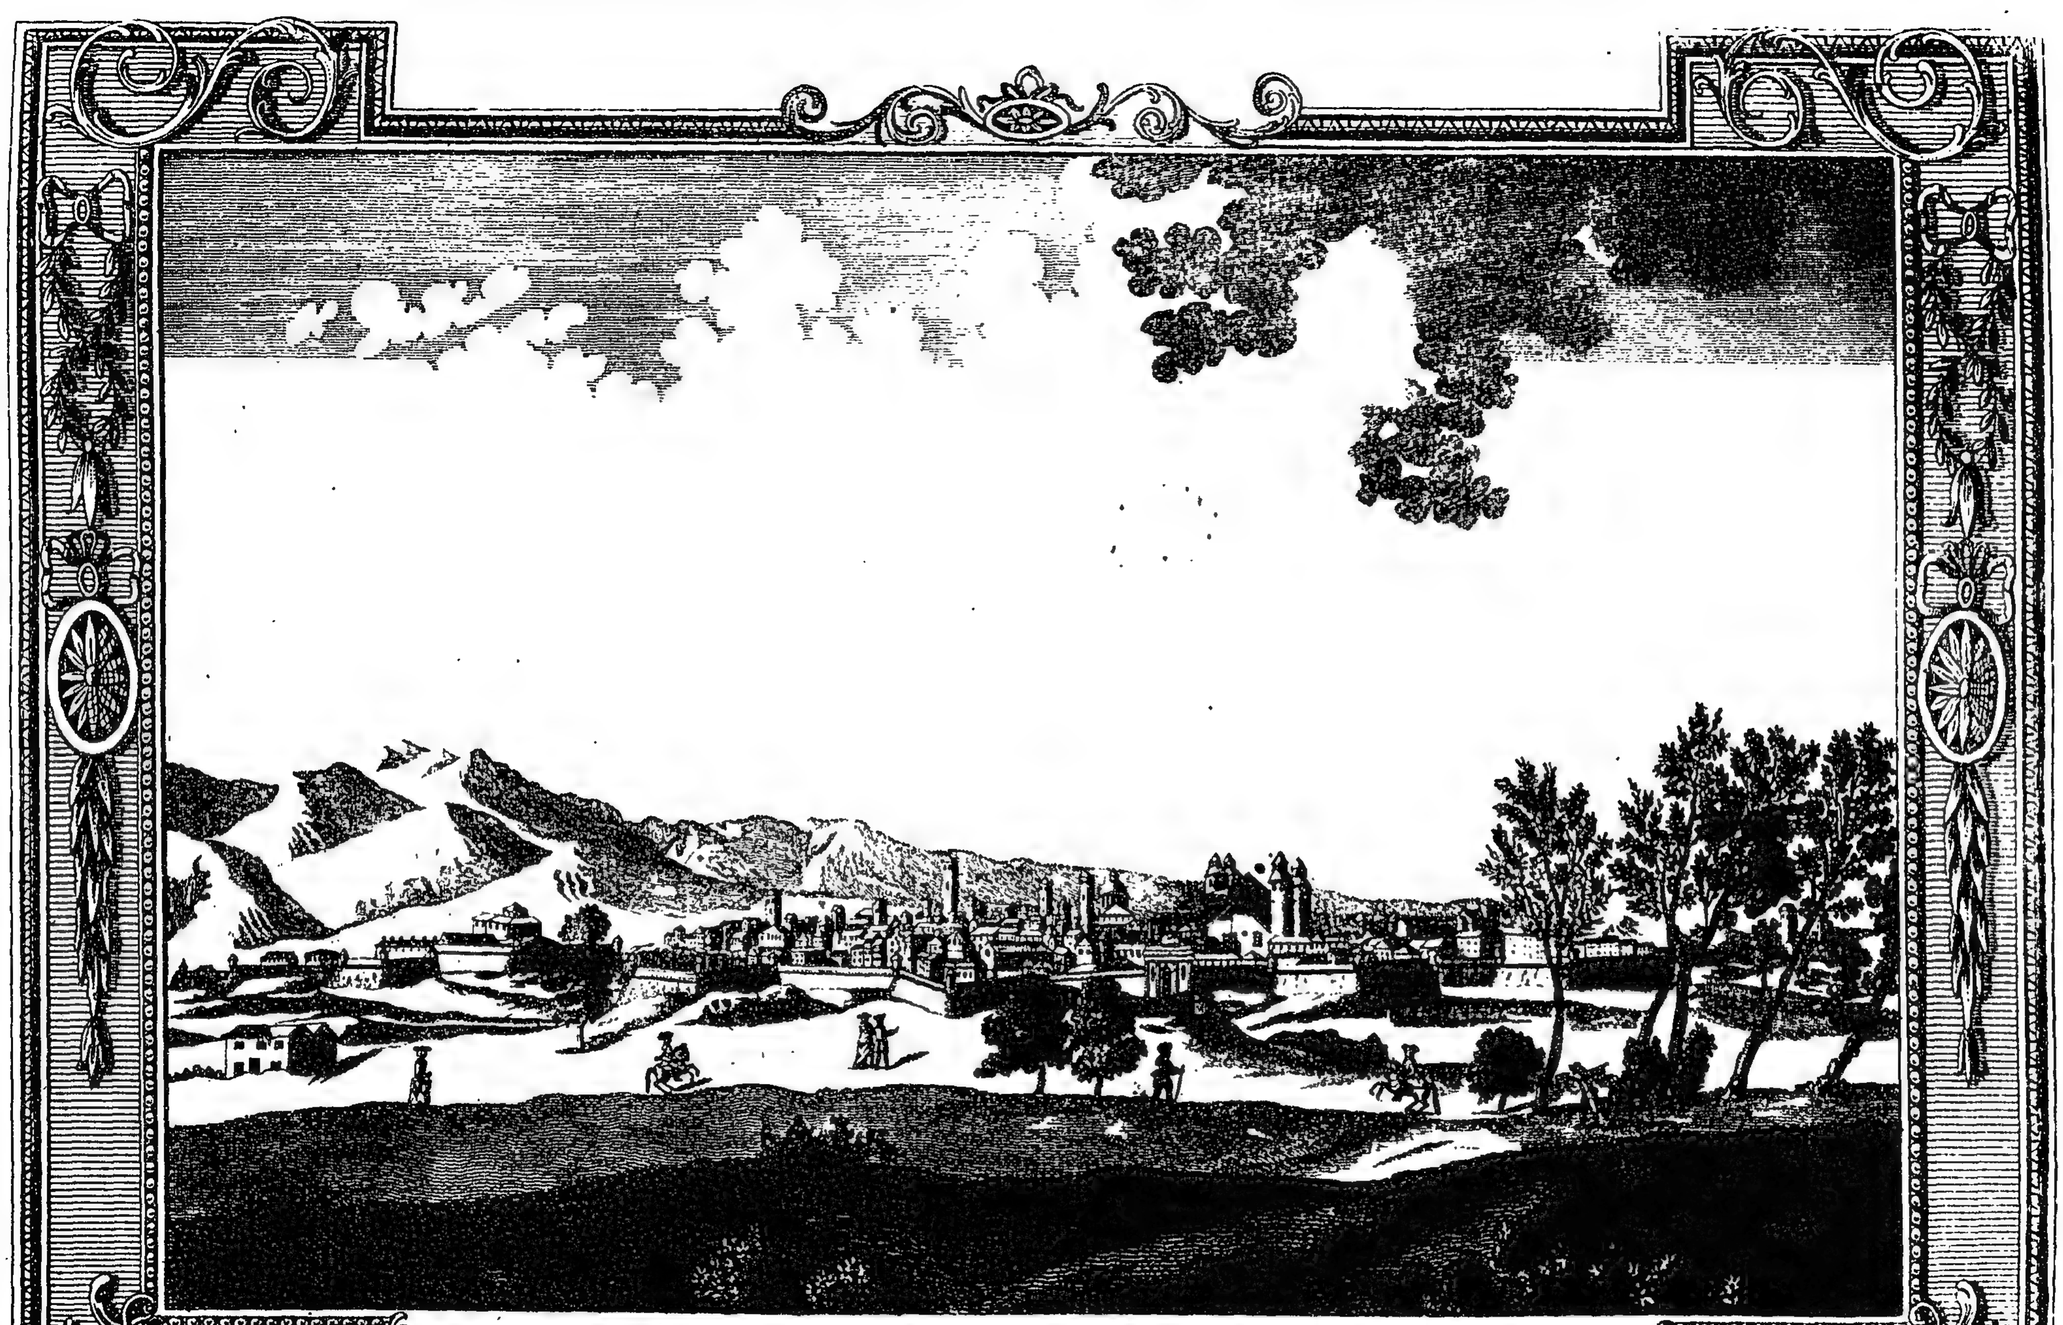
The city conſiſts of the Old and New. In the Old the ſtreets are crooked and narrow, but have ſome handſome houſes in them, and, in both the Old and New, are exceedingly clean and neat. From a canal cut from the river Doria, water is conveyed by an aqueduct into the city, and afterwards diſtributed at pleaſure through every ſtreet. Here is a fine citadel, an univerſity, library, and a great many charitable foundations. There are many beautiful villas, convents, and other buildings in the neighbourhood of Turin. Of the villas, thoſe belonging to the royal family are, Valentine, now neglected; Montcalier, Rivoli, and Stupinice; La Vigne de la Reine, and La Venerie, which has a very fine chapel and gardens, with a little town near it.

The town of Suſa, on the Doria, contains a triumphal arch, erected in honour of Auguſtus Cæſar. This place is ſurrounded by a wall, and has a ſtrong garriſon; and about a quarter of a league from it ſtands Fort Brunette, which perhaps cannot be paralleled in the whole world, having been hewn out of a rock with all its out-works. The paſſages in the rock are ſo large, that waggons and heavy cannon, drawn by ſeveral horſes, may paſs over it from place to place.

The ſmall ſea-port town of Nice is ſituated near the Mediterranean, at the mouth of the Paulon. The fortifications were entirely deſtroyed by the French in 1708. It gives name to a diſtrict, called the county of Nice, in which is alſo Villa Franca, a ſmall fortified town, two or three miles to the eaſt of Nice, with a harbour on the ſea, and two caſtles; and Capo de S. Oſpitio, a very ſtrong town on the ſea, and a free port. Nice has an indifferent harbour, is a free port, and the ſee of a biſhop, who is ſuffragan to the archbiſhop of Ambrun in Dauphine.

The duchy of Montſerrat, or Montferrat, is a duchy ſituated weſt of Milan. It is ſixty-two miles long, forty-eight broad, and very fertile. It contains a few fortifications, not in the leaſt remarkable; the principal of them, Caſal on the Po, forty-two miles eaſt of Turin, is the ſee of a biſhop, who is ſuffragan to Milan. Montferrat and Piedmont both belong to the king of Sardinia; as does

The duchy of Savoy, ſituated between France, Piedmont, and the lake of Geneva, being near ninety miles long, and ſeventy broad. It lies among the Alps, and conſequently is mountainous and ſterile. The roads over the Alps are diſagreeable and dangerous, eſpecially as huge maſſes of ſnow, called by the Italians avalanches, and fragments of rocks, frequently roll down in them from the impending precipices. The way of travelling is either in ſledges, chairs, or on the backs of mules: in ſome places the path on the brink of the precipices is ſo narrow, that there is but juſt room for a ſingle perſon to paſs. It begins to ſnow on theſe mountains commonly about the beginning of October. In the months of July, Auguſt, and September, many of them yield very fine graſs, with a great variety of flowers and herbs; and others box-wood, walnuts, cheſnuts, and pines. The air here, even in July and Auguſt, is exceeding cold. The heir apparent to the crown of Sardinia has always the title of duke of Savoy, and prince of Piedmont.



A corrupt French is ſpoken by the lower claſs of people in Savoy: but the inhabitants, in their diſpoſitions, reſemble the Germans more than the French. Great numbers of the mountaineers of both ſexes, are deformed, and particularly diſfigured with wens in the throat, which, as they are not painful, is the only inconvenience that attends them.

The town of Chamberry, the capital of the duchy, is ſituated on the river Leiſe, in a pleaſant valley in Savoy Proper, twenty-ſeven miles north-eaſt of Grenoble. It is walled, and the ſeat of the high court of Savoy, but not very large, nor of any great antiquity. Here are ſeveral handſome ſquares, a great number of monaſteries, a ſtately ducal palace, or caſtle, ſeveral palaces of the nobility, and a collegiate church, the head of which is ſtiled dean of Savoy; but ſince the dukes removed their reſidence to Turin, the town has loſt much of its antient ſplendor.

The ſmall town of Aix is ſituated about two leagues from Chamberry. The hot baths here are free to all, paying only the attendant, or rubber, a trifle: the water of them is clear, and of a greeniſh colour: no fiſh or any animal will live in them. Some remains of a Roman triumphal arch are to be ſeen here.

The province of Milan, which is one of the fineſt in Italy, lies to the north of the Apennine mountains, being near one hundred and ten miles long, and about one hundred broad. It is fertile and well watered, containing, beſides ſeveral rivers, ſome lakes, particularly Lago Maggiore, or the Greater Lake, which contains the Baromean iſlands, viz. Itolo Bella and Itolo Madre, the beauty of which almoſt exceeds imagination: art and nature ſeem to have vied with each other in embelliſhing them. In each of them is a palace with beautiful gardens, belonging to the Baromean family. The water of the lake is clear, and of a greeniſh colour, and abounds with fiſh. The hills with which it is ſurrounded, being planted with vines and cheſnut-trees, and interſperſed with ſummer-houſes, preſent a moſt charming landſcape.

The principal place in thoſe diſtricts, which belong to the king of Sardinia, is, Aleſſandria, ſurnamed De la Paglia, from the inhabitants uſing ſtubble for fuel, inſtead of wood. It ſtands upon the Tanaro, is well fortified, and contains above twelve thouſand inhabitants. Here is a fine opera-houſe: it is the ſee of a biſhop, ſuffragan to the archbiſhop of Milan, and two annual fairs are held

General View *of* TURIN, *the Capital of* Piedmont *in* Italy.

here in April and October. The town had the name of Aleſſandria from pope Alexander III. in honour of whom it was built, anno 1178.

The following places are contained in the Auſtrian diſtrict of the duchy of Milan, viz. 1. Milan, the capital, two hundred and ſixty miles north-weſt from Rome. This is a large walled city, with a rampart and citadel to defend it. The latter contains a foundery and arſenal, and the governor is independent of the governor of the Milaneſe. This city is governed by a preſident, and council of ſixty doctors of law, who are all nobles. It contains many reſpectable families. The cathedral is a vaſt pile, all of marble; and though ſomething has been doing for near four hundred years towards the outward or inward ornaments thereof, it is not yet finiſhed. Of the great number of ſtatues about it, that of St. Bartholomew, juſt flayed alive, with his ſkin hanging over his ſhoulders, and of Adam and Eve over the main portal, are the fineſt. The pillars, ſupporting the roof of the church, are all of marble, and the windows finely painted. This church contains a treaſure of great value, particularly a ſhrine of rock cryſtal, in which the body of St. Charles Boromeo is depoſited. The other churches, moſt worthy a ſtranger's notice, are thoſe of St. Alexander, St. Jerom, St. Giovanni di Caſorotti della paſſione, and St. Ambroſe, in the laſt of which lie the bodies of that ſaint, and of the kings Pepin and Bernard. In the Ambroſian college, founded by Frederic Boromeo, ſixteen profeſſors teach gratis. In the ſame college is alſo an academy of painting, with a muſeum, and a library, containing a vaſt number of printed books and manuſcripts. The ſeminary for ſciences, the college of the nobles, the Helvetian college, and the mathematical academy, are noble foundations, and ſtately buildings. Of the hoſpitals, the moſt remarkable are the Lazaretto, and that called the Great Hoſpital. In a void ſpace in one of the ſtreets of Milan, where ſtood the houſe of a barber, who had conſpired, with the commiſſary of health, to poiſon his fellow-citizens, is erected a pillar, called Colonna Infame (the infamous pillar) with an inſcription to perpetuate the memory of the execrable deſign. The city contains near two hundred and fifty thouſand inhabitants, and has been beſieged forty, taken twenty, and demoliſhed four times, yet it hath always recovered itſelf. Here are, beſides the churches, many palaces, convents, hoſpitals, &c. The polite people take the air on the ramparts, where they have the proſpect of the country on one ſide, and the ramparts on the other. The environs of this city, being adorned with beautiful ſeats, gardens, orchards, &c. are very pleaſant.

2. The city of Pavia is ſituated on the Teſſino, over which it hath a ſtone bridge of ſix arches, is old, ſpacious, and but thinly inhabited. It was formerly the capital of Lombardy, is an epiſcopal ſee, and badly fortified. Here is an univerſity, conſiſting of ſeven colleges. Not far from the city is a very magnificent Carthuſian monaſtery, called Certoſa, founded by John Galeazzo Viſconti, who died in the year 1494, and has an elegant monument of white marble erected to his memory in the church, the front of which is alſo of white marble, and the ſculptures of exquiſite workmanſhip. The park, in which the convent ſtands, is of great extent, and contains ſeveral large towns within it. The monks wear white garments, and are very hoſpitable: they ſing the ſacred offices in ſo ſlow and ſolemn a manner, that they conſtantly ſpend fourteen hours every day in the choir.

3. The town of Cremona on the Po is the ſee of a biſhop, and ſtrongly fortified. It has a bridge of boats over the river, an univerſity, a ſuperb cathedral, many other churches, convents, chapels, and other buildings.

The duchies of Parma and Placentia, which are united, lie to the north of Genoa, and belong to the crown of Spain. They are fertile and well watered, contain various minerals, and have ſome manufactures in them.

The city of Parma, which gives name to one of the diſtricts, is large and populous; it is ſituated on the river Parma, from which it derives its name, and by which it is divided into two parts, connected together by ſeveral bridges. It is four miles in circumference, and contains between forty and fifty thouſand inhabitants, with many fine ſtreets and houſes. The ducal palace conſiſts of three courts, two of which are new. Here is an univerſity, founded in 1599; and an academy, in 1601. The large theatre here, built by Renatus I. in 1618, is famous throughout Europe: it will contain upwards of ſeven thouſand ſpectators.

The other duchy, namely, Placentia, conſiſts of a large city near the Po. It contains many churches and convents, and about twenty-eight thouſand inhabitants. The citadel is ſtrong, but the other fortifications are inconſiderable. It had its name from its delightful ſituation in the midſt of a ſpacious fertile plain, where the paſtures are extremely rich. Here is an univerſity, a ducal palace, and a ſtately cathedral, with a fine church, called St. Maria in Campagna. The main ſtreet, ſtiled Stradona, is a very fine one. The biſhop of this city is ſuffragan to the archbiſhop of Milan. The Via Æmilia begins here, and extends as far as Rimini, on the Adriatic. There are ſome ſalt ſprings in the neighbourhood of this city.

Guaſtalla, which is a ſmall duchy, likewiſe belongs to Spain, is twelve miles long, and five broad, but contains no place worth mentioning, except Guaſtalla, which gives name to it, and is a ſmall fortified town on the river Croſtolo This duchy likewiſe belongs to Spain.

The duchy of Modena is ſituated eaſt of Parma, extends fifty-ſix miles in length, and is from twenty-four to thirty-ſix broad. The duke is a vaſſal of the empire. This country is well watered, and abounds with many neceſſaries of life, has in it many minerals, petrifactions, &c.

The city of Modena, the capital, is large, populous, and well fortified, but not handſome. It is the ſee of a biſhop, and has a large, unwieldy cathedral. The ducal palace is a very noble edifice, in which, among the other fine pictures, the birth of Chriſt, by Correggio, called la Notte Felice, is much celebrated. The only manufacture, for which this city is noted, is that of maſks, of which great numbers are exported. The tutelary ſaint of it is named Geminianus.

The city of Mirandola ſtands about twenty-four miles north-eaſt from Modena: this is a ſtrong, but not very large place, with a citadel. It is the ſee of a biſhop, and the capital of the principality to which it gives name, and which for a long time belonged to the noble family of Pico. Of this family and city was the famed Picus de Mirandola, whoſe works are well known among the learned; and being printed in a large and ſmall character, give name to the two ſizes of letter called double and ſingle pica uſed by printers.

Maſſa and Carrara, two little principalities, are contiguous to one another, and very fruitful. They both have their names from their capitals, and lie on the Tuſcan ſea. Maſſa, ſituated on the river Frigido, about three miles from the ſea, is the ſee of a biſhop, ſuffragan to the archbiſhop of Piſa, and has a ducal palace. Carrara is a ſmall neat town on the little river Lavenza, four miles from Maſſa, and as many from the ſea, at the foot of ſome high mountains, which yield a fine ſort of marble, from which the duke derives a conſiderable income.

The diſtrict of Mantua, which belongs to the houſe of Auſtria, is ſurrounded by the popedom, Venice, Milan, and Modena. It is about ſixty miles long, but not above ſeven broad; is fertile, and well watered.

The capital city, Mantua, is very antient, having been founded prior to Rome. It is ſituated in a marſh, which renders it naturally ſtrong, but at the ſame time renders the air unwholſome. The bridges are guarded by forts. The walls are four miles in circuit, and the number of the inhabitants (excluſive of the imperial garriſon, and about five thouſand Jews, who live in a diſtinct quarter, and have ſeveral ſynagogues) about ſixteen thouſand. Here are a great many convents and churches, with ſome fine ſquares, ſtreets, and houſes; but the city is much declined from what it was when it had dukes of its own. The riding-ſchool has not its equal; and the courſe is alſo well contrived. The ducal palace is old, and now much neglected, but the church belonging to it has a vaſt collection of riches, gold and ſilver crucifixes, ſtatues, and ſome good pictures. Mantua is an epiſcopal ſee, dependent on the pope. The cathedral, of which Julio Romano was the architect, contains ſome fine paintings, particularly a night-piece by Paul Veroneſe.

We are now come to the republic of Venice, which roſe from a very ſmall beginning to great conſequence. That cluſter of iſlands, where the city of Venice now ſtands, was originally inhabited only by fiſhermen; but, when Italy was invaded firſt by Alaric the Goth, and afterwards by Attila the Hunn, great numbers of the people fled thither for ſhelter with all their wealth. From that time a city gradually roſe, grew powerful from its ſituation, and opulent from commerce. A republic was formed, trade furniſhed the people with riches, riches gave birth to ambition; ambition urged them to conqueſt, and conqueſt procured them additional territories both in Europe and

Aſia. Thus by rapid ſtrides they roſe to great importance; but arriving at the zenith of their glory, they with almoſt equal velocity began to decline.

After many revolutions, an ariſtocratical form of government was at length eſtabliſhed in Venice. The nobles, who aſſumed the ſupreme authority, are about two thouſand in number, have each the title of Excellency, and wear as a mark of diſtinction black furred gowns reaching to their heels, with long caps and perriwigs. Some of the nobles, however, are ſo extremely poor, as to be obliged to beg of thoſe who are more opulent.

At the head of the government is the doge, whoſe office was once hereditary, and power abſolute; but the former is now elective, and the latter very much circumſcribed; in ſhort, this governor has little more than the ſhadow of greatneſs, and has been juſtly defined to be in habit and ſtate a king, in authority a counſellor, in the city a priſoner, and out of it a private perſon: he is as much ſubject to the laws as the meaneſt perſon; and when he dies there is no public mourning. But though the power of the doge is very ſmall, his ſtate and retinue are very ſplendid: his title is that of Serenity, and his office is for life. The yearly revenue of his office is about four thouſand pounds, and though he may be depoſed, he cannot reſign his dignity.

The principal Venetian order of knighthood is that of St. Mark, the badge of which is a large golden medal dependent from the breaſt. The order of Conſtantine knights wear a croſs hanging from a gold chain. The Inquiſition is under great reſtrictions here.

The naval power of the Venetians is the greateſt in Italy, as they can equip a formidable fleet. The army conſiſts of between twenty and thirty thouſand men, principally Swiſs and Dalmatians; and the commander in chief, ſtiled Capitano, is always a foreigner of diſtinction. The ordinary revenues of the ſtate, ariſing chiefly from the cuſtoms and duties on ſalt, amount annually to about one million two hundred thouſand pounds ſterling.

Several iſlands, and a ſmall part of the continent, compoſe the duchy (or dagado) of Venice; which contain the capital city of Venice, which is alſo the ſeat of the republic. It is ſituated four miles from any part of the Terra Firma, betwixt the city and which are many ſhallows, when, at low water, the bottom may be touched with a pole; but all poſſible care is taken to prevent their becoming dry land. The city is divided into many canals, on which the gondoliers, or boatmen, ply in their black gondolas, or boats. The ſtreets are clean, but narrow and crooked.

The moſt remarkable places in the city are the ducal palace, the ſquare, and church of St. Mark, who is the tutelar ſaint of Venice, the mint, public library, grand arſenal, ſeveral of the palaces of the nobles, churches, convents, and hoſpitals. In theſe laſt is a prodigious collection of the fineſt paintings; Venice, in this reſpect, ſurpaſſing even Rome itſelf. In the doge's palace, all the high colleges hold their aſſemblies. In this palace is a ſmall arſenal, furniſhed with arms againſt any ſudden inſurrection of the people, together with a ſtate priſon, a great many exquiſite paintings, and ſeveral curioſities. One ſide of it is towards St. Mark's ſquare; and the lower gallery on that ſide, with the hall under the new procuratie facing it, are called the Broglio, where the nobility, and none elſe, at leaſt while they are preſent, are allowed to walk.

St. Mark's ſquare is the zecca or mint; from zecca, the golden coin called zecchino takes its name. One of the ſmalleſt pieces of money at Venice is called gazetta; and the firſt newſpapers were from thence ſtyled Gazettes.

The grand arſenal, rope-walk, foundery, and ſalt-petre works here, deſerve a traveller's notice. Cloſe to the Rialto is the bank. There are two academies for painting at Venice, where the diſciples draw from the life.

The German factory contains about five hundred rooms, and is the general magazine for all goods that either come from, or are to be ſent to Germany. The Venetian trade, though on the decline, is ſtill conſiderable, particularly that of plate and other kinds of glaſs. Independent of what is called the city, many ſcattered and circumjacent iſlands are covered with buildings; among theſe, is Murano, which contains the celebrated glaſs manufactory: here, is alſo a palace, adorned with a gallery of admirable paintings, belonging to the Cornaro family.

The diverſions of the Venetians are chiefly maſquerading, eſpecially during the carnival, and other feſtivals; ridotos, operas, plays, which are generally wretched performances, and concerts of vocal and inſtrumental muſic. During their feſtivals, debauchery, riot, and licentiouſneſs, are carried to the greateſt height. The grand ſcene of all the ſhows and follies of the feſtivals, is the ſquare of St. Mark, in which bulls are ſometimes baited.

The marriage of the doge to the ſea, on Aſcenſion-day, being one of their greateſt ſolemnities, we ſhall here preſent our readers with a particular deſcription of it: On Aſcenſion-day, the doge, or in caſe of his illneſs, the vice-doge, who is always one of the ſix conſiglieri, performs the annual ceremony of marrying the Adriatic ſea in a barge called the bucentaur, which is pompouſly gilt and carved. At about ten in the morning, the ſignal being given by the firing of great guns, and ringing of bells, he goes on board this veſſel, and accompanied by ſeveral thouſand barks and gondolas, a great number of gallies finely ornamented, and the ſplendid yachts of foreign ambaſſadors, is rowed out to ſea, about two hundred paces towards the iſlands of St. Lido and St. Eraſmo. The patriarch and dignified clergy come on board the bucentaur, and preſent the doge and ſignora, as they paſs, with noſegays or artificial flowers, which, at their return, they make preſents of to their acquaintance. The doge, at his putting off and return, is ſaluted by the cannon of a fort on the Lido, and by thoſe on the iſland Eraſmo, and with the ſmall arms of the ſoldiers, who are drawn up along the Lido ſhore. The iſlands lie about two Italian miles from the city; and an eminence on the iſland of Lido affords a diſtinct view of this pompous proceſſion, and of the vaſt number of boats, &c. which cover the ſurface of the water, and make a beautiful appearance. In the mean time ſeveral hymns are performed on board the bucentaur, by the band of muſic belonging to St. Mark's church, and ſeveral prayers appointed for the occaſion are read or ſung, till the doge has paſſed the two forts of Lido and St. Eraſmo; and then he proceeds a little farther towards the Lido ſhore, the ſtern of his barge being turned towards the main ſea. Here the patriarch pours into the ſea ſome holy water, which is ſaid to have the virtue of preventing and allaying ſtorms. After this the doge, through an aperture near his ſeat, drops into the ſea a gold ring of a few dollars value, ſaying, in Latin, "We eſpouſe thee, O ſea, in token "of our real and perpetual dominion over thee." After this all return, and the doge with his company is ſet aſhore near the church of St. Nicholas, in the iſland of St. Lido, where the patriarch in perſon celebrates a ſolemn maſs. In the evening the principal members of the council, and all who waited upon the doge in the bucentaur, are entertained at the ducal palace.

Padua territory is thirty-five miles long, twenty-eight broad, and exceeding fertile. The capital, of the ſame name, is one of the richeſt and moſt flouriſhing cities of Italy, yet it has not much of its antient ſplendor. It is ſituated on the Brenta, thirty-four miles eaſt of Venice, and has many churches, hoſpitals, and convents; but the ſtreets are narrow and dirty. The univerſity, which was formerly in great repute, for ſome time has been on the decline, but the phyſic-garden is ſtill conſiderable. The Franciſcan church and chapel of St. Antony are ſplendid beyond imagination. This city is the ſee of a biſhop; in the podeſta's palace is the library, and in the old caſtle, an arſenal and granary. The territory is ſubject to violent ſtorms; but the air is healthful.

The territory of Veroneſe is very fertile, but contains only one place worth mentioning; viz. Verona, on the Adige, a large, ſtrong city, in a fine ſituation. Over the river are four bridges, of which that one which leads to the caſtle is much admired. The caſtles are three in number, the ſtreets narrow and dirty, the houſes mean. The beſt ſtreet in the city is that called the Corſo, where horſe and foot races are ſometimes run. The largeſt ſquare is that called Piazza d'Armi, where the annual fairs were formerly kept, in April and Autumn. Here are ſeveral academies for the improvement of muſic, polite exerciſes, &c. an elegant theatre, and a Roman amphitheatre in fine preſervation. The wine of this country is admirable, and the territory well watered, fertile, and healthy.

The city of Vicenza, which is large, contains about thirty thouſand inhabitants. Over the principal river are ſeveral bridges; without the city is a triumphal arch built by Palladio; but the city walls are gone to decay. There are a great many elegant buildings within it, particularly in the piazza before the council-houſe; for, beſides the cathedral, and other churches, and the convents, which are numerous, there are ſeveral hoſpitals, and ſome fine palaces. The council-houſe is a ſtately fabric, and ſo is the Monte della Pieta; in the latter of which is a fine library. Here

are

are ſtill to be ſeen ſome remains of a Roman amphitheatre, of a noble aqueduct, and ſeveral magnificent hot baths. The circumjacent territory is extremely fertile.

Breſciano, which is alſo a tolerably fertile and well watered territory, contains no place worth obſerving but Breſcia, which gives name to it, and is its capital, ſtanding in a pleaſant plain near the little river Garza. The caſtle ſtands on a rock, and commands the whole town, and the arſenal is well furniſhed with warlike ſtores. This town is not above three miles in circuit, but is very populous, and drives a conſiderable trade in fire-arms, ſwords, knives, and other cutlery wares.

Bergamaſco is in general barren, though well watered, and the inhabitants are ſubject to the ſame kinds of wens in the throat as the Savoyards. Bergama, a ſtrongly fortified town at the foot of the Alps, is the only place in it.

The town of Crema, in the territory of Cremano, which is fruitful and pleaſant, is ſituated on the Serio, being ſtrong, handſome, the ſee of a biſhop, and famed for a linen manufactory. Rovigo, a ſmall fertile diſtrict, contains a town of the ſame name that is thinly inhabited; and Adria, which formerly gave name to the Adriatic, is a biſhop's ſee.

The diſtrict of Marca Trevigniana is ſo fertile, as to have obtained the name of a Continental Garden. Treviſo, the capital, ſtands on the river Site, where it joins the Peaveſella. This is a biſhop's ſee, has given birth to many great perſonages, and contains at preſent ſome noble families. It is an antient, but ſtrong; a neat, but not populous place.

The territory called Patria del Friuli is the northern verge of Italy, and belongs partly to the Venetians, and partly to the Auſtrians. It is very fertile, but does not contain any conſiderable place, except the city of Udino, on the river or canal La Roia. It hath a fine caſtle, with ſeveral handſome churches, palaces, and convents; beſides a college for law, and an academy for martial exerciſes.

The peninſula of Iſtria, on the Adriatic, belongs partly to the Venetians, and partly to the Auſtrians. The air is unwholſome; but the territory, though hilly, is fruitful.

The ſtrong town of Capo de Iſtria is ſituated on an iſland in the gulf, ſo near the continent as to be joined by a bridge. It is the ſee of a biſhop, contains many convents, and its trade in ſalt is very conſiderable.

The little republic of Lucca, on the coaſt of the Mediterranean, is a miniature portrait of Venice. It is not thirty miles in circumference, but is fertile and populous. The inhabitants, who are ſaid to amount to upwards of one hundred and twenty thouſand, are very induſtrious, but extremely jealous of the Tuſcans, by whom they are almoſt ſurrounded. The forces of the republic amount, in time of peace, to about ſix hundred men, including the doge or gonfaloniers guard of Switzers, which conſiſts of ſeventy-ſix men; but there are above thirty thouſand in the territory of Lucca capable of bearing arms. The government is veſted in two councils, of which one is called the council of ſtate, and the other the great council, the executive being in the former, conſiſting of nine members beſides the doge, who continue in office only two months, and, during that time, have apartments in the palace of the republic, and are maintained at the public expence. The annual revenue amounts to about eighty thouſand pounds ſterling.

Lucca, the capital, and the only place in this territory worth deſcribing, is about three Italian miles in circumference, and well fortified. The walls afford very pleaſant walks, being planted with rows of trees. The number of inhabitants is about forty thouſand. The houſes are for the moſt part well built, and the ſtreets broad and well paved, but irregular. Several manufactories, particularly of ſilk, are carried on, and the fineſt oil in Italy is made here. This is the ſee of a biſhop. The cathedral is a large Gothic ſtructure, dedicated to St. Martin.

The republic of Genoa is greatly degenerated from its former ſplendor; but, among other misfortunes, the revolt of Corſica ſeems to have been the greateſt. The government is ariſtocratical. The doge or duke is choſen only for two years, and muſt be fifty years of age at the time of his election. The legiſlative power is lodged in the great council, conſiſting of four hundred members, of which four parts in five muſt be unanimous. The adminiſtration is veſted in a doge and a proper council. The doge has a guard of two hundred men. The great council make laws and raiſe money, the leſſer declare war, proclaim peace, and form alliances. The military is inconſiderable, the navy deſpicable, and the revenue at preſent ſmall.

The territories belonging to the Genoeſe are one hundred and ſixty miles in length, and about twenty-five in breadth. They extend along that part of the Mediterranean called the gulf of Genoa. They are tolerably fertile, pretty well watered, and divided into two diſtricts, viz. the eaſtern and weſtern coaſts.

The eaſtern coaſt contains Genoa, the capital, which ſtands near the Mediterranean ſea. As it is partly ſituated on a declivity, it appears to great advantage from the ſea. It is defended on the land-ſide by a double wall. The new and Balbi ſtreets conſiſt each of a double row of magnificent palaces; the other ſtreets are crooked and narrow; but the ſuburb of San Pietra d'Arena contains many noble buildings. Here are ſeveral palaces, churches, convents, hoſpitals, &c. many of which are ſuperbly built of marble. The fineſt of the churches are thoſe of the Annunciation, St. Mary Carignan, St. Dominic, and St. Martha. In the cathedral is a diſh made of a ſingle emerald. All the inhabitants here, except the principal ladies who are carried in chairs, walk on foot, on account of the narrowneſs or ſteepneſs of the ſtreets. The fortifications of the city towards the ſea are remarkably ſtrong. There are two fine ſtone-bridges over the rivers Bonzevera and Biſagno, the firſt whereof waſhes the weſt, and the other the eaſt ſide of the city, within which there is alſo a ſurpriſing ſtone-bridge, joining two hills. The harbour, though large, is far from being ſafe, but no care or expence have been ſpared to render it as ſafe and commodious as poſſible.

The principal places on the weſtern coaſt are as follow, viz. 1. Savona, which, next to Genoa, is the moſt conſiderable city of the ſtates. It is the ſee of a biſhop, ſuffragan to the archbiſhop of Milan; has a ſtrong caſtle, is well fortified, and famed for the fineſt ſweetmeats. Here alſo is a conſiderable ſilk manufactory; and there was once a good harbour, until it was partly choaked up, by order of the republic, that it might not hurt the trade of Genoa. 2. St. Remo, a ſmall town on the ſea, with a good harbour, ſeventeen miles eaſt of Nice. The town in Latin is called Fanum Romuli. There are many plantations of palm-trees about it, with olives, lemons, pomegranates, and other fine fruits.

The ſmall principality of Monaco lies between the Genoeſe territories and the county of Nice. The only place worth mentioning here, is that which gives name to the principality, viz. Monaco, antiently called Herculis Monæci Portus, from a temple of Hercules, that ſtood here. It is eight miles eaſt of Nice, and ſix weſt of Vintimiglia, and, though ſmall, is ſtrong both by nature and art, having a good harbour, with a caſtle and garriſon, paid and officered by the king of France; and in this town the prince uſually reſides. The income amounts to near five hundred thouſand French livres.

The duchy of Tuſcany is encompaſſed by that part of the Mediterranean called the Tuſcan ſea, Modena, Lucca, and the popedom. It is one hundred and ſixteen miles long, eighteen broad, well watered, mountainous in ſome parts, but fertile in others. The only order of knighthood here is that of St. Stephen, inſtituted in 1554; the duke is always grand maſter, and the badge of the order is an octangular red croſs, with a golden border worn on the breaſt. The great duke is an abſolute prince. His forces, however, ſeldom conſiſt of more than three regiments of foot and two of dragoons, and his navy is made up of only a few gallies and galleaſſes.

The city of Florence, the capital of the duchy, is ſituated on the Arno, twenty-ſix miles ſouth of Venice. It gives name to a populous and fertile diſtrict. Here are four ſtone-bridges over the Arno; the number of churches, palaces, hoſpitals, and convents, is great, but the ſtreets are crooked and narrow. The palaces here are inferior to thoſe of Rome, and moſt of the windows are only made of paper. The chapel for the interment of the great dukes in the church of St. Lozenzo, is hardly to be paralleled. Here is an academy for the improvement of the Tuſcan language, called Della Cruſca; another for agriculture, and another for riding. The principal trade, beſides oil, wine, fruits, and other produce of the country, conſiſts in wrought ſilks, and gold and ſilver ſtuffs. The nobility and gentry do not think it below them to trade; they even ſell their wine by retail out of doors, but not in their houſes; at the ſame time they deem it a great diſparagement to educate their children in the profeſſion of phyſic. They write the Italian here very well; but their pronunciation is guttural, and diſagreeable.

Florence is adorned with ſeven fountains, ſix columns, two pyramids, and about one hundred and ſixty ſtatues. Moſt of the Florentines are ſhort ſighted; and hence the Florentini cicchi, or blind Florentines, has paſſed into a proverbial

proverbial jeſt. The great piazza or ſquare is very ſpacious and magnificent, with a noble fountain in the midſt of it. The arſenal is a ſtately building, and well furniſhed with all ſorts of weapons of war, kept in very good order. The cathedral is a very magnificent edifice, the whole outſide being of poliſhed marble, and enriched with the moſt exquiſite architecture and ſculpture. The celebrated Campanile, or ſquare ſteeple, which is one hundred and eighty feet high, all of fine marble, of ſeveral colours, and curiouſly wrought, ſtands hard by the church.

The city of Piſa, on the Arno, has ſeveral handſome ſtreets and houſes; but graſs grows in many of the latter. The univerſity is in a flouriſhing condition, and the exchange is magnificent, but little frequented. The great duke's gallies are built, and commonly ſtationed here. This city is the principal reſidence of the order of St. Stephen, and the ſee of an archbiſhop. The cathedral, a large gothic pile, contains a great number of excellent paintings, and other curioſities. The echo of the baptiſtry exceeds that near Milan, though the repetitions are not quite ſo diſtinct.

This city has, for its defence, a moat, walls, a caſtle, fort, and a citadel; the laſt of which is a modern work. Hard by the cathedral is the city burying-ground, called Il Campo Santo, and in that the famous leaning tower, the inclination of which is ſo great, that a plumb line let down from the top touches the ground at the diſtance of near fifteen feet from the bottom. The phyſic garden is very ſpacious, contains a great number of plants, and is decorated with waterworks: over the door leading into it are theſe words, "Hic Argus, ſed non Briareus eſto;" i. e. "Employ the eyes of Argus, but not the hands of Briareus." A neceſſary caution in many places. The Arno is a conſiderable breadth, and has three bridges over it, one of them marble: it falls into the ſea two leagues below the town.

The city of Leghorn, thirty miles ſouth-weſt from Florence, in the territory of Piſa, makes a handſome appearance. The harbour is too ſhallow for large ſhips. It is fortified, but wants good water, which muſt be brought from Piſa. The port, conſiſting of two havens, one for the duke's gallies, and the other for merchant ſhips, is ſurrounded with a double mole above a mile and a half in length, and defended, together with the town, by a good citadel and twelve forts. The walks on the ramparts are very agreeable. There is good anchorage in the road, but ſhips riding there are much expoſed to the weather, and the Barbary corſairs. The light-houſe ſtands on a rock in the ſea, near which is the Lazaretto, where quarantine is performed. The number of the inhabitants is about forty thouſand, and one half of theſe Jews, who live in a particular quarter, but without any mark of diſtinction, and have a fine ſynagogue. The Turks, who are not ſlaves, alſo live in a particular quarter, as do the licenſed proteſtants, Roman Catholics, Jews, Greeks, Armenians, Mahometans, and even the Engliſh factory are indulged in the public exerciſe of their religion; but other proteſtants muſt be ſatisfied with private. Leghorn is the ſee of a biſhop, and reſidence of a governor, has a fine ducal palace, and a noble cathedral. The power of the inquiſition is limited to eccleſiaſtical matters, and Roman Catholics.

The large and antient city of Sienna ſtands thirty-eight miles ſouth of Florence. It has a fertile pleaſant territory of near ſixty-five miles ſquare. The city is clean, neat, and healthy, but not populous. The inhabitants are polite, and ſpeak the Italian language in its utmoſt purity. The walls are adorned with many high towers of brick, and the ſtreets paved with bricks ſet edge-ways. Here is the ſee of an archbiſhop, and the cathedral is a very magnificent gothic pile. Fronting the cathedral is a ſpacious and well-endowed hoſpital, founded by a ſhoemaker, who is interred in the church, and as a reward for his liberality, hath been canonized. Over the ſtatue erected to his memory is this appoſite inſcription, "Sutor ultra crepidam;" "The ſhoemaker went beyond his laſt." The arms of this city are Romulus and Remus ſucking a wolf, for it pretends to have been a colony founded by theſe two brothers.

SECT. III.

Of the Perſons, Character and Diſpoſition, Manners, Cuſtoms, &c. of the ITALIANS; with the Antient and Modern Hiſtory of ITALY.

HAVING, in our deſcriptions of the various ſtates of Italy, alſo mentioned many particulars relative to the cuſtoms, manners, religion, forces, revenues, &c. of the Italians; we need only add the following remarks; viz. That the inhabitants are uſually well-proportioned, though their complexions are none of the beſt. As to dreſs, they follow the faſhions of the countries on which they border, or to which they are ſubject, namely, thoſe of France, Spain, and Germany. With reſpect to their genius and taſte in architecture, painting, carving, and muſic, they excel greatly, and leave the other nations of Europe far behind them; but their muſic ſeems too ſoft and effeminate to deſerve all the praiſe beſtowed on it; and their houſes are far inferior to thoſe of England, in reſpect of convenience. No country hath produced better politicians, hiſtorians, poets, painters, and ſculptors, ſince the revival of the arts and ſciences, excluſive of thoſe of antient times. They are affable, courteous, ingenious, ſober, and ready-witted; but at the ſame time jealous, vindictive, laſcivious, ceremonious, and ſuperſtitious. The Italians, in their tempers, ſeem to be a good medium between the French and Spaniards, neither ſo gay and volatile as the one, nor ſo grave and ſolemn as the other. With reſpect to their diet, boiled ſnails, ſerved up with oil and pepper, or fried in oil, and the hinder parts of frogs, are reckoned dainty diſhes. Kites, jackdaws, hawks, and magpies, are alſo eaten, not only by the common people, but the better ſort. Wine is drank here both in ſummer and winter, cooled by ice or ſnow. The women admire yellow hair, as the Roman ladies and courteſans formerly did. They alſo uſe paint and waſhes, both for their hands and faces.

The Roman Catholic religion predominates here. They reckon the day from ſun-riſe to ſun-ſet, as the Athenians did of old. The Italian language is corrupted Latin; but ſince the revival of arts in Italy, it hath been ſo much refined, that it is now deemed elegant, ſoft, and ſmooth. The pureſt Italian is ſpoken in Tuſcany. The exports are chiefly wine, oil, perfumes, fruits, and ſilks. Travellers alſo expend large ſums of money in Italy, in purchaſing pictures, curioſities, antiquities, relics, &c.

In thoſe early ages, when the Romans firſt began to extend their territories, Italy, like moſt other countries, was parcelled out into a great number of ſmall ſtates, who were all gradually ſubdued by the Romans. On the declenſion of the Roman empire, the Huns, Goths, Vandals, Heruli, and other northern nations, paſſed the Alps, and ſeized on the greateſt part of it, which was overturned by Charlemagne, who founded a new empire in the weſt. The ſucceſſors of Charlemagne claimed, and for ſome time poſſeſſed, the ſovereignty of Italy; but their civil wars at home ſoon gave an opportunity to their governors either to aſſume or purchaſe the ſovereignty of the ſeveral ſtates they governed.

In proceſs of time, Savoy and Piedmont fell to the lot of the counts of Maurienne, the anceſtors of his preſent Sardinian majeſty, whoſe father became king of Sardinia, by virtue of the quadruple alliance concluded in 1718. Victor Amadeus, the preſent king, was born in 1726; and in 1773 ſucceeded his father Charles Emanuel.

After going through ſeveral hands, the Milaneſe was at length poſſeſſed by the emperor Charles V, about the year 1525, who gave it to his ſon Philip II. king of Spain. It remained with that crown till the French were driven out of Italy, by the Imperialiſts, in 1706. Theſe were diſpoſſeſſed of it in 1743, but by the emperor's ceſſion of Naples and Sicily to the preſent king of Spain, it reverted to the houſe of Auſtria, who has appointed a viceroy to govern it.

Mantua was formerly governed by the family of Gonzaga, who adhering to France, the territory was fortified, as a fief of the empire to the houſe of Auſtria, which now poſſeſſes it, the laſt duke dying without male iſſue; but Guaſtella was ſeparated from it in 1748, and made part of the duchy of Parma. The firſt duke of Parma was natural ſon to pope Paul III. the dutchy having been annexed to the holy ſee in 1545, by pope Julius II. The deſcendants of the houſe of Farneſe terminated in the late queen dowager of Spain, whoſe ſon, his preſent Catholic majeſty, obtained that dutchy, which, with that of Placentia, is now held by his nephew.

In antient times, the Venetians were the moſt formidable power in Europe. They conquered Conſtantinople itſelf in 1193, and held it for ſome time, together with great part of the continent of Europe and Aſia. The diſcovery of a paſſage to India, by the Cape of Good Hope, gave the firſt blow to their greatneſs, as it loſt them the Indian trade. The Turks, by degrees, took from them their moſt valuable poſſeſſions on the continent, and they loſt the Morea ſo late as the year 1715.

For a conſiderable time, the Genoeſe diſputed the empire of the Mediterranean ſea with the Venetians, but

were ſeldom or never able to maintain their own independency by land, being generally protected, and ſometimes ſubjected, by the French and Imperialiſts. They are, at preſent, poſſeſſed of a revenue barely ſufficient to maintain their dignity.

Tuſcany belonged to the emperors of Germany, who governed it by deputies till the year 1240, when the famous diſtinction of the Gwelphs, partizans of the pope, and the Gibellines, in the emperor's intereſt, took place. The popes then perſuaded the Imperial governments in Tuſcany to put themſelves under the protection of the church; but the Florentines, in a ſhort time, formed themſelves into a free commonwealth, and bravely defended their liberties againſt both parties by turns. Faction at laſt ſhook their freedom, and the family of Medici, long before they were declared princes or dukes, in fact governed Florence, though the rights and privileges of the people ſeemed ſtill to exiſt. The Medici, particularly Coſmo, who was deſervedly called the father of his country, being in the ſecret, ſhared with the Venetians in the immenſe profits of the Eaſt India trade, before the diſcoveries made by the Portugueſe. His revenue, in ready money, which exceeded that of any ſovereign prince in Europe, enabled his ſucceſſors to riſe to ſovereign power; and pope Pius V. gave one of his deſcendants, Coſmo, (the great patron of the arts) the title of great duke of Tuſcany, in 1750, which continued in his family to the death of Gaſtin de Medicis, in 1773, who left no iſſue. The great duchy was then claimed by the emperor Charles VI. as a fief of the empire, and given to his ſon-in-law the duke of Lorrain, and late emperor, in lieu of the duchy of Lorrain, which was ceded to France by treaty. Leopold, his ſecond ſon, brother to the preſent emperor, is now grand duke, and the country aſſumes a new face. Leghorn, which belongs to him, carries on a great trade; and, in order to prevent the depredations of the infidels, ſeveral ſhips of conſiderable force are now ſtationed on the Tuſcan coaſts.

Naples, or Sicily, has undergone many viciſſitudes of government, chiefly owing to the inconſtancy of the natives. Chriſtians and Saracens conquered it by turns. The Normans under Tancred drove out the Saracens, and, by their connections with the Greeks eſtabliſhed there, while the reſt of Europe was plunged in monkiſh ignorance, a moſt reſpectable monarchy flouriſhed in arts and arms. About the year 1166, the popes being then all-powerful in Europe, their intrigues broke into the ſucceſſion of Tancred's line, and Naples and Sicily at laſt came into the poſſeſſion of the French; and the houſe of Anjou, with ſome interruptions and tragical revolutions, held it till the Spaniards drove them out in 1504, when they annexed it to the dominions of that monarchy.

By virtue of various treaties, which had introduced Don Carlos, the king of Spain's ſon, to the poſſeſſion of Parma and Placentia, a new war broke out in 1733, between the houſes of Auſtria and Bourbon, about the poſſeſſion of Naples; and Don Carlos was received into the capital, where he was proclaimed king of the Two Sicilies. This was followed by a very bloody campaign; but the farther effuſion of human blood was ſtopped by a peace between France and the Emperor, to which the courts of Madrid and Naples at firſt demurred, but afterwards acceded in 1736, and Don Carlos remained king of Naples. Upon his acceſſion to the crown of Spain in 1759, it being found that his eldeſt ſon was by nature incapacitated for reigning, he reſigned the crown of Naples to his third ſon Ferdinand III. who is now the reigning king of the Two Sicilies.

The power of the papacy is now evidently at a low ebb. The order of jeſuits, who are not improperly ſtiled his janiſſaries, has been exterminated out of France, Spain, Naples, and Portugal; and is but juſt tolerated in other popiſh countries. The pontiff himſelf is treated by Roman catholic princes with little more ceremony than is due to him as biſhop of Rome, and poſſeſſed of a temporal principality. The preſent emperor has alſo lately given a great check in his dominions to the papal tyranny. This humiliation, it is reaſonable to believe, will terminate in a total ſeparation from the holy ſee of all its foreign emoluments, which even, ſince the beginning of the preſent century, were immenſe; and to the reducing his holineſs to the exerciſe of his eccleſiaſtical functions as firſt biſhop of Chriſtendom. The preſent pope, John Angelo Braſchi, who aſſumed the name of Pius VI. was born in 1717, and elected to the pontifical chair in 1775.

CHAP. XVIII.

THE NEW HISTORY AND DESCRIPTION OF

HUNGARY.

THIS country includes ſeveral provinces, which are incorporated with it; namely, Tranſylvania, Sclavonia, Croatia, and Dalmatia. Hungary, (which received its name from the Hunns, a Scythian nation, who poſſeſſed themſelves of it in the ninth century) lies between the eighteenth and twenty-ſecond degree eaſt longitude, and the forty-fifth and forty-ninth degree north latitude, is three hundred miles long, and two hundred broad; has Servia ſouth; the Carpathian mountains, north; Walachia and Tranſylvania, eaſt; Moravia, Stiria, and Auſtria, weſt. The northern parts are mountainous and barren, but wholſome; the ſouthern diſtricts are level, and fertile, but unwholſome. The mountains contain a great variety of minerals, and even diamonds. Corn is very plentiful; and the Hungarian wines, particularly Tokay, exceed all in Europe. Horſes, cattle, fiſh, and all kinds of vegetables abound, as do wild beaſts and various kinds of game. The low lands, excluſive of rivers, are watered by ſeveral lakes. We have already taken notice of the principal mountains and rivers, in our account of Germany and Poland.

The province of Hungary is divided into Upper and Lower. The former contains, 1. Zemplin, on the Bodrogh, which gives name to a county that contains ſeveral conſiderable towns, and many vineyards that yield excellent wine, particularly that which takes its name from Tokay, a conſiderable town, pleaſantly ſituated near the conflux of the Theis and Bodrogh. The wine called Tokay grows only on one mountain; but that of the neighbourhood, which uſually paſſes under the ſame name, is little inferior to it.

2. The caſtle of Skepus gives name to a county of great extent, abounding in ſome parts with fruitful corn fields, rich paſtures, pulſe, and flax, and in others with woods and mountains, ſome of which are among the loftieſt of the Carpathian chain. The county of Skepus affords no wine, but there are ſome iron and copper mines in it.

3. The city of Erlau is alſo a biſhop's ſee, forty-five miles north-eaſt of Buda, has a caſtle and warm bath, and in the neighbourhood are vineyards.

4. The city of Great Varadin, or Waradin, is ſituated on the river Koros, in the county of Bihar, one hundred and ten miles eaſt of Buda: it is well fortified, and the ſee of a biſhop. It has a ſtrong caſtle on the eaſt ſide. The royal free town of Debretzen, which is large and populous, is alſo in the county of Bihar.

5. On the river Beg, ſtands the ſtrong town of Temes-Var, which is the capital of the Bannat, or territory to which it gives name, and which (one ſmall diſtrict excepted, which was ceded to the Turks, at the treaty of Belgrade, in 1739) belongs entirely to the emperor. Beſides others of leſs note, there is a ſtrong town in the Bannat, called Lugos, ſituated among mountains.

The principal places in Lower Hungary are, 1. Nitra, on a river of the ſame name; it is a well peopled, but mean-built town, with a biſhop, whoſe palace and cathedral are in the caſtle.

2. Leopoldſtadt, a ſtrongly fortified place on the Wag, and the only town in theſe parts which could make head againſt an enemy in caſe of a ſiege.

3. The town of Preſburg, the capital of the kingdom, called by the inhabitants Poſony and Preſporen, is ſituated on the Danube, about forty-ſix miles eaſt from Vienna. The caſtle, in which the regalia are kept, ſtands on a hill above the town. Here the ſtates aſſemble, and in the cathedral, dedicated to St. Martin, the ſovereign is crowned. The town is not very large, nor well built, but is very antient, pleaſantly ſituated, and enjoys a good air. Its fortifications are only a double wall and ditch. Beſides the cathedral, there are ſeveral other popiſh and one Lutheran church, with a jeſuit's college, three convents, and two hoſpitals. It gives name to a county, and is the reſidence of the archbiſhop of Gran, who is legatus natus of the papal ſee, prince of the holy Roman empire, and alſo primate, chief ſecretary, and chancellor of the kingdom.

4. The caſtle of Lepto-Ujvar-Hradek gives name to a county every where full of mountains and rocks, higher than thoſe of the Alps; one in particular, called Beni-kova, is three thouſand paces perpendicular in height. They abound in metals, minerals, and medicinal ſprings, with caverns, in which are many curious figures in drop-ſtone. The birds who fly over ſome of theſe mineral ſprings are ſuffocated by the exhalations ariſing from them.

5. The royal free town of Gran, thirty-five miles from Preſburg, and nine-two from Vienna, is ſituated on the Danube, where it is joined by the river Gran. The town is well fortified, gives name to a county, and has a caſtle on a high rock, in which is the cathedral. Here are ſome natural warm baths. The neighbouring country is very pleaſant and fruitful, and yields excellent wine.

In this diſtrict are two towns of the name of Buda, the Old and the New. Old Buda is but a poor, mean place, but the New is a royal free town, ſtanding on the Danube, ſeventy-five miles from Preſburg, and one hundred and ſix from Vienna. It is well fortified, and was the capital of the kingdom and reſidence of the king, until it was ſeized by the Turks in 1529, in whoſe hands it continued till 1689.

The neighbouring country yields a good red wine, and excellent melons. Hard by the town is the iſland of St. Andrew, in the Danube, eight miles long, and eight broad: and near it, on the banks of the river, is the town of St. Andrew, which makes a better figure than Buda itſelf. A few miles alſo below Buda is another iſland, called Eſepel, which formerly belonged to Prince Eugene, who had a ſeat in the neighbourhood, where he often reſided.

The principal mine town in Hungary is Schemnitz, chiefly inhabited by proteſtants. The gold and ſilver mines ſtill produce a conſiderable quantity of ore (though ſhort of what they did formerly) and about one thouſand workmen are employed in them.

The town of Cremnitz, the capital of the county of Beps, contains a mint; but the mines are almoſt exhauſted.

The Hungarians are fierce, cruel, proud, and revengeful; better ſoldiers than merchants, and huntſmen than ſcholars. The nobility affect pomp, gluttony, and drunkenneſs. The men are ſtrong and well made; they ſhave their beards, leave whiſkers on the upper lip, wear furs on the head, a cloſe-bodied coat girt with a ſaſh, and a ſhort cloak buckled under the arm, in order to leave the right hand at liberty. The horſe, who carry a broad-ſword and battle-axe, are called Huſſars, and the foot are named Heydukes. Here are five languages ſpoken, viz. the Hungarian, Sclavonian, Walachian, German, and Latin. The trade of the country is in the hands of the Jews and Greeks. Though not above a fourth part of the people are Roman catholics, yet that religion is the eſtabliſhed one; but proteſtants, and particularly thoſe of the Greek church are tolerated, and Jews are doubly taxed.

The crown of Hungary has been in poſſeſſion of the Auſtrians ever ſince 1527, and it was finally ſettled on the heirs male of the houſe of Auſtria in 1687; and, in 1723, in caſe of their failure, on the female heir. The ordinary revenue of the kingdom exceeds a million ſterling, ariſing from the mines, duties on cattle, royal demeſnes, ſalt-works, conſtitutions, cuſtoms, &c. The fortifications and garriſons, conſtantly maintained on the frontiers againſt the Turks, are a great expence to the government. Hungary can eaſily bring into the field one hundred thouſand men, regulars and militia; for there are fifty thouſand in actual pay, and the provinces furniſh the other fifty thouſand on an emergency.

The province of Tranſylvania, ſituated to the ſouth of Hungary, being about one hundred and ſixty miles long, and one hundred and fifty broad. Its mountains yield ſilver, iron, lead, copper, quickſilver, rock-ſalt, cinnabar, ſulphur, vitriol, ſalt-petre, antimony, red ochre, iſinglaſs, and other minerals, and ſome are cloathed with vines. Many petrifying, ſalt, and medicinal ſprings, cold and hot, with a great variety of plants, are alſo found among them. The fields and vallies are rich and fertile, yielding corn, pulſe, and fruits; and the foreſts abound with buffaloes, elks, ſtags, wild goats, bears, foxes, martins, lynxes, ermines, beavers, wild aſſes, wolves, bees, &c. Vaſt numbers alſo of black cattle and horſes are bred here. Of the latter there is a wild ſort, with manes hanging down to the ground. The principal rivers are, the Szamos, the Maros, and the Aluta. The inhabitants are of ſeveral ſorts, as Hungarians, Saxons, Walachians, Armenians, Bulgarians, Greeks, Raſcians or Servians, and a people of Tartar origin. Here are alſo Jews and Zigduns, or gypſies, as in Hungary. The proteſtants are much more numerous than the Roman catholics. The ſtates, like thoſe of Hungary, conſiſt of the prelates or clergy, nobility, gentry, and royal towns.

The province of Sclavonia extends from the Adriatic to the Black Sea. This country has Carniola on the weſt, the Danube on the eaſt, the Save on the ſouth, and the Drave on the north; it extends about three hundred miles from eaſt to weſt, and ſeventy from north to ſouth, where broadeſt. It takes its name from the Sclavi, a Scythian nation, who, about the time of the emperor Juſtinian, poſſeſſed themſelves of this and the neighbouring countries The inhabitants are a mixture of Sclavonians, Croats, Walachians, Germans, Venetians, Turks, Servians or Raſcians, and Hungarians. The only religion publicly tolerated is the Roman catholic; yet there are many of the Greek church. Like Tyrol, it pays ten thouſand pounds ſubſidy to the emperor. The air is pleaſant and temperate, the face of the country level, and the ſoil fruitful in corn, wine and paſture.

The principal place is Eſſek, a conſiderable town on the Drave, eighty-ſeven miles north-weſt from Belgrade. It was remarkable once for a wooden bridge, erected by the Turks over the Danube and ſome moraſſes, which was near eight miles in length, and thirty yards in breadth, with rails on each ſide, watch-towers at every quarter of a mile's diſtance, and ſtairs leading down to the marſhes: but in the late wars between the Imperialiſts and Turks, who uſed to invade Hungary, this bridge was deſtroyed by the former.

The province of Croatia, ſituated weſt of Sclavonia, is eighty miles long and ſeventy broad. The Croats, who inhabit this country, derive their origin from the Sclavi, and ſpeak the Sclavonian language. Here is one biſhopric, but not any univerſity or ſeminary; and the towns are not worthy of deſcription. The ſoil, where cultivated, is fruitful in wine and oil, and many other products. Both horſe and foot are good ſoldiers, eſpecially the former, ſerving for much the ſame purpoſe as the huzzars, pandours, and other irregular troops.

The province of Dalmatia belongs to the Venetians, Auſtrians, Turks, and Raguſans; that is, the former have the maritime places, and the three other powers the reſt. The language is Sclavonian, the religion Romiſh; the mountains are clad with olives, vines, myrtles, and ſheep, and lined with gold, ſilver, and other ores; and the plains are fertile. Here and in Carniola is a people called Uſcocks, whoſe language is Walachian, and their religion reſembles that of the Greeks: they are a rough, ſavage race, much addicted to rapine, and noted for their agility, ſkipping like goats from rock to rock.

The capital of Venetian Dalmatia is Lara, the ſee of an archbiſhop. It ſtands one hundred and fifty miles from Venice, on a ſmall peninſula or iſland; for it is ſeparated from the land only by a deep ditch, into which the ſea flows at high water under a draw-bridge. Here is a capacious harbour, and alſo a citadel, in which the proveditor or governor of Dalmatia reſides, and the town is otherwiſe ſo well fortified, that it is deemed impregnable.

The ſmall republic of Raguſa much reſembles Venice in its conſtitution, the government being almoſt entirely in the hands of the nobles. The chief magiſtrate is ſtiled rector, anſwering to the Venetian doge, except that he is changed every month. Here alſo are ſeveral councils, of which that of the pregadi has the chief direction of affairs. To guard the city againſt contagious diſtempers, here is a board of health, conſiſting of five nobles. They are ſo jealous of their neighbours, that the gates of the city are allowed to be open only a few hours in the day. Their chief protector is the grand ſignior, to whom they pay an annual tribute of twenty thouſand zequins. The only place of any note in their territory is that from which the republic takes its name, which was antiently called Epidaurus. At preſent it is a ſmall, but well-built town, ſtanding on the ſea coaſt, in a wholſome air, but barren ſoil and having a good harbour, with ſeveral manufactories, and a conſiderable trade. It is the ſee of an archbiſhop, and ſome ſmall fertile iſlands in the Adriatic belong to it.

CHAP.

A General Perspective View of CONSTANTINOPLE, the Capital of the Turkish Empire.

CHAP. XIX.

THE NEW HISTORY AND DESCRIPTION OF

TURKEY IN EUROPE;

Comprehending the DANUBIAN PROVINCES and GREECE.

THE Danubian provinces, which conſtitute a part of the Ottoman empire, are bounded by Aſia on the eaſt, the Adriatic ſea on the weſt, the Hungarian provinces on the north, and the Mediterranean on the ſouth. They are ſix hundred miles long, four hundred and twenty broad, have a fertile ſoil, which is badly cultivated, and a wholſome air at all times, except when the plague rages. It is divided into ſix provinces; namely, I. Romania. II. Bulgaria. III. Servia. IV Boſnia. V. Moldavia. VI. Walachia.

The province of Romania, the antient Thrace, is about two hundred and eighty miles in length, and one hundred and eighty in breadth. The whole is well watered; the mountainous parts are cold, and only the level ones, towards the ſea, are warm and fertile. It is governed by a beglerbeg, who is the chief in Europe, and three ſangiacs.

The principal city is Conſtantinople, the capital of the whole Ottoman empire, and the reſidence of the grand ſeignior. This city is admirably ſituated on a point of land, which is waſhed by the ſea of Marmora to the ſouth, and by the Boſphorus to the eaſt and north; hence it hath not only a fine proſpect, but a communication by water with various parts of the empire. It was antiently called Byzantium, afterwards Conſtantinople, from Conſtantine the Great, and ſometimes the Porte, on account of its being the fineſt port in Europe. It ſtands in forty-one degrees north latitude, and twenty-four degrees forty minutes eaſt longitude, at the diſtance of one thouſand four hundred and thirty-five miles ſouth-eaſt from London. It is ſeparated from Aſia by a canal, is of a triangular form, and, including the ſuburbs, covers a great deal of ground. The ſtreets are badly paved, narrow, and dark; the houſes built of wood and mortar, low and mean; and the fortifications old, decayed, and unimportant. Here are twenty-two gates, ſix towards the land, the reſt towards the ſea. The innumerable bagnios, bazars, ſeraglios, and moſques, with their minorets, make a fine appearance at a diſtance. The moſques, of which there are ſeveral called royal, are handſome buildings, in detached ſituations, ſurrounded by lofty trees, and adorned by fountains. Near the harbour ſtands the ſeraglio, which is a collection of royal buildings, a mile and a half in circumference; below the palace are the gardens, from whence the coaſt of Leſſer Aſia preſents a fine proſpect. The hall of Andrerice, for foreign ambaſſadors, is amazingly magnificent, and contains a moſt ſuperb throne: not only this hall, but the grand ſeignior's and women's apartments, the mint, infirmary, kitchens, ſtables, treaſury, great council-chamber, &c. are within the compaſs of the ſeraglio. Annually forty thouſand cart loads of wood and forty thouſand oxen are conſumed in it for fuel and food. The moſt magnificent moſque is that of St. Sophia, which ſtands oppoſite to the great gate of the ſeraglio upon an eminence, from whence there is a gentle deſcent to the ſea-ſhore. The floors are covered with carpets; and there is a marble pulpit in every one of them, from whence the Mollas ſometimes preach to the people. Here are ſeveral Greek and Armenian, a few Roman Catholic, and one Lutheran church.

Fires are very frequent in this city; and it may not be improper to give a particular account of a moſt deſtructive one which happened on the ſecond of Auguſt, 1782, and deſcribed in the London Gazette.

"It broke out about ten o'clock at night, in the quarter called Gibali, ſituated towards the middle of the harbour, which a high north wind extended to ſuch a degree, as to baffle, for ſome time, the efforts made to ſuppreſs it. This conflagration, the greateſt perhaps that ever happened, continued during ſixty-two hours without intermiſſion, with ſuch fury, that one of the largeſt palaces, the habitation of the Aga of the Janiſſaries, diſappeared in leſs than ten minutes. The flames proceeded from ſea to ſea, and burned even the interior of the ſeven towers, at the oppoſite extremity of the city. In this direction the fire raged three miles in length, through the richeſt and beſt inhabited ſtreets, on a front ſometimes a mile broad, and ſometimes leſs, according to the regular hilly ſituation of the city. In ſome places it extended in different directions; ſo that at one time there appeared no leſs than eleven diſtinct conflagrations, moſt of which ceaſed only at the ſea-ſide, after conſuming the very wharfs. It is impoſſible to eſtimate the loſſes of all kinds occaſioned by this calamity; but it is certain, that numbers of people periſhed in the flames, and that many were driven by them into the ſea, and unfortunately drowned. Amongſt other public edifices, all the chambers of the janiſſaries, upwards of fifty moſques, three hundred corn mills, and two hundred public ovens, have been deſtroyed."

The Atmeidan, where horſe-races were antiently run, is ſtill put to the ſame uſe as it was formerly, for here the Turks throw the gerit or dart riding full ſpeed at the mark. The ſquare is of the ſame dimenſions it was formerly, viz. four hundred paces long, and one hundred broad; but moſt of the fine ſtatues and obeliſks which were in it are deſtroyed: one grand obeliſk, conſiſting of one piece of granite marble, ſtill remains entire, being fifty feet high, and ending in a point.

At the ſouth end of the city is the caſtle of ſeven, or rather eight towers, for an eighth hath been lately added, the whole ſerving as a ſtate priſon. In the markets for live cattle, ſlaves of all ages and ſexes are ſold, and theſe are generally called Chriſtians; but where any of the girls have a good ſhare of beauty that may recommend them to men of figure, they are kept in handſome lodgings by their maſters, and provided with good cloaths, and whatever elſe may recommend them to the purchaſers, and procure a good price.

This city, including gardens, ſuburbs, &c. is very extenſive in circumference, and the inhabitants exceeding numerous, conſiſting not only of Turks, but of a great number of Greeks and other Chriſtians, Armenians, Jews, &c. but the plague often makes dreadful havock amongſt them. The environs are pleaſant; and greater liberty is experienced in the ſuburbs of Galata than any other part of the Ottoman empire, as even taverns are tolerated. Pera is another ſuburb near Galata, where ambaſſadors and miniſters of foreign princes reſide; and the beſt buildings belonging to Conſtantinople are hereabout.

Scutari is a large populous town, to which the merchants of Perſia and other eaſtern countries reſort, and ſupply the city of Conſtantinople with whatever the eaſt affords.

The city of Adrianople, the ſecond in this empire, is about eight miles in circumference; the antient name was Oreſtes, but it received its modern name from the emperor Adrian, who rebuilt it after it had been deſtroyed by an earthquake. Here are ſeveral grand moſques; but the private houſes are meanly built.

The town of Philippopoli received its name from king Philip, the father of Alexander the Great. There is an old wall about the town, which is at preſent not a place of any great ſtrength. It is ſituated in an extenſive plain near the river Mariza, two hundred miles north-weſt of Conſtantinople; is inhabited chiefly by Chriſtians of the Greek communion, and is the ſee of one of their archbiſhops.

On the Thracian Cherſoneſe ſtands the port town of Gallipoli, being one hundred miles ſouth-weſt of Conſtantinople. This was the firſt town the Turks made themſelves maſters of in Europe, anno 1358: there are in it about ten thouſand Turks, four thouſand Chriſtians, and great numbers of Jews.

There is an old caſtle in Romania on the European ſide of the Helleſpont, uſually called Seſtos: it lies in twenty-ſeven degrees eaſt longitude, and forty north latitude. All ſhips bound to Conſtantinople are taken account of by the Turks at this caſtle, and the oppoſite one in Aſia.

The once great city of Heraclea, which formerly ſtood in the mid-way

mid-way between Conſtantinople and Gallipoli, exhibit at preſent little more than the ruins of it.

The province of Bulgaria, which is ſeparated from Romania by mount Hæmus, is two hundred and eighty miles long, and one hundred and eighty broad. It is governed by the beglerbeg of Rumelia, with four ſubordinate ſangiacs. The inhabitants are a mixture of Turks, Greeks, and Jews, who ſpeak a dialect of the Sclavonian language. The country is well watered, and though in general moutainous, has ſome fertile ſpots, abounds in cattle, contains a few iron mines, and ſome medicinal ſprings. The principal place is Sophia, a populous town on the Bojane, two hundred and ſeventy miles north-weſt of Conſtantinople. It has an unwholſome air, and is a great thoroughfare, without fortifications.

The province of Servia, antiently called Myſia Superior, from its lying higher up the Danube, has the rivers Save and Danube on the north: it is two hundred and fifty miles in length, and upwards of one hundred in breadth from north to ſouth. Belgrade, the capital city, is ſituated at the conflux of the Danube and Save, three hundred and forty miles ſouth-eaſt of Vienna. This was lately a large, beautiful city, ſtrongly fortified, defended by one of the ſtrongeſt caſtles in Europe, and inhabited by Chriſtians.

The laſt mentioned province, namely, Boſnia, part of the antient Illyricum, is bounded by the river Save, which divides it from Sclavonia on the north, by Servia on the eaſt, by Dalmatia on the ſouth, and by Croatia on the weſt, the river Unna running through it from north to ſouth, and dividing the Imperial from the Turkiſh territories. The chief town is Boſnia Seraio, one hundred and twenty miles weſt of Belgrade, on the frontiers of Turkey, in nineteen degrees of eaſt longitude, and fifty-four degrees of north latitude.

The province of Moldavia takes its name from the Moldau, which runs through it. It is ſituated on the eaſt of Tranſylvania, is about two hundred and forty miles long, but the breadth varies conſiderably. This is in general a barren ſpot, and the inhabitants are a mixture of various neighbouring nations. The principal places are Jaſſy, the capital and reſidence of the waywode, being ſituated on the Pruth, eighty miles north-weſt of Bauder, and Choczim on the Dineſter, near the borders of Padolia: this latter is a place of great ſtrength.

We have already, in the former part of this work, deſcribed the principal parts of Tartary in Aſia, and the different tribes among them. There are, however, a ſmall number, in proportion to the others, in Europe, whoſe places of reſidence, when they think proper to fix, are as follow:

1. The town of Beſſanabia, or Budziack, which borders on the Black Sea. The inhabitants are called White Hordes: they rove from place to place, live on the fleſh of horſes, oxen, cheeſe, milk, particularly that of mares, &c. The chief place is Bender, which, in the Turkiſh language, ſignifies a ſtrong paſs. Charles XII. of Sweden, after his defeat at Pultowa, reſided here.

2. The town of Oczakow, which is inhabited only near the ſea, and along the banks of the rivers, and the country between the Don and Nieper is poſſeſſed by the Nogay Tartars, who are dependent partly on the khan of the Crim Tartars, and partly on Ruſſia. Their food is horſe fleſh, and their religion Mahometaniſm; but they are ſaid greatly to exceed the moſt civilized Chriſtians in hoſpitality.

The reader will find a particular account of the Crim, Leſgee, Ubeck Tartars, &c. in p. 112, 113, 114, of this work, to which he is referred.

Greece is ſituated to the north of the Mediterranean, being four hundred miles in length, and two hundred and forty in breadth. The air is temperate, but fluctuating; the ſoil fruitful, but uncultivated, and the religion Chriſtianity, but debaſed by the ignorance of its profeſſors. The head of the Greek church is the patriarch of Conſtantinople, who is choſen by the neighbouring archbiſhop and metropolitans, and confirmed by the grand ſeignior; and the other patriarchs are thoſe of Jeruſalem, Antioch, and Alexandria.

There are four diſtinct provinces in Greece; namely, I. Macedonia. II. Albania. III. Theſſaly. IV. Lividia, or Achaia.

The province of Macedonia is ſituated on the weſt of the Archipelago, has a ſharp, clear, and wholſome air, and produces corn, wine, and oil. It is well watered, but mountainous: mount Athos, in particular, is covered with hermitages, and upwards of twenty convents. The only conſiderable place is the town called Karais, which is ſurrounded by walls, flanked with towers, and planted with artillery: this is the reſidence of the Turkiſh aga.

The populous town of Salonici, or Theſſalonica, is ſituated at the bottom of a bay of the Egean ſea, to which it gives name, lying in twenty-four degrees eaſt longitude, and forty-one degrees north latitude. Here St. Paul preached, and we have ſtill two of his epiſtles, written to the Theſſalonians.

The province of Albania, which comprehends Illyricum and Epirus, is ſituated to the eaſt of the gulf of Venice, being one hundred and ninety miles long, and ninety-ſix broad. The ſoil is fertile, but little cultivated, the inhabitants robuſt but ignorant, and they are of the Greek perſuaſion, but ſuperſtitious. The principal places are, Scutari, a place of conſiderable trade, eighteen miles north-eaſt of the gulf of Venice and Durazzo, thirty-five miles ſouth of Scutari.

Lower Albania, or Epirus, is exceedingly fruitful, and the inhabitants are well adapted for a military life. The towns are inconſiderable, being almoſt totally decayed.

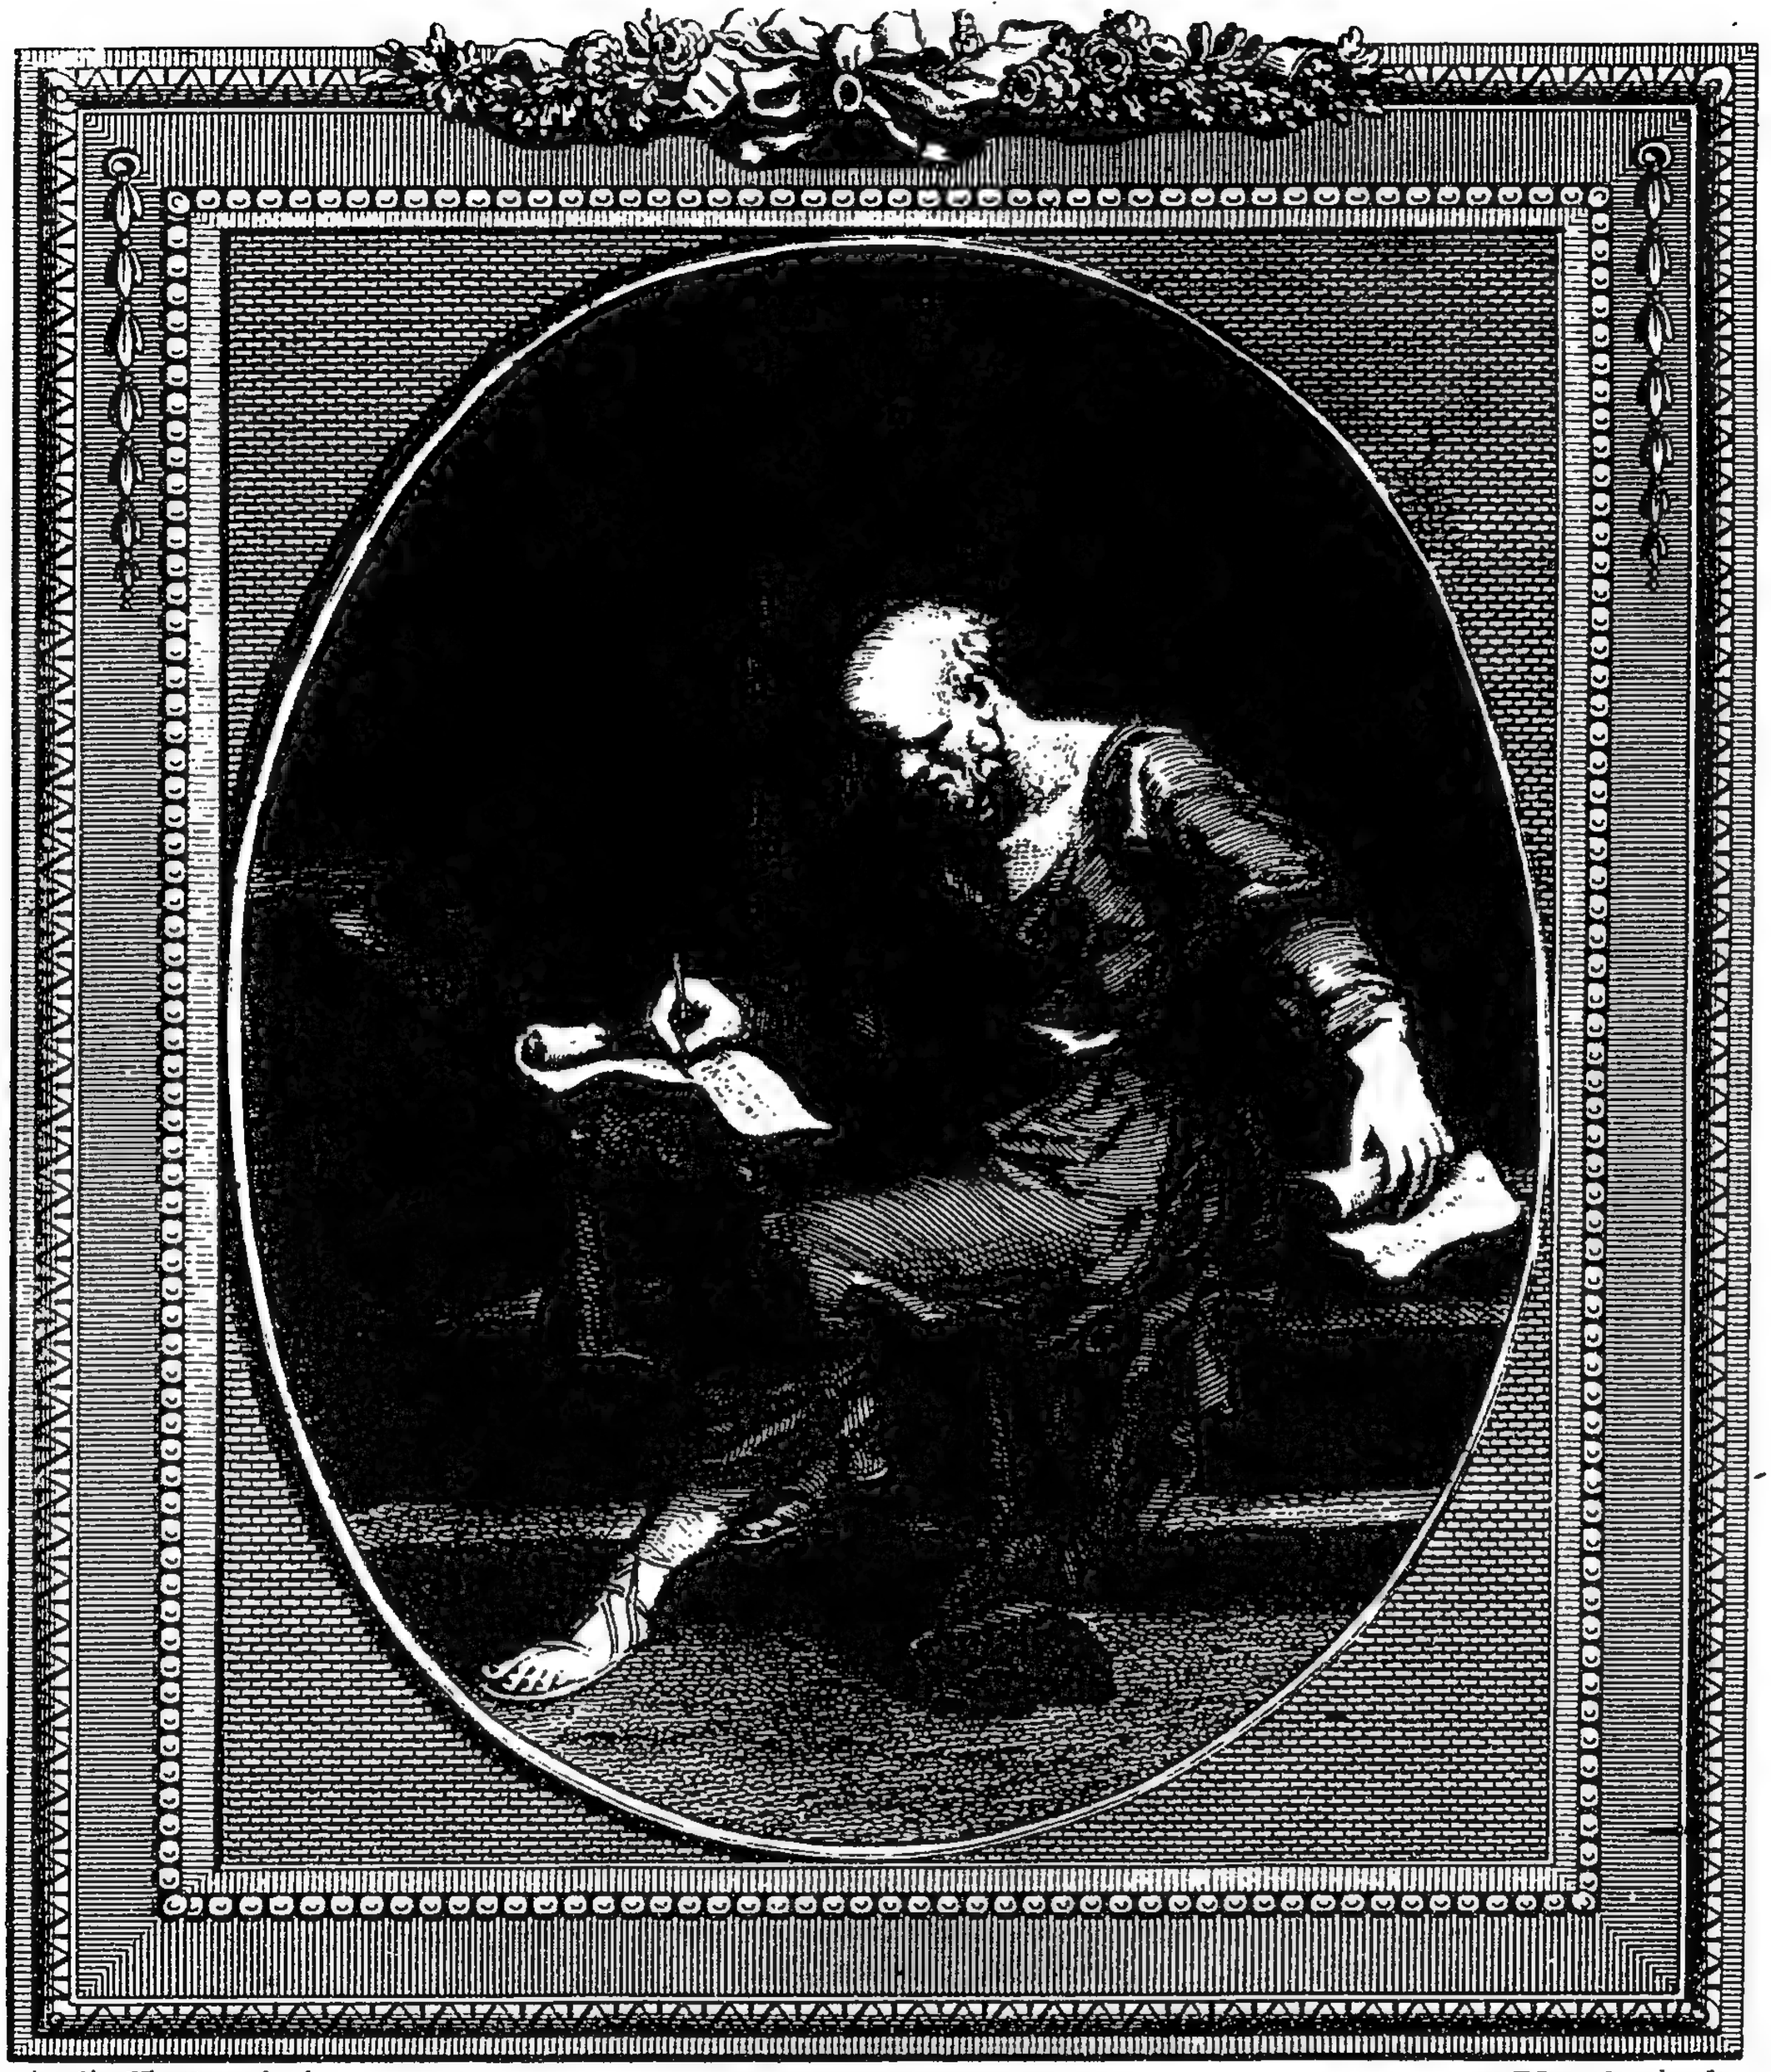
The province of Theſſaly, now Janna, is bounded by Epirus, on the weſt; by Macedon, on the north; by Achaia, on the ſouth; and by the Archipelago, on the eaſt. The chief town is Lariſſa, called Aſſabarba by the Turks, about fifty miles weſt of the iſland of Eubœa, or Negropont: it is ſituated on the river Peneus, having Mount Olympus on the north, and the plains of Theſſaly on the ſouth; a moſt delightful abode. It is a large populous city.

The province of Lividia, or Achaia, to the ſouth of Epirus, is one hundred and thirty miles long, but not above thirty-ſix broad. It is fruitful, though mountainous, being well watered. The principal place is Sentines, the antient Athens, ſituate near the bay of Engia, about forty miles eaſt of the iſthmus of Corinth. It ſtands almoſt in the middle of a plain, being a barren, but healthful ſoil, the river Iliſſus almoſt ſurrounding it; after which it continues its courſe by the hill called the Muſeum, and from thence runs through a wood of olives, ſix miles in length: the preſent town lies on the north-weſt ſide of the caſtle, extending a mile and a half through the plain, and is about four miles in circumference, but no wall about it. This is now a deſpicable place; and though the ſciences do not flouriſh here as formerly, the inhabitants are ſtill eſteemed a polite, ingenious people: their number is about ten thouſand, of which three fourths are Chriſtians of the Greek church. The habit of the modern Athenians is a black veſt with a looſe coat over it, lined with furs, and their cap reſembles the crown of a hat; on their legs they wear eaſy black boots, which ſit in wrinkles, but never ſhoes or ſlippers, as the Turks do. The women wear coloured gowns, uſually red or blue, which reach down to their feet, and over them a ſhort veſt of ſilk.

The town of Lepanto, the antient Naupactus, is ſituated near the north ſhore of the entrance of the gulf of Lepanto. It is ſurrounded by fruitful fields and vineyards, producing corn, rice, olives, oranges, lemons, and citrons, in great plenty; the wine is eſteemed the beſt in Greece.

The antient port-town of Livadia is ſituated on the gulf of Lepanto, twenty miles north-weſt of Corinth, and communicates its name to this province. The inhabitants conſiſt of Turks and Greek Chriſtians: and it is at preſent a populous trading town.

The Morea, or Peloponneſus, is a large peninſula joined to the continent of Greece by the iſthmus of Corinth. It is one hundred and twenty miles long, and one hundred and fifteen broad, tolerably fertile, except in the mountainous parts, and is in general well watered.



The principal places are as follow: 1. Corinth, the modern Gereme, ſituated between the bays of Lepanto and Engia, fifty miles weſt of Athens. The buildings are not now contiguous, but intermixed with fields and gardens, which make it look like a village; the caſtle is ſituated on a high ſteep rock above it, of very difficult acceſs. The country about it abounds with corn, wine, and oil. The narroweſt part of the iſthmus is about ſix miles over; and on a mount there, called Oneius, were antiently celebrated the iſthmian games; there are ſtill the ruins of a town upon it, and of temples dedicated to the Sun, Neptune, Diana, Pluto, Ceres, and Bacchus, and ſome remains of the walls built by the Lacedemonians croſs the iſthmus from ſea to ſea, to ſecure the Peloponneſian peninſula from the incurſions of invaders.

The town of Patras, eight miles weſt of Corinth, is the ſee of an archbiſhop. It is at preſent a place of ſome trade. Chiarenza, thirty-two miles ſouth-weſt of Patras, is thought to have been the antient Cylleni; and Lacedemon, or Sparta, now named Miſitra, antiently the capital of Laconia, is ſituated on the banks of the river Eurotas, forty miles ſouth of Napoli di Romania.

The town of Napoli di Romania, is ſituated thirty-ſix miles ſouth of Corinth: it is a ſtrong place with a good harbour, and has a conſiderable trade.

The city of Olympia ſtands in the famous Olympian plains, on which were celebrated the Olympic games. This city is likewiſe famed for its magnificent temple of Jupiter Olympus; in which was a famous ſtatue of that god ſeventy-five feet high, reckoned one of the ſeven wonders of the world.

CHAP. XX.

THE NEW HISTORY AND DESCRIPTION OF THE

EUROPEAN ISLANDS.

SECT. I.

Containing a general Geographical Survey of the Island of GREAT BRITAIN; with a particular Account of the Mountains, Forests, Lakes, Rivers, Medicinal Springs, Minerals, Vegetables, Quadrupeds, Birds, Fishes, Insects, and Reptiles therein contained; and also the Cities, Towns, and Places, remarkable Productions, &c. with a Description of the Inhabitants, their Manners, Customs, Religion, Trade, Manufactures, &c.

THE island of Great Britain, which on many accounts is the most respectable in Europe, is situated in the western ocean, between fifty and fifty-nine degrees north latitude, and between one degree forty-two minutes and six degrees longitude, being six hundred and twenty-five miles long, and three hundred and thirty-eight broad, where widest. The whole island consists of two grand divisions, viz. South Britain, or England and Wales; and North Britain, or Scotland. The former of these, namely, South Britain, which we shall first treat of, is bounded, on the north, by the river Tweed, which separates it from Scotland; on the west, by the Irish sea, which divides it from Ireland; on the south, by the British channel, which separates it from France; and, on the east, by the German ocean.

The air is in general healthy, the soil fertile, the face of the country beautifully diversified, the prospects admirable, and the lands well cultivated. The shores, by nature, form innumerable bays, creeks, harbours, &c. The circumjacent sea and intersecting rivers furnish a great plenty of various kinds of fish.

In many parts of England, the eye is delighted with an enchanting variety of gently swelling hills, level plains, corn fields, meadow grounds, wood and water, intermingled in the most agreeable manner. The champain country is parcelled out into beautiful inclosures, surrounded with quickset hedges, intermixed with stately oaks and elms. The farm-houses, scattered about in great numbers all over the face of the kingdom, appear large, neat, and convenient, in the midst of their offices or outhouses. The uncultivated part of the ground is cloathed with a continual green; and the lands in general display the perfection of agriculture. The seats of noblemen and gentlemen exhibit on every side a most delightful scene: flourishing cities, populous villages, and thriving towns, abound in every part of the kingdom, which in beauty, opulence, and cultivation, excels all the states in Europe.

We shall now proceed to describe the face of the country, and its various animal, vegetable, mineral, and medicinal productions.

The chief mountains in England are, as follow: The Peak, in Derbyshire; Endle, in Lancashire; Wolds, in Yorkshire; Cheviot, on the Scots borders; Chiltern hills, in Buckinghamshire; Malvern, in Worcestershire; Cotswold, in Gloucestershire; Wrekin, in Shropshire; Skiddow, in Cumberland; and Penlumnon and Snowden in Wales. The most celebrated of these mountains is the Peak in Derbyshire, which is rather a cluster of mountains than a single one; the principal of these is Mam-Tor.

There are above threescore forests in England; the principal of which are Windsor, Epping, Dean, Sherwood, New Forest, and Exmoor; the whole kingdom, indeed, being almost throughout shaded by trees and plantations, appears like one extensive forest.

The lakes in this country are, Soham, Whittlesea, and Ramsey Mere, in the isle of Ely and county of Cambridge; Winander Mere, in Westmoreland; Derwent Waters, in Lancashire; and Hull's Water, on the borders of Cumberland. The lakes Soham, Whittlesea, and Ramsey, in rainy weather, overflow the fens, and, joining, become one lake of vast extent.

The rivers in England (which, considering the extent of the country, are very numerous) not only fertilize the ground, but conduce to the improvement and prosperity of commerce. They are as follow; viz. The Thames, which is the chief river in the kingdom, being formed by the junction of the Thame and the Isis. The others are, the Medway, Severn, Trent, Tyne, Tees, Eden, Avon, Ribble, Mersey, Ouse, Humber, Loddon, Colne, Lea, Dee, Dove, Tweed, and Churn. The Thames rises on the confines of Gloucestershire, receives the Churn, and runs north-east to Lechlade, in Wiltshire, where it unites with the Colne, and becomes navigable. Thence continuing its course north-easterly, it is swelled by the Windrush; enters Oxford, where it receives the Charwell, then turning south to Abingdon, proceeds to Dorchester, where it is joined by the Thame. Thus increased, it takes an eastward direction, passes by Wallingford, Reading, Marlow, Windsor, Kingston, and Richmond, in its way to London, which having washed, divides the county of Kent from Essex, and widening as it approaches the Ocean, falls into the sea at the Nore, being navigable from its mouth to London-Bridge, for large ships.

Few countries abound more with medicinal springs, than England, which will appear by the following alphabetical list of them;

Actin Wells, Middlesex.
Alford, Somersetshire.
Ancliff, Lancashire.
Astrop, Northamptonshire.
Barnet, Hertfordshire.
Bath, Somersetshire.
Bristol, ditto.
Brosely, Salop.
Broughton, Yorkshire.
Burnly, Lancashire.
Buxton, Derbyshire.
Caergile, Flintshire.
Carlton, Lancashire.
Cawthorp, Lincolnshire.
Chadington, Oxon.
Cheltenham, Gloucestershire.
Chippenham, Wilts.
Clifton, Oxon.
Cobham, Surrey.
Codsall, Staffordshire.
Colurian, Cornwall.
Comner, Bedfordshire.
Crickle, Lancashire.
Crof, Yorkshire.
Doddington, Oxon.
Dog and Duck, Surrey.
Dulwich, Kent.
Epsom, Surrey.
Erasmus's Well, Staffordshire.
Euny Well, Cornwall.
Gainsborough, Lincolnshire.
Hampstead, Middlesex.
Handbridge, Lancashire.
Harrowgate, Yorkshire.
Hartlepool, Durham.
Heigh, Lancashire.
Holt, Wilts.
Holywell, Cornwall.
Jessop's Well, Surrey.
Ilmington, Warwickshire.
Inglewhite, Lancashire.
Kinalton, Nottinghamshire.
King's Cliff, Northamptonshire
King's Sutton, ditto.
Kirkley Thower Westmorland
Knaresborough, Yorkshire.
Landridod, Radnorshire.
Lemington, Warwickshire.
Lincomb, Somersetshire.
Madern, Cornwall.
Malton, Yorkshire.
Matlock, Derbyshire.
Moreton, Shropshire.
Nevil Holt, Leicestershire.
Newton Dale, Yorkshire.
Northall, Herts.
Nottingham, Dorsetshire.
Orston, Northamptonshire.
Pancras, Middlesex.
Pitchford, Salop.
Queen's Camel, Somersetshire.
Road, Wilts.
Rougham, Lancashire.
Scarborough, Yorkshire.
Shadwell, Middlesex.
Shapmore, Westmorland.
Stanger, Cumberland.
Strenfield, Lincolnshire.
Stretham, Surrey.
Swansey, Wales.
Sydenham, Kent.
Thetford, Norfolk.
Tilbury, Essex.
Tunbridge, Kent.
Tunbridge Wells, New, Middlesex.
Upminster, Essex.
West Ashton, Wilts.
Westwood, Derbyshire.
Whaley, Lancashire.
Witham, Essex.
Whiggleswerth, Yorkshire.
Willoughbridge, Staffordshire.

The minerals are, tin, lead, copper, iron, free-stone, marble, coal, fullers earth, black lead, allum, and salt. The most considerable mineral is tin; and Cornwall, for producing it, has been famous ever since the Phœnicians traded to Great Britain. Northumberland and Cheshire produce a great deal of alum and salt; and the kingdom abounds with fuller's earth, which is of great use in the cloth manufactory. Free-stone is

plentiful in Derbyſhire, and marble in the neighbourhood of Plymouth. Immenſe quantities of coals are dug out of the pits in Northumberland, Cumberland, Weſtmoreland, and the biſhopric of Durham.

With reſpect to the ſoil in England, it is in general a rich clay, though in many places it conſiſts of gravel and ſand, and there is a variety of moulds and marls in different parts of the country. Its vegetable produce is, corn, rye, oats, peas, beans, vetches, hops, horſe-beans, flax, clover, hemp, cinquefoil, trefoil, ſaintfoin, lucern, graſs, artichokes, aſparagus, cauliflowers, cabbages, coleworts, broccoli, kidney-beans, ſpinach, beets, cellery, endive, turnips, carrots, potatoes, leeks, onions, chalots, ſallading of all kinds, ſaffron, wood, apples, pears, cherries, apricots, nectarines, grapes, plums of various ſpecies, raſberries, ſtrawberries, gooſeberries, mulberries, blackberries, currants, nuts of various ſorts, and muſhrooms.

The corn which grows in England excels that of all the countries in Europe. The arable lands are computed to produce thirty-five millions of buſhels of wheat annually, a conſiderable part of which, after favourable ſeaſons, is exported. The Engliſh wheat-ear is, by the beſt judges, preferred to the foreign ortolan for flavour and delicacy. Near as much barley is made into malt, partly for beer and ale, and partly for diſtilling Engliſh ſpirits and Geneva. The ſpontaneous herbs are innumerable. Engliſh oak is the beſt in the univerſe; beſides which, here is plenty of aſh, elm, beech, poplar, walnut-tree, maple, ſycamore, alder, hornbeam, ſallow, willow, hazle, and birch. The gardeners of this country, who are the moſt expert in the whole world, can, by means of hot-beds and fire-walls, raiſe any exotic plant, and produce the moſt delicate fruits that grow within the tropics.

The Engliſh quadrupeds are, black cattle, ſheep, ſwine, horſes, aſſes, dogs, foxes, ſquirrels, ferrets, weazles, lizards, newts, otters, badgers, hedge hogs, pole cats, rats, mice, moles, rabbets, hares, deer, ſtags, &c. Their oxen are large and fat, and the beef has a delicious flavour. The ſheep are large, and even more valuable for their fleece than their fleſh, as above twelve millions of fleeces are annually ſhorn and manufactured in the kingdom. The horſes for the ſaddle and chace are finely proportioned and full of mettle; thoſe for the draught are amazingly ſtrong; and the war horſes have abundance of ſpirit. Among the animals peculiar to England, we muſt not omit to mention the maſtiffs and bull-dogs, whoſe ſpirit is ſo great, that they will ſingly attack any animal whatever; but when they are tranſported to any other country, this ſurpriſing ſpirit degenerates greatly.

The feathered tribe in England is very numerous, having great quantities of poultry, wild fowls, and birds; ſuch as turkeys, peacocks, geeſe, ſwans, ducks, tame pigeons, wood pigeons, wild ducks, wild geeſe, buſtards, teals, wigeons, plovers, pheaſants, partridges, woodcocks, growſe, quails, landrails, ſnipes, hawks, kites, owls, herons, crows, rooks, ravens, magpies, jackdaws, jays, blackbirds, thruſhes, nightingales, goldfinches, wrens, linnets, larks, and a great variety of ſmaller birds common to other countries.

The Engliſh game cock is remarkable for his courage; but, like the maſtiff and bull-dog, loſes it, if carried to any other country.

In the ſeas ſurrounding this iſland, there is great plenty of cod, mackerel, haddock, whiting, herrings, pilchards, ſkait, ſoals, ſhrimps, oyſters, lobſters, and crabs. And the rivers afford abundance of ſalmon, trout, eels, pike, perch, ſmelts, carp, tench, barbles, gudgeons, roach, dace, mullet, bream, plaice, flounders, cray-fiſh, and char. The laſt-mentioned is a very delicate fiſh, found in the freſh water lakes of Wales and Cumberland. The coaſt is ſeldom viſited by whales, but there are great numbers of porpoiſes tumbling about in the channel; and upon the rocks at the extremity of the iſland there are many ſeals.

Among the inſects and reptiles in this country may be reckoned adders, vipers, ſnakes, worms, bees, waſps, ants, crickets, gnats, flies of various kinds, graſshoppers, and many other ſpecies of inſects and vermin common to other European countries. Many inſects are of the tranſmigrating kind, changing from one ſpecies to another; examples of which are found in the caterpillar, moth, and butterfly.

England is at preſent divided into ſix circuits, namely, the home circuit, the Norfolk circuit, the Oxford circuit, the midland circuit, the weſtern circuit, and the northern circuit. Each of theſe comprises a certain number of counties. The home circuit includes Eſſex, Hertford, Kent, Surrey and Suſſex. In the Norfolk circuit, we reckon Buckinghamſhire, Bedfordſhire, Huntingdonſhire, Cambridgeſhire, Suffolk, and Norfolk. The Oxford circuit comprehends Oxford, Berkſhire, Glouceſterſhire, Worceſterſhire, Monmouthſhire, Herefordſhire, Salop, and Staffordſhire. In the midland circuit, we find Warwickſhire, Leiceſterſhire, Derbyſhire, Nottinghamſhire, Lincolnſhire, Rutlandſhire, and Northamptonſhire. The weſtern circuit includes Hampſhire, Wiltſhire, Dorſetſhire, Somerſetſhire, Devonſhire, and Cornwall. The northern circuit comprehends Yorkſhire, the biſhopric of Durham, Northumberland, Lancaſhire, Weſtmoreland, and Cumberland. Middleſex being the ſeat of the ſupreme courts of juſtice, and Cheſhire a county palatine, they are, on thoſe accounts, not included in any circuit.

Wales, which is a principality from whence the heir apparent derives his title, is divided into four circuits, called the north-eaſt circuit, the north-weſt circuit, the ſouth-eaſt circuit, and the ſouth-weſt circuit. In the north-eaſt, are contained the counties of Flint, Denbigh, and Montgomery: in the north-weſt, thoſe of Angleſey, Carnarvon, and Merioneth: in the ſouth-eaſt, are the counties of Radnor, Brecon and Glamorgan: in the ſouth-weſt, Pembrokeſhire, Cardiganſhire, and Caermarthenſhire.

In England, we number forty counties, containing twenty-five cities, one hundred and ſeventy-two boroughs, and eight cinque-ports, which are, Dover, Haſtings, Hythe, Romney, Rye, Sandwich, Seaford, and Winchelſea.

In deſcribing the ſituation of, and the principal places in, each county in England, we ſhall begin with the moſt weſterly, namely, Cornwall, which in ſhape reſembles what it implies, that is, a horn. It abounds in tin and lead, produces mundic, which affords copper as good as the Swediſh; is famous for the beſt kind of ſlate tiles, and furniſhes the builder with moor-ſtone, which reſembles Egyptian granite, when it is ſufficiently poliſhed.

The town of Launceſton is the moſt antient and chief in the county. Launceſton caſtle was formerly a very ſtrong place, and thence obtained the name of Caſtle-Terrible; the round hill on which it ſtands being environed with a triple wall. It was built by William de Merton, earl of Cornwall, ſoon after the Conqueſt. It is ſo much decayed, that no part of it, except that which ſerves for the county gaol, is uſed at preſent.

The town of Falmouth, where the river Fall runs into the Engliſh channel, is two hundred and ſixty-three miles from London. This is the richeſt and beſt trading town in the county. The harbour is ſo commodious, that ſhips of the greateſt burden come up to its quay. It is guarded by the caſtles of St. Mawes and Pendennis; the latter of which, ſtanding on a peninſula, is large and well fortified, and was built by Henry VIII. for the defence of Falmouth harbour. There is ſufficient ſhelter in many creeks for the whole royal navy to ride ſecure from any winds. The town is well built, and its trade of late greatly increaſed.

The town of Penzance, which is the fartheſt place in the weſt of England, is well built and populous, and has many ſhips belonging to it; veins of lead, tin, and copper, to the utmoſt extremity of low-water mark, are ſeen here.

The county of Devon, which joins Cornwall to the eaſtward, is naturally ſterile, but rendered fertile in many parts by art. The following are the principal places contained in it; viz.

The city of Exeter, capital of the county, and one of the principal cities in the kingdom. It is ſituated on a riſing ground watered by the river Ex, has ſix gates, and, with the ſuburbs, is two miles in circumference. The cathedral, called St. Peter's, is a magnificent and curious fabric, vaulted throughout, three hundred and ninety feet in length, and ſeventy-four in breadth, and has a ring of ten bells, reckoned the largeſt in England. Its bridge over the Ex is of great length, and has houſes on both ſides towards the ends. It has four principal ſtreets, the chief of which is called High-ſtreet, all centering in the middle of the city, which is well ſupplied with water.

The town of Totneſs ſtands on the river Dart. Here is a ſpacious church with a fine tower, a town-hall, and a ſchool-houſe. Its chief trade is the woollen manufacture; but it has more gentlemen than tradeſmen of note. There is a fine bridge over the river, which abounds with delicate trout and other good fiſh. It is diverting to ſee them catch ſalmon-peele here, with a ſpaniel trained to drive them into a ſhove-net: ſometimes a man will take up twenty ſalmon at a time, from fourteen to twenty inches long, for which they aſk only two-pence a piece.

The town of Plymouth is ſituate two hundred and ſixteen miles from London, at the influx of the rivers Plym and Tamar into the channel: it was antiently no more than a fiſhing-town, but is now the largeſt in the ſhire, contains near as many inhabitants as Exeter, and is one of the chief magazines in the kingdom, owing to its port, which is one of the largeſt and ſafeſt in England. It conſiſts of two harbours, capable of containing one thouſand ſail of ſhips; defended by ſeveral forts, particularly a ſtrong citadel of large extent, containing a grand magazine full of ſtores, and five regular baſtions. It is very convenient

convenient for homeward-bound ſhips to provide themſelves with pilots up the channel, and is alſo the general rendezvous of ſhips outward-bound.

There is alſo a royal dock-yard, for building and repairing ſhips, about two miles up the mouth of the river Tamar, which is an inlet of the ſea, diſtinguiſhed from Catwater by the name of Hamoaze, and commanded by the caſtle on St. Nicholas iſland. Here is a charity-ſchool, four hoſpitals, and a work-houſe. Off the entrance of the bay lies the edy-ſtone rock, which is covered at high water, and on which there is a light-houſe.

The town of Dartmouth includes in it what was formerly called three towns, Cliſton, Dartmouth, and Hardneſs. It ſtands on the ſide of a craggy hill, is about a mile long, the ſtreets very irregular, and the houſes generally high, ſo that it ſeems crowded. The harbour is eſteemed good, and five hundred ſail of ſhips may ride ſafe in the baſon, which is not only defended by three caſtles, but upon occaſion the entrance of it may be ſhut up with a chain. Dartmouth caſtle is very antient. The mother-church is called Townſtall, and is ſituated on a hill three quarters of a mile diſtant from the town. The tower of the church is ſixty-nine feet high, and is of good uſe as a ſea-mark.

The county of Dorſet, ſituated on the ſouth-eaſt of Devonſhire, is, like the two laſt, a maritime county. It abounds in corn, cattle, ſheep, &c. and is one of the pleaſanteſt and moſt fertile countries in the kingdom.

The chief or ſhire town is Dorcheſter, which was the moſt conſiderable ſtation of the Romans in thoſe parts; they had a camp near it with five trenches, incloſing ten acres, the veſtiges of which are ſtill viſible at a place called Maiden caſtle, about a mile from the town. It is ſituated on an aſcent, on the banks of the river Frome. The Ikening ſtreet of the Romans is plainly traced here; and the foundations of the old Roman wall appear quite round the town, except toward the eaſt, where the ditch is filled up, and a ſtreet built upon it; yet the place is ſtill called the Walls. St. Peter's, Trinity, and All-Saints churches, and the ſhire hall, are the principal buildings in the town.

The town of Portland, oppoſite to Weymouth, was formerly an iſland, and ſtill retains that name, though now only a peninſula. It is ſcarcely ſeven miles in circumference, and but thinly inhabited. In a lake in this iſland is a ſwannery, containing ſeven or eight thouſand ſwans. The land here is high, and by means of dangerous rocks, is acceſſible only on the north ſide, where it is defended by a ſtrong caſtle built by Henry VIII. and by another ſince erected on the oppoſite ſhore, called Sandsfoot-caſtle. The inland parts are famous for quarries of the fineſt and moſt durable free ſtone, with which were erected St. Paul's church, Weſtminſter bridge, &c. The beſt tobacco-pipe clay in England is found in Purbeck, which, like Portland, is improperly called an iſland.

The county of Somerſet, ſituated to the north-eaſt of Devonſhire, is a very fertile country, and more celebrated for its mineral waters than any other county in England. It gives the title of earl, and ſends eighteen members to parliament.

The city of Briſtol, twelve miles from Bath, is the ſecond city in the Britiſh dominions for trade, wealth, and number of inhabitants. Though it lay in two counties, before it was made a county of itſelf, which was in the reign of Edward III. it was by the parliament rolls reckoned in Somerſetſhire. The cathedral was formerly the collegiate church of St. Auguſtine's monaſtery, which, when diſſolved by Henry VIII. and erected into the ſee of a biſhop, he applied its revenues to the maintenance of a biſhop, dean, prebendaries, and other eccleſiaſtics. There are in this city eighteen churches; the chief is St. Mary Radcliff's, without the walls, built in the reign of Henry VI. by William Cannings, alderman of this city. This is a magnificent ſtructure in the gothic taſte; the workmanſhip ſo exquiſite, the roof ſo artificially vaulted with ſtone, and the tower ſo high, as to render it the fineſt pariſh church in the kingdom. Here are three excellent market-places, beſides a fiſh-market, near twenty hoſpitals and other benevolent foundations; a guildhall, a council, a tholſey, or exchange, which is the completeſt in Europe, two fine quays, ſeveral docks, a corn-market, and three gates, which are the only ones remaining out of fourteen, the antient number: beſides the above, here are a ſtately bridge over the Avon, a ſquare (larger than any one in London, Lincoln's-inn-ſquare excepted), and a cuſtom-houſe.

According to a late ſurvey, this city, which with the ſuburbs lies compact, being almoſt as broad as long, is about ſix miles in circumference, on the Glouceſter ſide, and three miles on the Somerſet ſide, which in the whole makes nine miles in circumference. The houſes are cloſe and crouded, eſpecially towards the bridge, and the heart of the city, where many of them are five or ſix ſtories high. The aſcent to St. Michael's hill is ſo ſteep, that upwards of one hundred ſteps are laid in the way to the ſummit of it.

This city has amazingly increaſed of late yeaas in the extent and elegance of its buildings. The firſt improvement was the erection of Queen-ſquare, begun in 1729, in the centre of which is a garden, and an obeliſk ſeventy feet high, in honour of his late royal highneſs Frederic prince of Wales.

The territory of Cheddar is famed for the fineſt cheeſe in the world, except the Parmeſan, and is twenty-three miles in compaſs, abounding with paſture. There are ſuch plantations of apple-trees in this pariſh, that three thouſand hogſheads of cyder have been made in one ſeaſon. It is common for three or four dairies here to join their milk, and to make what they call a Cheddar-cheeſe.

Ten miles from Bath is ſituated Frome Selwood, which though a town longer than ſome cities, has only one church. More wire-cards are made here than in any other town in Britain, and the woollen manufacture is reckoned more conſiderable here than in any other part of England.

To the north-eaſt of the county of Somerſet is ſituated Wiltſhire: this is rather an unfertile county, but abounds in ſheep. The principal place is Saliſbury, or New Sarum, an epiſcopal ſee, and a large well-built pleaſant city, near which four rivers join their ſtreams, and flow through every ſtreet. The cathedral is conſidered as the moſt elegant and regular in the kingdom, particularly for its lofty ſtone ſpire.

The county of Hants, or Hampſhire, is ſituated to the north-eaſt of Dorſetſhire, and is famous for hogs, ſheep, and timber. It ſends twenty-ſix members to parliament.

The principal places are, 1. Wincheſter, on the Itching: it reſembles an amphitheatre, and is ſurrounded by chalk-hills. The cathedral is venerable and large, but not elegant. Here are ſix other churches, two hoſpitals, a college, ſeveral public ſchools, &c. On St. Catherine's hill, near the city, are the remains of a camp; and on the weſt was a caſtle, where the Weſt Saxon kings kept their court.

2. The town of Southampton, twelve miles from Wincheſter, ſtands between two large rivers, the Itching and the Teſe, that fall here into that called Southampton water. The approach to this town, from the London road, is extremely pleaſant. It has a wall almoſt round it of a hard kind of ſtone. Henry VI. made it a county of itſelf, which renders it independent of the lord lieutenant. The chief ſtreet has one large quay; and one other called Weſt quay.

3. The town of Portſmouth, the great key of England, is regularly fortified, and ſtands at the entrance of a creek, on the iſland of Portſea. It is alſo defended by South ſea caſtle, Blockhouſe caſtle, and a chain that goes acroſs the harbour from the round tower to the oppoſite ſhore. This is the narroweſt point of entrance to a large and ſafe harbour. Here is one very magnificent church, having on the top of the ſteeple a ſhip for a weather-cock. The dock-yard is extremely convenient, capable of docking twenty-five or thirty ſhips in a fortnight. In the dock is likewiſe a royal academy. The common, as it is called, is the reſidence chiefly of the artificers and officers of the dock, but at this time has more houſes and inhabitants than the town itſelf.

To the north of Hampſhire is ſituated Berkſhire, which has a fertile ſoil, and contains as follows;

1. The antient and pleaſant town of Windſor, ſituated near the Thames, twenty miles from London. It has a fine caſtle built by the Conqueror. Edward III. who was born here, enlarged and beautified it; built the royal palace and chapel, together with St. George's hall and its chapel, and inſtituted here the order of the garter. Queen Elizabeth added the noble terrace, faced with free-ſtone ramparts, like thoſe of a fortified city, which is ſcarcely to be equalled in Europe. St. George's hall is eſteemed one of the fineſt in Europe. The royal chapel is beautifully adorned with curious paintings. The round-tower is built like an amphitheatre, very high, with elegant apartments. On the north ſide is St. George's, or the chapel of the Garter, one of the moſt elegant gothic ſtructures in the univerſe.

Near the town are two parks, the greateſt about fourteen miles, and the leſſer about three miles in circumference, ſtocked with all kinds of game, and laviſhly embelliſhed by the hand of nature. In the foreſt, which is thirty miles round, are ſeveral ſeats; particularly Cranbourn lodge, which ſtands on the top of a hill, and has a view not only of Windſor and the adjacent parks, but of London and its environs.

2. The town of Reading, which is the principal in the county, ſtands on the banks of the river Thames, near the influx of the Kennet, and has three pariſh churches, built of flint and ſquare ſtone; an hoſpital was founded here, and liberally endowed, by archbiſhop Laud.

The county of Surrey, ſituated to the ſouth of Middleſex, is

is a pleaſant, healthy, fertile country. The principal place (excluſive of the borough of Southwark) is Guildford, a large well-built town, on the river Wey, which is navigable from hence to the Thames. Not far from the river are the ruinous walls of an old caſtle, this place having in the Saxon times been a royal villa, where many of our kings kept their feſtivals. Here are three pariſh churches, of which that belonging to the upper pariſh has been lately rebuilt in a magnificent manner. Here are alms-houſes liberally endowed, and the remains of a once famous manufactory of cloth. In the neighbourhood are the walls of what was formerly called St. Catherine's chapel, built with a ſort of tile, which, when broken, has the appearance of iron, and the cement of them is in a manner impenetrable.

The other town, namely Richmond, is remarkable for its beautiful ſituation and royal palace, in which are many curious paintings by the moſt eminent maſters. Queen Caroline took great delight here; and his preſent majeſty has made great improvements in the gardens of this delightful place. The town runs up the hill a full mile to the park, with ſmall gardens declining all the way to the Thames, over which a very neat bridge has been lately erected.

The county of Suſſex, lying near the ſea, is ſituated to the ſouth of Surrey, and abounds in ſheep, wool, &c. It ſends twenty-eight members to Parliament. The chief place is Chicheſter, built on a plain near an arm of the ſea. It is a very neat, ſmall city, walled about in a circular form; with four gates opening to the four principal ſtreets, which meet in the centre, where is a beautiful croſs. All the ſpace or quarter between the weſt and ſouth gates is taken up with the cathedral, the biſhop's palace, the dean's, prebendaries, and vicars' houſes. The church itſelf is not very large, but very neat, with a high ſtone ſpire of an octagonal form, which for the beauty of its architecture is greatly eſteemed.

The county of Kent is ſituated to the ſouth-eaſt of Middleſex, and abounds in hops, wood, and fruit. It ſends eighteen members to parliament.

The principal places are, 1. Canterbury, the chief city in the county, and the metropolitan ſee of all England. The cathedral is a noble pile of Gothic architecture, and had, before the Reformation, thirty-ſeven altars. Seven kings have been interred in this church; and St. Auguſtine, with the ſeven archbiſhops that ſucceeded him, lie in one vault. Here was the ſhrine of Thomas à Becket, ſo famous for its riches preſented by votaries and pilgrims from moſt parts of the univerſe. There are ſix wards, denominated from its ſix gates; fifteen pariſh-churches, and ſeven hoſpitals in this city.

2. The town of Rocheſter lies in a valley on the eaſt ſide of the river Medway, and, except Canterbury, is the oldeſt ſee in England. Its cathedral is ſaid to have been built by Ethelbert king of Kent. Here is a ſtone bridge, conſiſting of twenty-five arches, which is eſteemed one of the fineſt in England. Rocheſter appears to have been a Roman ſtation, from the Roman Watling-ſtreet running through the town.

3. Tunbridge, or the town of Bridges; ſo called from the river Ton, and four other ſtreams of the Medway, which riſe in the Weald, over each of which is a ſtone-bridge. Tunbridge Wells, much frequented on account of their mineral waters, are five miles from the town, up to which the river Medway is made navigable.

4. The town of Margate, or St. John's, is ſituated on the north ſide of the iſle of Thanet, and is a member of the town and port of Dover, to which it is ſubject in all matters of civil juriſdiction. The principal ſtreet is near a mile in length, and built on an eaſy aſcent, by which means the upper part is clean and dry, but the lower end much otherwiſe. The pier is maintained and preſerved by certain payments for all goods and commodities ſhipped or landed. The bathing-rooms are not large, but convenient. Three of theſe rooms employ eleven machines till near the time of high water, which, at the ebb of the tide, ſometimes runs two or three hundred yards into the bay.

The county of Middleſex, which takes its name from its ſituation between the kingdoms of the antient Eaſt, Weſt, and South Saxons, is exceedingly fertile, ſends eighteen members to parliament, and contains the following places, viz.

The city of London, the metropolis of Great Britain; it is ſuppoſed to have been founded about the time of Claudius, in the year 42. It had formerly ſeven gates by land, namely, Ludgate, Aldgate, Cripplegate, Newgate, Alderſgate, Moorgate, and Biſhopſgate; all of which have been ſome time taken down. On the ſide of the Thames there were Dowgate and Billingſgate, long ſince demoliſhed, as well as the Poſtern-gate near the Tower, and the greateſt part of the walls. In the year 1670 there was a gate erected called Temple-bar, which is ſtill ſtanding, and determines the bounds of the city weſtward.

This celebrated city has undergone great calamities of various kinds, but the two laſt were moſt remarkable, namely, the plague in 1665, which ſwept away ſixty-eight thouſand five hundred and ninety-ſix perſons; and the fire in 1666, which burnt down thirteen thouſand two hundred dwelling houſes: in memory of this laſt there is an obeliſk erected, called the Monument, near the place where it began, which is one of the moſt remarkable ſtructures in the city. To the two above calamities, we may add the high wind in 1703, which did incredible miſchief to the city and its environs, and alſo to the ſhipping in the Thames.

The Tower of London is ſurrounded by a wall, and partly by a deep ditch, which incloſes ſeveral ſtreets, beſides the Tower, properly ſo called: this contains the great artillery, a magazine of ſmall arms for ſixty thouſand men, and the large horſe-armoury, among which are fifteen figures of kings on horſeback. The circumference of the whole is about a mile. There is one pariſh-church in it, which is under the command of a conſtable and lieutenant. In this fortreſs are kept the jewels and ornaments of the crown, as well as the other regalia, the mint for coining money, and the menagerie for foreign birds and beaſts.

The cuſtom-houſe ſtands in Thames-ſtreet near the Tower: it is a large ſtately ſtructure, where the king's cuſtoms are received for all goods imported and exported. There is a delightful proſpect of a grove of ſhips, laden with commodities of various kinds oppoſite to this place, as well as a great way down the river. London bridge is erected a little to the weſt of the cuſtom-houſe.

The Exciſe-office, in Broadſtreet, has been lately erected on the ſpot where Greſham college formerly ſtood, the latter of which was provided with profeſſors, appointed to read lectures there in the different faculties, which is now done in a convenient apartment over the Royal Exchange. Greſham college was formerly the muſeum of the Royal Society, and had a fine library belonging to it.

In 1732 the Bank of Engand began to be erected, and was finiſhed in two years; ſoon after which a marble ſtatue of William III. was ſet up in the hall. This is a noble and commodious ſtone building.

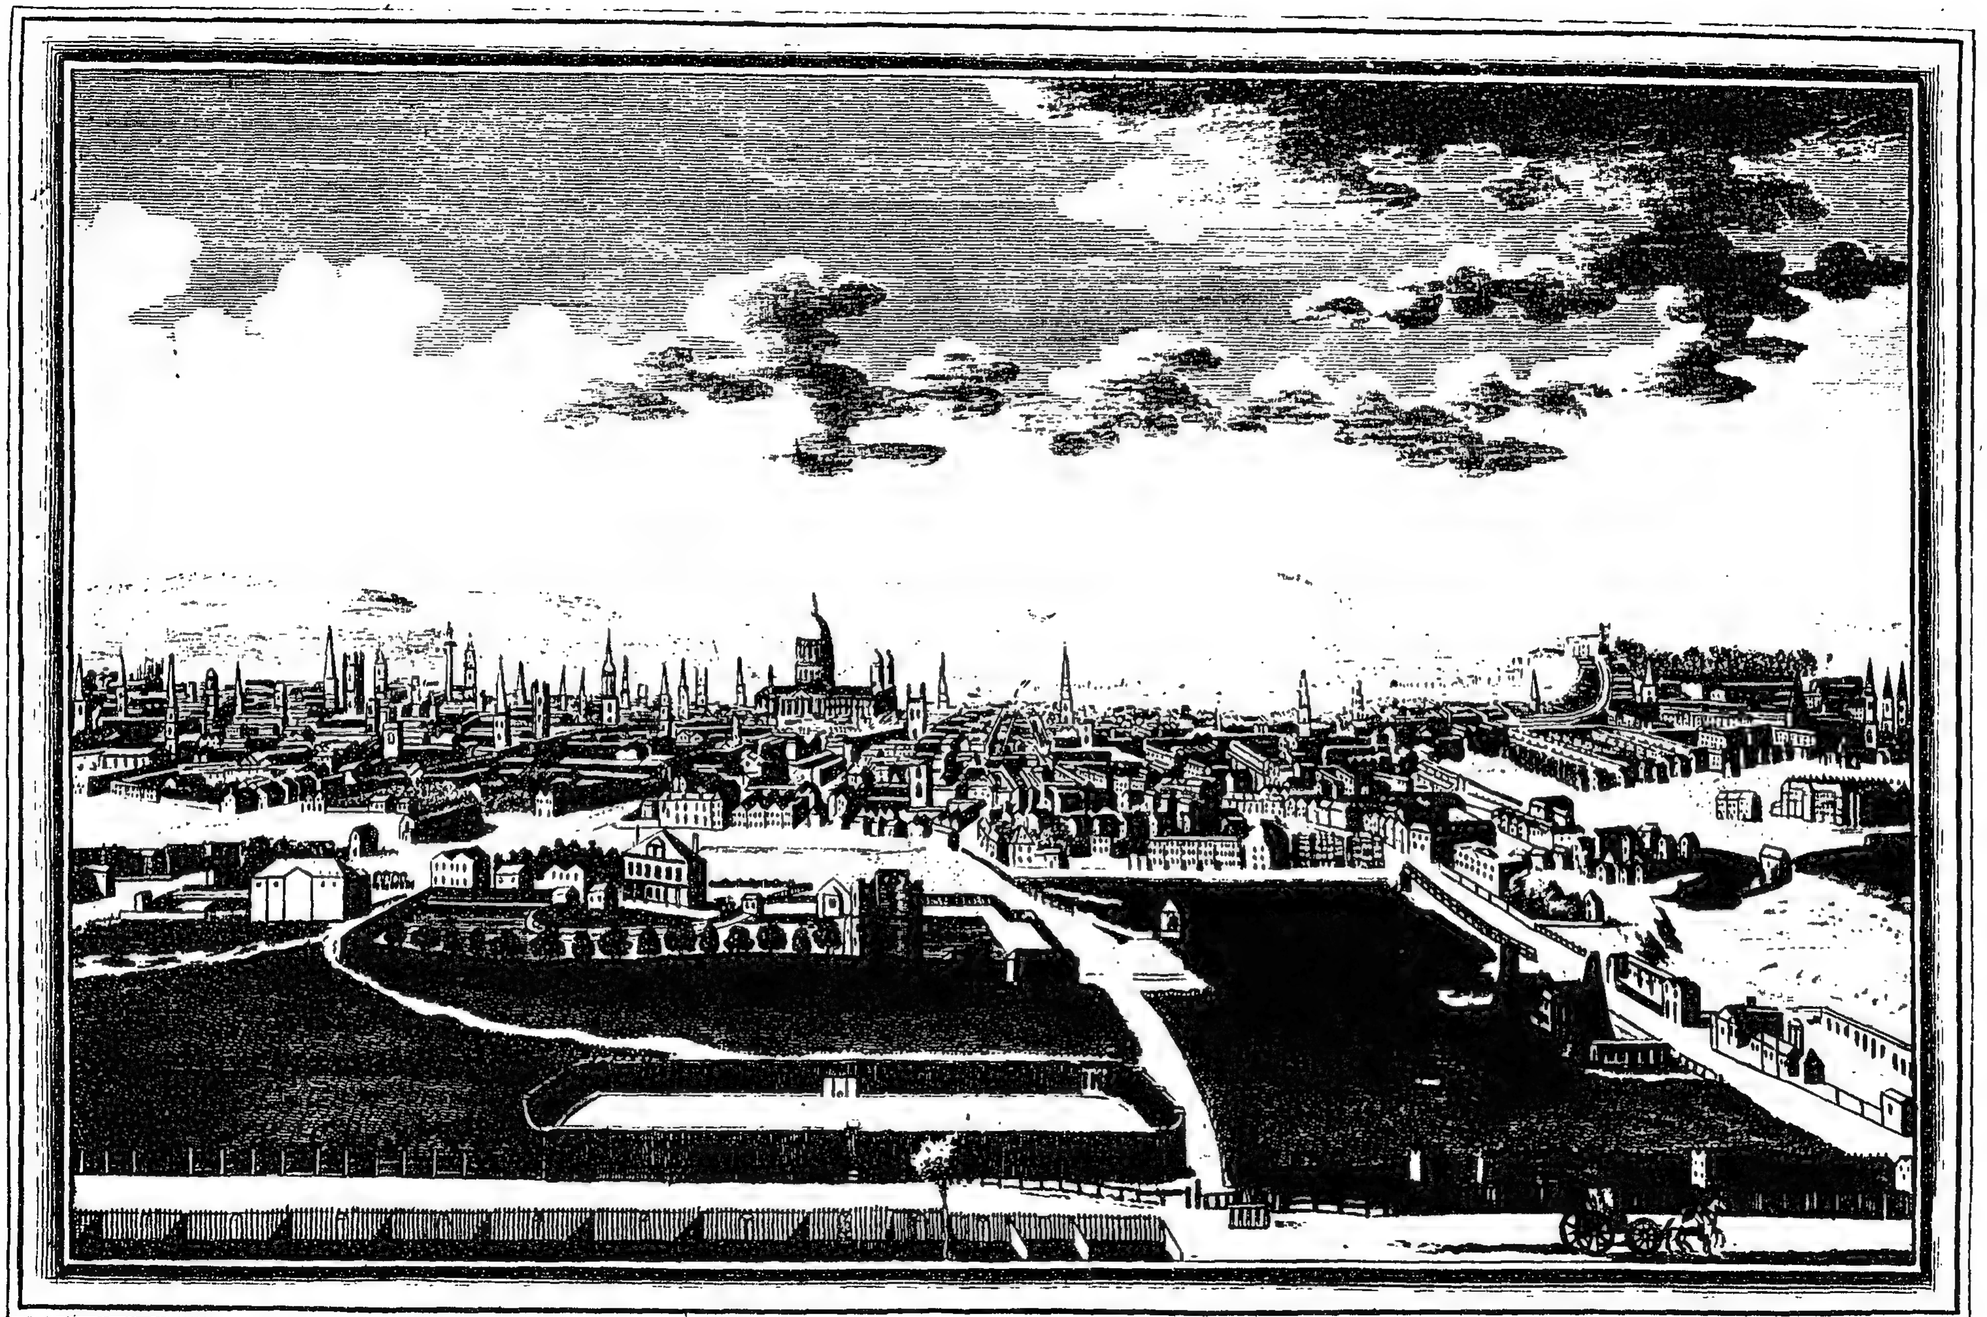
On the north ſide of Cornhill ſtands the Royal Exchange, which is generally allowed to be the fineſt ſtructure of the kind in Europe. It was firſt built by Sir Thomas Greſham in the years 1566 and 1567; but being burnt down in 1666, it was rebuilt in a more elegant manner with Portland ſtone, was finiſhed in 1669, and coſt ſixty-ſix thouſand pounds. The quadrangle within is one hundred and forty-four feet long, and one hundred and ſeventeen broad; on the outſide of the walls, are piazzas, and over them twenty-four niches, twenty of which are filled with the ſtatues of the kings and queens of England. In the middle of the area is the ſtatue of Charles II. in a Roman habit. The tower and turret of the lantern is one hundred and ſeventy-eight feet high, and makes a good appearance.

The Maſion-houſe, in which the lord mayor reſides, ſtands to the ſouth-weſt of the Royal Exchange; it was founded in the year 1739. It is a magnificent ſtructure, but its ſize, weight, and confined ſituation greatly diminiſh its dignity.

The church of St. Mary le Bow in Cheapſide is admired for its ſteeple, and has a fine ring of bells; and that of Walbrook, behind the Manſion, for its architecture, which is extremely curious and maſterly.

On the north-ſide of Cheapſide, at the top of King-ſtreet, ſtands Guildhall, the town-houſe of the city. The great hall is one hundred and fifty-three feet long, fifty broad, and fifty-eight high, and will hold near ſeven thouſand people. It is embelliſhed with the pictures of ſeveral Engliſh monarchs, particularly thoſe of their preſent majeſties, and ſeveral other diſtinguiſhed perſonages; a ſtatue has lately been erected there to the memory of the late earl of Chatham. And nearly adjoining to the before-mentioned building ſtands Blackwell-hall, famous for being the greateſt market in the world for woollen cloth.

Sion college ſtands near London-wall: here is a library appropriated to the uſe of the London clergy. There are alms-houſes belonging to it for ten poor men, and as many women, to each of whom ſix pounds per annum is allowed.



The cathedral of St. Paul, near Cheapſide, is allowed to be the fineſt proteſtant church in the world, and was built after model invented by Sir Chriſtopher Wren. Its length, from eaſt to weſt, is four hundred and ſixty-three feet, and including the portico, five hundred, and its height three hundred and forty-four feet from the ground to the top of the croſs.

The College of Phyſicians, though obſcurely ſituated on the weſt ſide of Warwick-lane, is nevertheleſs a handſome ſtructure.

In the Old Bailey ſtands Surgeons-hall, which is a handſome building, adjoining to which are the ſeſſions-houſe, and Newgate, the county gaol.

The noble building, called Chriſt's hoſpital, behind the north

A General View of LONDON, the Capital of England — Taken from an eminence near Islington.

Page xcii.

north ſide of Newgate-ſtreet, was formerly a houſe of the Grey Friars, and was founded by Edward VI. for the entertainment and education of the poor children of citizens of both ſexes. A mathematical ſchool was founded here in 1673, and a writing-ſchool in 1694, and by means of a great many noble benefactions the charity has been otherwiſe greatly increaſed.

On the ſouth ſide of St. Paul's are Doctors Commons, conſiſting of ſeveral handſome courts, where the judges of admiralty, court of delegates, court of arches, &c. meet. Near it is the Herald's college, to which belong three kings at arms, namely, Garter, Clarencieux, and Norroy, with ſix heralds, four purſuivants, and eight proctors. It is a ſpacious building with convenient apartments, a good library relating to heraldry, and the coats of arms of all the families of note in England are kept here.

The Inner and Middle Temple, near Temple-bar, are both inns of court for the ſtudy of the law. The Temple church was founded at firſt by the Knights Templars in 1185, and it is now one of the moſt beautiful gothic ſtructures in England. There are twelve other inns of court in the city, which are adapted to the like purpoſes.

There is a handſome ſtone bridge over the Thames at Black-friars; in the road near to which is Bridewell, uſed as an hoſpital, manufactory, and houſe of correction; and on the eaſt ſide of Fleet-market is a priſon for debtors, called the Fleet. There is alſo another priſon for the like purpoſe in St. George's fields, called the King's Bench; near to which is New Bridewell, a large building adapted for the puniſhment of vagrants, &c. In June, 1780, the King's Bench and Fleet Priſons, great part of Newgate, the toll-houſe on Black-friars bridge, &c. were burnt by the rioters.

There are ſeveral excellent foundations in London and its environs. Among theſe are, St. Bartholomew's hoſpital, near Weſt Smithfield, the ſmall pox hoſpitals, in Cold-bath fields and near Battle-bridge Wells, the lying-in hoſpital in Brownlow-ſtreet, Long-acre, another in the City Road, and a third near Weſtminſter-bridge, St. Thomas's and Guy's hoſpitals in Southwark, St. George's and the Lock near Hyde Park Corner, the Middleſex hoſpital in Tottenham-court road, the London hoſpital at Mile-End, and the Magdalen, for the reformation of proſtitutes, in St. George's fields. To theſe muſt be added, Bedlam or Bethlem hoſpital for inſane people in Lower Moorfields (united with Bridewell) and St. Luke's for the ſame purpoſe in Upper Moorfields; alſo the magnificent ſtructure called the Foundling hoſpital, in Lamb's-conduit fields.

The city of Weſtminſter, contiguous to London, is by ſome reckoned part of it, though under a diſtinct government, has long been famous for the palaces of the Engliſh monarchs, the ſeat of the law tribunals, and the high court of parliament. The name is derived from its abbey, formerly called a minſter, and its ſituation weſt of St. Paul's cathedral. The abbey is a truly venerable pile of building, in the gothic taſte, where moſt of the Engliſh monarchs have been crowned and buried. It was founded before the year 850, but the preſent fabric was erected by Henry III. It is four hundred and eighty-nine feet in length, and ſixty-ſix in breadth at the weſt end; but the croſs aiſle is one hundred and eighty-nine feet broad, and the height of the middle roof ninety-two feet. At the eaſt end is the chapel of Henry VII. which is ſo ingeniouſly wrought, that Leland calls it the miracle of the world. The ſcreen, or fence, is entirely braſs, and within are the figures of Henry VII. and his queen of ſolid braſs, gilt. The abbey abounds with magnificent monuments, many of which are erected to the memory of noble and royal perſonages; of ſuch as have diſtinguiſhed themſelves for their military or naval atchievements, their knowledge in the various ſciences, or other excellent qualifications either in a public or private capacity.

Weſtminſter-hall, near the abbey, is one of the largeſt rooms in Europe: but its roof is not ſupported by pillars. Here the law-courts are kept, and adjoining are the two houſes of lords and commons.

Weſtminſter-bridge, univerſally acknowledged to be a maſter-piece of art, is ſituated at a ſmall diſtance from the hall.

There are ſeveral magnificent ſquares in Weſtminſter, as thoſe of Hanover, Berkeley, Groſvenor, Cavendiſh, and a new one called Portman-ſquare. To the eaſt of this laſt is Portland-place, a new ſtreet, the buildings in which are ſaid to be ſuperior in grandeur to any in Europe. Beſides the above ſquares, there are St. James's, Soho, Leiceſter, Golden, and Bloomſbury; to which may be added the magnificent ſquare called Lincoln's-inn-fields, and ſeveral others of leſs note, both in and out of the city.

There are in London ninety-ſeven pariſhes within the walls, ſixteen without, nineteen in the out pariſhes of Middleſex, and eleven in the city and liberties of Weſtminſter. The number of meeting-houſes, for proteſtant diſſenters, of all denominations, is upwards of one hundred; beſides which, there are three Jews ſynagogues. The public ſchools are, that of St. Paul, Merchant Taylors in Suffolk-lane, near Cannon-ſtreet, and the Charter-houſe in London; the royal ſchool, and St. Martin's ſchool, near the King's Mews, in Weſtminſter.

With reſpect to the trading part of the city of London, it is commonly divided into eighty-nine companies; but ſome can hardly be called ſo, becauſe they have neither charters, halls, nor liveries. Of theſe there are twelve principal, of one of which the lord mayor is uſually free: they are as follow; the mercers, grocers, drapers, fiſhmongers, goldſmiths, ſkinners, merchant-taylors, haberdaſhers, ſalters, ironmongers, vintners, and cloth-workers. The lord mayor, twenty-ſix aldermen, two hundred and thirty-ſix common councilmen, a recorder, two ſheriffs, a chamberlain, a common ſerjeant, and a town-clerk, are the city magiſtrates.

A high ſteward, a head bailiff, a high conſtable, and fourteen burgeſſes, are the principal magiſtrates and officers for the government of the city and liberty of Weſtminſter.

Vauxhall, Ranelagh, the Pantheon, two play-houſes, the opera-houſe, and the theatre royal in the hay-market, are the principal places of public amuſement.

Beſides the clergy, the moſt learned bodies of men are, the Royal Society, the College of Phyſicians, the Society for the Encouragement of Arts, &c. and the Society of Antiquaries. The fineſt repoſitory of rarities is that called Sir Hans Sloane's Muſeum, kept in Great Ruſſel-ſtreet, Bloomſbury, and purchaſed by the parliament for the inſpection and uſe of the public.

London, Weſtminſter, and Southwark, are ſeated on the banks of the Thames; and from Radcliff-croſs in the eaſt to Northumberland houſe in the weſt there is a gradual aſcent to the principal ſtreets. The common fuel is pit-coal, uſually called ſea-coal, of which there are conſumed upwards of ſix hundred thouſand chaldrons every year. The number of hackney coaches is one thouſand, but the ſedan chairs are not ſo numerous.

It is computed that London is ſix hundred and ninety meaſured miles north by weſt of Madrid, ſeven hundred and fifty north-weſt of Rome, ſix hundred and ſixty weſt-north-weſt of Vienna, two hundred and twenty-five north-weſt of Paris, one hundred and ninety weſt-ſouth-weſt of Amſterdam, four hundred ſouth-eaſt of Edinburgh, and three hundred and thirty-four ſouth-eaſt of Dublin.

The county of Eſſex, ſituated to the eaſt of Middleſex, is extremely fertile, and abounds in cattle, corn, paſtures, ſaffron, &c. Its chief town is Colcheſter, a large and populous place on the river Coln, which paſſes through it, and is made navigable for ſmall craft up to the Hithe, a long ſtreet, which may be called the Wapping of Colcheſter, where there is a convenient quay; and at Wivenhoe, within three miles of it, is a good cuſtom-houſe. This, and all the towns round it, are noted for making of baize, of which great quantities are exported. For the ſupport of this trade, there is a corporation, called governors of the Dutch bay-hall: this town is alſo noted for excellent oyſters. It is reckoned to be about three miles in circumference, has ten pariſh churches, and five meeting-houſes. It had antiently a wall and a ſtrong caſtle, built by Edward, ſon to king Alfred, about the year 912.

The town of Chelmsford ſtands in a beautiful plain, having the little river Chelmer running through it, over which there is a bridge. This is called the ſhire or county town, and is a large, populous place, almoſt in the centre of the county, and its ſituation renders it the moſt frequented.

The county of Hertford (or Hartfordſhire, which received its name from the great number of harts with which it formerly abounded) is ſituated weſtward of Eſſex, is particularly fertile in corn and wood. The ſhire town is Hertford, which, however, is inferior in opulence to either Ware or St. Alban's. The town was in ſome note in the time of the Romans, who called it Durocobriva, or Red Ford, from the red gravel at the Ford. The Eaſt Saxon kings formerly kept their courts here. Its churches are All Saints and St. Andrew's.

The county of Bedford lies north-weſt of Hertfordſhire, is fruitful in corn and paſture. The principal town of the ſame name is a clean, well built, populous place. Here are five churches, of which the chief, and indeed the principal ornament of the town, is St. Paul's, which had once a college of prebendaries. The priory, now belonging to the earl of Aſhburnham, was founded before the Norman conqueſt for ſecular canons. The buildings of this town are pretty good, and the ſtreets broad. The north and ſouth parts are joined by a ſtone bridge over the Ouſe.

The county of Buckingham, or Buckinghamſhire, is both pleaſant and fruitful, abounds particularly in phyſical plants. The county town, Buckingham, ſtands in a low ground, encompaſſed on all ſides, except the north, with the river Ouſe.

The caſtle, now in ruins, was built in the middle of it, and divides it into two parts. In the north part ſtands the town-hall, a very handſome, convenient ſtructure. It is a populous town, and has three ſtone bridges over the Ouſe. Its church, which is in the weſt part of the town, is very large, and, when the ſpire was ſtanding, might be reckoned the beſt in the county. In 1698 it was in part blown down, and never ſince re-built. Earl Temple has lately made a new road from this town to his celebrated ſeat at Stowe: it runs in a ſtrait line about two miles up to the Corinthian arch, which, however, ſometimes diſappears, owing to the riſing and falling of the ground. The lace manufacture is the principal buſineſs here, as well as in other parts of the county.

The county of Oxford, which is pleaſant, healthful, and fertile, is ſituated to the weſt of Buckinghamſhire. The city, which bears the ſame name, ſtands on the conflux of the Charwell and Iſis: the name ſeems to be derived from a Saxon word, which ſignifies a ford for the paſſage of oxen. It enjoys a ſweet air, in a plentiful country, on a fine plain, and has every way a delightful proſpect. The private buildings are neat, the public ones ſumptuous, and the river navigable for barges: but that which gives it a conſequence above all other places in this kingdom, is the oldeſt and moſt noble univerſity in Europe, having been a ſeminary for learning upwards of eight hundred years. It is governed by a chancellor, vice-chancellor, and other officers, and contains twenty colleges, five halls, a ſtately pile called the ſchools, wherein exerciſes for the ſeveral degrees are performed; the theatre, the moſt magnificent building of the kind in the world; the Clarendon printing-houſe, which likewiſe ſurpaſſes every thing of a ſimilar nature; the muſeum, containing a chemical laboratory, a repoſitory of natural and artificial curioſities and antiquities, a library, phyſic-garden, &c.

The county of Glouceſter, or Glouceſterſhire, lies to the weſtward of Oxfordſhire, is tolerably pleaſant, but indifferently fertile. The city of Glouceſter is well built, clean, and healthy, ſecured by the river on the one ſide, a branch of which brings up veſſels of a conſiderable burden to its walls. It has a beautiful cathedral, five churches, and is well provided with hoſpitals. There is an elegant ſtone bridge over the river, with a quay or wharf, and a cuſtom-houſe; abundance of croſſes and ſtatues of the kings of England are diſperſed in different parts of the city, and large remains of monarchies. Under the bridge is a curious machine, which raiſes water to ſupply the town, which they alſo procure from Robin Hood's Well, a mile or two out of the town. The cathedral is an antient but magnificent fabric, and has a tower, which is one of the neateſt and moſt curious pieces of architecture in England; and a whiſpering place, as in the cupola of St. Paul's. It has beautiful cloiſters, and twelve chapels in it, with the arms and monuments of great perſons. Its town-hall for the aſſizes is called the Booth-hall.

The county of Monmouth, which was formerly part of Wales, is the moſt weſtern Engliſh county towards ſouth Wales. The town of Monmouth, twelve miles from Hereford, and one hundred and twenty-five from London, has its name from the mouth of the river Minway, on which it is ſituated, ſtanding on a pleaſant ſpot between that river and the Wye, over each of which it has a bridge. The place carries on a conſiderable traffic with Briſtol by means of the Wye. It has a ſtately church, the eaſt end of which is curiouſly built. The town is in a manner ſurrounded by water, there being another river, the Trothy, over which it has alſo a bridge.

The county of Hereford is one of the moſt fertile in the kingdom, and particularly celebrated for its cyder. The only city in this county, called after its name, has a good ſtone bridge of eight arches over the Wye, and is encompaſſed with rivers on all ſides but the weſt. Its name ſignifies the ford of an army, it having been for ſeveral hundred years the head quarters of the Saxons before the conqueſt, and of the Engliſh afterwards; who were ſtationed here, to keep the Welſh in awe. Before the civil wars, it had ſix, but now only four churches. The cathedral is a magnificent ſtructure, and contains monuments of its antient prelates. The biſhop's caſtle, the cloſe with the dignitaries houſes, and the college of the vicars and choriſters, are pleaſantly ſituated. It is a large, but not very populous city.

The county of Worceſter, north-eaſt of Herefordſhire, is well watered, and very fruitful. The capital city, Worceſter, is ſituated near the Severn, over which it has a fine ſtone bridge. The chief manufactures of the place are broad cloth, gloves, and porcelain, which is a compoſition of a middle nature between fine earth and glaſs. The public buildings make a grand appearance, eſpecially the guildhall and the workhouſe. It had formerly a caſtle and walls, with three gates, and five watch towers, all long ſince deſtroyed. The cathedral (the model of that at Bruſſels,) is a large edifice, but not very elegant, except the choir of the chapel, on the ſouth ſide, which is of curious workmanſhip. A handſome library belongs to the cathedral, ſupported by one ſingle pillar in the middle. Here are the monuments of king John, prince Arthur, brother to Henry VIII. the counteſs of Saliſbury, and other illuſtrious perſons. Beſides the cathedral, there are eleven pariſh churches. The ſtreets are broad and well paved; the foregate ſtreet is regular and beautiful; the hoſpitals deſerve notice, eſpecially that noble one erected by Robert Berkley, of Spetchy, who laid out two thouſand pounds in the building, and four thouſand pounds in endowing it for twelve poor men: there are, beſides this, ſix or ſeven others. Here is a good water houſe and quay. The Severn, though generally rapid elſewhere, glides by Worceſter very gently. The remarkable battle in 1641, when Charles I. was defeated by Cromwell, was fought near the ſouth gate of the city, where bones of the ſlain are frequently dug up.

The county of Warwick to the eaſt of Worceſterſhire, is particularly famous for its iron works, and very fertile.

The city of Coventry is united with Litchfield, in Staffordſhire, as a biſhoprick. It is large and populous, but the buildings are old; and ſome of them which are built with timber, project out ſo much, that in the narrow ſtreets the tops of the oppoſite houſes almoſt touch. The chief churches are St. Michael's and Trinity. The proteſtant diſſenters are a conſiderable body here. The town-houſe is worth ſeeing, the windows being of painted glaſs, repreſenting ſome of the old kings, &c. who have been benefactors to the city. Its chief manufactures are tammies, and the weaving of ribbands.

The county town is Warwick, ſituated on the banks of the Avon, on a ſpot remarkably rocky. It is a very antient place, and may be approached four ways, anſwering to the points of the compaſs, and cut through rocks. Theſe lead to four ſtreets which meet in the centre of the town. The walls and cellars are made in the rock. It is ſupplied with water by pipes from ſprings half a mile off, and has a noble ſtone bridge of twelve arches over the Avon. Here is a caſtle, the principal ornament of the place, ſtrong both by art and nature; the rock on which it ſtands is forty feet from the river; but on the north ſide it is even with the town. From its terrace, which is above fifty feet perpendicular from the Avon, there is a proſpect of the river, and a beautiful country beyond it. The apartments are well contrived, and many of them adorned with original pictures by Van Dyke, not inferior to ſome of the royal palaces.

The town of Birmingham is very large and populous; the upper part of it ſtands dry on the ſide of a hill, but the lower is watery, and inhabited by the meaner ſort of people. They are employed here in the iron works, in which they are ſuch ingenious artificers, that their performances in the ſmall wares of iron and ſteel are admired both at home and abroad. It is much improved of late years, both in public and private buildings. Near this town is a ſeat belonging to Sir Liſter Holt, Bart. but converted into public gardens, with an organ and other muſic, in imitation of Vauxhall, which appellation it bears at preſent.

The county of Northampton, eaſt of Warwickſhire, has leſs waſte ground than any other county, and conſequently is exceedingly rich and fertile. It gives the title of earl, and ſends nine members to parliament. The town of the ſame name, ſtands upon the Nen, over which it has two bridges. The buildings were handſome, and the place large, (having ſeven pariſh churches within the walls, and two without) when it was reduced to aſhes by a dreadful fire in 1675. Liberal contributions from all parts of the kingdom reſtored it in a great meaſure to its original ſize; and for neatneſs, beauty, and ſituation, few towns equal it. It has four churches, of which the great one, viz. Allhallows, is a handſome edifice, with a handſome portico of twelve lofty Ionic columns, and a ſtatue of king Charles II. on the baluſtrade. It ſtands near the centre of the town, and at the meeting of four ſpacious ſtreets. The market place is one of the fineſt in Europe. The horſe market is thought to exceed any other of the kind in England. Its moſt conſiderable manufacture is ſhoes, of which great numbers are exported; the next to that ſtockings. The walls are two thouſand one hundred and twenty paces in compaſs. Among the public buildings, which all make a grand appearance, the George inn looks more like a palace, and as ſoon as it was finiſhed at the expence of two thouſand pounds, the owner John Dryden, generouſly gave it to the poor. A county hoſpital is built here after the manner of the infirmaries of London, Briſtol, Bath, &c. and the river Nen has lately been made navigable up to the town. The ſeſſions and aſſize houſe, is a very beautiful building of the Corinthian order.

The city of Peterborough, which is of great antiquity, is ſeated on the river Nen, over which there is a bridge, which leads into Huntingdonſhire, and is in the eaſtern angle of Northamptonſhire, ſeventy-ſix miles north by weſt of London. It has many good houſes, the ſtreets are handſome and well built, and the market place is pretty ſpacious. The cathedral is the fineſt gothic building in England.

The town of Wellingborough, pleaſantly ſituated on the banks

banks of the ſame river, ſixty-five miles from London, is large, well built, and populous, with a handſome church, and free ſchool: it has a pretty good trade.

The county of Huntingdon, to the eaſt of Northampton-ſhire, is a great corn and paſture county, and abounds in fiſh and wild fowl. The town of Huntingdon, near the Ouſe, over which there is a ſtone bridge, is the conſtant place for the aſſize, as well as the county gaol, and is a populous trading place, conſiſting chiefly of one large ſtreet well built, with a handſome market place, and a good grammar ſchool. There are ſeveral beautiful meadows on the banks of the river. The bridge or rather bridges, with the cauſeway, are ornaments as well as benefits to the town; near the weſt ſide is Hinchinbroke, which gives the title of viſcount to earl Sandwich's eldeſt ſon.

The town of St. Neots, in this county, is well built, and fifty-ſix miles north north weſt of London, it is ſeated on the Ouſe, has a handſome church, and a conſiderable market.

The town of St. Ives, fifty-ſeven miles north-weſt of London, is a large and handſome place. It has one large church, two diſſenting meetings, a popiſh chapel, with about five hundred dwelling-houſes. The ſtreets are pretty wide and tolerably well paved.

The principal rivers in this county are the Nen and Ouſe.

The county of Cambridge, including the iſle of Ely, is ſituated to the weſt of Suffolk, and in general is very fertile, and produces great quantities of corn, particularly barley. The principal river is the Ouſe, which runs from the eaſt to the north-weſt, and receives the Cam, near Thetford.

The town of Cambridge, the capital of the county, is ſo called from its ſituation on the banks of the Cam, which form ſeveral iſlands on the weſt ſide, and divides the town into two parts, which are joined by a large ſtone bridge. It is very antient, being well known in the time of the Romans, by the name of Camboritum. William the Conqueror built a caſtle here, of which the gate-houſe is ſtill ſtanding, and uſed for the county gaol. The town is divided into ten wards, has fourteen pariſh churches, contains upwards of twelve hundred houſes, for the moſt part irregularly built, and about ſix thouſand inhabitants. The univerſity, which is a corporation of itſelf, contains twelve colleges and four halls; it is governed by a chancellor, vice chancellor, a commiſſary, high ſteward, and two proctors; there is alſo a librarian, regiſter, &c.

The antient city of Ely, is ſituated in the fenny country, called the iſle of Ely; and being ſurrounded by the Ouſe and other ſtreams, is unhealthy, though it ſtands on a riſing ground. It was made an epiſcopal ſee by Henry I. The cathedral and the biſhop's palace are its chief ornaments; the former has a remarkable dome and lantern, ſuppoſed to be the only work of its kind in Europe, and was a monaſtery in the Saxons' time. Here are about ſix hundred good houſes, and one good ſtreet well paved. The aſſizes are alternately held here and at Wiſbech.

The town of Newmarket, which is handſome and well built, conſiſts of one long ſtreet, the north ſide of which is in Suffolk, is famous for horſe-races, and prodigiouſly frequented by perſons of all ranks. The town is not modern, as the name imports; for it was of note in the time of Edward III. but being burnt down in 1683, was afterwards rebuilt. Beſides the pariſh-church of St. Mary, there is alſo a ſmall church, All-ſaints, which is, properly ſpeaking, only a chapel of eaſe to Wood-Ditton, in Cambridgeſhire. It is a healthy place, and on a ſpacious heath, which is the fineſt courſe in England. Here are ſeveral very wide, ſteep, and long ditches, which were cut by the Eaſt Angles, to keep out the Mercians; one of which runs many miles over the heath, and being a ſtupendous work, much ſuperior to the reſt, has obtained the name of the Devil's Ditch.

The county of Suffolk, ſituated on the ſea coaſt, weſt of the German ocean, has but an indifferent ſoil, that near the ſhore being ſandy and full of heaths, yet abounds in rye, peas, and hemp, with numerous flocks of ſheep. The principal rivers are the Waveney, the Deben, the Orwell, by ſome called the Gipping, and the Stour. The chief town is

Ipſwich, ſixty-eight miles to the north-eaſt of London. It was antiently in a flouriſhing ſtate, as appears from the great number of ſhips that belonged to it, when its harbour was more commodious, and twenty-one churches, of which now only twelve remain. The tide riſes here twelve, ſometimes fourteen feet. The town is populous, about a mile long, and ſomething more in breadth, forming a ſort of half-moon on the bank of the river, over which it has a good bridge of ſtone. It is a corporation; and its chief manufactures are linen and woollen. Here is a convenient quay and cuſtom-houſe, and no place in Britain is thought to be ſo well qualified for the Greenland fiſhery, ſince the ſame wind which carries a ſhip out of the harbour is quite fair to the Greenland ſeas. The town, which contains about four thouſand houſes, contains twelve pariſh-churches, a town-hall, a county-hall, two hoſpitals, a free-ſchool, &c. is governed by a bailiff, twelve aldermen, and twenty-four common council-men.

The county of Norfolk, which is alſo a maritime place, to the north of Suffolk, is exceedingly fruitful, and deemed an epitome of the whole kingdom. The principal rivers are the Ouſe, Waveney and Yare.

The city of Norwich, one hundred miles north-eaſt by north of London, is large, and ſituated near the conflux of the rivers Venſder and Yare. It ſtands on the ſide of a hill, and is near two miles in length, and one in breadth. Though the place is irregular, yet all the buildings are neat and handſome. It has twelve gates, and ſix bridges over the Yare; thirty-ſix churches, beſides the cathedral, and chapels and meeting-houſes of all denominations. The roof of the cathedral, a large, venerable, and handſome ſtructure, is adorned with the hiſtory of the bible. The choir is large and ſpacious, and the ſteeple higher than that at Grantham, but lower than that at Saliſbury. Here are two churches for the Dutch and Flemings, who enjoy ſingular privileges. It is governed by a mayor, recorder, twelve aldermen, two ſheriffs, and twenty-one common council men.

The ſea-port town of Yarmouth, one hundred miles north-eaſt of London, and ſeated on the river Yare, is well built, and very populous, at the mouth of the Ouſe.

Lynn Regis, or King's Lynn, one hundred and two miles north-eaſt of London, is a handſome, large, and well built town, at the mouth of the Ouſe.

The county of Lincoln, a large and plentiful maritime place, is ſituated to the weſt of the German ocean, and divided into three parts, viz. Holland, Keſteven, and Lindſey. This laſt diviſion, which is the largeſt, contains,

The city of Lincoln, one hundred and thirty-five miles from London, built on the ſide of a hill, at the bottom of which runs the river Witham, in three ſmall channels, over which are ſeveral bridges. The cathedral was eſteemed the glory of Lincoln; for its magnificence and elevation is ſuch, that the monks concluded it would mortify the devil to look at it; and hence an envious look, by a proverbial expreſſion, is compared to the devil looking over Lincoln. In the centre of the old caſtle, which was built by the Romans, and repaired by the Saxons, is a modern ſtructure where the aſſizes are held. The city is a county of itſelf, and has extenſive power and privileges. On the Down of Lincoln is ſometimes ſeen, that rare bird called the buſtard; the circumjacent country is very rich and agreeable; the noble tract of Lincoln heath extending like Saliſbury plain, above fifty miles. The cathedral was ſucceſſively brought to perfection by ſeveral of its biſhops. Here is the fineſt and largeſt bell in England, called Tom of Lincoln, near five ton weight, containing four hundred and twenty-four gallons, ale meaſure, and is near twenty-three feet in circumference. This city is governed by a mayor, twelve aldermen, two ſheriffs, &c. whoſe juriſdiction extends twenty miles round it.

The town of Boſton, on the river Witham, which is navigable to Lincoln, and one hundred and twenty miles north of London. It was formerly made a ſtaple for wool, and the merchants of Hans towns fixed their guild here; it is a pleaſant, well built town, and has a good foreign and inland trade. Its church is reckoned the largeſt pariſh church without croſs aiſles in all the world: it is three hundred feet long within the walls, one hundred feet wide, handſomely ceiled with Iriſh oak, ſupported by tall and ſlender pillars; it has three hundred and ſixty-five ſteps, fifty-two windows, and twelve pillars, anſwerable to the days, weeks, and months of the year. The tower or ſteeple, is famous for its height and workmanſhip, being two hundred and eighty-two feet high. It has a beautiful octagon lantern on the top, which is ſeen near forty miles every way, but eſpecially on the ſea as far as the entrance of the dangerous channels called Lynn-deeps and Boſton-deeps, ſo that it is the guide to mariners, as well as the wonder of travellers, and is a magnificent ſpecimen of a fine Gothic taſte. The town has a commodious haven, and is plentifully ſupplied with freſh water by pipes from a pond, incloſed in the great common called the Weſt Fen. It is governed by a mayor, recorder, twelve aldermen, eighteen common council-men, &c.

In the diviſion of Keſteven is the town of Stamford, on the Welland, which is navigable for barges. It is finely ſituated on the declivity of a hill, and has a ſtone bridge of five arches. Here is a handſome town hall, and ſix pariſh-churches, with ſeveral good ſtreets and fine ſtructures. The trade is very conſiderable in malt, coals, and free-ſtone. The inhabitants are numerous and rich.

The borough town of Grantham, one hundred and ten miles from London, ſituate on the river Witham, has abundance of good inns of great reſort. It is well built: here is a fine large church, with a handſome ſpire of ſtone two hundred and eighty feet high; which, by a deception of the ſight, ſeems to ſtand awry. A good free-ſchool was built and endowed here by Dr. Richard Fox, biſhop of Wincheſter, and a native of this town; and here the celebrated Sir Iſaac Newton received his

first education. It is governed by an alderman, two juſtices of the peace, a recorder, coroner, &c.

The county of Rutland, to the ſouth-weſt of Lincolnſhire, is the ſmalleſt county in England, but contains more parks than any other; and it is as fertile as pleaſant. The county town is Oakham, where the aſſize is held: it is ſituated in the little but rich vale of Catmos, ninety-four miles from London; is indifferently well built, but famous for its market, fairs, caſtle, hoſpitals, and free-ſchools. This town is remarkable for an antient cuſtom, ſtill obſerved, that every peer of the realm, the firſt time he comes through this town, ſhall give a horſe-ſhoe to nail upon the caſtle-gate; and if he refuſes, the bailiff of the manor has power to ſtop his coach, and take the ſhoe. This is now called the order of the horſe-ſhoe; and it is common for the donor to have a large one made with his name ſtamped on it, and often gilt. One over the judges ſeat, in the aſſize hall, is of curious workmanſhip. Here is a church dedicated to All Saints, which is a handſome ſtructure with a lofty ſpire; alſo a free-ſchool, and an hoſpital.

The village of Uppingham is a pretty compact well built place; has a very good free-ſchool, and an hoſpital: it is ſeated on an eminence, eighty-ſeven miles from London.

The county of Leiceſter, ſituated on the weſt of Rutland-ſhire, is a plentiful and extenſive place. Its chief rivers are the Avon, Soar, Anker, and Welland. It gives the title of earl, and ſends four members to Parliament.

The principal and county town, Leiceſter, and the only one ſending members to Parliament, is the largeſt, beſt built, and moſt populous in the ſhire, having ſix pariſhes and five churches. The freemen are exempt from toll in all markets in England. St. Margaret's church is a noble and elegant ſtructure, and famous for a ring of ſix of the moſt tuneable bells in the kingdom. In St. Martin's church is an epitaph on one Heyric, who died in 1589, aged ſeventy-ſix, lived in one houſe with his wife fifty-two years, though ſometimes twenty in a family; and the widow, who lived to be ninety-ſeven, ſaw, before her death, in December 1611, of her children, grand children, and great grand children, to the number of one hundred and forty-three. There is an exquiſite piece of workmanſhip in the high ſtreet, in form of our Saviour's croſs. The hoſpital built by Henry Plantagenet, duke of Lancaſter, is ſupported by ſome revenues of the duchy of Lancaſter, ſo as to be capable of maintaining one hundred aged perſons decently: it was rebuilt in 1776, at his Majeſty's expence. Here is another near the abbey, for ſix widows. The inhabitants have greatly improved in the manufacture of ſtockings wove in frames, and are thought to return in that article ſixty thouſand pounds per annum.

The county of Derby, ſituated to the weſt of Nottingham-ſhire, is barren on its ſurface, owing to the great number of hills, mountains, &c. but rich within the bowels of thoſe eminences. The peak is in the north-weſt part. It gives the title of earl, and ſends four members to Parliament.

The ſeven wonders of the Peak are, 1. Poole's-hole; 2. Mam-Tor, or the Mother Rock; 3. The Devil's arſe; 4. Tides-Well, or Weeden-Well; 5. Buxton-Wells; 6. Elden-hole. 7. Chatſworth-houſe and gardens. One of the moſt extraordinary of which is Poole's hole, a ſtupendous cavern, at the foot of a great mountain. The entrance is ſo low and narrow, that you muſt ſtoop to get in; but it ſoon opens into a wide and lofty concavity, that has ſome reſemblance to a Gothic cathedral, which reaches above a quarter of a mile in length. Water drops every where from the roof and ſides, and being of a petrifying quality, it encruſts all the ſtones with long cryſtals, in various forms, which, by the help of a ſtrong imagination, are ſhewn you as lions, lanthorns, organs, a flitch of bacon, &c. At length you come to the queen of Scots' pillar, which is the boundary of moſt people's curioſity, and was ſo named by that unhappy princeſs, when ſhe viſited this place. It is compoſed of a clear bright ſtone, like alabaſter, or rather like that kind of ſpar which is found about lead. A ſtream of water runs along the middle of this cavern among the fallen rocks, with an hideous noiſe. On the left hand is a ſort of chamber, where they ſay Poole, a famous robber, lived, and whoſe kitchen and bed-chamber they ſhew you, after you have crept ten yards on your hands and knees. What appears moſt extraordinary is, the ſurpriſing height of the arch, which Dr. Leigh compares to fret-work, organ, and choir-work, beſpangled with ſtars, which dazzle the eyes, and look extremely beautiful from the reflection of the lights.

The town of Derby, which is the capital, is ſo called from having been a park or ſhelter for deer: it ſtands on the weſt ſide of the river Derwent, over which it has a neat ſtone-bridge of five arches. The ſouth ſide is watered by a little rivulet called Mortin-brook, which has nine bridges over it. The moſt remarkable church in Derby is All-ſaints, or All-hallows, having a beautiful Gothic ſquare tower ſixty yards high, with four pinnacles. This town depends chiefly on a retail trade; alſo in buying and ſelling corn, in making malt, and brewing ale, of both which great quantities are ſent to London. The town is governed by a mayor, nine aldermen, and other officers. The rebels came as far as this town in 1745, and then returned back into Scotland.

The county of York, which is the largeſt in the kingdom, contains a variety of ſoils, gives the title of duke, ſends thirty members to parliament, and is divided into the eaſt, weſt, and north ridings; on account of their ſituation.

The city of York, is the ſecond in the kingdom: its chief magiſtrate has the title of lord-mayor. The cathedral is built in the gothic ſtile, and by ſome thought to be the fineſt in England, if not to excel any in Italy. It is dedicated to St. Peter. The windows are adorned with glaſs, exquiſitely painted with ſcripture hiſtory, and other moſt curious figures, in one hundred and ſeventeen partitions. In the ſouth tower there is a fine peal of twelve bells. The nave of this church, which is bigger than any except St. Peter's at Rome, is four feet and a half wider, and eleven feet higher than that of St. Paul's. The aſcent from it through the choir to the altar is by ſix ſteps. The entrance of the middle nave of the church, at the weſt door, is under the largeſt gothic arch in Europe, which binds and ſupports the two towers. At the ſouth end of the croſs aile is a circular window, called the marigold window, from its glaſs being ſtained of that colour; and a large one at the north end, conſiſting of five lights reaching almoſt from bottom to top, and erected, as they ſay, at the charge of five maiden ſiſters. The painting repreſents embroidery.

The city is in a pleaſant ſituation, and divided into four wards, containing twenty-eight pariſhes, and walled, but not fortified with artillery. The river Ouſe from the north paſſes through it, and divides it into two parts, joined together by a ſtone-bridge of five arches, of which the middleſt is reckoned, for height, breadth, and architecture, to be equal to the Rialto at Venice, though not to that at Blenheim. The great council-chamber, the exchequer, the ſheriff's court, and the two city priſons, are kept upon this bridge. The river brings large veſſels to the quay, though at ſixty miles diſtance from the ocean. It has four large well built gates, and five poſterns. The other moſt remarkable ſtructures are the guildhall, which is longer, and in ſome reſpects ſuperior to that of London. Near it is the ſtatue of king Edgar, who rebuilt the city and St. Antony's hall, in which there is one room big enough to hold moſt of the inferior tradeſmen of the city. The market-houſe in the ſtreet called the Pavement, is a curious piece of architecture, ſupported by twelve pillars of the Tuſcan order; and there is another ſtill larger in a ſquare, called Thurſday market. In this city are ſeventeen churches; of which All-hallows has the fineſt gothic ſteeple perhaps in England. The city belongs to neither of the ridings, but enjoys its own liberty, and has a juriſdiction over thirty-ſix villages and hamlets in the neighbourhood.

The town of Hull, or Kingſton upon Hull, is large, cloſe built, and exceeding populous. It has two churches, one called Trinity or High-Church; the other St. Mary's, or Low Church; the former is a ſpacious, beautiful building, the pillars of which are remarkably ſmall, and had, before the Reformation, twelve chantries, in one of which is now a neat library. Here are ſeveral meeting-houſes, an exchange built in 1621, a cuſtom-houſe, and an engine for making ſalt-water freſh. Here is a free-ſchool, with a hall over it belonging to the merchants, who have founded an hoſpital called Trinity-houſe, in which are maintained many diſtreſſed ſeamen and their widows. The rigid diſcipline beggars meet with here, makes Hull tremendous to them: all foreign poor are whipped out, and the poor of the town are ſet to work. They have a cant litany among them, viz. from Hell, Hull, and Hallifax, good Lord deliver us.

The town of Scarborough is large, built in the form of a creſcent, on the ſide of a ſteep hill. It has a commodious quay, but little trade. The pier is maintained by a duty upon coals; and the mariners have erected an hoſpital for widows and poor ſeamen, which is maintained by a rate on veſſels, and deductions out of ſeamen's wages. From the middle of November herrings are taken here in great numbers. Beſides herrings, they catch ling, cod-fiſh, haddock, turbot, and other fiſh in great plenty, and ſometimes whiting and mackerel. The ſpa-well is at the foot of an exceeding high cliff, riſing perpendicularly out of the earth like a boiling-pot, near the level of high-water-mark in ſpring-tides, with which it is often overflowed. It is never dry, and in an hour yields twenty-four gallons of water, which is purgative and diuretic. Here is good accommodation, beſides aſſemblies and public balls. The reſort of company is prodigious to this place of gaiety, where, with numbers, health is the pretence, but the end diſſipation. It ſends two members to parliament, and is two hundred and four miles north of London.

This county alſo contains the market towns of Leeds and Halifax, both in the Weſt Riding.

The county or biſhoprick of Durham, ſituated to the north of Yorkſhire, is very rich in coals, though the ſoil is not very fertile. The principal rivers are the Tees, the Wear, the Tame, and the Tyne.

The capital town, of the ſame name, is ſituated on an hill, has a cathedral, which is an old, but magnificent pile. Beſides the cathedral, here are ſix pariſh churches. Southward of the cathedral, is the college. Above the college-gate is the exchequer; and at the weſt, the gueſt-hall, for the entertainment of ſtrangers. On the north-ſide of the college ſchool is a houſe for the maſter, and between the church-yard and caſtle an open area, called the palace-green; to the weſt of which is the ſhire-hall, where the aſſizes and ſeſſions are held for the county; and near it a library. On the eaſt is an hoſpital built and endowed by biſhop Coſin; on the north ſide is a caſtle, now the biſhop's palace, built by William the Conqueror, the outward gate-houſe of which is at preſent the county gaol. The other principal public buildings are, the toll-booth near St. Nicholas's church, the croſs and conduit in the market-place, and the two bridges over the Wear.

In this county are alſo the town of Darlington, and the ſea-port town of Sunderland.

The county of Cumberland, ſouth-weſt of Northumberland, has a piercing, yet wholſome air, but is not very fertile: the land is for the moſt part hilly.

The capital city, Carliſle, is ſituated at the conflux of the rivers Eden, Peterill, and Cauda; it is a ſea port, but without ſhips, merchants, or trade; has but two pariſh churches, St. Cuthbert's and St. Mary's; the latter ſtands differently from any pariſh church in England, viz. in the body of the cathedral, which is in the middle of the city, incloſed by a wall; the eaſt part of the cathedral, which is neweſt, is a fine piece of workmanſhip; the lower or weſt part ſuffered much in the civil wars, when this city was beſieged. The choir of the cathedral is an exact piece of architecture, has a ſtately eaſt window forty feet high, and thirty feet broad, adorned with pillars of curious workmanſhip. The roof is elegantly vaulted with wood, and embelliſhed with the arms of France and England; the Percy's, Lucy's, Warren's, &c. This town is the key of England on the weſt ſea, as Berwick upon Tweed is on the eaſt ſea: it has a bridge over the Eden, which is but a little way from Scotland, the ſouth part of which indents into England, at leaſt fifty miles further than it does at Berwick.

The town of Whitehaven, is ſo called from the white cliffs that are near it, and ſhelter the harbour from tempeſts: is is populous, and has been greatly improved by Sir James Lowther, who was at a vaſt expence to make the harbour more commodious, and to beautify the town, the trade of which chiefly conſiſts in ſalt and coal. Some of the coal-mines here are ſunk to the depth of one hundred and thirty fathoms, and are extended under the ſea to places where there is above them ſufficient depth of water for ſhips of large burden. They carry on a good trade to Ireland, Scotland, Cheſter, &c.

The town of Penrith, or Perith, two hundred and eighty-two miles from London, has a very good market for all ſorts of commodities and cattle: the church is a large and handſome ſtructure.

The county of Weſtmoreland is ſituated to the ſouth-eaſt of Cumberland, has a healthy, but ſharp air, is very mountainous, and has many barren parts in it. The principal rivers are the Eden, the Lone, and the Ken. It gives the title of earl, and ſends four members to parliament.

The chief town is Appleby, which though neither rich nor beautiful, is, by its ſituation in the midſt of pleaſant fields, and on the banks of the river Eden, which almoſt encompaſſes it, rendered very agreeable. Here is an hoſpital for a governeſs, and twelve other widows, called the mother and twelve ſiſters. This place has of late years gone greatly to decay, conſiſting at preſent of only one broad ſtreet of mean houſes: however, it ſtill keeps the aſſizes and ſeſſions, and at the upper part is the caſtle. The church ſtands at the lower end of the town; and they have likewiſe erected a town-houſe.

The town of Kendal, two hundred and fifty-ſix miles north-weſt of London, is ſeated in a valley, among hills, on the weſt ſide of the river Can or Ken, over which there are two ſtone bridges, and one of wood, which leads to the caſtle, now in ruins. The church is a ſpacious ſtructure, ſupported by five rows of pillars, and twelve chapels of eaſe belong to it. The free-ſchool ſtands on the ſide of the church-yard, and is well endowed, having exhibitions to Queen's college in Oxford. It is noted for its manufactures of cottons, druggets, hats, and ſtockings.

Here is alſo the town of Lonſdale, or Kirby-Lonſdale, ſeated on the Lone.

The maritime county of Lancaſter is ſituated to the eaſtward of the Iriſh ſea; is famous for its manufactures. It gives the title of duke, and ſends twelve member to parliament.

The ſhire town, Lancaſter, has its name from the river Lone, on the ſide of which it is ſituated, near its mouth, and gives name to the whole county: it is the antient Longovicum mentioned in the itinerary. Here are frequently found the coins of Roman emperors, eſpecially where the Benedictine friars had a cloiſter, which they ſay was the area of an antient city burnt to the ground in 1322 by the Scots. This town has lately much improved in commerce, being a populous, thriving corporation, with a tolerable harbour and cuſtom-houſe. The county-aſſizes are held in the caſtle, which is one of the faireſt monuments of antiquity in England.

The town of Liverpool, though not very antient, is neat and populous; and the moſt flouriſhing ſea-port in theſe parts, nearly equal to the city of Briſtol. The inhabitants carry on an incredible trade, with very large ſtocks, to all the northern and ſouthern parts of the world. They import almoſt all kinds of foreign goods, have a large inland trade; and, with Briſtol, ſhare in that to Ireland and Wales. It is alſo the moſt convenient and moſt frequented paſſage to Ireland, ſtanding at the mouth of the Merſey river, or Liverpool water. Here are four churches, many ſpacious clean ſtreets, an elegant town-houſe, an admirable wet dock with iron flood-gates, a ſtately cuſtom-houſe, a neat play-houſe, &c. The harbour is defended, on the ſouth ſide, by a caſtle, and, on the weſt, by a tower, on the Merſey.

Manchester is a very large and populous town, ſeated between the Ilk and Irwell, is one hundred and eighty-one miles north north-weſt of London. This is a place of great antiquity; and carries on a very extenſive trade in cottons, tickings, velvets, &c. It has a collegiate church, and two modern ones. This town has alſo a ſpacious market-place, exchange, college, hoſpital, free-ſchool, and library. The choir of the collegiate church is remarkable for its curious carved work, and a famous clock that ſhews the age of the moon. The chief magiſtrate is a conſtable, or headborough. The town gives the title of duke to the noble and antient family of Montague.

Other towns of inferior note in this county are, Warrington, on the river Merſey; Preſton, on the north ſide of the Ribble; and Wigan, on the river Douglas.

To the ſouth of Lancaſhire lies Cheſhire, which has a ſerene air and good ſoil, and is famous for its cheeſe; the land being fitter for paſture than corn. The principal rivers are the Merſey, the Wever, and the Dee.

The city of Cheſter, called alſo Weſt Cheſter, is large and well built, full of wealthy inhabitants, who, by its proximity to the Severn and Ireland, drive a conſiderable trade; it has ſeveral fairs in the year for cattle, Iriſh linen, cloths, hardware, hops, drapery, and Manchester goods. It is a place of great antiquity, and of a quadrangular form; the walls are near two miles in circumference; and there are four gates, towards the four cardinal points. It has a ſtrong caſtle, in which is the ſhire-hall, where all the cauſes belonging to the county palatine are determined. By the bridge is a handſome water-houſe; and the principal ſtreets are adorned with piazzas, under which are the tradeſmen's ſhops. It contains ten pariſh-churches beſides the cathedral; is governed by a mayor, two ſheriffs, and twenty-four aldermen; ſends two members to parliament, and is a biſhop's ſee.

In this county are likewiſe the towns of Namptwich, Middlewich, Northwich, and Macclesfield.

The county of Stafford, lying on the ſouth-eaſt of Cheſhire, is a rich, though not fertile place.

The ſhire-town, Stafford, where the aſſizes, and alſo the quarter ſeſſions are held, is one hundred and thirty-two miles from London. It ſtands low on the river Sow, over which it has a good bridge. Here are two handſome churches, a free-ſchool, and a ſpacious market-place, in which ſtands the ſhire-hall: it is well built and paved: and much increaſed of late, both in wealth and inhabitants, by its manufactories of cloth. The old cuſtom of Borough Engliſh is ſtill kept up here. The buildings are for the moſt part of ſtone and ſlate, and ſome of them in the modern taſte.

The town of Litchfield is large and neat, and, when joined to Coventry, is a biſhopric. The cathedral, which ſtands in the cloſe, was begun in 1148; and is now a noble ſtructure, being walled like a caſtle, and, ſtanding on an eminence, is ſeen at the diſtance of ten miles.

The town of Wolverhampton ſtands upon a high ground, and is a populous well built town, and the ſtreets are well paved. It has an antient collegiate church, annexed to the deanery of Windſor; and a very handſome chapel, with a preſbyterian and a quakers meeting-houſe. It is chiefly noted for its iron manufactory, conſiſting of locks, hinges, buckles, cork-ſcrews, &c. The town is chiefly ſupplied with water from four weak ſprings called Pudding-well, Horſe-well, Waſhing-well, and

Meal-well. The healthy ſtate of this place is aſcribed to its high and dry ſituation.

Shropſhire lies ſouth of Cheſhire, and is tolerably fertile. It contains the following places; viz.

The town of Shrewſbury on the Severn; it has two fine bridges over that river, which ſurrounds it, except on the north ſide, in the form of a horſe-ſhoe, and renders it a peninſula. It has a free grammar-ſchool; and contains five pariſh churches, beſides a chapel, two of which are handſome ſtructures, adorned with large ſpire ſteeples; here are good ſtreets, and handſome houſes well inhabited: it is ſurrounded with a ſtrong wall, through which there are three gates, and on the eaſt and weſt two good ſtone bridges. This place is the common mart between England and Wales, to which all ſorts of Welch commodities are brought. It is a corporation with the title of an earldom, ſends two members to parliament, and is governed by a mayor, an alderman, a recorder, twenty-four common-councilmen, and a town-clerk. The town is nearly two miles long, and moſtly broad.

The following Table will exhibit at one view many curious and neceſſary particulars reſpecting the ſeveral counties in England, the frequent repetition of which might have proved diſguſting.

A TABLE, containing the Modern and Antient Names of the Counties or Shires in England; the Titles they give; their Length, Breadth, Circumference, Cities and Towns, Diſtances from London, Market Towns, the Number of Members they ſend to Parliament; and the Number of Pariſhes and Acres contained in each.

The other part of South Britain called Wales, or the principality of Wales, was in the year 870, divided by Roderic, king of Wales, into three parts, that his three ſons might equally ſucceed him. Theſe diviſions were called South Wales, North Wales, and Powis Land; but the latter diviſion was ſoon ſwallowed up by the two former. Wales formerly conſiſted of fourteen counties, including Monmouthſhire and Herefordſhire, but theſe having been ſince annexed to England, the principality now conſiſts of only twelve counties, each of which has the privilege of ſending to parliament a knight, and every ſhire town a burgeſs.

This principality is bounded on all ſides by the ſea and the Severn, except on the eaſt, where it joins to the counties of Cheſter, Salop, Hereford, and Monmouth, being one hundred and

and thirteen miles long, and ninety broad, where wideſt. The country, though for the moſt part mountainous, is not altogether unfruitful, as the vallies abound in corn, the ſeas and rivers with fiſh, and the hills, excluſive of the metals and minerals they contain, feed great numbers of black cattle, ſheep, deer, goats, and other animals.

There are twelve counties or ſhires in Wales; namely, I. Radnorſhire; II. Brecknockſhire; III. Glamorganſhire; IV. Carmarthenſhire; V. Pembrokeſhire; VI. Cardiganſhire; VII. Montgomeryſhire; VIII. Merionethſhire; IX. Carnarvonſhire; X. Denbighſhire; XI. Flintſhire; XII. Angleſea: this laſt we ſhall give an account of, when we come to deſcribe the iſlands belonging to Great Britain.

The county of Radnor, to the ſouth-weſt of Shropſhire, is tolerably fertile. The chief commodities are ſheep and horſes: the principal place is New Radnor, one hundred and fifty-ſeven miles from London, is a very antient borough, well built for theſe parts, but chiefly thatched houſes. It was called Radnor by the Engliſh, from Rhaiadr Gwy, or the cataract of the river Wye, near the town of Rhaiadr. It ſtands in a fruitful valley, at the bottom of a hill, where abundance of ſheep are fed. It is twenty miles in length, eighteen in breadth, has five pariſhes, and ſends two members to parliament.

The county of Brecknock, to the ſouth of Radnorſhire, has a ſharp but wholſome air, is very mountainous, and abounds with black cattle, veniſon, goats, wild fowls, &c.

The town of Brecknock, or Brecon, one hundred and fifty-nine miles from London, is the capital, and almoſt the centre of the county. It is a compact, well-built town, in which the aſſizes are held: it ſtands at the confluence of the rivers Hondby and Uſk, over which it has a good ſtone bridge; is well inhabited, and has ſome ſhare in the woollen manufacture. The ruins of its caſtle, built by Bernard de Newmarch, in the reign of William Rufus, remain; its markets are well ſupplied with cattle, corn, and other proviſions. Brecknock priory was founded in the reign of Henry I. by Bernard de Newmarch. It is now a pariſh church, and ſtill a moſt magnificent building, ſituated on an eminence, and built in the form of a croſs. In the centre of the croſs an embattled tower riſes about ninety feet, and lies open to the church above the roof. There is ſtill remaining, in the priory houſe, the refectory or dining-room.

The county of Glamorgan, ſituated north of the Briſtol channel, is tolerably fertile towards the ſouthern parts. It is forty-five miles long, and twenty-one broad, has eighteen pariſhes, and ſends two members to parliament.

The town of Cardiff, one hundred and ſixty-one miles from London, is the capital, where the aſſizes are alſo held. It has a bridge over the Taff, in which ſmall veſſels may come up, and lade or unlade there. This is a large, well-built town, conſiſting of two pariſhes, and reckoned the moſt beautiful in all South Wales; it has a good trade with Briſtol, and plentiful markets and fairs for corn, cattle, ſheep, horſes, ſwine, &c.

The antient town of Swanſea, two hundred and two miles from London, is large, clean, and well built; drives the greateſt trade of any in the county, eſpecially in coals: holds a correſpondence with Briſtol; and has a good harbour, where ſometimes one hundred ſhips at a time come in for coals and culm. The town ſtands on the river Twy, and its markets are well furniſhed with all neceſſaries. Here are the remains of an antient caſtle, built about the year 1113 by Henry Beaumont, earl of Warwick.

The county of Carmarthen, ſituated north-weſt of Glamorganſhire, has a milder air, and is more fruitful than moſt of the Welſh counties. It is forty-ſeven miles long, and twenty-ſeven broad, has eight pariſhes, and ſends two members to parliament.

The capital town, Carmarthen, two hundred and four miles from London, is ſituated on the river Twy, over which it has a ſtone bridge, and is a place venerable for its antiquity. It is a very polite, induſtrious, thriving, and populous town, of great reſort, and drives a very conſiderable trade. This place was antiently reckoned the capital of Wales.

The county of Pembroke is encompaſſed around by St. George's channel, except on the eaſt ſide, where it joins to Carmarthenſhire, and on the north-eaſt to Cardiganſhire. It is a fruitful country, being thirty-three miles in length, and twenty-eight in breadth, contains one hundred and forty-five pariſhes, and ſends three members to parliament.

The county town is Pembroke, two hundred and thirty-four miles from London, and ſtands at the innermoſt eaſtern creek of Milford-haven. It has two handſome bridges over the two points of it. Here are the remains of an antient caſtle on a rock, in which Henry VII. was born, and under it is a vault noted for a ſtrange echo, called the Wogan, and ſuppoſed to have been originally a ſtore room for the garriſon. It was built by Arnulph de Montgomery, in the reign of Henry I. It has two pariſhes, and a cuſtom-houſe: it is well frequented, not only by gentlemen, but likewiſe by ſeveral merchants and tradeſmen, ſome of whom have well-built houſes here.

The town of Haverford-weſt, two hundred and thirty-ſix miles from London, ſtands on the north ſide of a hill, but is a very neat, well built, ſtrong, populous, and trading town, having a fine ſtone bridge, plentiful markets, a commodious quay for ſhips of burden, and a cuſtom-houſe. There are three pariſh-churches in the town, beſides one, called Prengeſt, in the out parts.

The harbour called Milford-haven has ſixteen creeks, five bays, and thirteen roads, in which one thouſand ſail of ſhips may ride ſecurely. It is the beſt harbour in the three kingdoms, there being no manner of danger in ſailing in or out of it with the tide, and almoſt any wind, by night as well as by day; and a ſhip in diſtreſs may run aſhore on ſoft ooze, and there lie ſafe. The ſpring tide riſes in the harbour thirty-ſix feet, and the neap about twenty-ſix.

The county of Cardigan, ſituated north-eaſt of St. George's channel, is for the moſt part barren, but contains ſome valuable mines. It is forty miles long, and eighteen broad, contains ſixty-four pariſhes, and ſends two members to parliament.

The principal town, of the ſame name, two hundred and twenty-two miles from London, is pleaſantly ſituated at the mouth of the Twy, over which it has a good ſtone bridge leading into Pembrokeſhire. It is a large, antient, and populous borough, and carries on a conſiderable trade, eſpecially to Ireland, the tide flowing up to the town. The church is a handſome ſtructure, and the caſtle, though in a ruinous condition, is ſtill in being.

The county of Montgomery, one hundred and ſixty-one miles from London, is ſituated in a very healthy air, on the eaſy aſcent of a rocky hill, having beneath it a pleaſant valley, through which the Severn winds its courſe. The town is large, though the buildings, except a few belonging to wealthy families, are but indifferent.

Six miles from Montgomery ſtands the corporate town of Welſh-pool, which is large and well built, ſituated on a lake in a fruitful valley, where is a good manufactory of flannel. There is a caſtle, belonging to the earl of Powis, on the ſouth ſide.

To the eaſt of St. George's channel is Merionethſhire, which is a mountainous, barren, bleak, unhealthy country, and the inhabitants are more remarkable for idleneſs and incontinency than any other of the Welſh people. It is thirty-five miles in length, twenty-five in breadth, has forty-ſeven pariſhes, and ſends two members to parliament.

The town of Harlech, in this county, is ~~one~~ two hundred and thirty-nine miles from London, ſituated on a rock near the ſea, where there is a harbour for ſhips. It is a mean town, thinly inhabited, but has a garriſon for the ſecurity of the coaſt, and an old, decayed, and uſeleſs caſtle, originally a ſtrong fort of the antient Britons. In the year 1694 the country about Harlech was annoyed above eight months with a fiery exhalation, of a curd colour, which aroſe from the ſea, and was ſeen only in the night.

The town of Dolgelly, thirty-ſix miles from Welſh-pool, is ſituated in a woody valley by the Avon, at the foot of the great mountain Idris, which is computed to be near three miles high, and one of the loftieſt mountains in Britain. Here is a good market for Welſh cottons, and a tolerable inn for travellers.

The county of Carnarvon, ſituated ſouth-eaſt of the iſle of Angleſea, is very mountainous, but abounds in cattle, ſheep, goats, and other animals. It is forty miles long, and twenty broad, has ſixty-eight pariſhes, and ſends two members to parliament.

Carnarvon, the principal town, two hundred and fifty-one miles from London, is ſituated on the channel that ſeparates this ſhire from the iſle of Angleſea, and was built by the command of Edward I. out of the ruins of the city Sagontium, which ſtood a little below it. The town has a beautiful proſpect of the iſle of Angleſea, and is pretty ſtrong both by nature and art.

The county of Denbigh, to the ſouth-weſt of Flintſhire, is for the moſt part mountainous and barren, though there are a few fertile ſpots in it. Its length is thirty-one miles, and breadth ſeventeen, contains fifty-ſeven pariſhes, and returns two members to the Britiſh parliament.

The town of Denbigh, two hundred and ten miles from London, on the banks of the Iſtrio, is a handſome, large, and populous place; was at firſt built on a ſteep rock, but in proceſs of time has been removed to the bottom of it. It ſtands on a branch of the Clwyd, has a good trade, and is by ſome eſteemed the beſt town in North Wales. It has a good market for corn, cattle, and other proviſions; and two churches.

Weſt of Cheſhire, is the county of Flint, which contains ſome mines, but the ſoil is in many places barren.

The ſhire-town, Flint, one hundred and ninety-five miles from London, ſtands on an arm of the river Dee; it had formerly

merly a caſtle, the ruins of which are ſtill remaining: Henry II. began, and Edward II. finiſhed it.

The city of St. Aſaph, two hundred and twelve miles from London, is a biſhop's ſee, ſituated in the vale of Clwyd, at the conflux of the Elwy with the Clwyd; but the buildings are not remarkable for beauty, nor the church for elegance. The epiſcopal ſee was founded in the year 560, by Kentigern, biſhop of Glaſgow, in Scotland, who reſigned it to his diſciple Aſaph, from whence its name is derived.

SECT. II.

Of the Characters, Cuſtoms, Manners, Conſtitution, Government, Laws, Religion, &c. of the ENGLISH.

THE inhabitants of South Britain are in general of a good ſize, and well made; they have regular features, fair ſkins, and florid complexions. The women, in particular, are deemed the moſt beautiful in Europe. The faſhionable dreſs of the Engliſh is uſually copied from the French, but the former generally add decency and cleanlineſs to the decorations of the latter. A ſcorbutic humour being common to the country, decayed teeth is on that account a very common perſonal defect.

With reſpect to their manners, the Engliſh people vary in the different claſſes of which they are compoſed, according to the difference of education and intercourſe. Perſons of faſhion, after having ſtudied at the univerſity, commonly travel for improvement. They are magnificent in their dreſs, equipage, dwelling, and manner of living; generally polite, hoſpitable, good-natured, humane, charitable, and forgiving; but not very remarkable for their liberality to the profeſſors of the poliſhed arts, even to thoſe who have exhibited proofs of excellence and ingenuity. Reſpecting the unfavourable part of their character, there is obſerved in them a diſpoſition to gaming, riot, an exceſſive inſolence of pride, and a ſtrong propenſity to contemptuous ridicule, diffuſed through the whole nation, from the higheſt peer to the very dregs of the people. Perhaps this is the peculiar characteriſtic of the Engliſh: for it ſtrikes every foreigner at his firſt arrival in England, and appears remarkably conſpicuous in the writings of the Engliſh authors.

The Engliſh merchants are, beyond all others, eſteemed for their honourable dealings, as well as for their knowledge of trade, and their extenſive commerce. The people in general are maſters of the different profeſſions they exerciſe; their workmanſhip is neatly and elegantly finiſhed, far above any thing of the ſame ſort in other countries; and though they are not the moſt remarkable for their diſcoveries in the arts of handicraftſmen, they never fail to make improvements on the inventions of their neighbours. They have been always equally famed for ingenuity and courage. Their ſoldiers are fearleſs in the day of battle, and have obtained a great number of ſignal victories over the moſt powerful and warlike nations on the continent, and in point of activity, ſkill, and intrepidity, their ſailors are confeſſedly ſuperior to all the mariners upon earth.

We may divide the diverſions and paſtimes of the Engliſh into thoſe of the town and thoſe of the country, and again ſubdivide theſe into ſuch as are peculiar to the higher ranks of life, ſuch as are practiſed by the lower claſs of people, and ſuch as are common to both. The diverſions of the town are operas, ridottos, maſquerades, concerts of muſic, theatrical performances, and card aſſemblies for perſons of faſhion. The paſtimes of the country, peculiar to the ſame degree, are horſe-races, ſtag, fox, and hare-hunting. A ſpirit of gaming prevails with ſuch exceſs at a horſe-race, that one would imagine all the ſpectators were actually poſſeſſed. Hunting is the ſport of country gentlemen; and thoſe whom the world diſtinguiſh by the appellation of fox-hunters, ſeem to be infatuated with the diverſion. The common people delight in cock-fighting, cudgelling, wreſtling, duck-hunting, bowls, ſkittles, or nine-pins, archery, priſon-bars, cricket, ſhuffle-board, quoits, divers games of chance, and ſpectacles of various kinds, ſuch as tumbling, balancing, vaulting, feats of legerdemain, bear and bull-baiting, aſs-races, collections of wild beaſts, muſic, dancing, drolls, puppet-ſhows, ringing bells, &c.

Perſons of faſhion have large and magnificent houſes, many of which are built of ſtone, and well provided with offices. The apartments are ſpacious, adorned with carvings and paintings, and the furniture rich and ſplendid. The middling ſort of people live in brick-houſes, roomy, convenient, well finiſhed, and neatly furniſhed. The habitations of the lower ſort are built of brick, though not ſo large and well finiſhed. Many of the dwellings in the country are covered with thatch, inſtead of tiles.

The Engliſh in general are fond of good cheer; and it is perhaps owing to their living more luxuriouſly than any other people, that diſtempers ariſing from intemperance are riſe in England, eſpecially in the great towns; fevers of all kinds, continual, remitting and intermitting, inflammatory, malignant, and eruptive; pleuriſies, coughs, catarrhs, diarrhœas, dyſenteries, and conſumptions, gout, gravel, dropſy, jaundice, and the lues venerea. But the endemial diſeaſes of this climate are the ſcurvy, hypochondria, madneſs; and hyſterics among the fair ſex.

In England the nobility are numerous and wealthy; and no country can produce ſuch a number of noblemen living in all the pomp of affluence, and all the joys of independence: they are diſtinguiſhed by the different titles of duke, marquis, earl, viſcount, and baron. The ſons of nobility enjoy certain titles by courteſy, according to the rank of their father; but the law ranks them among the commons of England. Thus the eldeſt ſon of a duke is denominated marquis, or earl, and the younger ſons are ſaluted by the appellation of My Lord. The firſt ſon of a marquis or earl is denominated lord of ſome barony belonging to his father, and his brothers are likewiſe addreſſed by the title of Lord John or Lord William, &c. the ſiſters enjoy the honourable title of Lady in the ſame manner. But the younger children of viſcounts and barons are not entitled to this courteſy.

The baronets of England, ſo called as an inferior kind of barons, are the next claſs or order of perſons after the barons. The title of baronet is conferred by patent under the great ſeal, and deſcends to the elder male heir. In ſpeaking and writing, he is diſtinguiſhed, like other knights, by the appellative Sir prefixed to his chriſtian name.

There are three orders of knighthood, excluſive of baronets; namely, Garter, Bath and Thiſtle. The order of the Garter, dedicated to St. George, is one of the moſt antient and honourable orders in the univerſe. The ſeat of the order is in the caſtle of Windſor, conſiſting of the chapter-houſe, the hall, and chapel of St. George. A knight of this order is diſtinguiſhed by a blue garter with a gold buckle, worn on the left leg, and inſcribed "Honi ſoit qui mal y penſe;" ſignifying, "Shame to him who puts a bad conſtruction on this order;" by an embroidered ſilver ſtar on the left breaſt, and the picture of St. George enamelled upon gold, and beſet with diamonds, hanging at the end of a broad blue ribband, that from the left ſhoulder croſſes the body.

Henry IV. inſtituted the order of the Bath, which took its denomination from their bathing on the eve of their admiſſion. The order, which had grown obſolete, was revived by George I. in the year 1725, when eighteen noblemen and as many commoners were inſtalled knights of the Bath with great ceremony at Weſtminſter. Their number is limited to forty-ſix, and they are diſtinguiſhed by a ſtar on the breaſt, and over the left ſhoulder they wear a broad red ribband like a belt.

Peculiar to Scotland is the order of the Thiſtle, conſiſting of the ſovereign and twelve knights, who wear a green ribband over the ſhoulder, and on the breaſt an embroidered ſtar, repreſenting St. Andrew with rays of glory.

The general denomination of eſquires is given to all the gentlemen of South Britain not diſtinguiſhed by nobility or knighthood. The higheſt order of plebeians are freeholders or yeomen; then fellow copyholders, merchants, traders, mechanics, hired ſervants, and day-labourers: but it is to be obſerved, that opulent merchants are to be conſidered as of greater importance than the degree wherein they are placed in the above ſcale, and frequently wed their daughters to nobility by means of large portions.

As ſoon as a woman in England is married, ſhe, with all her moveables, is at the will and diſpoſal of her huſband; nor can ſhe alienate any thing without his conſent: her neceſſary apparel is not her own property; nay, at the death of her huſband, all the perſonal chattels ſhe poſſeſſed at marriage deſcend to his executor or adminiſtrator. She can make no contract without her huſband's conſent, nor reply without him, in matters of law. On the other hand, he muſt pay the debts which ſhe has contracted, and be obliged to make ſatisfaction to the party, ſhould ſhe injure any perſon by her tongue, or treſpaſs.

Fathers have an uncontrouled authority in England reſpecting their property; ſo that they may give away their unentailed eſtates from their own children, or bequeath their fortunes to any one child in preference to all the reſt. A youth of fourteen may chuſe his guardian, and conſent to marriage; at twenty-one he is at age to make any contract, deed, or will, and to ſit in parliament. The eldeſt ſon inherits to the landed entailed eſtate, and the younger children are portioned from the goods and chattels; but in Kent, and ſome other places, the lands are equally divided among all the ſons.

The inhabitants of Wales are in general brave, hardy, and hoſpitable, jealous of affronts, haſty, malicious, conceited, proud,

proud, and litigious. The nobility and gentry ſpeak the Engliſh language, affect the Engliſh faſhions, and endeavour to civilize the lower orders of their countrymen; in particular, they have done their utmoſt to break them of the ſavage and inhuman cuſtom of plundering wrecks, and have, in ſome meaſure, ſucceeded. The Welſh language (a dialect of the Celtic) is chiefly uſed by the common people, though ſome of them ſpeak Engliſh indifferently.

With reſpect to the Engliſh conſtitution, which is a limited monarchy, it may, with all its defects, be conſidered as the beſt that ever was formed in any part of the world, whether we conſider the dignity of the crown, or the happineſs of the community. The legiſlative power is veſted in the king, lords and commons, aſſembled in parliament, and no law can be made without the concurrence of all three. The houſe of lords is compoſed of all the peers of the realm, ſpiritual and temporal: the houſe of commons, including the Scots members, amount to five hundred and fifty-eight. They are choſen every new parliament by the counties and boroughs, and, in their collective body, are ſuppoſed to repreſent the people of England. A new parliament is choſen once in ſeven years, in conſequence of writs iſſued by the crown: the king has likewiſe power to prorogue and diſſolve this aſſembly at his pleaſure, as well as to refuſe aſſent to any bill, without giving any reaſon for the refuſal. At preſent, the Engliſh laws are compounded of the civil law, the common law, or Saxon law, the foreſt law, the ſtatute law, manor law, marſhal law, and franchiſes, or peculiar laws founded upon royal grants and charters, confirmed by acts of the parliament of England.

The king has the appointment of the judges, who are twelve in number, diſpoſed in different courts of judicature, and divided into certain circuits, for the adminiſtration of juſtice through all parts of the realm. The tribunals of the courts of king's bench, common pleas, chancery, exchequer, and the duchy chamber of Lancaſter, are held at Weſtminſter.

In England, the ſeveral puniſhments inflicted on civil criminals are different from thoſe adjudged in other countries. High treaſon, petty treaſon, rape, ſodomy, murder and felony, are capital crimes by the laws of this country. A traitor is firſt hanged up, then cut down, opened and diſembowelled; but noblemen are beheaded. A traitor's conviction is attended with ruin of his family. Coiners, though adjudged guilty of high treaſon, are only drawn on ſledges and hanged. Petit treaſon, comprehending the murder of a maſter or miſtreſs by a ſervant, of a huſband by his wife, of a biſhop by a clergyman, is puniſhed by drawing the criminal to the gallows on a hurdle, and hanging him by the neck till he is dead, but are ſentenced to be drawn and burnt alive.

The titles of the monarch of England are, George III. by the grace of God of Great Britain, France, and Ireland, king, defender of the faith, &c. He ſtyles himſelf king of France, from an ancient claim which his predeceſſors had to that kingdom, of which he poſſeſſes nothing at preſent but three or four inconſiderable iſlands on the coaſt of Normandy. The title of Defender of the Faith was an ancient appellation given to the kings of England; but more particularly confirmed by Leo X. to Henry VIII. in conſequence of a book written by this prince againſt Luther, in defence of the ſeven ſacraments. The title was afterwards continued by act of parliament. The king of England, in point of power, pomp, dignity, and revenue, rivals the greateſt monarchs of Chriſtendom: he is ſupreme head of the church, and chief magiſtrate of the kingdom: he has the ſupreme right of patronage, paramount over all the eccleſiaſtical benefices in England: he is the ſupreme civil judge, and the fountain from which all juſtice is derived.

With reſpect to their arms, the royal atchievement, borne by the preſent royal family, is thus marſhalled quarterly: In the firſt grand quarter Mars, three lions paſſant-guardant in pale; Sol, the imperial enſigns of England: theſe are impaled with the royal arms of Scotland, conſiſting of Sol, a lion rampant within a double treſſure, flowered and counter-flowered with fleur de lis, Mars. The ſecond quarter contains the arms of France, namely, Jupiter, three fleurs de lis, Sol. The third for Ireland, exhibits Jupiter, an harp, Sol, ſtringed, Luna. In the fourth grand quarter is repreſented his preſent majeſty's own coat of arms, being Mars, two lions paſſant-guardant, Sol; for Brunſwick, impaled with Lunenburg, giving Sol, ſemée of hearts proper, a lion rampant, Jupiter; having, for antient Saxony, Mars, an horſe current, Luna, grafted in baſe, and in a ſhield ſurtout, Mars, the diadem, or, a crown of Charlemagne, the whole ſurrounded with a garter, as ſovereign of that order. Above the helmet, as the emblem of ſovereign juriſdiction, is an imperial crown; the creſt, a lion paſſant-guardant crowned with the like; the ſupporters a lion rampant guardant, Sol, crowned as the former, and an unicorn, Luna, gorged with a crown, and chained. The royal motto is, "Dieu et mon droit," implying, that the king of England holds his crown of God only. As the emblem of the union of England and Scotland, the table of the compartment is adorned with the roſe and thiſtle intermixed.

The heir apparent, or eldeſt ſon of the king of England, is born duke of Cornwall, and afterwards created prince of Wales, with letters patent, by which the ſaid principality and a certain revenue are granted to him. He bears the king's arms, with the addition of a label of three points, charged with nine terteaux; his device being a coronet beautified with three oſtrich feathers, inſcribed "Ich dien," which ſignifies, "I ſerve," in the German language.

A proteſtant epiſcopal church is the eſtabliſhed religion of England; but liberty of conſcience being allowed, a great variety of ſects hath ſprung up ſince the Reformation, the lateſt of which are the methodiſts, who form a very numerous body; moſt of them are alſo members of the church of England, and profeſs to adhere more cloſely than the other members of that church, to the thirty-nine articles, and the greateſt part of them are rigid Calviniſts. All ſects of religion are either connived at or tolerated: and though many authors have exclaimed with great heat againſt the many ſects in England, yet it ſhould be conſidered, that civil and religious liberty are cloſely connected, and that it does not become any church, who makes no pretenſions to infallibility, to erect the ſtandard of perſecution.

The church of England is the moſt mild and moderate conſtitution which hath ever appeared in any part of Chriſtendom.

The archiepiſcopal ſees are thoſe of Canterbury and York, to which all the other dioceſes of England and Wales are ſubject. The archbiſhop of Canterbury, ſtyled the primate of all England, is the firſt peer of the kingdom; he precedes all dukes and great officers of the crown, next the royal family, and performs the ceremony of the coronation. The dioceſes contained in the province of Canterbury are thoſe of London, Winchеſter, Ely, Lincoln, Rocheſter, Litchfield and Coventry, Hereford, Worceſter, Bath and Wells, Saliſbury, Exeter, Chicheſter, Norwich, Glouceſter, Oxford, Peterborough, Briſtol; and in Wales, the biſhoprics of St. David's, Llandaff, St. Aſaph, and Bangor. The archbiſhop of York is ſtyled primate of England, and metropolitan; hath place and precedence of all dukes, next to the royal family, and all great officers of ſtate, except to the lord chancellor: he enjoys many prerogatives and privileges within his own province, which comprehends the biſhoprics of Sodor and Man, Durham, Carliſle, and Cheſter.

The Engliſh language is compounded of ſeveral others, but more particularly the Saxon, Celtic, French, and Latin; but the former predominates. This, inſtead of rendering it defective, gives it innumerable graces, ſince it has incorporated moſt of the beauties, and rejected the defects, of the languages of which it is compoſed. Hence it is more elegant than the German, more copious than the Spaniſh, more energetic than the French, and more manly than the Italian.

This favoured iſland may be deemed the ſeat of the Muſes. Alfred the Great cultivated literature, at a period when all the reſt of Europe was immerſed in ignorance and barbariſm; ſince his time, a continual ſucceſſion of learned men have been diſtinguiſhed by their maſterly writings, and done credit to the Britiſh name; and at preſent literature in England ſeems to have arrived at its utmoſt zenith. Indeed, we have men of genius and talents, who exceed thoſe of any other nation in almoſt every art, ſcience, manufactory, and profeſſion.

The iſland of Great Britain, being plentifully ſupplied with all the conveniencies of life, could ſubſiſt without ſupplies from any other country whatſoever. But as foreign commerce is advantageous, employs abundance of artiſts, as well as a great number of poor, and is a manifeſt improvement to all manufactories in general; ſo it is the ſureſt and moſt effectual means not only to enrich, but to ſtrengthen the nation, and render it a terror to its enemies. The Engliſh merchants traffic largely with Ruſſia, Sweden, Denmark, Norway, Hamburgh, Bremen, both ſides of the Baltic, all the northern parts of Germany, Holland, Flanders, Portugal, Sicily, Italy, the Levant, the coaſt of Africa, the Eaſt and Weſt Indies, and (the late unhappy diſputes being now terminated by treaty) to the North American colonies.

The commodities exported from England are comprehended in the different articles of corn, cattle, ſhip proviſion, butter, cheeſe, beef, pork, and biſcuit, iron, lead, tin, copper, manufactured and unmanufactured, leather, copperas, allum, pit coal, ſaffron, hops, flax, hats, ſhoes, herrings, pilchards, cod, ſalmon, oyſters, liquorice, watches, ribbands, toys; alſo the different manufactures of wool, ſuch as broad cloth, bays, kerſies, ruſſies, ſerges, ſays, frizes, ſtuffs, flannels, rugs, caps, and ſtockings. The products of wool are the principal articles of the Engliſh traffic, the exports of them exceeding two millions yearly. The imports from various parts of the globe are immenſe.

Many branches of foreign commerce are monopolized and managed by incorporated or chartered companies, viz. East India company, Levant or Turkey company, Merchant Taylors, Ruſſia company, Royal African company, Hudſon's Bay company, South Sea company, Hamburg company, Greenland company, &c.

The fiſhery is very conſiderable, and if properly cultivated, would equal, if not excel, any other branch of commerce. It conſiſts of pickled herrings, cod, ling, and tuſk from Scotland, and the Scottiſh coaſt: red herrings from Yarmouth, and pilchards from the weſtern coaſt of England; beſides which, a conſiderable number of ſhips are annually employed in the whale fiſhery of Spitzbergen.

In time of peace, the land forces of Great Britain and Ireland do not exceed forty thouſand, viz. twelve thouſand in the latter, and the reſt in Great Britain, and various garriſons beyond the ſeas; but in time of war, during hoſtilities, the number has, according to exigencies, been greatly augmented; the troops in pay being ſometimes very numerous. The navy of Great Britain is more powerful than that of any other country in the univerſe. In the late war, the number of ſeamen amounted to upwards of forty thouſand, but in peaceable times only about ſixteen thouſand are retained by government.

The revenues of England are immenſe, though of ſo complicated a nature as not to be eaſily aſcertained; and the funds are perfectly ſecure, though the national debt is enormous. Accounts are kept in pounds, ſhillings, pence, and farthings, the former being only a nominal ſum. Beſides farthings, halfpence, ſixpences, ſhillings, half-crowns, crowns, half-guineas, and guineas, which are the common current coins, there are ſome ſilver pieces, ſuch as pennies, two-pennies, three-pennies, and groats, and ſome gold ones, ſuch as two and five guinea pieces. There are two ſorts of weights, ſuch as troy and avoirdupois; all goods, ſubject to waſte, are weighed by the latter, all others by the former. Twelve ounces of the firſt, and ſixteen of the latter, conſtitute a pound. Meaſures of length are the inch, foot, yard, fathom, perch or pole, acre, furlong, and mile. Dry meaſures are chaldron, laſt, quarter, comb, buſhel, peck, gallon, quart, pint. Liquid meaſures are, tun, butt, pipe, hogſhead, barrel, kilderkin, firkin, gallon, quart, pint, half-pint, gill.

SECT. III.

Containing a Deſcription of that Part of GREAT BRITAIN, called SCOTLAND, or NORTH BRITAIN.

THIS part of the iſland of Great Britain is bounded on all ſides by the ocean, except the ſouth, where it is ſeparated from England by the river Tweed; towards the eaſt by the Cheviot hills, and the river Eſk, and Solway Frith towards the weſt. It is generally reckoned three hundred and eighty miles in length from Aldermouth head, near the iſle of Mull, to Buchaneſs, and one hundred and ninety in breadth where broadeſt. The principal part of the country is mountainous and hilly, the air ſharp, but wholſome, and the ſoil in general inferior to that of England. It was formerly divided into an heptarchy, like England, but is now diſtinguiſhed by two diſtricts, viz. Highlands and Lowlands; the people of the former are rude and uncivilized; thoſe of the latter imitate the Engliſh cuſtoms and manners. The whole country is admirably well watered with rivers and lakes. There are a few foreſts of fir; timber in general, however, is very ſcarce. The quarries contain free-ſtone: and, indeed, Scotland in general, in every part of its natural hiſtory, reſembles England, except that moſt of its productions are rather inferior to thoſe of South Britain, from the mere unfavourable ſituation of the country.

The Scots are brave, paſſionate, and vindictive, and the Highlanders in particular are accuſed of inſincerity, cruelty, rapacity, avarice, pride, and naſtineſs. In general the Scots are tinctured with learning, but it is of a ſuperficial nature. They are good ſoldiers, and obſequious ſervants; their cloaths are after the Engliſh faſhion, except that their peaſants wear blue bonnets, and the Highlanders plaids, the only remains of the antient Roman dreſs. They have long viſages, high cheek bones, and ſandy hair. In diet they are abſtemious, and their houſes are badly accommodated. Moſt of the North Britons are uncommonly fond of muſic, and their tunes are extremely ſweet, expreſſive, and affecting; their common inſtrument is the bagpipe. Their religion is Calviniſm or the Preſbyterian, and the kirk of the kingdom is divided into thirteen provincial ſynods, which contain ſixty-eight preſbyteries, and nine hundred and thirty-eight pariſhes. Scotland ſends to the Engliſh parliament ſixteen peers and forty-five commoners.

This northern part of the kingdom is divided into the following counties, viz.

The county of Caithneſs, the moſt northern in Scotland, is very rocky, contains many bays and promontories, abounds in cattle, ſheep, goats, roe-bucks, red deer, and produces copper and iron; but the inhabitants principally live by fiſhing and grazing. It is thirty-five miles long, and twenty broad. The principal place is Weick, though Thurſo, a town on the other ſide of the country, is ſuppoſed to be better inhabited.

The county of Sutherland, ſouth-weſt of Caithneſs, is mountainous and barren, but well ſupplied with fiſh and wild fowl, by reaſon that it is not only watered by ſeveral rivers, but contains above ſixty lakes, including various ſmall iſlands. It is eighty miles long, and forty broad. The principal place is the royal borough of Dornock, which conſiſts of nine pariſhes, contains a cathedral, and is the ſeat of a preſbytery.

The county of Roſs, includes Tayne and Cromartie: it is ſituated to the ſouth-weſt of Sutherland, and has ſnow on its mountains the greateſt part of the year. The vallies, however, are fertile, the air good, and the hills produce foreſts of fir, game, &c. It is eighty miles long, and ſeventy-eight broad. The chief place, Channerie, is but an inconſiderable market-town, though the ſeat of a preſbytery.

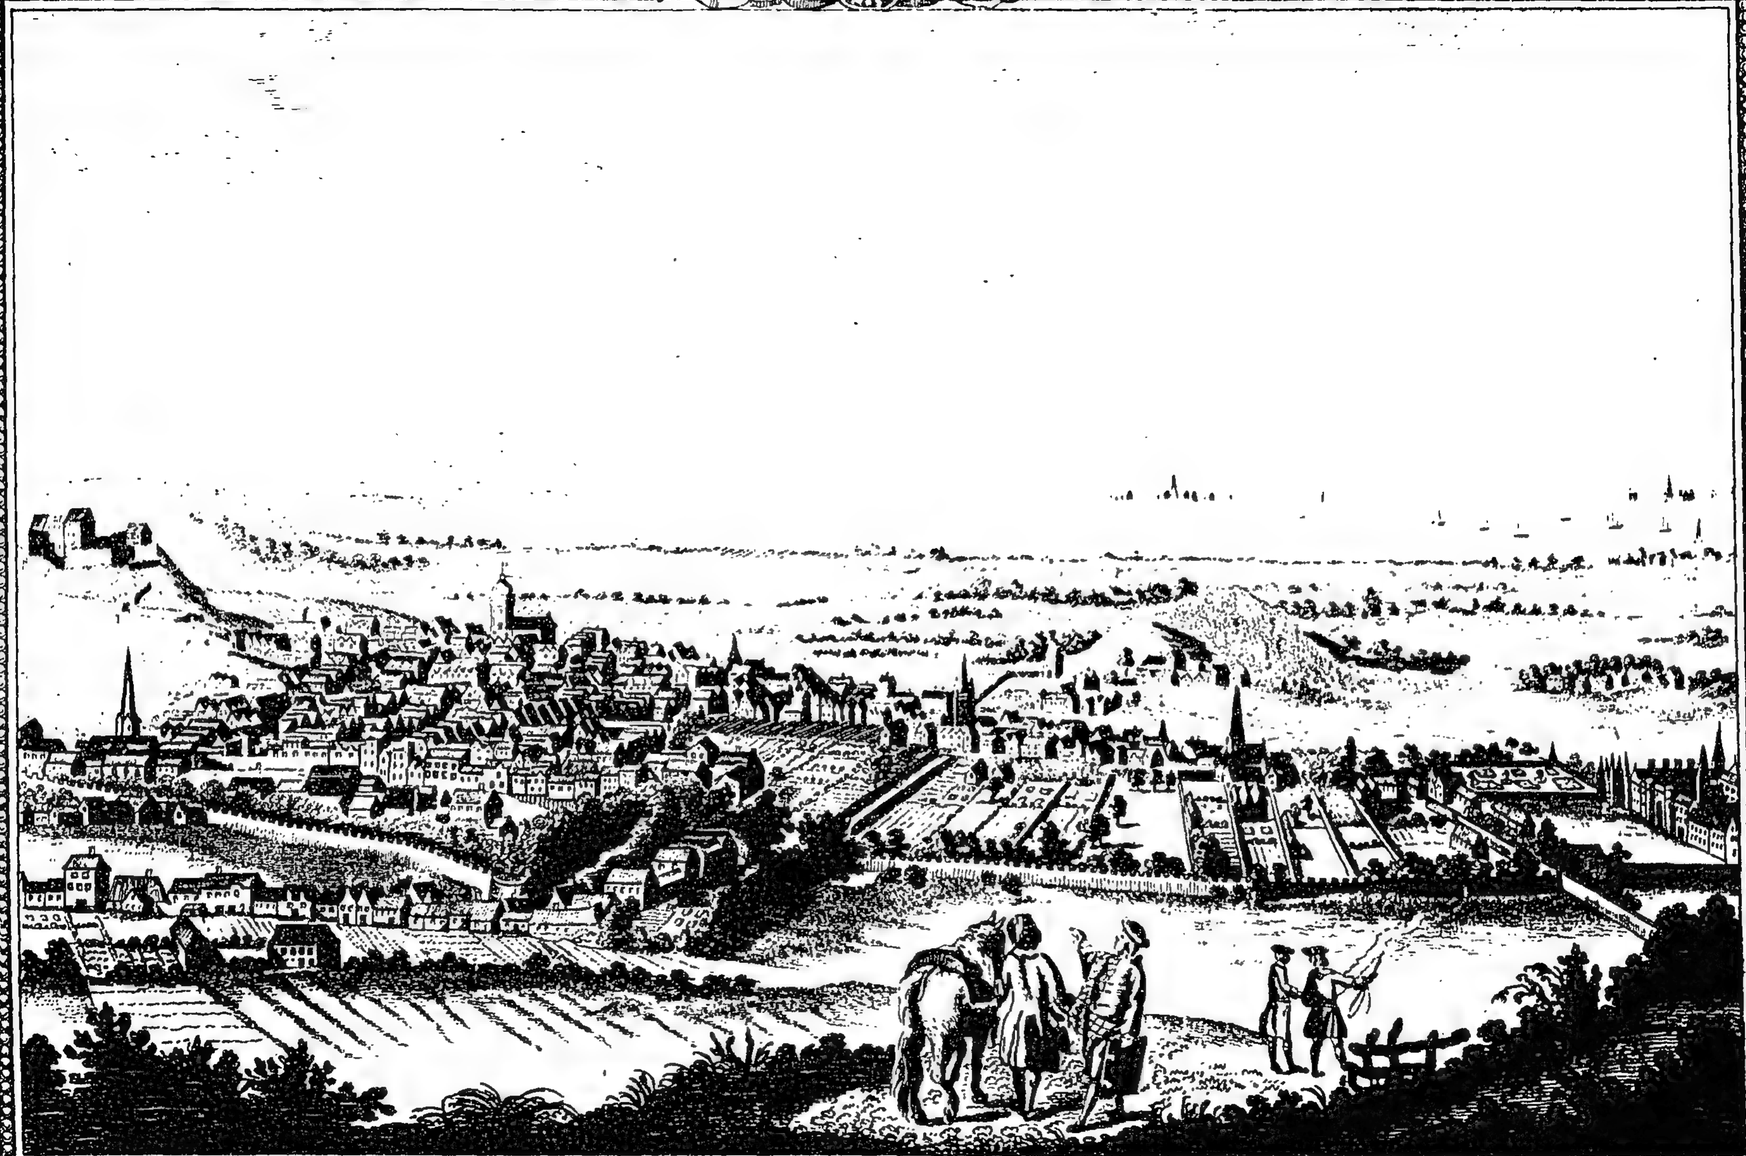
The county of Inverneſs, to the ſouth of Roſsſhire, is in general barren, but produces wood, iron, and game. It is ſixty miles long, and fifty-five broad. At the mouth of the Aber, in the centre between the weſt and north highlands, ſtand the towns of Maryborough and Fort William, built to check the depredations of ſome of the clans. Inverneſs, from which the ſhire derives its name, is a royal borough on the river Neiſs, over which there is a bridge of ſeven arches. It is the ſeat of a preſbytery, contains thirteen pariſhes, and may be juſtly deemed the key and capital of the iſlands. The inhabitants imagine their town to be a model of neatneſs, and that Engliſh is ſpoken by them in its utmoſt purity, but this is not ſtrictly true.

To the ſouth-eaſt of Roſsſhire, is the county of Nairn, which has a ſalubrious and temperate air, and contains ſome tolerable paſture land: it is twenty miles long, and fourteen broad. The only place of note is Nairn, which though a royal borough, is poor and mean, and the harbour is quite choaked up: it ſtands on the banks of the river Nairn.

The county of Elgin, to the eaſt of Nairn, has a tolerable air, and the low country is fertile: it is twenty-four miles long, and twenty broad. The town of Elgin is a royal borough, ſituated in a verdant plain on the river Loſſie. It contains thirteen pariſh churches, and is the ſeat of a preſbytery.

The county of Argyle, to the ſouth-weſt of Inverneſs, is for the moſt part wild and barren: it is ninety miles long, and ſeventy broad. The town of Argyle is the ſeat of a provincial ſynod, conſiſting of five preſbyteries, and forty-nine pariſhes, and gives the title of duke and earl to the noble family of Campbell, the moſt powerful of all the Scotch nobility. This ſhire is divided into ſeveral diſtricts, viz. Argyle, properly ſo, Cowal, Kintyre, Knapdale, and Lorne.

The county of Perth, is ſituated about the centre of Scotland, and may be deemed one of its moſt fertile provinces; being ſeventy miles long, and ſixty broad; the people are polite and induſtrious, and their habitations neater than in moſt other parts of the kingdom. The ſhire is divided into ſeveral diſtricts, viz. Perth Proper, Scone, Monteith, Braidalbin, Athol, Stratherne, and Gowrie.



The town of Perth, capital of the province, is an agreeable, populous place, ſituated twenty miles within land, on the ſouth bank of the river Tay. It was otherwiſe called St. Johnſton's, from a church dedicated to St. John, as the patron of the place. It is a royal borough, ſecond in dignity to the metropolis, gave the title of earl to the family of Drummond, which is now forfeited, and is the ſeat of a large preſbytery.

The royal palace of Scone, or Scaan, ſuppoſed to be the centre of the kingdom, ſtands on the north bank of the Tay. Scone gives the title of baron to the viſcount Stormont, a branch of the family of Murray. He is alſo hereditary keeper of this palace, which is large, ſpacious, and magnificent, though built in the antient manner; ſome of the pannels are adorned with paintings, performed above two hundred years ago; and here is a bed of fine needle work, ſewed by the hands of Mary queen of Scots.

The county of Bamff, to the weſt of Aberdeenſhire, is very fertile and pleaſant, inhabited chiefly by lowlanders: is thirty-two miles long, and thirteen broad. The town of Bamff is ſituated on the coaſt of the Murray Frith, is a royal borough, of very little conſideration. It was of old ſecured by a caſtle, which is now in ruins; this is likewiſe the caſe with the abbey of Deer, in the neighbourhood which belonged to the monks of the Ciſtercian order.

The county of Aberdeen, has a wholeſome air, is well watered, finely diverſified with hills and dales, and pretty fertile: is fifty miles long, and thirty-ſix broad. It comprehends the

London Published by R. Sayer at the Kings Arms N.o Paternoster Row.

A General View of the City & Castle of EDINBURGH, the Capital of Scotland.

diſtricts of Mar, Garioch, Strathbogie, and the greater part of Buchan.

Aberdeen, the capital town, is eighty miles north of Edinburgh. It ſtands upon the river Dee and Don, and is in effect divided into two diſtinct towns. Old Aberdeen, the ſeat of a preſbytery, built at the mouth of the Don, has a church of hewn ſtone, with a lofty ſteeple or turret, ending in an imperial crown, with a round globe of ſtone, and two gilded croſſes. Hard by the church is a library, furniſhed with a valuable collection of books: but old Aberdeen is chiefly remarkable for the college founded by king James IV. conſiſting of a principal, ſub-principal, regents, or profeſſors of divinity, civil law, phyſic, philoſophy, and the languages. The town is ſmall, indifferently built, and inconſiderable, though very antient.

About a mile from hence, at the mouth of the river Dee, is New Aberdeen, the county town, a neat, populous and flouriſhing place, adorned with churches, hoſpitals, a fine wharf, a cuſtom-houſe, and many ſtately edifices built of hewn ſtone. The ſtreets are large and well paved, the private houſes lofty, and well finiſhed, provided with gardens and orchards, which appear intermingled with the buildings, and give it the air of a city, when viewed at a diſtance.

The county of Mearns, or Kincardine, ſituated ſouth of Aberdeen, is in general fertile, twenty-ſeven miles long, and twenty broad; the principal place is Stonehive, the ſeat of the county courts; a ſmall town with a good haven, improved by the late earl Mareſchal, and enjoys a good ſalmon fiſhery. Kincardine, another conſiderable place, ſtands on the river Dee, and gives the title of earl to a branch of the family of Bruce. Fourden, or Mearns, is a ſmall town and the ſeat of a preſbytery. Cowy is an antient borough, greatly decayed, and remarkable for nothing but the ruins of a caſtle, ſaid to have been built by king Malcolm Kenmore.

The county of Forfar, to the ſouth-weſt of Kincardineſhire, produces cattle, game, wood, and minerals. It is twenty-nine miles in length, and ſixteen in breadth.

Forfar, the county town, from which the ſhire takes its name, gave the title of earl to a branch of the noble family of Douglas, which title was extinguiſhed at the death of the laſt earl, a gallant youth, who loſt his life in the battle of Dumblain. The town, though inconſiderable, is a royal borough, and the ſeat of a preſbytery.

Dundee, the moſt flouriſhing town of this county, and antiently called Alutum and Taodunum, was the birth-place of the hiſtorian Hector Boethius. It is ſituated at the foot of a hill, on the north ſide of the Tay, not far from this river's influx into the ocean. Dundee is a royal borough, handſomely built, and inferior to few towns in Scotland for ſtrength, ſituation, and commerce: it is alſo the ſeat of a preſbytery.

The county of Clackmannan, is only eight miles long, and five broad, and contains one place of note, viz. Aloa, in the Frith of Forth, a ſea-port of tolerable trade. It produces good corn and paſtures, and plenty of coals and ſalt.

The county of Fife, a peninſula between the Frith of Forth and the Tay, is tolerably fertile. It is forty-ſeven miles long, and ſeventeen broad. The principal place is Cowpar of Fife, the county town, ſituated on the river Eden; but the moſt celebrated place is the city of St. Andrew's, always famous for its univerſity. St. Andrew's was alſo the principal ſeat of the Culdees, who directed all ſacred inſtitutions from the firſt converſion of the Picts to Chriſtianity.

Seven miles from the coaſt of Fife, almoſt oppoſite to the rock of Baſs, lies the iſland of May, which is about a mile and a half in circumference. It formerly belonged to the priory of Pittenweem, and was dedicated to St. Adrian, ſuppoſed to have been martyred in this place by the Danes.

The county of Stirling, ſituated to the ſouth of Perthſhire, is both fertile and pleaſant; it is twenty miles long, and twelve broad. Stirling, the capital town, derives its name from Ster, a Saxon word, ſignifying hill; and lin water: it was antiently called Binobara, of the ſame ſignification in the Scottiſh language. The town, which is large and populous, ſtands about thirty miles from Edinburgh, on the deſcent of a hill, the top of which is covered with a ſtately old caſtle (of which the earls of Mar were formerly caſtellans) kept in repair and garriſoned by the government. The town is incloſed with a wall, except towards the north, where the part of a fort is ſupplied by the river Forth, over which the inhabitants have built a ſtone bridge, conſiſting of four ſtately arches, with an iron gate in front to ſecure it.

The county of Lenox, (called alſo Dumbartonſhire) which is twenty-four miles long, and twenty broad, is fertile in corn, near the rivers, but the other part is mountainous, which however feeds a great number of ſheep. The lake Lough Lomund is a great curioſity, being ſupplied by ſubterraneous ſprings and rivulets, ſurrounded with huge mountains, extending near twenty-five miles in length, and in ſome places five miles in breadth, incredibly deep in every part, interſperſed with twenty-four verdant iſles, ſome of which are inhabited, and ſtocked with red deer.

The capital town, Dumbarton, is a ſmall inconſiderable royal borough, ſituated near the confluence of the Clyde and Leven; and at preſent remarkable for nothing but its caſtle, which is very large, and formed on a very ſingular conſtruction. It is a ſteep rock, riſing up in two points, and every where inacceſſible except by a narrow paſſage or entry, fortified with a ſtrong wall and rampart. Within this wall is the guard houſe, with lodgings for the officers; and from hence a long flight of ſtone ſteps aſcends to the upper part of the caſtle, where ſeveral batteries mounted with cannon are planted.

The ſhire of Renfrew, eaſt of Dumbartonſhire, from which it is ſeparated by the river Clyde, is tolerably fertile, and hath many opulent inhabitants. It is twenty miles long, and thirteen broad. The principal town is Renfrew, an inconſiderable place, which yields greatly to the village of Paiſley, in point of importance.

The ſhire of Lanerk, ſouth-weſt of that of Edinburgh, is divided into two diſtricts, viz. that of Lanerk, and the barony of Glaſgow. It is forty miles long, and twenty-four broad. The ſoil is diverſified, being in ſome places barren, and in others fertile. The principal place is the large, elegant, and flouriſhing city of Glaſgow, which contains about thirty thouſand inhabitants. It ſtands on the deſcent of an eminence near the Clyde, over which it has a handſome ſtone bridge of ſeven arches; the ſtreets are regular and well paved, the houſes lofty and built of ſtone, the churches elegant, and the univerſity a noble and beautiful foundation. The whole place has the appearance of opulence, as the people are induſtrious.

The ſhire of Linlithgow, to the ſouth of Stirlingſhire, is a ſmall county, but very pleaſant, and tolerably fertile. It is fourteen miles long, and thirteen broad. Linlithgow, the chief town, is a neat place, alſo a royal borough, and the ſeat of a preſbytery.

The ſhire of Edinburgh, or Weſt Lothian, ſituated to the ſouth of the Frith of Forth, abounds in minerals, is extremely fertile, well cultivated, and pleaſant. The ſheriffalty of the ſhire is in the gift of the crown, and Edinburgh is a county of itſelf. Its length is twenty-one miles, and breadth ſixteen.

The city of Edinburgh, which is the capital of Scotland, was formerly the royal reſidence. It conſiſts principally of one ſtreet, with lanes running from it, the ground riſing gradually from Holyrood-houſe, to the Cannon-gate head, which is the ſuburb, and from thence to the caſtle, which is the higheſt part of the city. The principal ſtreet, beſides this, is called Cowgate, and is on the ſouth ſide of the other, and from this ſeveral lanes run up the hill towards the univerſity, and Herriot's hoſpital. The city is about a mile in length, but in no part above half a mile in breadth. The houſes are built of ſtone, ſix or ſeven ſtories high; and near the Parliament-cloſe they are fourteen ſtories high. The whole is walled on every ſide except the north, where a lake circumſcribes it. The caſtle is remarkably ſtrong. The council-houſe and ſeſſions-houſe are convenient fabrics for the purpoſes for which they are deſigned. The high church, which was the cathedral, is now divided into four churches; beſides which, there are ſeven other churches, and a chapel in the caſtle. This city is governed by a lord provoſt, four bailiffs, and a common council. The palace called Holyrood-houſe was formerly an abbey, and is a handſome convenient ſtructure.

The town of Leith, ſituated on the Forth, two miles north of Edinburgh, is not only the port, but may with juſtice be termed the warehouſe of Edinburgh. It is a flouriſhing handſome town, interſected by the river Leith; over which there is a ſtone bridge, whereby the two parts are connected.

The county of Haddington, to the north-eaſt of Edinburghſhire, is very fertile and well cultivated. Its length is twenty miles, breadth twelve. The ſhire town, ſituated on the river Tine, over which it has a ſtone bridge with three arches, is large, well built, the ſeat of a preſbytery, and a royal borough.

At the mouth of the Forth ſtands Dunbar, a royal borough, and the ſeat of a preſbytery. It is a neat, ſmall town, carries on a conſiderable trade, has a good market, and a ſecure harbour.

The county or ſhire of Berwick, adjoining to England, and ſituated to the ſouth-eaſt of Edinburghſhire, is a rough mooriſh country, irregularly diverſified with woods and valies. Its length is twenty-four, breadth ſixteen miles. The town of Berwick being now annexed to England, the principal Scots town of this county is Duns, a large, populous barony in the centre of the ſhire, having a caſtle for its defence, and is the ſeat of a preſbytery.

The ſhire of Aire, to the eaſt of the Firth of Clyde, is a level, pleaſant, and tolerably fertile country. Its breadth ſixty-four, length thirty-ſix miles. Aire, the county-town, is an antient royal borough, commodiouſly ſituated for trade, and

compoſed

compoſed of the old and new town, which a bridge of four arches connects together.

The county of Twedale is ſituated to the ſouth of Edinburghſhire, produces ſome grain, is particularly fertile in paſturage, well watered with rivers, and contains ſeveral lakes. Its length is twenty-five miles, and breadth eighteen. The only town worthy of notice is Peebles, a ſmall pleaſant place on the Tweed, over which it has a ſtone bridge of five arches. This place was formerly remarkable for three churches, three ſteeples, three gates, three bridges, and three ſquares.

The county of Tiviotdale (called alſo Roxburghſhire) lies to the ſouth of Berwickſhire; and, though rather barren, is well inhabited. Its length is thirty, and breadth fifteen miles. Roxburgh, the county town, was formerly a flouriſhing place; but is now greatly reduced, by reaſon that its royalty was removed to Sedburgh, ſituated on the confluence of the Ted and Teſy rivers.

The ſhire of Selkirk, to the weſt of Roxburghſhire, is a hilly country, but yields good paſture, and abounds in cattle. Its length is twenty, breadth twelve miles. The chief town is Selkirk, famous for its manufactures of boots and ſhoes: it is a royal borough on the Eltrick.

The county of Dumfries, to the ſouth-weſt of Selkirkſhire, is in general hilly, but produces cattle in abundance. Its length is fifty, breadth thirty-four miles. Annam, a royal borough and ſea-port was once the chief town, but having gone to decay, Dumfries is at preſent to be conſidered as ſuch.

The town of Dumfries, which may be ſtiled the capital of the ſouth-weſt part of Scotland, is a large, flouriſhing, royal borough, ſituated at the mouth of the Nid, at the diſtance of ſixty-four miles from Edinburgh. The houſes are well built and commodious; the ſtreets are open and ſpacious; the town is adorned with an old caſtle in tolerable repair, four gates, a ſtately church, an exchange for the merchants, a toll-booth, a large market place with a curious croſs, and a noble bridge of free-ſtone over the river, conſiſting of thirteen large arches, with a gate in the middle, as bounding between the ſhire of Dumfries, and the Stewartry of Galloway. Dumfries is the ſeat of a preſbytery and provincial ſynod, carries on a very conſiderable ſhare of trade and commerce, and gives the title of earl to the chief of the family of Crichton.

The ſhire of Wigtown, ſituate to the ſouth of Aireſhire, abounds in cattle, horſes, &c. Its length is twenty-four, breadth twenty-three miles. The capital of the ſhire is Wigtown. It is a royal borough, where the ſheriff holds his court, and the ſeat of a preſbytery, ſituated near the mouth of a river, in the bay of the ſame name, eleven miles in breadth, at the diſtance of eighty-eight miles from Edinburgh. It has the advantage of a tolerable harbour, and is well ſituated for trade; but this being entirely neglected, the town is very poor, and thinly inhabited: however, it beſtows the title of earl upon the chief of the Flemings.

SECT. IV.

A compendious View of the Hiſtory and Antiquities of GREAT BRITAIN.

THE antient inhabitants of this iſland were firſt invaded by Julius Cæſar, and afterwards ſubdued by the Romans. In the reign of Valentinian III. they quitted the iſland, and taking with them all the Roman and Britiſh forces, left the kingdom expoſed to the excurſions of the Picts and Scots. The Britons ſucceſſively elected ſeveral monarchs, who were depoſed almoſt as ſoon as they were advanced to the throne, till they made choice of Vortigern, who finding it difficult to contend with the Picts and Scots, who invaded his dominions, ſolicited ſuccours from abroad; and, accordingly, in 449, a large body of Anglo-Saxons arrived under the conduct of two leaders, Hengiſt and Horſa, who having obtained a victory over the enemy, ſettled here; and other bodies of Saxons coming over, extended their dominions, and at length conquered England, which received its name from the Angles. They erected ſeven monarchies, thoſe of Kent, Suſſex, the Eaſt-Angles, the Weſt-Saxons, the Eaſt-Saxons, Northumberland, and Mercia. Egbert, king of the Weſt-Saxons, at length united all the other kingdoms under him.

In the ninth century the Danes paſſed over to England, and proved ſo troubleſome to the Saxon princes, that they were at length obliged to ſhare the kingdom with them. This diviſion laſted till the year 1041, when the Saxons again recovered the whole country. Upon the death of this prince, he was ſucceeded by Harold; but William duke of Normandy invaded the kingdom, and coming to a battle with Harold, near Haſtings, in Suſſex, defeated his rival, who was ſlain in the engagement, and agreeing to obſerve the Saxon laws was proclaimed king. After his deceaſe, and that of his two ſons, his deſcendants of the female line contended for the throne, which Henry II. ſirnamed Plantagenet, at laſt aſcended in 1154, and tranſmitted to his deſcendants. This prince was by inheritance earl of Anjou, Maine, and Touraine; by marriage, duke of Guienne; and by ſucceſs of his arms, lord of Ireland. John, the youngeſt ſon of Henry II. was obliged to grant the Magna Charta. Edward I. ſubdued the principality of Wales, and endeavoured to maintain his ſuperiority in Scotland.

Edward III. the eldeſt ſon of Edward II. ſucceeded to the crown in the life-time of his father; the queen and Mortimer, during his minority, uſurped the adminiſtration, governed in his name, and murdered Edward II. But Edward III. afterwards cauſed Mortimer to be ſeized in the queen's apartments, and to be executed. This prince invaded France, and in 1346 obtained the glorious victory of Creſſy, and about the ſame time David king of the Scots was made priſoner. John the French king and his ſon Philip were taken priſoners at the battle of Poictiers, by Edward the Black Prince. Richard II. the ſon of Edward the Black Prince, and grandſon of Edward III. ſucceeded to the throne. He ſuppreſſed a rebellion raiſed by Wat Tyler: but the parliament, diſguſted at his adminiſtration, raiſed an army againſt him, and made him priſoner. The duke of Lancaſter, the king's uncle, claimed the crown of Caſtile in right of his wife, and invaded Spain. His ſon, the duke of Lancaſter, dethroned Richard II. and uſurping the crown was ſtiled Henry IV. and being confirmed in the throne by the parliament, Richard was ſoon after murdered. Henry V. gained ſeveral victories over the French, took many of their towns, and having married Catharine, daughter to Charles VI. king of France, by the convention of Troyes, obtained the reverſion of that crown, but died in the midſt of all his expectations. His infant ſon, Henry VI. who was crowned at Paris, inherited both kingdoms; but under him the Engliſh arms in France met with a ſad reverſe, by his loſing that kingdom.

At this time diſputes aroſe concerning the crown, between the houſes of York and Lancaſter, both which were of the royal blood, and were commonly called, in alluſion to their arms, the White and Red Roſe; and theſe diſputes ſoon broke out into a bloody civil war, which was frequently renewed. Edward IV. the eldeſt ſon of Richard, duke of York, was at length eſtabliſhed on the throne, while Henry VI. was confined in the Tower, and at laſt murdered. Edward V. the eldeſt ſon of Edward IV. with his brother Richard, duke of York, were alſo murdered in the Tower, by their uncle Richard, duke of Glouceſter, who aſcended the throne by the name of Richard III. but Henry, earl of Richmond, defeating that unnatural monſter at Boſworth, and that murderer, who was the laſt male of the houſe of York, being killed in the battle, Henry, in 1485, obtained the crown. This was Henry VII. who being of the houſe of Lancaſter, and marrying Elizabeth, of the houſe of York, in him both roſes were united.

Henry VIII. the ſon of Henry VII. was remarkable for his numerous marriages, his manner of living, government, and power. On account of his book on the ſeven ſacraments, which was written againſt Luther, he was dignified by the pope with the title of Defender of the Faith, a title which the kings of England had long before aſſumed, as appears from ſeveral charters granted to the univerſity of Oxford. This king ſoon quarrelled with the pontiff, and under him the happy reformation of religion began in England; and the parliament enacted an oath of ſupremacy, by which all eccleſiaſtics were compelled to acknowledge the king as ſupreme in all cauſes both eccleſiaſtical and civil. Under Edward VI. the Reformation was promoted; but his ſiſter and ſucceſſor Mary again introduced popery, lighted the fire of perſecution, and loſt Calais, the only place in France belonging to the crown of England. Under her ſiſter Elizabeth the Reformation was completed, and very conſiderable improvements made in trade and navigation. She appointed for her ſucceſſor James I. king of Scotland, who endeavoured to unite both kingdoms, under the name of Great Britain. This weak and puſillanimous prince paid little regard to the conſtitution of England. His example was followed by his ſon Charles I. The people roſe in defence of their liberties, and that unhappy prince loſt his head on the block. The Scots proclaimed his ſon Charles II. but were defeated therein by Oliver Cromwell, who governed theſe kingdoms under the title of Protector of England, Scotland, and Ireland. In his time the Engliſh made themſelves maſters of Jamaica and Dunkirk. His ſon Richard was afterwards choſen protector; but being averſe to the cares of government, he made little or no oppoſition to the return of Charles II. who was reſtored to the throne of his anceſtors. This laſt prince ſold Dunkirk to the French; under his reign a dreadful peſtilence ravaged England, and London was deſtroyed by fire.

James, duke of York, married his eldeſt daughter Mary to William prince of Orange, and Anne his ſecond daughter to prince George of Denmark, and on Charles's deceaſe aſcended the throne; he then openly declared himſelf a papiſt, and ſtrenuouſly endeavoured to bring this kingdom again into ſubjection

jection to the see of Rome. In the year 1688 was born James the late pretender, whom some affirm to be the lawful son of king James II. by his second spouse, while others deny it. Against this prince the church of England united with the Dissenters, and both applying to his son-in-law, the prince of Orange, invited him to assist in the defence of their liberties: on which he landed in England, and the king fled to France; whence the crown, which he had thus abdicated, was in a national convention offered, with certain restrictions, to the prince of Orange and his consort Mary. This prince, who assumed the title of William III. was succeeded by Anne, king James's youngest daughter, and under her, in 1702, was accomplished the union of the kingdoms of England and Scotland, under the general name of Great Britain. On her decease, in 1714, the crown devolved to George Louis, elector of Hanover, and duke of Brunswick Lunenburg. His reign began with a rebellion, which was soon suppressed. That prince was peaceably succeeded by his son George II. in whose reign another rebellion broke out, and was quelled by the bravery of his son William duke of Cumberland. His reign was distinguished by a number of victories, that will do honour to the British annals; and on the twenty-fifth of October, 1760, he was succeeded by his grandson George III. his present majesty, in whose reign an unhappy war broke out between England and America; which terminated in a treaty between all the contending powers, in 1783, by which the Thirteen Colonies became independent of the mother country. For a more ample and copious account of Great Britain, and its dependencies, we beg leave to refer our readers to Barnard's New, Comprehensive, and Complete History of England, in Seventy Numbers in Folio, printed for Alex. Hogg, No. 16, Paternoster Row; adorned with beautiful Cuts.

In describing the antiquities in Great Britain, we shall, in the first place, take notice of the celebrated Druid temple, about six miles from Salisbury, called Stonehenge, which consists of two circles and two ovals respectively concentric: the outer circle being one hundred and eight feet in diameter. The intention of the founders seems to have been this: the whole circumference was to consist of one hundred upright stones, each stone four cubits broad, and each interval two cubits. Of the outer circle, which in its perfection consisted of sixty stones, and thirty imposts, there are seventeen uprights left standing, eleven of which are contiguous to the grand entrance, and have five imposts upon them. The lesser circle, which never had any imposts, is somewhat more than eight feet from the inside of the outward one, and consisted of forty lesser stones, forming, with the outward circle, a kind of circular portico. There are only nineteen of the forty left, but eleven of them are standing in situ, five in one place contiguous, three in another, and two in another. The walk between these two circles, which is three hundred feet in circumference, is equally grand and delightful. The adytum, or cell, into which none but the upper order of Druids entered, is composed of certain compages of stones, or trithithons, consisting of two upright stones, and an impost at top; there are evidently five of these remaining, three of which are entire, nine are ruined in some measure, but the stones remain in situ. The stones that compose it are really stupendous; their height, breadth, and thickness, are enormous; and to see so many of them placed together in a nice and regular figure with exactness: to consider, as it were, not a pillar of one stone, but a whole wall, a side, and end of a temple, of one stone; to view them curiously, creates such an emotion in the mind, as cannot easily be described by words.

At a small distance from this amazing work of antiquity, are a great number of elevations, something resembling the form of a bell, called barrows, or barrow; these are sepulchral tumuli; wherein the antient Britons deposited the ashes of their dead, and raised in memory of soldiers slain in or near the place.

On Marlborough downs there is an erection of huge stones, called Abury, resembling Stonehenge. These stupendous remains are also supposed to be the ruins of an antient Druidish temple; so large, that a whole village is now contained within the circumference of them.

About five miles from Lancaster is a remarkable cave called Dunald Mill-hole. In the middle of a large common, a brook, near as big as the New River, after turning a corn-mill just at the entrance of the cave, runs into its mouth by several beautiful cascades, continuing its course two miles under a large mountain, and at last makes its appearance again near Carnford, a village in the road to Kendal. The entrance of this subterraneous channel has something pleasingly terrible: from the mill at the top you descend about ten yards perpendicular, by means of chinks in the rock and clumps of trees: the passage is then almost parallel to the horizon leading to the right, a little winding, till you have some hundreds of yards thick of rocks and minerals above your head.

Among the Roman antiquities in Great Britain are, several altars, monumental inscriptions, walls, and military ways, the principal of the latter being one that began at Dover, and passed through the whole island to Cardigan in Wales. The chief Roman wall is that called the Wall of Severus, or Pitt's Wall, which runs through Northumberland and Cumberland, beginning at Tinmouth, and ending at Solway Frith, being about eighty miles in length.

The Anglo-Normanic remains exhibit noble examples of gothic architecture; the Saxon antiquities consist of strong fortresses and ecclesiastical edifices; and the Danish are hardly discernible from them.

IRELAND.

Describing its Natural History, Geographical Survey of the Cities and Towns therein contained; also an Account of the Inhabitants, their Manners, Customs, Religion, Language, Laws, Government, Commerce, &c.

IRELAND is situated between the fifth and tenth degree of west longitude and the fifty-first and fifty-sixth degree north latitude, being bounded on the east by St. George's channel and the Irish sea, which separates it from England and Wales; on the north-east by a channel about fifteen miles broad, which separates it from Scotland; and on all other sides by the ocean. It is about two hundred and seventy-eight miles in length, and one hundred and fifty-five in breadth; its superficial contents are estimated at eleven million sixty-seven thousand seven hundred and twelve Irish, or seventeen million nine hundred and twenty-seven thousand eight hundred and sixty-four English acres: the number of houses were computed, in 1753, to be five hundred and ninety-five thousand four hundred and thirty-nine; there are also two thousand two hundred and ninety-three parishes, two hundred and sixty baronies, and one hundred and eighteen boroughs.

With respect to its natural history, this country differs very little from England. The air is, in general, clear and wholsome, but moist in those parts where there are bogs and fenny grounds; of these, however, few now remain; the greater part having within the present century, been drained, and the ground cultivated. The soil is for the most part very fruitful both in corn and grass, especially the latter; for which reason they breed a prodigious number of sheep and black cattle. The productions of the marshy parts are various. Some are covered with grass, some with reeds and rushes, and others with little shrubs interspersed with water. Some yield abundance of excellent turf; and others, called bed bogs, produce large firs and other trees.

There are in Ireland much the same animals and vegetables as in England; but they have a greater plenty of game, insomuch that hares, pheasants, &c. are sold in the public markets.

This country is well watered with rivers; among which the most remarkable are, the Shannon, Barrow, Neor, Suir, Bann, Lee, Liffy, and Boyne. The Shannon is a much larger river than any in England, but not navigable above fifty miles. It runs from north to south upwards of three hundred English miles, and, like the rest, abounds with excellent fish, particularly salmon and pike. Here are likewise a great number of lakes, or loughs, many of which also produce large quantities of fish; and the great lake, called Neagh, is remarkable for its petrifying quality. But the bays, harbours, and creeks, which every where indent the coast, form the chief glory of Ireland, and render the country the best fitted for foreign commerce beyond any other in Europe.

The principal riches and commodities of Ireland are cattle, hides, tallow, suet, butter, cheese, wood, salt, honey, wax, furs, hemp, and more especially fine linen cloth, which they have brought to great perfection, and their trade in it is vastly increased. They are also by a late act of parliament permitted to send their wool into England. It is said by some, there are mines of iron, silver, and lead: but if there are, they are not worked.

Here are several lofty chains, as well as single mountains, some of which contain in their bowels beds of ruins, minerals, coals, quarries of stone, slate, and marble. Some of the forests produce excellent timber, particularly oak, which is esteemed as good in every respect as any in England.

Geographers usually divide Ireland into four large provinces; namely, I. Ulster; II. Munster; III. Leinster; IV. Connaught.

The province of Ulster, the most northern of Ireland, is in some parts mountainous, but in general fertile and well watered: the principal rivers are, the Banne, Loughfoyle, Swilly, Newry-water, and Maine. It also abounds with large lakes, and the soil in general is fruitful in corn and grass, and there are

plenty of horſes, ſheep, and beeves. The waters yield abundance of excellent fiſh.

Ulſter contains the following counties; viz. 1. Donegal, which is in moſt parts very fertile, and the air clear and wholſome. The town of Donegal, which gives name to it, is a poor, mean place; and the only thing in the whole county, worthy of notice, is the ſalt-water lake, or rather arm of the ſea, called Lough Swilly, which extends eighteen miles in length, and is about five miles broad at its mouth: one thouſand ſail might ride in it with ſafety. There is no town or trade of any conſequence on its banks, but many villages and gentlemens' ſeats.

2. Londonderry, or Colerain, is alſo a tolerably fertile county, being well watered by the river Bann. It ſends eight members to parliament. *Londonderry*, or *Derry*, the capital and ſee of a biſhop, ſtands at the bottom of Lough-Foyle. It has a very good port, to which ſhips of the greateſt burden have acceſs, and a conſiderable trade. Great quantities of ſalmon, ſalted and barrelled, are exported from hence to foreign parts. This town is well fortified with a ſtrong wall, and along the banks of the river are ſeveral caſtles and a fort.

The town of Colerain is ſituated near the mouth of the river Bann. Here is a very valuable ſalmon-fiſhery, which principally belongs to the city of London. This town is handſome, and ſurrounded with a good wall.

3. Antrim conſiſts chiefly of bogs and marſhes; but the cultivated parts are tolerably fruitful.

The town of Belfaſt is the moſt conſiderable in all this part of Ireland, for extent, wealth, trade, and number of inhabitants. A great trade is carried on from hence to Scotland, particularly to Glaſgow. The harbour below the town is commodious, and has a good depth of water.

The town of Carrickfergus is populous, walled, and fortified, has an excellent harbour, and is defended by a caſtle on a high rock. Here the aſſizes and quarter ſeſſions are held both for the county and town.

One of the greateſt natural curioſities to be met with in Europe, is in this county. It is called the Giant's Cauſeway, and is ſituated by the ſea-ſide, about eight miles from Colerain: it is compoſed of pillars all of angular ſhapes, from three ſides to eight. The eaſtern point, which joins to a rock, terminates in a perpendicular cliff, formed by the upright ſides of the pillars, ſome of which are upwards of thirty-three feet in height. Each pillar conſiſts of ſeveral joints or ſtones, lying one upon another, from ſix inches to about a foot in thickneſs; and, what is very ſurpriſing, ſome of theſe joints are ſo convex, that their prominences are nearly quarters of ſpheres, round each of which is a ledge, which holds them together with the greateſt firmneſs, every ſtone being concave on the other ſide, and fitting, in the exacteſt manner, the convexity of the upper part of that beneath it. The pillars generally conſiſt of about forty joints, and are from one to two feet in diameter.

4. The county of Tyrone contains many mountains, which are very barren; but the vallies and low grounds are fruitful both in corn and paſture. Omagh is the principal town in this county: but it does not contain any thing worthy of particular deſcription.

5. The county of Fermanagh is one of the moſt unwholſome in this province, the greateſt part of it being taken up with bogs, and a large lake called Lough-Earne. Inniſkilling, the capital of the county, is ſituated on an iſland, and, being an important paſs, it is well fortified and garriſoned. It is chiefly remarkable for producing a regiment of its name in Ireland, in the war between king William III. and James II.

6. The county of Cavan is very boggy; notwithſtanding which, the air is far from being unhealthy. The town which gives name to it is very ſmall and inſignificant. But Kilmore, ſituated in this county, though a mean place, is a biſhop's ſee, and one of the richeſt in Ireland.

7. The county of Monaghan is very mountainous, woody, and marſhy; and the principal town, which gives name to it, does not contain any thing worthy of particular notice.

8. The county of Armagh is, in general, very fertile, the ſoil being eſteemed the richeſt in Ireland; only there is a certain hilly and barren track in it called the Fews.

The town of Armagh, which gives name to the county, is the ſee of the primate of all Ireland, and is ſaid to have been founded by St. Patrick in the fifth century. Here was antiently a famous monaſtery, built about the year 610 by St. Columba, or Columbanus.

The town of Charlemont, which received its name from a fort or mount built by Charles Blount, lord Mountjoy, is a ſmall neat place, ſituated on the river Blackwater.

Lugarn, the prettieſt town in the county, is pleaſantly ſituated on a gentle eminence, in a fertile and populous country, about two miles from, and commanding a proſpect of, Lough-Neagh, one of the largeſt lakes in the kingdom. This town hath for many years acquired the name of Little England, from the ſimilarity of its general figure, of the language, manners, and diſpoſitions of the inhabitants, to thoſe of the Engliſh.

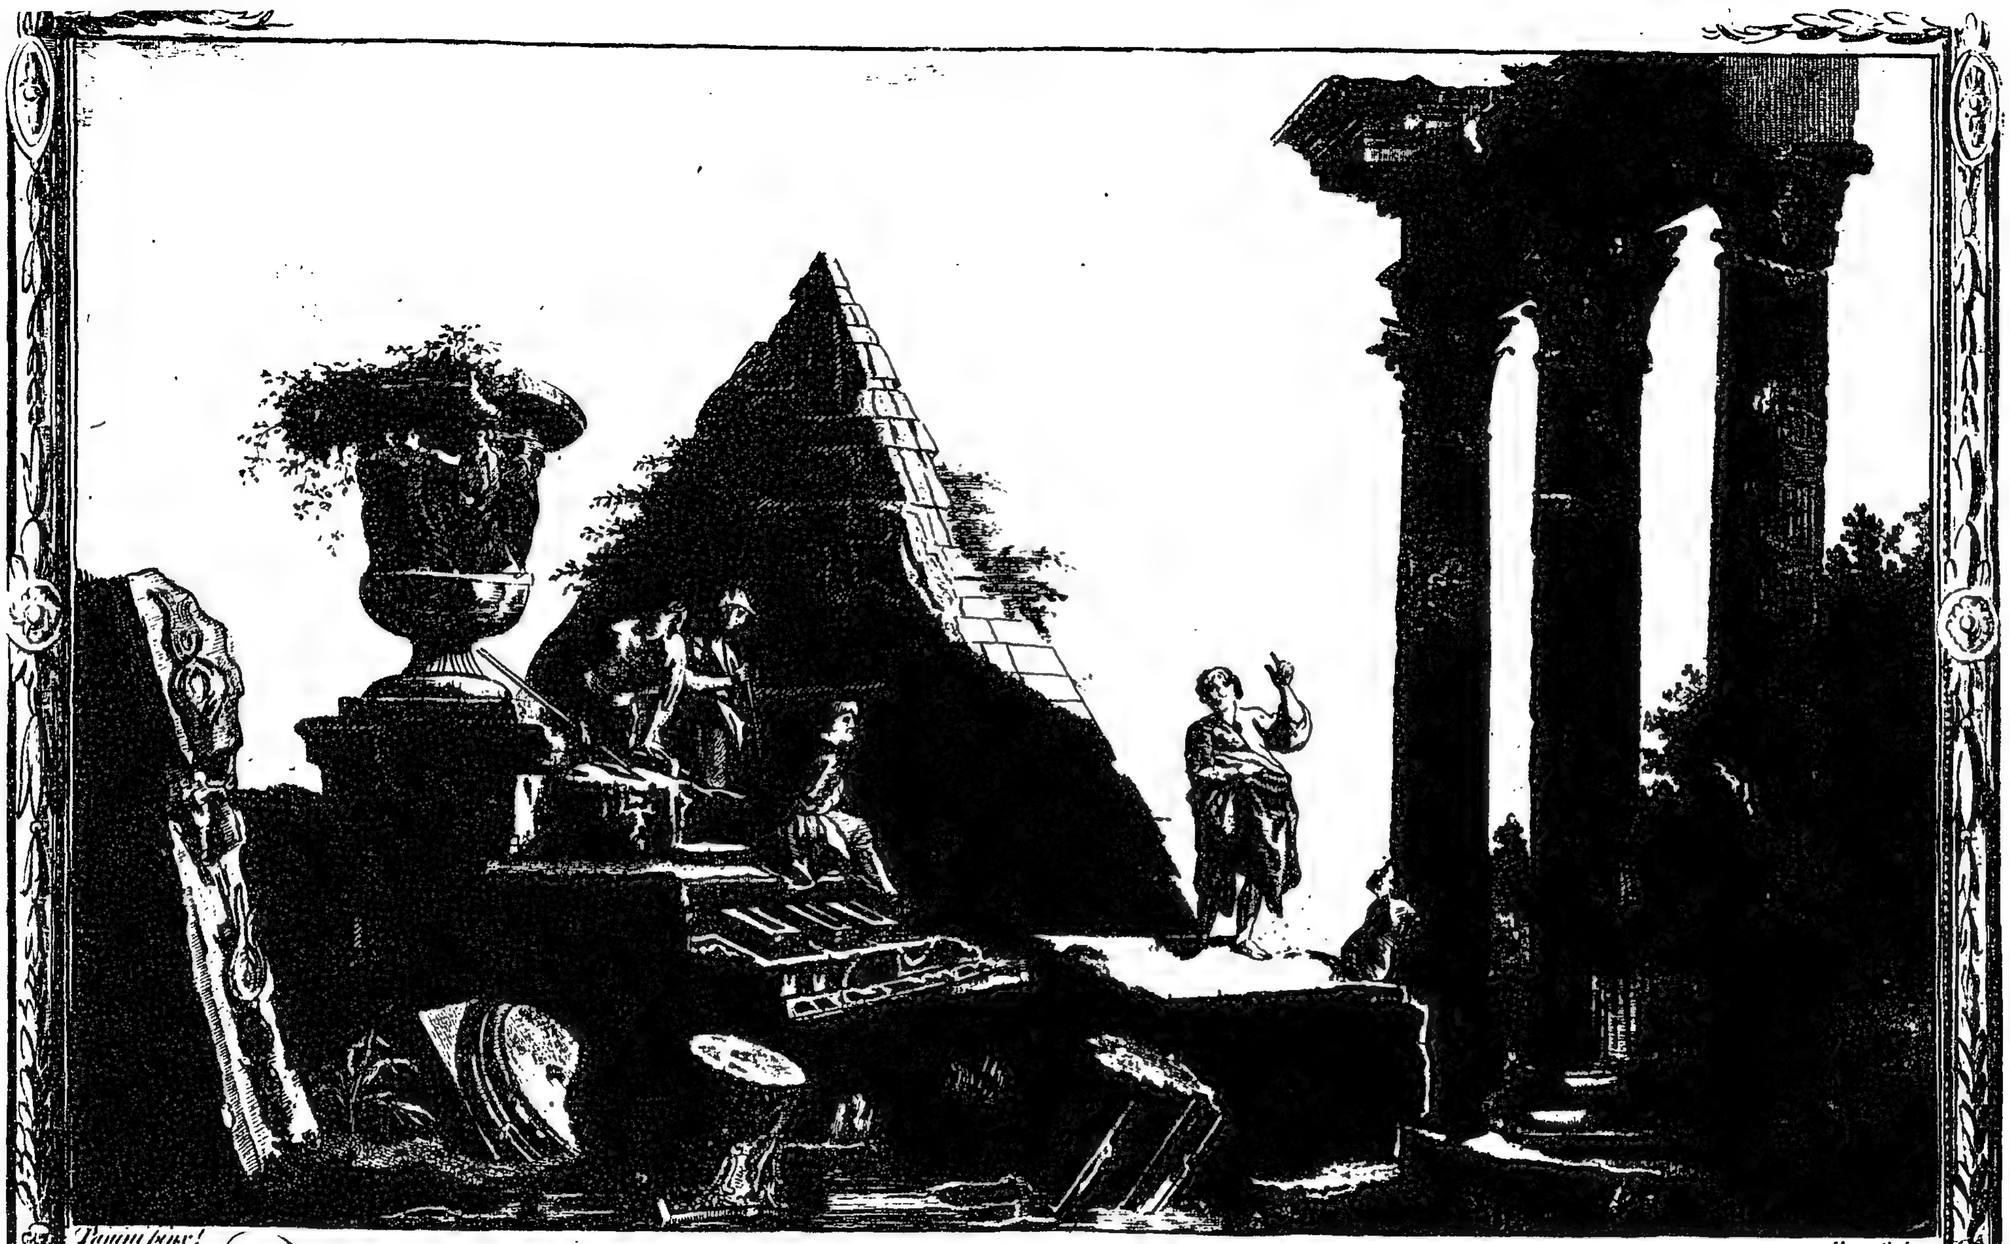
9. Down, the laſt county in this province, is very populous, has a good air, and is exceeding fertile.

The capital of this county is Down-Patrick, a biſhop's ſee, erected about the end of the fifth century by St. Patrick. Beſides the cathedral, here are ſeveral handſome brick buildings, as the church, the ſeſſions-houſe, two ſchools, a market-houſe, barracks for a troop of horſe, and two alms-houſes.

The town of Newry ſtands near a river of the ſame name, over which it has two bridges. A garriſon is conſtantly kept in this town, which is a great thoroughfare. Killcaleagh is a ſmall but neat town, and had the honour of giving birth to that celebrated naturaliſt and phyſician Sir Hans Sloane: here is a handſome church, a caſtle and barracks for a troop of dragoons. Bangor contains between two and three hundred houſes, and, like the before-mentioned town, has a conſiderable manufactory for linen yarn. The firſt church of ſtone, in the province of Ulſter, is ſaid to have been erected in this town. Here are ſtill the ruins of a very antient abbey.

The province of Leinſter is in general well cultivated, has a good air and ſoil, and abounds in corn, cattle, fiſh, and fowl. It is bounded on the eaſt by the Iriſh ſea, on the weſt by Connaught, from which it is ſeparated by the Shannon, on the north by Ulſter, and on the ſouth by the ocean. The chief rivers are the Barrow, Boyne, Liffy, Neur, Urrin or Slane, and Inny.

The following counties are contained in this province, viz.



1. The county of Dublin, or Develin, which, except a mountainous tract in the ſouth part of it, is very populous and fertile, and abounds with all the neceſſaries of life. It far exceeds any other part of the kingdom, not only in populouſneſs, culture, trade, and wealth, but in the politeneſs and ingenuity of its inhabitants. It ſends ten members to parliament.

The principal city Dublin, capital of the whole kingdom, is in magnitude and number of inhabitants the ſecond city in the Britiſh dominions. It is built in the form of a ſquare, about two miles and a half long, and nearly as much in breadth, and is ſuppoſed to contain one hundred and forty thouſand inhabitants. It is ſituated about ſeven miles from the ſea, at the bottom of a large and ſpacious bay, to which it gives name, upon the river Liffy, which divides it almoſt into two equal parts, and is banked in through the whole length of the city on both ſides, which form ſpacious quays for the convenience of loading and unloading veſſels. The increaſe of Dublin, within thirty years paſt, is incredible; and it is generally ſuppoſed that four thouſand houſes have been added to the city and ſuburbs ſince the reign of queen Anne.

Dublin, in appearance, bears a great reſemblance to London. The houſes are of brick, the old ſtreets are narrow and mean; but many of the new ſtreets are more elegant and better planned than thoſe of the metropolis of Great Britain. Sackville-ſtreet, otherwiſe called the Mall, is particularly noble. The houſes are elegant, lofty, and uniformly built, and a gravel walk runs through the whole, of an equal diſtance from the ſides. The river Liffy, though navigable for veſſels as far as the cuſtom-houſe, is but ſmall, when compared to the Thames at London. Over it are two handſome bridges of ſtone, and three others that have little to recommend them. The caſtle (as it is called, from one once ſituated there, of which at preſent there are very few remains) is the reſidence of the lord lieutenant, but has very little of grandeur in its external appearance, except the large ſquare and court yard which it incloſes. Some of the rooms, however, are large, and very elegantly furniſhed. Near the caſtle is the New Exchange, a magnificent building lately erected.

Trinity college is built of Portland ſtone in the fineſt taſte, and extends about three hundred feet. Near it is the parliament houſe, which is a very elegant and ſubſtantial edifice. The portico in particular is perhaps without parallel; the internal parts have alſo many beauties, and the manner in which the building is lighted has been much admired. But one of the greateſt and moſt laudable undertakings this age can boaſt of, is the building of a ſtone wall about the breadth of a moderate ſtreet, a proportionable height, and three miles in length, to ſhelter ſhips in ſtormy weather, and confine the channel of the bay. The fine ſquare, called Stevens Green, is very extenſive, being one mile in circumference.

In 1728 was opened the linen-hall, erected at the public expence for the reception of ſuch linen cloths as were brought to Dublin for ſale, for which there are convenient apartments. This national inſtitution is productive of great advantages, by preventing many frauds which otherwiſe would be committed in a capital branch of trade, by which many thouſands are employed, and the kingdom greatly enriched. It is entirely under the direction of the truſtees for the encouragement of the linen

The Remarkable **RUINS** *of the* **MOREA** *formerly called the* **PELOPONNESUS,**
in Africa, now Turky *in* Europe.

linen manufactory of Ireland, who are compoſed of the lord chancellor, the primate, the archbiſhop of Dublin, and the principal part of the nobility and gentry.

On an eminence, near the city, are the barracks, pleaſantly ſituated: they are ſaid to be the largeſt and moſt commodious of any in Europe, and conſiſt of four large courts, in which are generally quartered four battalions of foot, and one regiment of horſe; from hence the caſtle and city guards are relieved daily.

The park, called Phœnix Park, which belongs to his majeſty, commands a moſt delightful proſpect, is ſuperior to that of St. James's, being alſo much more extenſive.

This city contains eighteen pariſhes, eight chapels, three churches for French, and one for Dutch proteſtants, ſeven preſbyterian meeting-houſes, one for methodiſts, two for quakers, and ſixteen Roman Catholic chapels: the cathedral church, called St. Patrick's, lies in the ſouth ſuburb, and is very antient and handſome. Here is a ſociety, called the Dublin Society, which, by diſtributing premiums yearly, to a very conſiderable amount, for encouraging and promoting huſbandry, and other uſeful arts and manufactures, hath been of infinite benefit to the kingdom. Dublin, like the city of London, is governed by a lord mayor, &c. Hackney-coaches and chairs are fixed here by rates, as in London, for the different diſtances, or ſet-downs, as they are called.

The two theatres are the principal public amuſements in Dublin, which are generally well filled, and ſerve as a kind of nurſery to thoſe in London, under the king's patronage.

2. The county of Louth is the ſmalleſt in the whole kingdom, but it has a pleaſant and healthy air, and is very fruitful in corn and paſture. Drogheda, the chief town, is ſituated near the mouth of the Boyne, about twenty miles from Dublin. It is divided into two parts by the ſaid river, which has a plain but convenient bridge over it.

3. The county of Wicklow, which is very mountainous, has a very clear and wholſome air, and the low lands are well cultivated. Between the mountains are ſome of thoſe deep, dark vallies, called glyns, which are very beautiful and picturеſque; together with ſome grand and aſtoniſhing water-falls. The moſt remarkable among the latter is that called the Fall of Ponurſcourt, which, from the peculiarity of its ſituation, its prodigious height, and ſingular beauty, well deſerves the notice of a traveller. The water-falls are at leaſt three hundred feet, of which two hundred are viſible on the plain below it.

The principal town, Wicklow, is remarkable for producing the beſt ale in the kingdom. It has barracks for three companies of foot, and a kind of caſtle and haven at the mouth of the river Leitrim; but moſt of its trade conſiſts in carrying proviſions to Dublin in ſmall veſſels.

4. Wexford county is ſituated on the ſouth of Wicklow. The air is good, but the ſoil various. In ſome places it is coarſe and poor, but in others it produces plenty of corn and paſture. The capital town, Wexford, is both large and antient, being ſituated at the mouth of the Slane. Here is a very antient caſtle, a good harbour for veſſels of conſiderable burden, and barracks for two companies of foot.

5. The county of Longford is pleaſant, and in general tolerably fertile, but ſome parts of it are very boggy. The capital town is Longford, which has barracks for a troop of horſe, and a caſtle.

6. The county of Eaſt Meath is very fertile, abounding in corn, paſture, and herds of cattle. Antiently it had petty kings, by whom it was governed. Trim, the county town, is ſituated on the Boyne; but, except barracks for a troop of horſe, does not contain any thing remarkable.

7. The county of Weſt Meath contains a great many rivers, lakes, and bogs, but it is very fertile where the land is free from theſe. Mullinger, the chief town, is ſmall, but very compact, and contains barracks for a troop of horſe. Athlone is a tolerably good town, ſituated on the Shannon, and has a garriſon and caſtle.

8. King's County is not ſo rich as ſome of the other counties, nor ſo well inhabited: it was formerly full of bogs, but is now well drained and cultivated. Philip's Town, or King's Town, is the capital of the county: here are barracks for a company of foot, but nothing elſe that merits notice.

9. Queen's County, antiently full of bogs and woods, is now tolerably well incloſed, cultivated, and inhabited. Maryborough, or Queen's Town, the capital, received its name from queen Mary, wife of Philip king of Spain: it hath barracks for a company of foot ſoldiers.

10. The county of Kilkenny is one of the beſt and moſt populous in Ireland, abounds in towns and caſtles, and hath plenty of all things. It is divided, as it were, into two parts, by the river Neor, or Nura, which has its ſource from thoſe lofty mountains, called the Slieu-bloom, or Blandine-hills.

The capital town, Kilkenny, took its name from the cell or church of Conic, who was an eminent hermit in this county. It is the ſeat of a biſhop, and is divided into the Engliſh and Iriſh towns. The former is by far the moſt conſiderable, the other being only a kind of ſuburbs. Both together make one of the largeſt, moſt wealthy, populous, and trading towns in the kingdom. It is ſaid of Kilkenny, that its air is without fog; its water without mud, its fire without ſmoke, and its ſtreets paved with marble. The two latter are, indeed, matter of fact; for they have in the neighbourhood a kind of coal that burns from firſt to laſt without ſmoke, and pretty much reſembles the Welch coal. Moſt of the ſtreets are alſo actually paved with a very good ſort of black marble, of which they have large quarries near the town, which takes a fine poliſh, and is beautifully intermixed with white granite. Here are barracks for a troop of horſe, and four companies of foot, and a well endowed free ſchool, called the college.

11. The county of Kildare is ſituated to the ſouth of Eaſt Meath, and is in general very rich and fertile. Kildare, the capital, is the ſee of a biſhop, who has the precedence of all the Iriſh biſhops, except that of Meath. In the neighbourhood is a plain, called the Currough, large enough for ten thouſand men to encamp upon.

12. The county of Carlow is chiefly ſituated between the rivers Barrow and Slane. It enjoys a wholſome air, and produces good corn and graſs. Carlow, the chief town, ſtands on the Barrow, has an antient caſtle, and contains barracks for a troop of horſe.

The province of Munſter was formerly a petty kingdom of itſelf, before the Engliſh invaded and conquered Ireland. The air is temperate and healthful: the ſoil, plains, and vallies, where properly cultivated, are fruitful both in corn and graſs, but the mountains are bleak and barren. Great numbers of cattle are fed here, and it is well ſupplied with fiſh.

The counties contained in this province are as follow, viz.

1. Cork, the largeſt in the kingdom, containing near a million of acres: it contains ſeveral towns and harbours, and though a conſiderable part of it is boggy, mountainous, and barren, yet it is pretty well cultivated and improved.

The city of Cork is, next to the capital, the largeſt and moſt populous in the kingdom. It is encompaſſed not only by walls, but alſo by the channel of the river Lee, over which there are ſeveral bridges. Cork is an epiſcopal ſee, and a city of great trade, ſituated fifteen miles up the river. Though ſmaller veſſels can come up to the quay, yet the larger generally ride at a place called Paſſage. It has the moſt trade of any town in the kingdom, particularly in beef, butter, and tallow, great quantities of which are exported to foreign parts: and many ſhips bound to the Weſt Indies put in here to victual. It has many handſome public ſtructures, particularly a cathedral, cuſtom-houſe, and two gates, one on the north, and the other on the ſouth. Its churches are unexceptionably the neateſt and the moſt elegantly furniſhed of any in the kingdom. The city, together with its liberties, makes a county, and is governed by a mayor, aldermen and ſheriffs.

2. The county of Kerry is in general very mountainous, barren, and dreary, but the ſoil of ſome particular ſpots is fruitful, eſpecially in corn and paſture. Tralee, the county town, is ſituated on a bay of the ſame name, but doth not contain any thing very remarkable.

The lake of Killkarny, ſaid to be the moſt beautiful perhaps in the world, is the greateſt curioſity in this county. It is ſurrounded with one continual range of lofty mountains, rocks, and precipices, the immenſe declivities of which are covered with woods, intermixed with ever-greens, from nearly their top down to the verge of the lake. In the neighbourhood of the lake are the remains of an old abbey, which are well deſerving the notice of a traveller, and alſo a great many ſeats and villas.

3. The county of Limerick contains ſeveral lofty mountains, one of which, called Knockpatrick, affords a very fine proſpect of the adjacent country, the ſea and the Shannon.

The town of Limerick, whence the county takes its name, is the ſee of a biſhop, and a very ſtrong, handſome town. It ſtands upon the Shannon, which is navigable for ſhips of burden almoſt up to the city, though ſituated about ſixty miles from its mouth. Here is a fine cathedral, and barracks for twenty-two companies of foot. The city is divided into two parts, both of which are ſtrongly fortified with walls, caſtles, baſtions, and bulwarks, with draw-bridges upon the river.

4. The county of Tipperary is in general very fertile, but the northern part of it is mountainous, and the air bleak and unwholſome. Clonmell, the capital, is ſituated on the banks of the Suir. The town is walled, neat, and populous; has a ſtrong gaol, and a court-houſe. Here are barracks for two troops of horſe, and a good market.

5. The

5. The county of Waterford is chiefly level, notwithſtanding which a great part of it is barren, and the air unwholſome and thick.

Waterford, the county town, was firſt built by certain pirates of Norway, and has been a biſhop's ſee ever ſince the year 1096. Till eclipſed by Cork, it was accounted the ſecond city in the kingdom for trade, wealth, and populouſneſs, being ſituated on a fine harbour, defended on the eaſt ſide by Duncannon fort. Here is a fine cathedral, but the houſes are in general built of timber, and make but a mean appearance. The haven extends near eight miles almoſt in a ſtraight line, and is but little encumbered with rocks or ſand. There is a citadel on the weſt ſide, and on the eaſt a block-houſe and ſtore-houſe. The city carries on a great trade, particularly with England; and ſhips of burden come up cloſe to its quay. The city and its liberties make a diſtinct county.

The province of Connaught is the moſt mountainous of the four into which Ireland is divided. It is the leaſt cultivated and incloſed, the thinneſt of inhabitants, and thoſe the moſt ignorant and unpoliſhed. Grazing is the chief employment of the peaſants. Immenſe numbers of ſheep and bullocks are bred here, particularly in the counties of Clare and Galway. It alſo abounds in horſes, game, veniſon, honey, and hawks, and is well ſupplied with fiſh, having many convenient bays and creeks on the coaſt, and ſeveral rivers, particularly the Shannon, Moy, Suck, Droſos, and Gyll. In this province are the following counties, viz.

1. The county of Galway, which, next to Cork, is the largeſt in the whole kingdom, and in general has in it plenty of cattle, and is very fertile in corn and paſture.

Galway, the city from which the county is named, ſtands on a noble bay, having many harbours and roads on every ſide. It is a very neat, ſtrong, and flouriſhing city; and is admirably ſituated for a trade not only to France and Spain, but alſo to the Weſt Indies. The buildings, both public and private, are moſtly of ſtone, and handſome. The city is walled, and was once the ſee of a biſhop, but is now within the archbiſhopric of Tuam. It carries on a very conſiderable herring-fiſhery, and is almoſt the only place upon this coaſt that has any foreign trade. The harbour is about two miles from the city, to which the goods are brought in lighters. Here are barracks for two companies of foot.

The town of Tuam was once a famous city, has been the ſee of an archbiſhop ever ſince the beginning of the ſixth century, but is now a conſiderable place.

2. The county of Clare has a good air and ſoil, but contains very few towns; the moſt remarkable is Clare, ſo called from Richard and Thomas de Clare, younger ſons of the earl of Glouceſter, to whom Edward I. gave the county. Barracks for two companies of foot are erected here.

The principal and beſt town in the county is Ennis, ſituated about two miles from Dublin. It ſtands on a lake formed by the Shannon, has a good market, and is a neat place.

The town of Killalo, a biſhop's ſee, with the privilege of a fair and market, ſtands on the Shannon, and was once much more conſiderable than at preſent. The dioceſe is very large, containing one hundred pariſh-churches, beſides chapels. A little to the ſouth of this town is a ridge of rocks, which run quite acroſs the river Shannon, and ſtop up all farther navigation to it.

3. The county of Sligo is very mountainous; and in the plains and valleys the air is unwholſome, owing to their being full of bogs. The ſoil, where it is free from lakes and fens, is tolerably good, and fit either for grazing or tillage. Sligo, the capital, ſtands on a bay, to which it gives name, as well as the county. Though not large, it is pretty populous, and has an old caſtle; but its trade is inconſiderable, notwithſtanding its harbour is ſo deep, that ſhips of two hundred tons burden can come up to the quay.

4. The county of Mayo abounds in lakes, and is incloſed on one ſide by the ſea. The air is moiſt and cold, eſpecially upon the mountains, where the ſoil is alſo poor and coarſe, but there is good paſturage, with herds of cattle and deer, in the other parts.

In this county are ſeveral lakes and rivers abounding with fiſh: that of Lough-Maſk, a lake eleven miles long, and five broad, affords plenty of ſalmon. The Gallo glaſſes, a people deſcended from the Scotch of the weſtern iſles, who uſed to fight in coats of mail with two-edged battle-axes, formerly lived on the banks of this lake.

The town of Mayo, capital of this county, ſtands on the borders of Sligo, at the mouth of the river Moy. It was once a biſhop's ſee; but the biſhopric hath been ſome time annexed to Tuam. Caſtlebar, the only parliamentary borough in the county, ſtands on a little river which falls into Lough-Conn: here are barracks for a troop of horſe.

5. The county of Roſcommon is in general very healthy. The air is clear, and the ſoil yields plenty of graſs, with ſome corn. It is incloſed, on the north, by the Carlow mountains, which are very ſteep and high. Roſcommon, the county town, is a very inconſiderable place. Ballina Sloe, a ſmall town in this county, is remarkable for having the largeſt beaſt or ſtock fair in the king's dominions. It continues each time a week, and is kept twice a year.

6. The county of Leitrim is very mountainous, but noted for grazing vaſt herds of cattle. The town, which gives name to the county, is ſituated near the Shannon. It was formerly a tolerable good town, but is now greatly decayed, and contains nothing remarkable.

The following table will exhibit, at one view, the names of the reſpective counties, their length, breadth, chief towns, and the members they ſend to Parliament.

Provinces	Counties.	Leng.	Bread.	Chief Towns.	Memb. Parl.
Ulſter.	Donegal	64	35	Donegal	12
	Londonderry	36	30	Londonderry	8

	Roſcommon	35	28	Roſcommon	8
	Leitrim	44	18	Leitrim	6

With reſpect to the inhabitants of Ireland, they are a medley of the antient (or wild) Iriſh, and of Scotch and Engliſh emigrants. The common people are very ignorant and uncivilized, particularly thoſe who inhabit the province of Connaught. The greateſt part of them are papiſts; and hence they have a ſettled averſion to Engliſhmen, and even to their own countrymen of a different perſuaſion. To this alſo may be attributed thoſe acts of ſavage cruelty ſo frequent in this country, as well as the irregularities attending their public meetings, which generally end in bloodſhed. Many of their ſurnames have an O or Mac prefixed to them, which ſignify grandſon and ſon: formerly the O was uſed by their chiefs only, or ſuch as piqued themſelves upon the antiquity of their families. Their muſic is the bagpipe, but their tunes are generally in a melancholy ſtrain. In the interior parts of the kingdom, ſome of their old cuſtoms ſtill prevail, particularly their funeral howlings. The inferior ſort place the corpſe of a relation or friend on a table before their doors, having a plate on the body to excite the charity of paſſengers, and this cuſtom is practiſed even in the ſkirts of the capital.

They pay little regard to the ſabbath, the principal part of the day being conſigned to amuſements; and in the evening they aſſemble at public-houſes, when they dance to the bagpipe, which generally terminates in riot and debauchery. Their manner of living ſeems to reſemble that of the antient Britons as deſcribed by Roman authors, or the preſent Indian inhabitants of America. Mean huts or cabins built of clay and ſtraw, partitioned in the middle by a wall of the ſame materials, ſerve the double purpoſes of accommodating the family, who live and ſleep promiſcuouſly, having their fires of turf in the middle of the floor, with an opening through the roof for a chimney; the other being occupied by a cow, or ſuch pieces of furniture as are not in immediate uſe. Their children ſcarcely know the uſe of cloaths; and are not aſhamed to gaze upon ſtrangers, or make their appearance upon the roads in that primitive manner. Their wealth conſiſts of a cow, ſometimes a horſe, ſome poultry, and a ſpot for potatoes. Coarſe bread, potatoes, eggs, milk, and ſometimes fiſh, conſtitute their food: for how plentifully ſoever

ſoever the fields may be ſtocked with cattle, they ſeldom taſte butcher's meat of any kind.

Perſons of condition in general differ little in language, dreſs, manners, and cuſtoms, from thoſe of the ſame rank in Great Britain, whom they imitate. They are generally repreſented as being very hoſpitable, but are ſometimes ſuſpected of more oſtentation than real friendſhip reſpecting this virtue. They are ſo fond of titles, that their peerage has become a burleſque upon nobility, many of that order amongſt them having neither antiquity, merit, nor fortune to recommend them to ſuperior notice; and, beſides other bad conſequences, it is to be feared that theſe coronets muſt be ſupported at the expence of their unhappy tenants, and of manufactures, which conſequently will riſe in proportion as neceſſaries advance in price.

The Iriſh language is fundamentally the ſame with the Britiſh or Welſh, and a dialect of the Celtic, which is made uſe of by the Scotch highlanders oppoſite the Iriſh coaſts. It is, however, in a great meaſure defaced by provincial alterations, but not ſo altered as to render the Iriſh, Welſh, and Highlanders unintelligible to each other. The native language is only ſpoken by the peaſants and lower ſort of people, who are remarkable for their frequent blunders in ſpeaking it.

The eſtabliſhed religion in Ireland is the ſame as in England. The church is under the government of four archbiſhops, namely, the archbiſhop of Armagh, who has the title of primate of all Ireland; the archbiſhop of Dublin, who is ſtiled primate of Ireland; and thoſe of Caſhel and Tuam. Under theſe four archbiſhops are nineteen biſhops.

Diſſenters of all denominations are tolerated in Ireland, particularly Preſbyterians, Independents, Baptiſts, Quakers, and Methodiſts. But the far more numerous bodies are the Papiſts, who have their biſhops, and other dignitaries like the eſtabliſhed church; but neither they, nor the inferior clergy of that communion, have any other revenues than the voluntary contributions of the laity. It is ſuppoſed that throughout Ireland there are about eight Papiſts to one Proteſtant; but in the capital the diſproportion is only as four to one.

For the promotion of learning in Ireland, there is one univerſity, and ſeveral free-ſchools erected for the education of youth; and for promoting the principles of real Chriſtianity among the poor popiſh natives of Ireland, and inuring them from infancy to induſtry, and obedience to their ſovereign, is inſtituted the incorporated ſociety for promoting Engliſh Proteſtant working ſchools. This inſtitution bids the faireſt for leſſening the number of Papiſts, and conſequently of increaſing induſtrious and loyal ſubjects.

Ireland being ſubordinate to England, the government is much the ſame. The king ſends a viceroy, who is ſtiled lord lieutenant; and who comes as near the grandeur and dignity of a king as any viceroy in Chriſtendom. To aſſiſt him on all occaſions, he has a privy-council, compoſed of the officers of ſtate, and ſuch others as his majeſty is pleaſed to appoint. The parliament is convened, prorogued, and diſſolved, at the pleaſure of the king. During former reigns, the ſame parliament continued till the death of the king; but by a late act, a new one is to be choſen every eight years. The laws made by the parliament here are ſent to England for the royal approbation; when they paſs the Great Seal of England, and are returned, if approved of by his majeſty and council.

The preſent revenue of Ireland is ſuppoſed to be ſomething more than half a million ſterling, out of which ſeventy thouſand pounds is granted in penſions. Their lands are not incumbered with heavy taxes, nor are their exports or imports ſubject to high duties; and every article of conſumption is to be procured upon the moſt eaſy terms.

The courts of juſtice, their terms and manner of proceeding, aſſizes, juſtices of the peace, &c. and almoſt all the ſeveral orders and degrees of the people and nobility, are much the ſame here as in England.

The chief articles exported from Ireland conſiſt of linen cloth, yarn, lawn, and cambrics, which are encouraged by the Engliſh government. Wool and bay-yarn are allowed to be exported to England only, but great quantities of both are ſmuggled into other countries. The other exports are, horſes and black cattle, beef, pork, green hides, ſome tanned leather, calf ſkins dried, tallow, butter, candles, cheeſe, ox and cow-horns, ox hair, horſe hair, herrings, dried fiſh, rabbet ſkins, otter ſkins, goat ſkins, &c. The principal arricles of their importation are, wine, brandy, tobacco, ſpices, hops, coals, copper, block tin, lead, mercury, grocery, haberdaſhery goods, and Weſt-India commodities.

The Iriſh having no mint, the coins uſed by them are the ſame with thoſe of England, but they differ in their denomination, an Engliſh ſhilling paſſing for thirteen pence, a guinea for one pound two ſhillings and ninepence, and ſo in proportion for the other coin.

The hiſtory of Ireland is involved in fable before the Saxon kings of England began to invade that coaſt; and very few memorable events are recorded for many centuries afterward. About the concluſion of the eighth century the Danes and Normans, or as they were called, the Eaſterlings, made frequent deſcents, and at length began to erect places of defence, in order to preſerve a footing on the iſland. By them Dublin, Waterford, Wexford, Limeric and Cork, were built. Still the internal ſtate of the kingdom can only be obſcurely known. It ſeems, however, that ſeveral petty princes ſhared the country. Henry II. of England began to meditate the conqueſt of Ireland about 1168, to effect which, he inſtigated Strongbow earl of Pembroke, with ſome other lords, to eſpouſe the cauſe of Dermot M'Murrough, king of Leinſter, whoſe oppreſſive tyranny had cauſed him to be driven from his country, and who interceded with Henry, then in France, for his aſſiſtance towards re-eſtabliſhing himſelf in his kingdom. Theſe lords cauſed the Danes to evacuate Ireland, who had eſtabliſhed themſelves on the ſouth-eaſt coaſt, and proceeded to make themſelves formidable to the natives, which excited the jealouſy of king Henry, who was not ſatisfied until the Engliſh lords had ſworn fealty to him and his heirs, and reſigned into his hands all the Iriſh cities and forts which they had ſubdued. In 1172 Henry in perſon paſſed over to Ireland with a formidable power, which ſoon procured him to be acknowledged lord paramount of Ireland. He proceeded to ſettle a civil adminiſtration at Dublin which conformed very nearly to that of England. He likewiſe very liberally rewarded his Engliſh nobility with eſtates in Ireland, and eſtabliſhed a trading colony, from Briſtol, in the city of Dublin. Ever ſince his reign Ireland has continued an appendage to the crown of England, although its loyalty has been more or leſs firm under different princes.

MINOR ISLANDS.

Containing a Geographical Deſcription of thoſe Iſlands belonging to the Kingdom of GREAT BRITAIN; their Situation, Extent, Natural Hiſtory, Inhabitants, &c.

THE iſle of Angleſea, is the moſt weſtern county of North Britain. It is twenty-four miles long, fourteen broad, and ſends one member to parliament. The river Merſi ſeparates it from Carnarvonſhire, and it is ſurrounded by the ſea on every ſide. It abounds in corn, cattle, fowls, fiſh, &c. produces mill-ſtones, grind-ſtones, aſbeſtos or mountain flax, copper ore, ſtony oker, white clay, &c.

This iſland contains, 1. Beaumaris, two hundred and forty-two miles from London; a handſome, well-built town, on the eaſt ſide of the iſland, has a good harbour for ſhips, a very handſome church, with ſome fine monuments of the Bulkeley's family, and the knights-templars: it was formerly defended by a ſtrong caſtle built by Edward I. the ruins of which are ſtill to be ſeen.

The town of Holy-head, twenty-eight miles from Beaumaris, and two hundred and forty-four from London, is the ſtation for the packet-boat to Ireland, being the neareſt land to Dublin. It is the moſt weſtern point of Angleſea, but is a little iſland of itſelf, and has a ſmall village, called in Welſh Caer Gybi, conſiſting of a heap of ſtraggling houſes built on rocks, but ſeveral of them have very comfortable accommodations for paſſengers, both with regard to lodging and diet. The church was formerly collegiate, and founded by one Keeius, a hermit, about the year 650. The walls of the church are the remains of a Britiſh fortification, built by Caſwallon Lawhire, lord of Angleſea, about the year 450.

Wight, though an iſland ſituated near ſix miles from the main land, is nevertheleſs reckoned a part of Hampſhire. It is twenty-two miles long, twelve broad, and is divided into thirty pariſhes. The air is pure and healthful; and the ſoil ſo rich, as to produce corn enough in one year to ſerve it ſeven. A ridge of lofty hills runs through the middle of the iſland, which not only afford plentiful paſture, but a delightful proſpect of the ſea. The vales below conſiſt of meadow and corn fields; nor is the coaſt deſtitute of natural curioſities; here are excellent fiſh of various kinds. The extremities of the coaſt on the ſouth and weſt ſides are very rocky; and weſtward, not far from the ſhore, are thoſe rocks called the Needles, from their ſharpneſs. Farther to the ſouthward are the Shingles: at both which places the iſland is inacceſſible; and it is fortified by art towards the ſouth-eaſt, where it is almoſt level.

The town of Newport, the principal in the iſland, is a very antient borough, and a large populous place, greatly enriched by its plenty and commerce. Cowes river is navigable by barges to Newport quay, which extends itſelf round great part of the town, and renders their ſhipping goods from the ſtore-houſes very commodious; the ſtreets are regular and uniform,

meeting at right angles. The corn, beaſt, and butter markets are kept in diſtinct ſquares, very large and commodious. The buildings are greatly improved, but neither grand nor regular. The church is a large building, with a ſquare tower; and the inhabitants have lately erected an organ, and otherwiſe greatly decorated it: yet this church is but a chapel of eaſe to Cariſbrook, a ſmall village about a mile from Newport, and famous for a caſtle, built about the time of the Norman conqueſt, which was the reſidence of the antient lords of the iſland: king Charles I. was confined here, until removed to Hurſt caſtle. Cowes, a remarkable port and harbour, is at the mouth of Newport river: here is a caſtle built by Henry VIII. and alſo a fine ſaltern. St. Helena lies at the eaſt end of the iſland, twelve miles from Newport. It is only remarkable for its road, which is large enough to contain the whole Britiſh navy.

The town of Peel, ſituated on the weſtern coaſt, is a place of conſiderable trade. Upon a ſmall iſland cloſe to the town is Peel caſtle, one of the ſtrongeſt in the world, and has a garriſon in it. The iſland on which it ſtands is a ſtupendous rock, inacceſſible from all quarters but that of the town, from which it is ſeparated by a narrow ſtreight, fordable in low tides. Within one of the churches is a chapel appropriated to the uſe of the biſhop; and underneath the chapel is a dungeon or priſon for offenders, one of the moſt dreadful places of confinement imaginable. The magnificence of the caſtle itſelf is ſaid to exceed that of any modern ſtructure in the world; the largeneſs and loftineſs of the rooms, the fine echoes reſounding through them, the many winding galleries; the proſpect of the ſea and ſhips, which, by reaſon of the vaſt height, appearing like buoys floating on the waves, affect the mind of the ſpectator with equal aſtoniſhment and pleaſure.

The Iſle of Man, though held by the Britiſh crown, was, till of late, no part of the kingdom of Great Britain; but was governed by its own laws and cuſtoms under the hereditary dominion of a lord, who formerly had the title of king, and who, though he long ago waved that title, was to the laſt inveſted with regal rights and prerogatives. But in the year 1765, for the further and more effectually preventing the miſchiefs ariſing to the revenue and commerce of Great Britain and Ireland, from the illicit and clandeſtine trade carried on to and from the Iſle of Man, it was thought expedient to veſt in the crown all rights, juriſdictions, and intereſts in and over the ſaid iſland, and all its dependencies holden by the proprietors the duke and dutcheſs of Athol; who then ſurrendered the ſame, excepting only their landed property, and the patronage of the biſhopric of Sodor and Man, the temporalities of the ſame when vacant, and all patronages and eccleſiaſtical benefices. Upon this annexation of the iſland, the ſum of ſeventy thouſand pounds was paid as full compenſation to the proprietors, according to their own propoſals to the commiſſioners of the treaſury. The inducement for giving ſo large a ſum was, probably, the clear revenue of the iſle for ten years, from 1754 to 1763, which, having been laid before parliament, appeared, at the medium, to be ſeven thouſand two hundred and ninety-three pounds and ſixpence halfpenny per annum. The contract was accordingly executed by both parties, under the authority of parliament, April 19, 1765.

The Weſtern Iſles, or Hebrides, are ſcattered in the Deucaledonian ſea, to the north-weſt of Scotland, of which kingdom they conſtitute a part. They are ſituated between the fifty-fifth and fifty-ninth degree north latitude, are computed to exceed three hundred in number, and contain about forty-eight thouſand inhabitants. No country abounds more with the neceſſaries of life, and at leſs labour or charge, than the Hebrides. They have fleſh and fiſh in prodigious plenty. Their cattle of all ſorts, as cows, ſheep, hogs, and goats, are exceeding numerous and prolific, ſmall indeed, (as are their horſes) but of a delicious taſte: ſo are their deer, which freely range in herds on their mountains. No place can compare with them for tame and wild fowl, there being of the latter no where in the world a greater diverſity, many ſorts of them extremely beautiful, and rare, or utterly unknown elſewhere. The like may be ſaid of the various amphibious animals. Numberleſs are their fountains and ſprings, rivers, rivulets, and lakes, very wholſome in their waters, and ſuperabounding with fiſh, eſpecially trout and ſalmon; and no ſeas in Europe are better ſtored, not only with herrings, but all other kinds of fiſh, from the ſhrimp to the whale. No harbours or bays are ſuperior to theirs, either for number or conveniency: add to this, their variety of excellent roots and plants, particularly thoſe of marine growth, all of them ſerving for food or phyſic. Their paſtures are ſo kindly, that they might live on milk alone, with that inconceivable quantity of eggs which they yearly gather off the deſart rocks and iſlets. Bread is plentiful enough among them, and the ground is generally allowed to be much richer than on the Scottiſh continent; ſome parts of which are often ſupplied with corn from hence. The inhabitants are of the ſame race with thoſe who live in the Highlands of Scotland, ſpeak the ſame language, wear the ſame dreſs, and obſerve the ſame cuſtoms; with this difference, that they are more ſimple, induſtrious, and ſincere, than their neighbours of the main land. They are in general ſtrong, vigorous, and healthy, their conſtitution being ſteeled by labour, and preſerved by temperance in their diet.

The Highlanders of ſuperior condition live like their neighbours; but the common people are wretchedly lodged in paltry cottages or cabins built of looſe ſtones or mud, and thatched with ſtraw; their partitions are no other than a kind of hurdle, plaſtered with clay; they have neither glaſs in their windows, nor any other chimney than a hole in the middle of the roof, through which the ſmoke finds its way. Theſe people are utter ſtrangers to cleanlineſs; they are extremely ſluttiſh in their houſes, and naſty in their perſons: and this impurity is, in all likelihood, one great cauſe of that inveterate itch which infects the greateſt part of them.

St. Kilda, one of the Hebrides, is only five miles in circumference, and ſituated in fifty-eight degrees of north latitude. The whole iſland is one hard rock, divided into four high mountains, thinly covered with black mould, except on the tops, where the ſoil is three feet deep. The hills are cloathed with ſhort graſs, which yields good paſturage to the horſes, cattle, and ſheep; and their vallies of arable land produce large crops of excellent barley. St. Kilda is one of the ſtrongeſt natural fortreſſes in the known world, being inacceſſible in every place but at that rock, which might be defended againſt any force by looſe ſtones hurled from the impending mountain of Oterveaul. On the weſt ſide of the iſland there is a ſmall bay, in which ſome veſſels take ſhelter when the wind is at ſouth, or blows from the north-eaſt: but the ſea is generally ſo impetuous all round, that it frequently removes fragments of rocks and ſtones of a prodigious weight.

Here are great numbers of ſea fowl, which may be diſtinguiſhed into ſeveral different ſpecies: among which are the guer fowl, and the ſolan gooſe.

The people of this iſland, amounting to about two hundred ſouls, are originally deſcended from the inhabitants of the Haines and the adjacent iſles: like theſe they ſpeak the Erſe language in great purity, and have for ſome time been proteſtants of the church of Scotland, from whence a miniſter is ſent to them. They live together in a ſmall village, ſituated in a bottom among hills, and compoſed of low wretched cottages, the thatch and roof being ſecured by ſtraw ropes, with ſtones hanging at the end of them. The number of ſheep on this and the neighbouring iſlands may amount to two thouſand; and their cows, which are very ſmall, do not exceed one hundred. All the animals on the main land, including dogs, cats, and even wild fowl, are ſpotted.

The arable land of this iſland is divided into ten equal parts, and theſe again are ſubdivided, according to the number of families. They manure the land with a compoſt of turf-aſhes, mixed with ſtraw and urine; and add to this the bones and entrails of the ſea fowl. They plow with a ſmall crooked inſtrument; ſow their barley very thick; and reap an harveſt twenty-fold. The ſea-coaſt furniſhes them with plenty of cod, ling, mackarel, turbot, herring, and all the other ſpecies of fiſh common to the ſea; here are likewiſe otters and ſeals: but their chief dependence for food and gain, is upon the ſea-fowl, which they catch many different ways; but their employment ſubjects them to the moſt imminent dangers; for they are obliged to climb rocks, the very ſight of which fills with horror the mind of a ſtranger.

Lewis, or Long iſland, is ſixty miles to the weſtward of St. Kilda: it extends one hundred miles in length from north to ſouth, and from thirteen to fourteen in breadth, conſiſting of a great number of iſles and rocks, and parted by the ſea into two diviſions, called Lewis and Harries; the former of which lies weſtward of the latter.

Harries is an iſland ſeparated by a channel from Lewis: it extends about twenty-four miles in length, and in ſome places about ſix miles in breadth. The air and climate are the ſame with thoſe of Lewis: the face of the ground is rocky and mountainous, covered with graſs and heath: on the weſt ſide, however, the land is more flat and arable, producing naturally abundance of clover and daiſy, which in the ſummer perfume the air with an agreeable fragrance. There are divers freſh water lakes in this iſland, abounding with trout, eels, and ſalmon. The ſoil is in general dry and ſandy; but when manured with ſea-ware, yields very great harveſts of oats, rye, and barley.

The iſle of Sky may be ranked among the largeſt iſlands of the Hebrides: it was ſo called from Skianach, which, in the Erſe dialect, ſignifies winged, becauſe the two promontories of Valerneſs and Trotterneſs, by which it is bounded on the north-weſt and north-eaſt, are ſuppoſed to reſemble wings. The iſland lies between the ſhire of Roſs and the weſtern part

of Lewis, extending forty miles in length from north to ſouth; in ſome places twenty, and in others thirty in breadth, the circumference of the whole amounting to about one hundred. This iſland is alſo compoſed of many different iſlands and rocks; and is divided between proprietors; the ſouthern part belongs to the laird Macleod, ſaid to be lineally deſcended from Leod, ſon to the black prince of Man: the northern diſtrict, or barony of Trotterneſs, is the property of a Macdonald, whoſe anceſtor was Donald, king or lord of the iſles, and chief of the numerous clan of Macdonalds, who are counted the moſt warlike of all the Highlanders. Sky is part of the ſhire of Javerneſs, and formerly belonged to the dioceſe of the iſles: on the ſouth, it is parted from the main land by a channel three leagues in breadth, though at the ferry of Glenelly it is ſo narrow, that a man may be heard calling for the boat, from one ſide to the other. This iſland is well provided with a variety of excellent bays and harbours, and is ſurrounded by inferior iſles, among which are Soa-Brettil, Oronſa, Pabbay, Scalpa, Surah, Gigay, Iſlay and Bute.

But the moſt celebrated of all the weſtern iſlands, is Jona, likewiſe called St. Columb-hill, from St. Columba, who came hither from Ireland, and lies buried here. The iſland ſtretches two miles in length, from ſouth to north, in the neighbourhood of Mull, and is about a mile broad from eaſt to weſt. One end of it is rocky and barren: the other plain, arable, and fruitful.

In the Caledonian ſea lie the Orcades, or Orkney iſles, which are about thirty in number, but not all inhabited, the greateſt part being ſmall holms that produce nothing but paſturage for ſheep and goats. They are ſituated eighteen leagues from Scotland, between the fifty-eighth and ſixtieth degree of latitude, and in longitude from London between one degree thirty minutes and two degrees fifty minutes, and are divided on the ſouth from Caithneſs, the moſt northern point of Scotland, by the Pentland or Pictland Frith, from twelve to ſixteen miles in breadth. The principal of them are known by the denominations of South Ronaldſha, Swinna, Hoy, Burra, Lambholm, Flotta, Faira, Cava, Gramſey, Mainland, Copinſha, Stupenſha, Damſey, Inhallo, Stronſa, Papa-ſtronſa, Sanda, north Ronaldſha, Eda, Rouſa, Wyre, Garſa, Egleſh, north Faira, Weſtra, Papa-Weſtra.

The chief of the Shetland iſlands are, Mainland, Bruſſa, the Skerries, Burray, Whalſey, Vuſt, Yell, Feſſar, &c.

Mainland, extending ſixty miles in length, and twenty in breadth, is indented by a great number of bays, and abounds with moſſes, bogs, and mountains, ſo that it is more adapted for paſturage than corn: nevertheleſs the low grounds near the ſhore produce oats and barley. On the eaſt ſide of the iſland ſtands Lerwick, the principal town, conſiſting of about three hundred families. Towards the weſt is ſituated Scalloway, which, though very ſmall, is the ſeat of judicature; and here likewiſe the preſbytery of Scotland aſſemble. The iſland of Braſſa, ſituated on the eaſtward of Mainland, is about five miles long, and two in breadth; has ſome arable ground, and two churches; but is chiefly remarkable for its ſound, in which the great herring-fiſhery is carried on. The landlords here are conſiderable gainers, by letting out their ground and houſes to the Dutch and Hamburghers. The Skerries, Burray, Whalſey, and Vuſt, are inconſiderable iſlands, the largeſt and laſt not exceeding eight miles in length: but all of them are provided with churches, and in Vuſt there are three good harbours.

Yell is ſixteen miles in length, is indented like the figure of 8, has three churches, and ſeveral chapels, but the country is mooriſh and barren.

Feſſar, or Fetlor, five miles in length, is remarkable only for the ruins of ſome watch-towers which the natives call Picts houſes: they are from twenty to thirty feet high, twelve broad, and tapering to the top. The natural hiſtory of theſe iſlands, with the character, cuſtoms, &c. reſembling thoſe of the Orcades and Hebrides already deſcribed, it is unneceſſary to repeat them here.

The iſlands in the Britiſh channel, ſituated near the French coaſt, are Jerſey, Guernſey, Alderney, and Sark.

The iſland of Jerſey, known to the antient Romans, is ſituated eighteen miles weſt of Normandy. The north ſide is inacceſſible by reaſon of lofty cliffs, but the ſouth is almoſt level with the water. The higher midland parts are well planted, particularly with apple-trees, from which great quantities of cyder are made. The vallies are fertile, and well cultivated, and the paſtures feed great quantities of cattle, ſheep, &c. The inhabitants apply themſelves, in time of peace, to the improvement of commerce, and more particularly to the manufacture of ſtockings, ſale of honey, &c. which is here very exquiſite. In war time they have in general a concern in privateering, for which the ſituation is admirable. The French, in the late war, made a deſcent on this iſland, but their army was defeated by the garriſon, and made priſoners of war. Jerſey is about twelve miles in length, hath a healthy air, and contains about twenty thouſand inhabitants. The governor is appointed by the Britiſh crown, but the civil juriſdiction is inveſted in a bailiff and twelve jurats. The capital town, St. Helier, is handſome, and contains about four hundred houſes. The language is French, corrupted by an intermixture of Engliſh.

The iſland of Guernſey, in length thirteen miles and an half, and nearly of the ſame breadth, contains ten pariſhes, which, however, have only eight miniſters, four of the pariſhes being united; and Alderney and Sark, which are appendages, having one a piece. This iſland, though naturally finer than Jerſey, is neither ſo populous, nor ſo well cultivated. It is, however, a healthful place, and fruitful in corn and paſture, but has only one church. The people in war time, as in Jerſey, are fond of privateering: the only harbour is St. Peter le Port, which is guarded by two forts, one called the Old Caſtle, the other Caſtle Cornet. The inhabitants ſpeak French, it having been a part of Normandy, and is ſtill governed by Norman laws.

The iſland of Alderney is a very healthful place; fruitful in corn and paſture, and remarkable for the fine breed of ſmall cows. It is only ſeparated from the coaſt of Normandy by a narrow ſtreight, called the Race of Alderney: it has only one church. The inhabitants live together in a town of the ſame name, the iſland being but eight miles in circuit.

The little iſle of Sark lies between the iſlands of Guernſey and Jerſey on the coaſt of Normandy in France: it is leſs than the former, has a fine air, and is fertile. The three laſt of theſe iſlands are computed to contain about twenty thouſand people, and all the four are part of the Norman patrimony, being the only remains of that part of France formerly conquered by the Britiſh arms.

ICELAND, MEDITERRANEAN, and ADRIATIC ISLANDS.

Containing a Deſcription of the above Iſlands, their Boundaries, Extent, Situation, Natural Hiſtory, Inhabitants, Laws, Cuſtoms, &c.

ICELAND is about four hundred miles long, and one hundred and fifty broad: it is ſituated in the Atlantic ocean, between ſixty-three and ſixty-eight degrees north latitude, and between ten and twenty-ſix degrees weſt longitude. The greater part of the iſland is mountainous, ſtony, and barren, but in ſome places there are excellent paſtures, and the graſs has a fine ſmell. The ice, which gets looſe from the more northern country in May, brings with it a large quantity of wood, and ſeveral animals, ſuch as foxes, wolves, and bears. For two months together the ſun never ſets, and in the winter it never riſes for the ſame ſpace, at leaſt not entirely.

The iſland is well watered with large and ſmall rivers that flow from the mountains, beſides rivulets and large lakes, all of which abound with excellent fiſh. There are no foreſts in any part of the iſland, but this defect is in a great meaſure compenſated by large quantities of fine timber that come floating on ſhore on different parts of the ſea coaſt. The natural productions of Iceland, ſuch as quadrupeds, birds, inſects, and fiſh, reſemble thoſe of Norway, Greenland, &c. already deſcribed.

There are ſome exceeding lofty mountains, which are always covered with ice and ſnow. The inhabitants live in the vallies between them, and in thoſe near the coaſt are plains covered with verdure: but notwithſtanding the intenſe coldneſs of this iſland, earthquakes and volcanos have been more known here than in much warmer climates. The former have ſeveral times laid the country deſolate, particularly in 1734, 1752 and 1755, when fiery eruptions broke out of the earth. Many of the ſnowy mountains have alſo gradually become volcanoes. The moſt famous of theſe burning mountains is that called Heela, which is ſeated in the ſouthernmoſt part of the iſland, not far from the ſea. It has frequently ſent forth flames, and a torrent of burning matter. Its eruptions have been very frequent, eſpecially in 1693, when they were moſt dreadful, and occaſioned terrible devaſtations, the aſhes being thrown all round this iſland to the diſtance of more than one hundred miles; but ſince that time Heela has been free from eruption. It takes up four hours to aſcend from the foot of this mountain to its ſummit; and on the north-weſt is a large chaſm, reaching from the top almoſt to the bottom.

Eruptions from other mountains have broke out ſince thoſe of Heela have been ſtopped. The huge mountains of Crabla on the 17th of May, 1724, began to eject in a terrible manner ſmoak, fire, cinders and ſtones, which were followed by a fiery ſtream, like melted metal. The lava continued to move ſlowly

on

on or about eight or nine miles as far as the lake of Mynat, into which it diſcharged itſelf, but did not ceaſe till the end of September 1729, when the eruptions of the mountains ſubſided. They were, however, ſoon followed by the eruptions of three of the adjacent mountains.

In this county are found ſtones of various colours, but no marble. It likewiſe produces a kind of cryſtal, a large quantity of pumice-ſtone, and, near the volcano, two ſorts of agate. It is alſo certainly rich in minerals, though there are no mines worked in the country. The people find, even above ground, large lumps of ſilver, copper, and iron ore, ſo rich, that they are melted by a common wood fire, and the metal made into various utenſils. Sulphur is the principal metal of this iſland, great quantities of which were formerly exported to Copenhagen and other countries, but that branch of trade has entirely ceaſed for ſome time.

The inhabitants of Iceland are well made, and poſſeſs a conſiderable ſhare of bodily ſtrength, though they ſeldom live to a very old age. In general they are ſober, honeſt, docile, and induſtrious; but, like all others, who dwell in cold countries, they are fond of drinking ſpirituous liquors, though few are ſo circumſtanced as to procure any conſiderable quantity. They are ſubject to various diſorders, particularly the rheumatiſm, fevers, aſthma, and conſumption; but the leproſy, or rather a kind of hereditary ſcurvy, is the prevailing diſeaſe. The dreſs both of the men and women reſembles that worn by the Norwegians. The men in fiſhing wear a garment of ſheep-ſkin over their cloaths, and this they frequently ſoften by rubbing it over with fiſh liver. Their chief employment is fiſhing, to which they bring up their children as ſoon as they have ſtrength to row about.

Their houſes nearly reſemble thoſe in Norway, with this difference, that as they are not ſo well ſupplied with timber, they make more uſe of ſtones, turf, and mud walls. The better ſort poſſeſs tolerable houſes, well furniſhed. The walls are comfortably thick and warm, and the roofs either boarded or thatched.

Theſe people having been originally a colony from Norway, they ſtill ſpeak the old Norwegian dialect, though they have adopted a great number of terms from the Scots, with whom they heretofore maintained a conſiderable traffic. The Lutheran doctrine is the only religion here tolerated. The country is divided into two biſhopricks; namely, the ſee of Skalholt for the ſouth, and that of Hoalum for the north. The revenue of each biſhop amounts to about two thouſand rix dollars; from which, however, he muſt maintain the rector and corrector, the miniſter of the cathedral church, and a certain number of ſcholars. At the time of the Reformation, great part of the church revenues was ſecularized, and now belong to the king of Denmark. The churches are in general low, and but indifferently decorated; nevertheleſs they are clean, decent, and commodious.

The inhabitants of this iſland are ruled by a governor called Staffſamptmand, or rather by his deputy the Amptmand; the former is generally choſen by the king from the Daniſh nobility, and reſides at Copenhagen; but the latter always lives in Iceland, at the king's palace of Reſſeſted, on a ſalary of four hundred rix dollars. His majeſty likewiſe appoints a receiver, who collects all the taxes and revenues, and tranſmits them to the treaſury. Beſides the ſteward, there are Syſſelmen, who farm the king's taxes in certain diſtricts, and act as juſtices of the peace, each within his own province.

The king's revenues ariſe from taxes and dues, an annual ſum paid by the company of merchants, ſecularized abbey lands, and other royal demeſnes farmed out to the natives. Law-ſuits, in ſpiritual matters, or concerning freehold property, are determined by the Norwegian laws; but in every diſpute relative to meum and tuum, the old Iceland laws take place. There are two judges, called langmand, who preſide over the ſouthern and northern diviſions, and ſometimes deputies are allowed. There is no other legal method of puniſhing men with death than beheading or hanging; the women, condemned to die, are ſewed up in a ſack, and drowned. In ſpiritual caſes, the deputy-governor ſits as judge, with the deans and clergy as his aſſeſſors.

The commerce of this iſland, with reſpect to its exports, conſiſts of dried fiſh, ſalted meat, butter, train oil, coarſe woollen cloth, ſtockings, gloves, eider-down feathers, raw wool, ſheep-ſkins, lamb-ſkins, and fox-ſkins. The imports are, timber, fiſhing lines and hooks, tobacco, bread, horſe-ſhoes, brandy, wine, ſalt, linen, and a few other neceſſaries and ſuperfluities for perſons of higher rank.

The Danes, by an excluſive charter, monopolize the whole trade of Iceland. This company maintains factories at all the harbours in the iſland, where they exchange the foreign goods for the merchandize of the country; and as the balance is in favour of the Icelanders, they pay the overplus in Daniſh money, which is the only current coin in this iſland. The weights and meaſures nearly reſemble the Daniſh.

In treating of the iſlands in the Mediterranean, we ſhall begin with a deſcription of Ivica and Fermentora, which were called Pithyuſæ by the Greeks, from the vaſt quantities of pines they produced. The former ſeparately was called Ebuſus, and the other Ophiuſa and Collubraria. Fermentora, ſix miles north of Ivica, is ſmall, and at preſent uninhabited. Theſe iſlands lie about thirty-ſix miles weſt of Cape St. Martin on the coaſt of Spain. Ivica is about forty miles long, and twenty-two broad, and very mountainous, but not unfruitful, where it is cultivated. The commodities are ſalt and figs; the principal place is Ivica, a ſmall town, with a fort and harbour, and the reſidence of the governor, who is ſubordinate to the viceroy of Majorca.

There is another little iſland, called Cabrera, ſituated ſouth of Majorca. It takes it name from the multitude of goats found upon it: it is a receptacle for baniſhed perſons, and has a ſmall garriſon and caſtle to defend the entrance of the harbour.

The iſland of Majorca is the neareſt to the Spaniſh coaſt of any of theſe iſlands: it is ſixty miles in length, and forty in breadth, abounds in corn, cattle, horſes, wine, oil, honey, ſaffron, deer, rabbets, wild fowl, &c. and is plentifully ſupplied with fiſh. Here are four capes, viz. Pedra eaſt, Groſſer weſt, Salmas ſouth, and Termentor north. It has watch-towers all round it. Towards the north and weſt it is mountainous, but has ſeveral good harbours, with plenty of water. The air is wholſome, but very hot and dry in ſummer. A conſiderable body of horſe and foot is kept here for the defence of the iſland. The language of the better ſort is Spaniſh, but that of the common people is a medley of Spaniſh, Latin, Greek, and Arabic.

The principal town, Majorca, antiently Palma, which ſtands on the ſouth-weſt ſide of the iſland, on a bay between the capes, and is a large and well fortified town, the reſidence of the viceroy, the ſeat of the court of inquiſition and other courts, and has a revenue of twenty thouſand ducats per annum. The inhabitants are computed at ten thouſand. Here are a great many churches, a ſtately cathedral, an univerſity, ſeveral hoſpitals, handſome ſtreets and ſquares; of the laſt, there is one called Born, where the bull-fights and other ſhews are exhibited.

The iſland of Minorca lies thirty-three miles eaſt-north-eaſt of Majorca. Its greateſt length from eaſt to weſt is thirty-eight miles, and its breadth fifteen. The air is moiſt, but never exceeding cold or hot. Here are lead mines, plenty of fiſh, ſalt, fine marble, rabbets, ſheep, honey, wax, capers, oil, cotton, wine, ſome of which is excellent, fine acorns, opuntia, palm trees, which, however, bear no fruit, myrtles, with a vaſt variety of petrified ſhells, and a great deal of cattle. The water is ſaid to be of an indifferent quality. The inhabitants, like the Spaniards, are too proud and lazy to cultivate the ground in a proper manner, and conſequently have but little corn. They are computed at about twenty thouſand, have natural turns to poetry, love, muſic and dancing, and, like their anceſtors, are expert ſlingers.

The capital, Citadella, lies on the weſt coaſt, where the governor reſides. It is a ſmall place, but well fortified, and chiefly inhabited by the Engliſh. The harbour of Port Mahon is one of the fineſt in Europe (both for its capaciouſneſs and ſecurity from wind and enemies) being four miles long, and above half a mile in breadth. The town is ſmall, but has a briſk trade. Near it is St. Philip's caſtle (which, with the town and harbour, lie at the ſouth-eaſt end of this iſland,) is a ſquare fort, which has always a good garriſon.

In 1756, the French got poſſeſſion of this iſland, the Engliſh garriſon in Fort St. Philip's not having been duly ſupported, reinforced, and ſupplied by Admiral Byng, who was ſent to its relief. The combined forces of France and Spain again took it in 1782, and, by the treaty concluded in 1783, it was ceded to his catholic majeſty.

The iſland of Corſica, between the gulph of Genoa and the iſland of Sardinia, extends from forty-one to forty-three degrees of north latitude, and from nine to ten degrees of eaſt longitude. Hence its greateſt length from Cape Corſo, which is its utmoſt northern point, to Cape Bonifacio, its utmoſt ſouthern extremity is about one hundred Engliſh miles, and its greateſt breadth about fifty. It is computed to be one hundred miles diſtant from the city of Genoa to the ſouth, and is divided into the country on this ſide and beyond the mountains, which are again ſubdivided into thirty-eight cantons, called pieves by the natives. Being for the moſt part mountainous, woody, dry and ſtony, it has little arable land. Some of the low grounds and vallies, however, yield corn, wine, figs, almonds, cheſnuts, olives, and other fruit trees. Here are ſome ſalt-works, and hot baths on the iſland, with cryſtals, iron and allum: here is alſo a good breed of cattle and horſes, and the woods and foreſts abound with deer and other game, together with honey and wax.

Corſica is but thinly inhabited, but the clergy are very numerous, compared to the reſt of the people, as the Franciſcans, Capuchins and Servetes, have no leſs than ſeventy-five convents. It belonged to the Genoeſe, but the natives, on account of their tyranny, having for many years taken up arms againſt them, that ſtate ſurrendered its right to the French king, under whoſe dominion it now remains. General Paoli, who long commanded them in their ſtruggles for freedom, now reſides in England, and has a penſion from the Britiſh court.

The principal places are, 1. Baſtia, the capital, ſituated on the north-eaſt coaſt of the iſland, twenty-two miles ſouth of Cape Corſe, and ſeventy-ſix north of Cape Boniſacio. It is the ſee of a biſhop, has a good harbour and caſtle, and is pretty well fortified.

2. The town of San Fiorenzo, ſituated alſo on the northern ſide of the iſland, on a gulf to which it gives name, has a good haven, with ſome fortifications, and is the reſidence of a biſhop; but its inhabitants are few, on account of the unwholeſomeneſs of the air.

3. The town of Boniſacio, which is ſmall, but well peopled, ſtands on the ſouthern coaſt of the iſland. 4. Porto Veccio, a little ſea port town on the eaſtern coaſt.

5. Ajazzo, by ſome eſteemed the capital of the iſland, ſtands on the weſtern coaſt by the river Gravone, and on the ſouth ſide of a gulf, to which it gives name. It is an epiſcopal ſee, a place of good trade, and well peopled. 6. Corto, on the Golo, is alſo an epiſcopal ſee, and is defended by a ſtrong caſtle and wall.

The iſland of Sardinia, one hundred and fifty miles weſt of Leghorn, one hundred and ſixty in length, and eighty in breadth, has but an indifferent air, yet the ſoil is fruitful, and abounds in corn, wine, oil, and fruit: here are alſo plenty of cattle, game, buffaloes, bears, and deer, ſome of which have fine ſpotted ſkins; gold, ſilver, lead, iron, ſulphur, allum, &c. The commodities, excluſive of the productions already mentioned, are coral, linen, ſilk, wool, hides, and cheeſe; and the whole is enjoyed under the title of king, by a prince of the Savoy family. The inhabitants are indolent, and diſſolute in their manners; conſequently the country is not ſo well cultivated as it might be. The religion is Roman Catholic, and the language Spaniſh. The only venomous creature is a kind of ſpider.

The chief town, Cagliari, is ſituated on the ſouth ſide of the iſland, and on the declivity of a hill; it is divided into high and low; the former being handſome and well built, but the latter poor and unhealthy. The town contains ſeveral convents: the cathedral is magnificent; the archbiſhop and viceroy reſide here; the port is ſpacious, and defended by a battery and caſtle.

By an oppoſite courſe of the rivers Sacro and Tirſo, this iſland is nearly cut into two equal parts or provinces; the one called Il Capo de Cagliari, and the other Il Capo de Saſſari, or Lugedori. There are a great many ports, gulfs, and bays in it, with ſeveral ſtrong towns, a great number of villages, three archbiſhoprics, and four biſhoprics. The clergy, both ſecular and regular, have great privileges, incomes, and immunities. The only univerſity is that of Cagliari. The revenues of the iſland are ſaid to exceed the charges of its government and ſupport. A great many ſmaller iſlands lie about Sardinia.

The iſland of Capri, or Caprea, is much taken notice of for the noble ruins on it. It is about four miles long, and one broad, and is ſituated at the entrance of the gulf of Naples, about three miles from the continent. This iſle was the reſidence of the emperor Auguſtus for ſome time, and afterwards of Tiberius for many years. The principal ruins and remains of antiquity are at the extremity of the eaſtern promontory. It contains about one thouſand five hundred inhabitants, who are exempt from all taxes, and belongs to the province of Lovoro, in the kingdom of Naples. There are ſeveral ſprings of freſh water in it, and in a delightful valley between the mountains, at the two extremities, ſtands a city of the ſame name with the iſland, which is the ſee of a biſhop, whoſe revenue ariſes chiefly from the prodigious flights of quails that come thither at certain ſeaſons, particularly in March.

The iſland of Iſchia is a ſmall but pleaſant place, lying on the Neapolitan coaſt, about two miles from the cape of Meſſina, and twenty-five from Naples. Moſt of it is ſurrounded with high, craggy, and inacceſſible rocks, which ſhelter it from the winds, and defend it from invaders. Some parts of it are rich and delightful, yielding all manner of delicious fruits, and excellent wines, but others are diſmal and barren. It was antiently called Inarime, and was very ſubject to earthquakes. There are a number of pleaſant towns and villages in it, and alſo ſeveral hot baths and mineral waters.

The iſland of Sicily, the moſt conſiderable in the Mediterranean, is divided from Italy by a narrow ſtraight, called the Faro of Meſſina. The tides here flow irregularly and violently. The rock, antiently called Scylla, and now Cape Seiglio, is on the Calabrian ſide, and the whirlpool, formerly called Charybdis, lies not far from Meſſina, and is now denominated Caloſara.

This iſland enjoys a ſalubrious air, and the ſoil is ſo fertile, that it is ſtiled the granary of Italy. It produces abundance of corn, wine, oil, fruits, ſugar, honey, ſaffron, wax, ſilk, &c. ſome gold, ſilver, iron, allum, vitriol, ſaltpetre, and mineral ſalt. The mountains yield emeralds, jaſper, agate, porphyry, lapis lazuli, and a ſtone called catochite, of a greeniſh ſpeckled colour, which grows ſoft by the warmth of one's hand, ſticking to it like glue, and is an excellent antidote againſt the ſting of ſcorpions, and ſome other poiſonous inſects. Here are plenty of excellent fiſh, among which are the peſce ſpada, or ſword-fiſh, and tunnies, and a good deal of coral is found upon the coaſt. Great quantities of raw or manufactured ſilk are exported from Meſſina, where a conſul from almoſt every nation in Europe reſides, to manage and protect the trade of the nation to which he belongs.

In this iſland are ſeveral rivers and good ſprings, but few of the rivers are navigable, having but a ſhort courſe, and deſcending precipitately from the mountains, the moſt noted of which is Mount Ætna, now called Monte Gibello, or Mongibello, a volcano, whoſe eruptions have often proved fatal to the neighbouring country. The eruptions of Mount Ætna are generally preceded by an earthquake, which often does more damage than the eruptions, which will appear from the following authentic account tranſmitted hither from Florence, dated Feb. 25, 1783: "On the 5th of this month there happened a tremendous and dreadful earthquake at Meſſina, which has entirely deſtroyed that beautiful city, together with moſt of its inhabitants, amounting, it is ſaid, to near forty thouſand ſouls. The citadel, the forts that commanded the ſea, the magnificent port, the centre of commerce of Sicily, the ſuperb edifices, the public monuments, are overthrown, and all the grandeur thereof vaniſhed away. The oppoſite coaſt of Calabria has greatly ſuffered, and it is computed that no leſs than one hundred and thirty towns have been deſtroyed. Several perſons of high rank, and a great number of families of diſtinction are totally loſt, and nothing left of a great city but the ruins, watered by the tears of the wretched ſurvivors." Mount Ætna is ſeventy miles in circuit, and ſo high, that it harbours many wild beaſts: at the bottom are corn fields, and plantations of ſugar canes. Among the other mountains, one of the moſt conſiderable is Mount St. Julian, near Palermo, antiently called Eryx, and vulgarly Trepani.

The nobility are ſo numerous in this iſland, that a late writer ſays it is paved with noblemen, there being no leſs than ſixty dukedoms, fifty-ſix marquiſates, and upwards of one hundred earldoms. The people in general, with reſpect to their character, are reckoned a perverſe race, being a mixture of Italians and Spaniards: they ſpeak chiefly Spaniſh, and follow the Spaniſh faſhions, particularly in wearing black. The eſtabliſhed religion of the iſland is the Roman Catholic. The number of churches, convents, and religious foundations is very great, and they are well endowed. There is a ſovereign tribunal, which judges, in all eccleſiaſtical affairs, and admits of no appeal to the pope. The Jews are now allowed to ſettle here, and make open profeſſion of their religion, which was not the caſe while the iſland was immediately ſubject to Spain.

Geographers commonly divide this iſland into three parts or provinces, viz. Val di Domino, Val di Noto, and Val di Mazara. The principal places are as follow:

1. The city of Palermo, capital of Sicily, antiently Panorames, a large, rich, and well built city, ſituated at the very bottom of a gulf, to which it gives name. It is ſaid to have been built by the Phœnicians at their firſt coming into Sicily, and it is now an archiepiſcopal ſee, being one hundred and twenty miles diſtant from Meſſina to the weſt. The viceroy's palace is a magnificent ſtructure, adorned with fine ſculptures, gardens, &c. and ſerves inſtead of a caſtle, ſtanding high, and being flanked with ſome lofty towers, and other works. There are many other fine public edifices, as the cathedral, and the other churches, ſeveral fountains, the city gate, which leads to the ſea ſide, the quay, the mole, forts, convents, town-houſe, lombard houſe, and univerſity. The quay is one of the fineſt walks about the city, being wide and of a great length, and planted with trees. The port is ſafe and commodious every where, except on the ſouth-weſt ſide, which is full of rocks, that appear no higher than the ſurface of the ſea. This city carries on a conſiderable trade, is computed to contain one hundred and twenty thouſand inhabitants, and the two ſtreets, which croſs each other, are very fine.

2. The city of Meſſina, before the late calamity, was pretty large and well built, had a ſpacious harbour near the ſtraight to which it gives name, and not above ſix miles from the coaſt of Calabria. It was one of the greateſt market towns in the Mediterranean,

diterranean, contained many noble edifices, was the ſee of an archbiſhop, and contended with Palermo for being the capital of the iſland. The cathedral was a large ſpacious building, very rich in plate, and finely adorned in the inſide.

3. The city of Syracuſe, greatly celebrated among the antients, and formerly the capital of the iſland, is ſaid to have been built by Archias, a Corinthian, and to have extended upwards of twenty-two miles, or one hundred and eighty ſtadia, in compaſs. It ſtands forty-ſix miles from Catania, ſeventy-five from Meſſina to the ſouth, and thirty-eight north from Cape Paſſaro, the Promontorium Pachynum of the Romans, on that ſpot antiently called Inſula, or the Iſland. This city is a biſhop's ſee, has a fine large harbour ſupplied with plenty of water by the famed fountains of Arethuſa, and is defended by a fortified caſtle. It was almoſt ruined by an earthquake in 1699, yet the number of its inhabitants are now ſaid to be fourteen thouſand.

4. The town of Cartelamara is ſituated on a bay, to the ſouth of Monte Reale: it is a biſhop's ſee, and has a good harbour. Near it ſtood the town antiently called Egeſta, and celebrated for its warm baths. The other towns of this province are too inconſiderable to merit particular deſcription.

No country has undergone greater viciſſitudes of government than Naples or Sicily, chiefly owing to the inconſtancy of the natives, which ſeems to be incorporated with their air. Chriſtians and Saracens by turns conquered it. The Normans under Tancred drove out the Saracens; and, by their connexions with the Greeks eſtabliſhed there a moſt reſpectable monarchy flouriſhing in arts and arms, while the reſt of Europe was plunged in monkiſh ignorance. About the year 1166, the popes being then all powerful in Europe, their intrigues broke into the ſucceſſion of Tancred's line, and Naples and Sicily at laſt came into the poſſeſſion of the French; and the houſe of Anjou, with ſome interruptions and tragical revolutions, held it till the Spaniards drove them out in 1504, it was then annexed to the crown of Spain.

Off the north coaſts of Sicily, in the Tuſcan ſea, lie ſeveral ſmall iſlands, called at preſent the Lipari iſlands, from the chief of them, which is ſaid to have its name from Liparus, the founder of its capital.

Lipari, which lies about twenty-ſix miles north from the neareſt coaſt of Sicily, and is about eighteen miles in circumfence, including the windings of the ſhore, enjoys a wholſome air, and rich ſoil, producing corn, wine, and fruit, eſpecially figs and raiſins, in great plenty, together with ſulphur, allum, and bitumen. It hath alſo ſome excellent hot ſprings, and on the coaſts are caught a great variety of fine fiſh, with which it drives a conſiderable commerce. The capital, called alſo Lipari, is ſtrong both by nature and art, well inhabited, and an epiſcopal ſea, under that of Meſſina. The ſmall iſlands of Levanzo, Maritima, and Favagnana, (which with the Lipari iſles are ſubject to the king of the two Sicilies) lie at the weſt end of Sicily.

We ſhall here mention the iſle of Malta, though it is not properly ranked with the Italian iſlands. It was formerly called Melita, is ſituated in fifteen degrees eaſt longitude, and forty-five degrees north latitude, ſixty miles ſouth of Cape Paſſaro in Sicily, and is of an oval figure, twenty miles long, and twelve broad. Its air is clear, but exceſſively hot: the whole iſland ſeems to be a white rock covered with a thin ſurface of earth, which is however amazingly productive of cotton, indigo, and a variety of fruit, roots, herbs, &c. but corn and ſalt are the principal commodities. It contains about ſixty thouſand inhabitants, who ſpeak Italian in the towns, and a corrupt Arabic in the country.

The knights conſiſt of eight tongues or nations, the chief of which are French, Italians, Spaniards, Engliſh, and Germans. They are ſaid to amount to about three thouſand, have conſiderable poſſeſſions in the Roman catholic countries on the continent, and are under the government of a grand maſter, who is elected for life. They ought all to be of antient noble families; but ſometimes nobility is diſpenſed with on account of perſonal merit, and ſuch are called cavalieri di gratia. The grand maſter and knights are equally capable of being advanced to a cardinal's hat. According to the ſtatutes, no natural children, thoſe of great princes excepted, nor perſons under eighteen years of age, can be admitted into the order; but the pope may diſpenſe with theſe qualifications, and the grand maſter has an unlimited privilege to grant this favour to ſix perſons. The knights are under vows of celibacy and chaſtity; but they keep the former much better than the latter. They wear croſſes of a particular form, and are ſtill conſidered as the bulwark of Chriſtendom againſt the Turks on that ſide.

The chief town, Valetta, had its name from the grand maſter Fred. Joh. de Valetta, who built it anno 1566. It is a handſome town, with an excellent harbour, and ſtrongly fortified. Here is an elegant palace for the grand maſter, ſeveral convents, nunneries, and churches, the principal of which is dedicated to St. John; a college of Jeſuits, a large hoſpital, and a building where Turkiſh ſlaves are kept.

The moſt conſiderable of the other towns are, Citta Vittorioſa, or Il Borgo Senglea, Malta called alſo Medini, and Citta Vacchia where the biſhop reſides; Bormola, Forte di S. Thomaſſo, Forte Roſſo, Citta Nuovo, and Cottonera.

There are, beſides Malta, two other ſmall iſlands lying near it, that belong to the order, namely, Gozo, antiently Gaulos; and Comino, antiently Hephæſtia-Gozo, is very fruitful, and has about three thouſand inhabitants, with ſeveral good harbours, and ſtrong forts. Corſino, though very ſmall, is pretty fertile, and has a fort and harbour.

The iſlands in the Adriatic are eight in number, viz. I. Luſiona, or Leſina. II. Corfu, or Corcyra. III. Cephalonia. IV. Zante. V. Leucadia, or St. Maura. VI. Candia, formerly Crete. VII. The Cyclades. VIII. The Sporades.

The firſt of theſe, namely, Luſiona, or Leſina, ſituated ſeventy-five miles north-eaſt of Naples, is about ſeventy miles long, and ſixteen broad. The ſhore is low, has two caſtles, and a Moſaic kind of decayed cauſeway. The reſt is inhabited by huſbandmen, who cultivate the moſt fertile part of the country, which, though mountainous and rocky, produces plenty of corn, wine, olives, ſaffron, honey, and fruits. Theſe live in towns and large villages, ſome of one hundred, ſome of five hundred families: and here is conſiderable gain from good fiſheries. The capital of the ſame name, is well-built, and populous. Here are many fine churches, monaſteries, &c.

The iſland of Corfu, or Corcyra, near the mouth of the Adriatic, is about one hundred and twenty miles in circumference, and a very important place to the Venetians, who have generally about fifteen gallies, and other veſſels. The place is famous for ſalt, wine, olives, lemons, cyder, &c. The principal city, Corfu, has a noble metropolitan church of the Greeks. The town is handſome, and well defended by the caſtle of St. Ange, which is deemed impregnable.

The iſland of Cephalonia is rather larger than Corfu. The capital, of the ſame name, is a biſhop's ſee. Argoliſto, the principal port, and the reſidence of the governor, is a ſtrong fortreſs. It is fertile in oil, excellent Muſcadine wine, and grapes not unlike currants, which are a very profitable commodity. The climate is very hot, and the trees bloſſom throughout the winter. It is ſubject to the Venetians.

The iſland of Zante, ſeventeen miles from Cephalonia, is one hundred and fifty miles in circumference, mountainous, and ſubject to earthquakes. It has, however, plenty of wines, oil, corn, currants, excellent peaches, figs, and cucumbers, &c. but a ſcarcity of wood. The Engliſh and Dutch have factories here. The capital of the ſame name, is tolerably populous. This iſland, which alſo belongs to the Venetians, has no fortifications; but there is a fortreſs upon an eminence planted with cannon. In one part of this iſland is a ſpring, which throws out a deal of bitumen, eſpecially at the time of an earthquake.

Cerigo, formerly Cerhera, is a rocky, barren iſland, ſixty miles in circumference, between Candia and the Mare, and contains a town of the ſame name. South from Zante, on the Morea coaſt, lie two ſmall cluſters of iſlands, the one called Strophades, the other Strivali.

The iſland of Leucadia, or St. Maura, lies in the Ionian ſea, and is divided from the continent by a ſtraight not above fifty paces over, or more than four feet deep. The whole iſland is fruitful, and near forty miles in circumference. The Carthaginians ſettled a colony here, and formed the ſtraight, for Leucadia was formerly a peninſula.

The iſland of Candia (formerly Crete) lies to the ſouth of the Archipelago; is about two hundred miles in length, fifty in breadth, and five hundred in circumference. Candia, antiently the capital, is now in ruins, and the harbour ſo ſpoiled as to admit only boats. The walls of the town, which are ſtill ſtanding, are pretty ſtrong; and it is the ſee of a Greek archbiſhop. Here are ſome Greeks, who bear a very good character, a few Jews, and ſome Armenians, beſides three or four French families, with a vice-conſul. It was taken by the Turks in 1669, after above three years ſiege. It was attempted to be retaken by the Venetians in 1692, but without effect. The product of this iſle is corn, wine, oil, wool, ſilk, and excellent honey. The air is good, as well as the water. It is divided into three parts, the principal of which is Candia, where the beglerbeg reſides; the ſecond is Canea, where there is a baſhaw; and the third is that of Retimo, where there is another baſhaw. Mount Ida, ſo famed in hiſtory, is in the middle of this iſland, and is only a barren, diſagreeable, ſharp-pointed eminence, with not the leaſt ſhadow of a landſcape: no delightful grotto, public ſpring, or purling rivulet, are to be ſeen thereon.

The famed iſlands called the Cyclades lie in the Archipelago, being

being diſpoſed in the form of a circle, as their name imports. The principal of theſe is Pelicandro, which contains only one village, but from its caſtle may be ſeen all the iſlands of the Archipelago. 2. Naxia, the moſt fertile of theſe iſlands. 3. Milo, ſixty miles in compaſs, and conſiſting chiefly of a ſpongy rock, but well inhabited and cultivated, with an excellent harbour. 4. Sephanto, thirty-ſix miles in compaſs, contains ſeveral villages. 5. Paros, one of the leaſt, but beſt cultivated of the Cyclades, and its marble has for many ages been famous under the name of Parian ſtone. 6. Antiparos, ſixteen miles in circuit, contains only one village. 7. Nio, nine miles ſouth of Naxia, contains Homer's tomb. 8. Armorgo, thirty-ſix miles in compaſs, yields corn, wine, and oil. 9. Delos, only about eight miles in compaſs, in the centre of the Cyclades. 10. Argentiere: its name is taken from the ſilver mines in it: the place is barren, and water ſcarce. 11. Zia is fruitful, and contains ſome antiquities. 12. Thermia is populous, well-cultivated, produces much ſilk, and has in it plenty of partridges. 13. Joara is deſolate. 14. Mycene has a town of the ſame name, and its inhabitants are the beſt ſailors in the Archipelago. This place contains about three thouſand people; but for one man there are four women, who are often ſeen lying among the hogs in the open ſtreets: here are plenty of partridges, quails, woodcocks, turtle doves, rabbets, and wheat-ears; beſides which, it produces excellent grapes, and delicious figs. Almoſt all the inhabitants are Greeks, who have fifty churches in all. 15. Tine, thirty-five miles in circumference, produces abundance of fruit, wine and ſilk. 16. Andros, one hundred and twenty miles in compaſs, is fertile, and well watered.

Thoſe called the Sperades, or ſcattered iſlands, are as follow; viz. 1. Engia, thirty miles in circumference, and is very fruitful. 2. Colouri, antiently Salamis, fifty miles in circumference, contains three villages, one of which is called Colouri. 3. Negropont, antiently Eubœa, is ninety miles long, twenty-five broad, and very fruitful. 4. Scyro, twenty-five miles north-eaſt of Negropont, is ſixty-miles in circumference, and has a town of the ſame name. 5. Serphanto, which abounds in iron and loadſtone; this was the place, whereto the Romans baniſhed their malefactors. 6. Stalimene, or Lemnos, is of a ſquare form, being about twenty-five miles on each ſide. 7. Samondrachi, or Samothrace, near the coaſt of Romania, is twenty-five miles in circuit. 8. Embro, which contains four villages, one bearing the name of the iſland. 9. Theſſus, famous for wine and marble. 10. Macroniſi is barren and uninhabited. 11. Syro has a town of the ſame name, with a good harbour. 12. Sikino, which produces plenty of figs, and the beſt wheat in the Archipelago.

We ſhall conclude our account of the European iſlands with a deſcription of the Azores, or Weſtern iſlands, which have, by different geographers, been variouſly deemed parts of America, Africa, and Europe, as they are almoſt in a central point; but we apprehend they may with more propriety be conſidered as belonging to the latter. They are a group of iſlands, ſituated in the Atlantic ocean, between twenty-five and thirty-two degrees of weſt longitude, and between thirty-ſeven and forty north latitude, nine hundred miles weſt of Portugal, and as many eaſt of Newfoundland. They are nine in number, viz. St. Maria, St. Miguel or St. Michael, Terceira, St. George, Graciоſa, Fayal, Pico, Flores, and Corvo.

Theſe iſlands were firſt diſcovered by ſome Flemiſh ſhips in 1439, and afterwards by the Portugueſe in 1447, to whom they now belong. The two weſternmoſt were named Flores and Corvo, from the abundance of flowers on the one, and crows on the other. They are all fertile, and ſubject to a governor-general, who reſides at Angra in Terceira, which is alſo the ſeat of the biſhop, whoſe dioceſe extends over all the Azores; and whoſe income, paid in wheat, amounts to about two hundred pounds ſterling a year. On every iſland there is a deputy-governor, who directs the police, militia and revenue; and a juiz, or judge, is at the head of the law departments, from whom lies an appeal to a higher court at Terceira, and from thence to the ſupreme court at Liſbon.

St. Miguel, the largeſt, is one hundred miles in circumference, contains about twenty-nine thouſand inhabitants, and is very fertile in wheat and flax. Its chief town is Panta del Gado. This iſland was twice ravaged by the Engliſh in the time of Queen Elizabeth.

Terceira is reckoned the chief iſland, on account of its having the beſt harbour; and its chief town, named Angra, being the reſidence of the governor-general and the biſhop. The town contains a cathedral, five other churches, eight convents, ſeveral courts of offices, &c. and is defended by two forts.

The iſland of Pico, ſo called from a mountain of vaſt height, produces excellent wine, cedar, and a valuable wood called teixos. On the ſouth of the iſland is the principal harbour called Villa das Lagens.

The inhabitants of Flores having been many years ago infected with the venereal diſeaſe by the crew of a Spaniſh man of war, that was wrecked upon their coaſt, the evil, it is ſaid, ſtill maintains its ground there, none of the inhabitants being free from it, as in Peru, and ſome parts of Siberia.

One tenth of all their productions belong to the king, and the article of tobacco brings in a conſiderable ſum. The wine, called Fayal wine, is chiefly raiſed in the iſland of Pico, which lies oppoſite to Fayal. From eighteen to twenty thouſand pipes of that wine are made there yearly. The other iſlands have nothing that merit particular notice. All of them enjoy a ſalubrious air, but are expoſed to violent earthquakes, from which they have frequently ſuffered.

THE NEW AND UNIVERSAL

SYSTEM OF GEOGRAPHY.

BOOK IV.

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF

SOUTH AND NORTH AMERICA.

CHAP. I.

OF AMERICA IN GENERAL.

SECT. I.

AMERICUS VESPUCIO, a Florentine by birth, being, in 1497, ſent to improve the diſcoveries made in 1491, by Columbus, gave to this diviſion of the globe the name of America. This vaſt continent (at leaſt what has been hitherto diſcovered) reaches from latitude ſeventy-eight degrees north to latitude fifty-ſix ſouth, that is, one hundred and thirty-four degrees; which taken in a ſtrait line, amount to upwards of eight thouſand and forty miles in length. Its breadth is very irregular, being in ſome places three thouſand ſix hundred and ninety miles, and in others, as at the diſtance of Darien or Panama, not not above ſixty or ſeventy. The boundaries aſcribed to it are the land about the pole on the north; the Atlantic ocean which ſeparates it from Europe and Aſia on the eaſt; another vaſt ocean on the ſouth, and the Pacific ocean uſually called the South Sea, which divides it from Aſia on the weſt. How or when America was firſt peopled, cannot be aſcertained; but if the north of Aſia is joined to America, it is moſt likely to have been from thence, eſpecially as the natives of theſe parts ſtill bear a great reſemblance to one another.

The native Americans, who are diſtinguiſhed into various tribes, are found, as far as we are yet acquainted with them, to bear a wonderful likeneſs, both in their perſons and manners; for they have all coarſe black hair on their heads, but none on any other parts of their bodies, not even on their faces, except thoſe in the country called Labrador, in North America, who have not only thick luſty beards, and hair on other parts of their bodies,

but

but alſo eat raw fleſh, and go cloathed both in ſummer and winter, in all which reſpects they differ from the others, and are therefore ſuppoſed to have a different origin.

The New World may properly be divided into four parts, viz. I. South America. II. American and Weſt India iſlands. III. North America. IV. Countries lately diſcovered by Captain Cook and other navigators; moſt of which latter we have already deſcribed.

I. South America compriſes the following grand diviſions; viz. Terra Firma, belonging to Spain; in length fourteen hundred, breadth ſeven hundred miles, chief city Panama. 2. Peru, belonging to Spain; length eighteen hundred, breadth five hundred miles, chief city Lima. 3. Paragua, belonging to the Spaniards and Jeſuits; length fifteen hundred, breadth one thouſand miles, chief city Buenos Ayres. 4. Chili, belonging to Spain; length twelve hundred, breadth five hundred miles, chief city St. Jago. 5. Terra Magellanica, or Patagonia, belonging to its natives; length ſeven hundred, breadth three hundred miles. 6. Brazil, belonging to Portugal; length two thouſand five hundred, breadth ſeven hundred miles, chief city St. Sebaſtian. 7. Amazonia, belonging to its natives; in length twelve hundred, breadth nine hundred and ſixty miles. 8. Guiana, poſſeſſed by the Dutch and French; length ſeven hundred and eighty, breadth four hundred and eighty miles, chief places, Surinam and Cayenne.

The extent of the vaſt peninſula of South America, is computed to be from the iſthmus of Darian to Cape Horn, in the form of a triangle, goes by the general name of Peruvia, although the countries included within it do not acknowledge the authority of the crown of Spain. Thoſe dominions in South America, which belong to the Spaniards, are under two governors ſtiled viceroys and captains-general, ſubordinate to whom are ſeveral audiences, as thoſe of Panama, Terra Firma, Chuquiſaca, Quito, Lima, Los Charcas, and Chili, conſiſting of a preſident, and a certain number of counſellors, with the inferior officers, appointed by the king.

SECT II.

Of TERRA FIRMA, PERU, PARAGUAY, and CHILI, their Boundaries and Extent, Climate, Rivers, Mountains, Produce, Animals, &c. with the ſeveral Diſtricts, Cities, and Towns therein contained; and alſo a Deſcription of the Inhabitants, their Perſons, Manners, Cuſtoms, Dreſs, Diet, &c.

THE boundaries of Terra Firma, called alſo New or Golden Caſtile, are, the Atlantic ocean on the north; Peru and Amazonia on the ſouth; the Pacific ocean and New Spain on the weſt, and Surinam on the eaſt. It is fourteen hundred miles long, ſeven hundred broad, and had the name of Golden Caſtile, from the great quantity of gold found in it. The climate is neither pleaſant nor healthy; the inhabitants, one part of the year, being almoſt drowned with perpetual floods of rain, and in the other ſcorched by the moſt intenſe heat.

The ſoil, in ſome parts, is a barren land, or drowned mangroveland, that will ſcarcely produce any kind of grain; in others, it yields Indian corn, balms, gums and drugs, almoſt all manner of fruits, as well of Old as of New Spain, ſugar, tobacco, Braſil wood, and ſeveral kinds of dyeing wood; a variety of precious ſtones, particularly emeralds and ſapphires; veniſon and other game. The plantations of cacao, or chocolate nuts, in the diſtrict of Caraccas, are eſteemed the beſt in America. The rivers, ſeas and lakes teem with fiſh, and alſo with alligators; and the bowels of the earth were once furniſhed with the richeſt treaſures, now almoſt exhauſted. The ſame may be ſaid of the pearl fiſheries on the coaſt.

The diſtrict of Terra Firma is very mountainous. According to Dampier, the mountains of Carthagena and St. Martha are the higheſt in the world, being ſeen two hundred miles off at ſea; from theſe run a chain of hills, of almoſt equal height, quite through South America, as far as the ſtraights of Magellan, called the Cordilleras des Andes. The provinces of Venezuella, and the diſtrict of the Caraccas, are likewiſe very mountainous. Some of the mountains in the provinces of Popayan contain volcanos; but towards the ſhore of the Paciſic ocean, the country is low and marſhy. The whole is watered by a great number of rivers, the principal of which is that of Oroonoko.

The provinces are, 1. Terra Firma Proper, which lies in the form of a creſcent about the bay of Panama, being the iſthmus which joins South and North America: it is three hundred miles in length, but in breadth only ſixty, where the iſthmus is narroweſt. This country conſiſts of prodigious high mountains and deep vallies, flooded more than half the year. It abounds in gold and pearls.

The principal places are, 1. Panama, which is ſtrongly fortified and garriſoned, and the walls mounted with large cannon. Here is the reſidence of the governor of the province, and the ſeat of a royal audience, with a convenient harbour, well ſecured againſt ſtorms by a number of ſurrounding iſlands. At the bottom of the ſea are found numbers of pearls, and the oyſters in which they are found are extremely delicious. This kind of fiſhery is of great advantage to the inhabitants of all the iſlands in the bay; who generally employ at leaſt a part of their ſlaves in it.

The town of Porto-bello is ſituated cloſe to the ſea, on the declivity of a mountain which ſurrounds the harbour. The governor is always a military officer, ſubordinate to the preſident of Panama. The town is but thinly inhabited, owing to its noxious air, and contains 200 wooden houſes, which moſt of the inhabitants let, when the galleons are here, and make any temporary ſhift for themſelves. In the year 1739 gallant admiral Vernon took this place with only ſix ſhips, demoliſhed the forts, and diſmantled the fortifications.

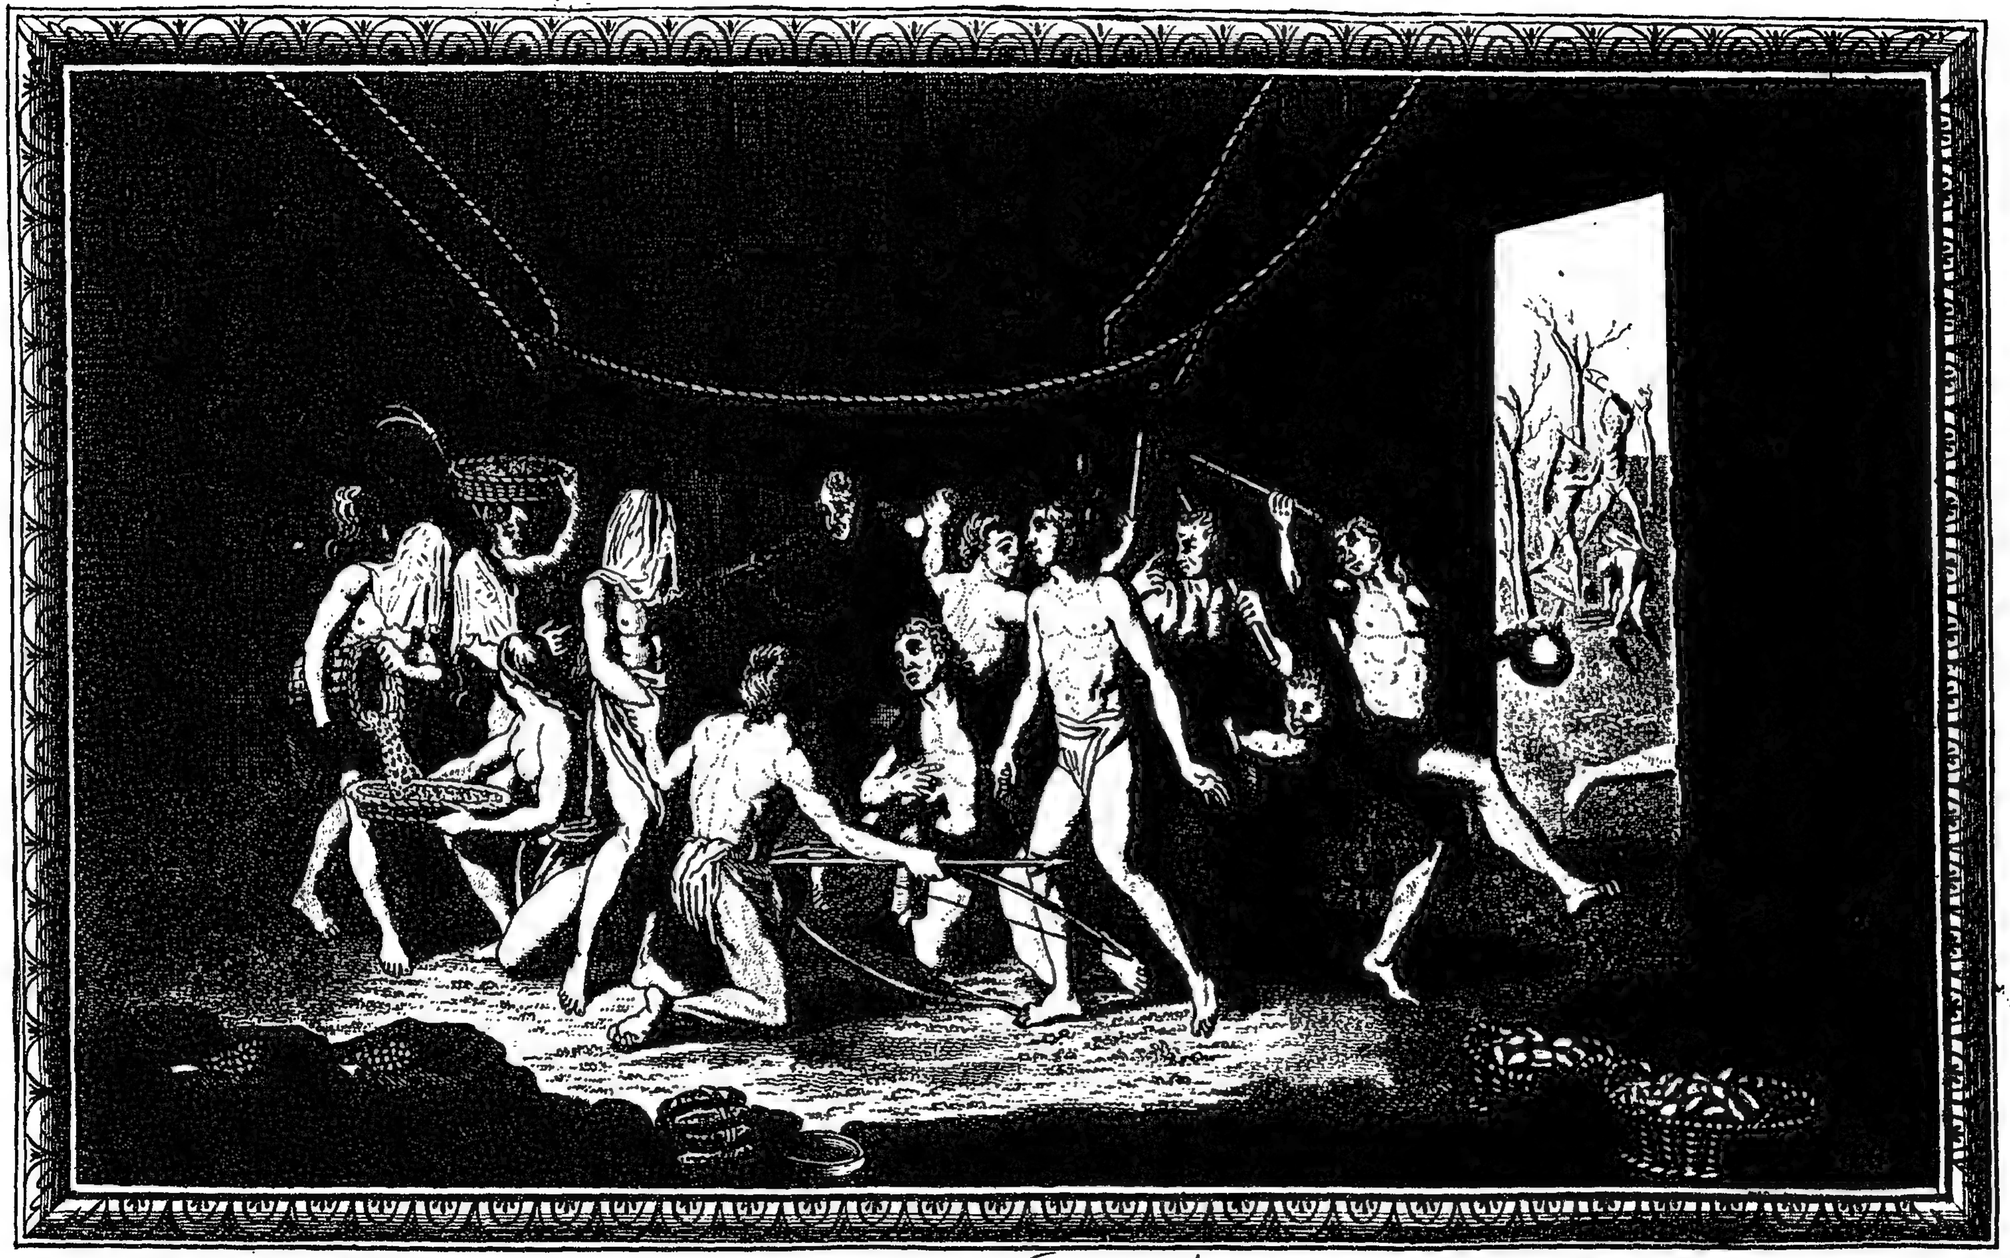
Carthagena is neither rich, fertile, nor populous: here is no great quantity of corn nor cattle: valuable gums, balms, and drugs, are found here, but no mines of gold or ſilver.

The metropolis, of the ſame name, is a fine, opulent city, and ſtrong fortreſs, ſituated on a ſandy iſland, called a peninſula by moſt writers. The harbour lies between the iſland and the main, and the entrance is at the ſouth-weſt end. The city and ſuburbs are well laid out; the ſtreets ſtraight, broad, uniform, and well-paved. The houſes are built of ſtone or brick, with balconies or lattices of wood.

Carthagena was an independent government till 1739, when the viceroy of New Granada was appointed. It extends 53 leagues from weſt to eaſt, and 85 from ſouth to north, containing ſeveral fruitful vallies, called by the natives Savannahs, in which are many ſettlements of Europeans, Spaniſh Creoles, and Indians. The climate is hot and unhealthy; and, among other diſeaſes, the black vomit and leproſy are fatal to Europeans. The Guiney worm and pigue are very troubleſome inſects. The bay of Carthagena is the firſt place in America at which the galleons touch.

Santa Martha is two hundred miles long, one hundred and forty broad, very mountainous, but produces gold, jewels, marble, ſalt, &c. The capital of the ſame name, on a branch of the Rio Grande, is the reſidence of a governor, and the ſee of a biſhop.

On the north ſea lies Venezuela, which includes the diſtrict of Caraccas. It is a populous and fertile province, but labours under a ſcarcity of water. The capital of the ſame name is the reſidence of a governor, and the ſee of a biſhop: the inland town of Caraccas is large and populous.



The province of Rio de la Hacha is pleaſant and fertile. The capital, of the ſame name, contains nothing remarkable. Here are mines of jaſper and chalcedony, and a pearl-fiſhery.

The province of New Andaluſia (including the diſtricts of Commona and Parie) is fertile, and rich in gums, drugs, medicinal plants, ſugar, tobacco, and ſeveral ſorts of valuable timber. Comana, or New Cordulia, is the capital, but is not ſo handſome a town as St. Thomas.

The inland province of New Granada, called ſometimes Santa Fé and Caſtelle del Oro, is very extenſive, and beautifully diverſified with mountains and vallies. The mountains contain gold, ſilver, and emeralds; and the vallies produce corn, cattle, roots, fruits, and great quantities of guaiacum, balms, drugs of various kinds, gums, and other rich articles of commerce. Santa Fé de Bagota, the capital of this province, and of all Terra Firma, is a large, populous, opulent, and well-built city, ſituated on a lake, with altars at ſtated diſtances higher than houſes, and richly adorned.

Paita, a ſea-port town, was ſacked by the late lord Anſon, in 1741; and Guiaquil is a conſiderable commercial town, on a river of the ſame name.

The natives of Terra Firma are bold and warlike; and as they have almoſt impregnable and inacceſſible fortreſſes, and bear an inveterate hatred to the Spaniards, they never have, and it is probable never will be ſubdued. The Spaniſh general Pedro Rias and his ſucceſſors, deſtroyed in Terra Firma no leſs than eight hundred thouſand people, and plundered the country of ſeveral millions of gold, to obtain which they exerciſed the moſt ſhocking barbarities on the natives. Theſe people have lank, coarſe, long, black hair. Their natural complexion is a copper colour. The inhabitants are differently dreſſed, according to the Spaniſh faſhion. The men wear a caſſock without folds, deſcending to the knees, a large cape, and ſleeves open at both ſides. It has button-holes, and two rows of buttons. The habits of the better ſort are made of embroidered ſtuffs. The handicrafts wear a blue ſtuff of the manufacture of the country, but in make it differs not from the other. The Indians of

Roberts sculp.

MARRIAGE-CEREMONIES *observed by the* INDIANS *of* PANAMA.

on each ſide, which ſecures them in the manner of railing, and enables them ſafely to paſs the unſteady bridge.

Before a viceroy was appointed at Santa Fé in New Granada, Peru contained the three audiences of Lima, Los Charcos or La Plata, and Quito; but now the two former are only contained in it.

The capital of this audience (called Lima) is ſituated in a fine valley near the ſea, in the latitude of twelve degrees two minutes ſouth. A river of the ſame name waſhes the walls, over which was a handſome ſtone-bridge; but on October 28, 1746, a dreadful ſhock of an earthquake almoſt entirely deſtroyed this city in the ſpace of three minutes, burying in the ruins thoſe inhabitants, who, endeavouring to ſave their moſt precious moveables, had not made ſufficient haſte into the ſtreets and ſquares, ſo that by this calamity above twelve thouſand people periſhed.

The ſupreme tribunal at Lima, called Audiença, is held in the viceroy's palace, and conſiſts of eight auditors, and a fiſchal, for civil affairs. Here is alſo a chamber of accompts, a board of treaſury, a court for the effects of perſons dying inteſtate and without lawful heirs, a council of commerce, and a tribunal of the inquiſition, many convents, chapels, and hoſpitals, with an univerſity, in which are profeſſors of the ſeveral ſciences, and three ſubordinate colleges.

The inhabitants of Lima, as of all the other cities in Spaniſh America, conſiſt of Spaniards, Meſtizoes, Mulattoes, Indians, and Negroes. The Spaniſh families were very numerous; there having been no leſs, at a moderate computation, before the earthquake, than eighteen thouſand whites in this capital, a third or fourth part of whom conſiſted of the chief nobility of Peru.

The harbour of Lima, named Callao, is ſituated ſix miles weſt of the city. It is the beſt port in the ſouth, being ſcreened from the winds by the iſland of St. Lawrence.

The town of Cuſco, capital of the empire of Peru, and the ſeat of the incas, before the arrival of the Spaniards, ſtands above three hundred and twenty-ſix miles from Lima, towards the eaſt. It was then very large, magnificent, and populous. Here ſtood the famous temple of the ſun. The incas reſided in a part of the citadel, the walls of which were incruſted with gold and ſilver; and the whole fortreſs was built of ſtones, ſo long, that ſeveral oxen could hardly draw one of them. The air is very pure and wholeſome, and the neighbouring country very pleaſant and fruitful.

Los Charcos or La Plata audience is bounded, on the north, by that of Lima, being five hundred and ſeventy miles in a ſtrait line, and four hundred wide, where broadeſt. The climate is various, the ſoil in general fertile, and the principal commodities, ſilver, gold, and pimento.

The chief places are the following; La Plata, the capital which had its name from the mines in its neighbourhood, is ſeven hundred and eighty miles from Lima, towards the ſouth-eaſt. The inhabitants, including Indians, exceed fourteen thouſand. Here is a great ſcarcity of water. This is the ſeat of the governor of the province, of the archbiſhop, has an univerſity, and court of inquiſition ſubordinate to that of Lima.

The town of Potoſi, famous on account of the rich ſilver mines in its neighbourhood, ſtands about ſixty miles from La Plata, to the ſouth-eaſt. There are alſo ſome gold mines, and many others of ſilver, in the audience, beſides thoſe near Potoſi.

The extenſive province of Tucuman is entirely under the dominion of the Spaniards, though they poſſeſs only a few cities in it. According to the lateſt geographers, it does not extend beyond the twenty-ſeventh degree of ſouth latitude, lying to the weſtward of Paraguay, and ſouth of the river Plata. The cities poſſeſſed by the Spaniards are, St. Jago del Eſtero, ſo called from a river on which it is ſituated, whoſe inundations greatly contribute to fertilize the adjacent land; St. Miguel del Tucuman, Neuſtra Sennora de Talavera, Cordova de la Nueva, Andaluſia, Rioja, and the large village of San Salvador. The two firſt of theſe are the moſt conſiderable; the two laſt are ſmall, and built without order or ſymmetry.

Quito is reckoned to be about four hundred miles in length, and two hundred in breadth; and is ſituated between two chains of the high mountain called Cordillera de los Andes. The lands of this province are for the moſt part well cultivated; and there are a great number of towns and villages inhabited by the Spaniards or native Americans. Every village is adorned with a large ſquare, and the church ſtands on one ſide of it. All the roads are laid out in a line, croſſing each other, ſo that the aſpect of the country has the appearance of a large garden. It might be imagined that this country is very hot; but it lies ſo high, and ſo near the mountains covered with ſnow, that the air is very temperate. They might have plenty of wine here, if Lima had not an excluſive privilege of making it themſelves. They have no vicunas or guanacoes here; but they have an animal of the ſame kind, called by the natives lamas, which is like a ſmall camel, and can carry fifty pounds weight. They have all ſorts of materials proper for dying, and ſeveral ſorts of fruits and plants which have been brought from Spain, beſides thoſe that naturally grow here. They have alſo imported beeves and ſheep. A great deal of gold is got in the north parts of this province.

The natives in general are very fond of dreſs; the perſons of diſtinction of both ſexes wear long garments, and a kind of looſe mantle over their ſhoulders. The dreſs of the Spaniards is plainer than that of the Indians, the latter uſually being of flowered cotton; both are fond of wearing ear-rings, and rows of beads round their necks, and the Indians will ſometimes adorn even their ancles with bracelets. An Indian barber has a long looſe garment, and carries his baſon and other utenſils with him. The peaſants are neat, but adorn themſelves with beads or ſhells; and a common Indian only wears a plain looſe garment, which the women ſo contrive as to carry their children on their backs. The dreſs of a mechanic reſembles that of the barber above deſcribed, with this difference, that he walks about with all his tools packed up in a bundle behind him.

The capital city, Quito, is ſeated in a pleaſant valley between two chains of high mountains. It is about a mile in length, and three quarters of a mile in breadth, is a biſhop's ſee, and the reſidence of the treaſurer of the kingdom, as well as of the other officers. It contains about thirty-five thouſand inhabitants, of which one third are originally Spaniards. Here are ſeveral religious communities, and two colleges, which are a ſort of univerſities, under the direction of the Jeſuits and Dominicans.

The third diviſion of South America, which comes under our notice, is Paraguay, bounded on the north by Amazonia, eaſt by Brazil, weſt by Peru and Chili, and on the ſouth by Patagonia. It is one thouſand five hundred miles long, one thouſand broad, and extremely fertile. Independent of horſes, mules, ſheep, goats, hogs, poultry, game, grain, fruits, &c. it produces an admirable drug, called by the name of the country Paraguay: this is an excellent emetic, and of itſelf might form a conſiderable article of commerce. The foreſts abound with wild beaſts, and the rivers and lakes, beſides various kinds of fiſh, with crocodiles, alligators, &c. The mines contain gold, ſilver, copper, iron, amethyſts, &c. To the weſt of the great river Paraguay the country is barren; but to the eaſt, where the Jeſuits have erected temporal and ſpiritual monarchy, it is fertile. The next conſiderable river is that of Plate, or La Plata, which riſes in Peru, and falls into the Atlantic ocean.

The climate of Paraguay differs but little from that of Spain, and the diſtinctions between the ſeaſons are much the ſame. In winter, indeed, violent tempeſts of wind and rain are very frequent, accompanied with ſuch dreadful claps of thunder, attended with lightning, as fill the inhabitants, though uſed to them, with terror and conſternation. In ſummer, the exceſſive heats are mitigated by gentle breezes, which conſtantly begin at eight or nine in the morning.

The cotton tree is a native of this country. The Spaniards ſow and uſe hemp in pretty large quantities; tobacco and ſome ſugar are alſo produced here. Venomous herbs are alſo found in many places; with theſe the Indians poiſon their arrows; but the antidotes are equally common; and, among others, the herb called ſparrows herb, which forms pretty large buſhes, and was diſcovered, and obtained its name in the following manner: Among the different kinds of ſparrows found in theſe provinces, moſt of which are of the ſize of our black birds, there is a very pretty one called macagua. This little creature is very fond of the fleſh of vipers, againſt whom, for this reaſon, he wages a continual war: here are alſo vaſt numbers of all kinds of ſerpents. The rattle-ſnake of Paraguay is a very formidable creature; the effects of its bite are ſudden, and the conſequences dreadful, unleſs antidotes are ſpeedily applied. The chief antidote is a ſtone, to which they have given the name of St. Paul Bezoard, and a poultice of chewed garlick. There are bees of ten different ſpecies in the foreſts of this country.

When the Spaniards and Portugueſe firſt invaded this country, they had but very trifling ſucceſs againſt its inhabitants: but the Jeſuits effected by art what the others had failed in by force. They began by fixing about fifty Indian families into a townſhip, and then by learning their language, conforming to their manners, cultivating their minds, and inculcating ſuch doctrines as were moſt likely to promote their vices, ſoon acquired great authority among them, and made numerous converts, till at laſt, by ſteadily purſuing the ſame artful meaſures, they arrived at that degree of power and influence they now or lately poſſeſſed, as being in a manner the abſolute ſovereigns of a great part of this extenſive country.

For the government of the country, here are parochial and provincial

provincial juriſdictions, but ſubordinate to a ſupreme council of an annual meeting of all the fathers. One of the grand objects of the members of this council was to prevent ſtrangers from being thoroughly acquainted with their ſtrength, riches, and policy: hence the natives were reſtrained from learning the Spaniſh language.

The ſeveral provinces, into which Paraguay is divided, take their names from the rivers that paſs through them. The principal are, Paraguay and La Plata, properly ſo called. The town of Aſſumption is ſituated at the conflux of the rivers Panama and Paraguay, and is a large, well built, and populous city, erected by the Spaniards in 1531, in the midſt of a very rich and fruitful territory, producing all ſorts of corn and fruit. The air is wholſome and temperate, and the trees always green.

La Plata takes its appellation from the river of the ſame name. It is a fine, fertile, plentiful province: proviſions of all kinds abound, the principal wants being thoſe of ſalt and fuel. The great river of Plate, or La Plata, riſes in Peru, and, among other rivers, receives the Paraguay in its courſe. The water is clear, abounds in fiſh, is full of delightful iſlands, and may be navigated for the greateſt part of its courſe. Along its banks are ſeen the moſt beautiful birds of all kinds, but it ſometimes overflows the adjacent country to a great extent, and is infeſted by ſerpents of a prodigious bigneſs. We may form ſome judgment of its largeneſs by the width of its mouth, which is about ſeventy leagues. Before it falls into the Paraguay, it is called Panama. From its junction with the Paraguay to its mouth is above two hundred leagues.

The capital of the province, called Neuſtra Sennora de Buenos Ayres, and which takes its name from the pleaſantneſs of the climate, was founded in 1535, under the direction of Pedro de Mendoza, at that time governor. It ſtands on a point, called Cape Blanco, on the ſouth ſide of the Plata, fronting a ſmall river, in thirty-four degrees thirty-four minutes ſouth latitude, in a fine plain, riſing by a gentle aſcent from the river. The town has ſtraight broad ſtreets, and is of a conſiderable extent, containing no leſs than three thouſand houſes, built moſtly of chalk or brick. Here is a very handſome ſquare, with a magnificent cathedral, and a caſtle, in which the governor holds his court, with a garriſon of three thouſand men. The more civilized part of the natives are of a moderate ſtature, and well made. They have flat round faces, olive complexions, and long black hair. Their garments were formerly the ſkins of beaſts, but now, in moſt things, they conform in dreſs to the Spaniſh faſhion. The wives of the petty princes or lords wear a kind of triple crown made of ſtraw, and their lords hang doe-ſkins over their ſhoulders. The boys and girls go quite naked. They wrap their infants as ſoon as born in a tyger's ſkin, and give them the breaſt for a little while, and then a piece of half raw meat to ſuck. Their beds are the hides of oxen or tygers ſpread on the ground, but the people of rank uſe hammocks of net-work. Previous to their embracing Chriſtianity, they worſhipped the ſun, moon, ſtars, thunder, lightning, groves, rivers, animals, &c.

The bad qualities common to all of them are ferocity, inconſtancy, perfidy, and drunkenneſs. Their favourite liquor is chica. They aſſemble to drink it, and to dance and ſing, and in theſe exerciſes they perſiſt till they are all drunk. They then quarrel, and from words ſoon proceed to blows, ſo that their merry-makings ſeldom terminate without bloodſhed, if not in the death of ſome of the gueſts.

There is, properly ſpeaking, no form of government among them; every town, indeed, has its cacique; but theſe chiefs have no authority, but in proportion to the eſteem they have acquired. Several do nothing but rove from place to place with their furniture, which conſiſts of nothing but a mat, a hammock, and a calabaſh. Thoſe who live neareſt to Tucuman are better cloathed and lodged; but the cabins of ſuch as live in moſt of the towns are no better than wretched hovels made with branches of trees, and covered with ſtraw, or rather graſs.

They are admirable horſemen, and tame and manage the wild horſes with great addreſs, which has made the Spaniards repent ever having ſtocked the country with thoſe uſeful animals. Their arms are bows, arrows, and lances, which they uſe with great dexterity and ſtrength. They faſten a rope to the latter, by which they can, as the end is bearded, draw the wounded perſon to them. Beſides ſawing the necks of their priſoners with the jaw-bone of a fiſh, they ſcalp them, and preſerve their ſcalps, as tokens of victory.

It is cuſtomary with the women of Chaco to prick their faces, breaſts and arms, in order to mark them. They are ſtrong, robuſt, have eaſy labours, and bathe themſelves and children immediately after the delivery. They are very jealous of their huſbands, yet entertain very little affection for their offſpring. They uſually bury their dead on the ſpot where they expire, plant a javelin, and the ſcull of an enemy (if they can get one) over the grave, and then remove to a diſtance from the place of interment.

The kingdom of Chili, comprehended in the viceroyalty of Peru, reaches from the frontiers of Peru to the ſtraights of Magellan. This country was firſt diſcovered by Don Diego de Almagro about the year 1535. Theſe kingdoms are ſeparated by the diſtrict of Atacama, which extends eighty leagues between the province of the ſame name, being the laſt of Peru, and the valley of Copayapu, the firſt in Chili. Eaſtward, ſome parts of this kingdom terminate on the frontiers of Paraguay, properly ſo called, though ſome uninhabited deſerts intervene, and others on the government of Buenos Ayres, or La Plata, properly ſo called, though between theſe are the Pampas, or wide-extended plains. Its weſtern boundary is the ſouth-eaſt, extending nearly from twenty-ſeven degrees, the latitude of Copayapu, to fifty-three degrees thirty minutes ſouth. But that part of this kingdom, which is inhabited by the Spaniards, begins at Copayapu, and terminates at the large iſland of Chiloe, the ſouthern extremity of which is in the twenty-fourth degree of ſouth latitude, and its extent from weſt to eaſt is the diſtance between the coaſt of the South Sea and the Cordilleras, which are here of a ſtupendous height.

As the kingdom of Chili lies ſouth to the equator, the ſeaſons are almoſt oppoſite to thoſe in the northern hemiſphere: but the face of the country, except on the ſea coaſt, is beautiful, and the climate wholſome. On the eaſt, the country is ſcreened by the Andes, while from the weſt the air is cooled by the moſt refreſhing ſea breezes. Along the coaſt of the Pacific Ocean they enjoy not only a fine temperate air, but a clear ſerene ſky moſt part of the year. Sometimes, indeed, the winds that blow from the mountains are exceedingly ſharp in winter; but, in general, this is one of the moſt comfortable climates in the world, being a medium between the intenſe heats of the torrid zone and the piercing colds of the frigid.

The Chileſians are of a middle ſtature, ſtrong built, of a tawny complexion, and have long black hair on their heads, but pluck off that on their chins, or other parts of their bodies. They are tall, robuſt, active, and courageous, enduring fatigue, heat, and cold to admiration. Their arms are pikes, bows, arrows, and ſwords, and their diſcipline much more regular than that of the other Indians. Their manners are very ſimple. They have no gold nor ſilver, though theſe metals are ſo common in their country. All their bedding is ſome ſkins laid on the ground, and they eat on the ground, or elſe on a little bench, and wipe their hands on a broom, inſtead of a napkin. Their food conſiſts of maize, fruits, herbs, and what they catch by hunting and fiſhing. Their drink is alſo made of maize toaſted, ſteeped and boiled, or of fruits. Their furniture conſiſts of four or five diſhes, and ſome wooden ſpoons or ſhells, a calabaſh or gourd to drink out of, and a leaf of a tree or maize for a ſalt-ſellar.

The martial genius of the natives continually retarded the progreſs of foreigners, and has always been the cauſe why the Spaniſh ſettlements here are ſo diſproportionate to the extent, fertility, and riches of the country. The free Indians are much more numerous than the Spaniards, who are computed at no more than twenty thouſand. All the inhabitants of Chili, including Europeans, Meſtizoes, mulattoes and negroes, are reckoned at one hundred and fifty thouſand only. Even the free Indians, it ſeems, now acknowledge the dominion of the king of Spain, and pay tribute to his governor; but the ſubjected Indians belong entirely to the Spaniards, living among them, and ſerving them in the ſame manner as the natives of Peru and Mexico. The greater part of Chili is ſtill poſſeſſed by the free Indians, who are rather allies than ſubjects of Spain, having (as we before hinted) acknowledged the ſupremacy of the king of Spain, but are to be ſubject to their own laws and government; an engagement which it will be hazardous for the Spaniards to break.

Earthquakes have often done a great deal of damage at St. Jago, that of 1647 was ſo violent, that it almoſt overturned the whole town, and left ſuch unwholſome vapours in the air, that all the inhabitants died, except about three or four hundred: and the dreadful ſhock in 1730 laid the city in ruins. In the neighbourhood are the gold mines of Tiltill, and the Lavaderoes, by their concerns in which many of the citizens amaſs vaſt fortunes.

South of St. Jago is the province of Conception: the town of the ſame name is the oldeſt European eſtabliſhment in Chili, and the ſecond city in point of dignity. The harbour is good, the fortifications indifferent, but the garriſon ſtrong. The peaſants in the neighbourhood of Conception have great addreſs in the uſe of the nooſe and lance; with theſe they will combat the fierceſt bull, throwing the nooſe ſo artfully, as to

lay

lay certain hold of ſome part of the body. When a bull is haltered, they draw the knot, at the ſame time giving ſpurs to their horſes, and hamſtringing him with their lances, ſo that the animal is taken and diſabled at the ſame inſtant.

The province of Chiucitos is bounded by La Plata, on the north-eaſt, and Chili on the weſt. The original inhabitants are very voluptuous and warlike. They are alſo very ſuperſtitious, and change their wives as often as they pleaſe. They maintained bloody wars with the Spaniards till 1690, ſince which time ſome of them have become Chriſtians. Its chief riches conſiſt of honey and wax.

SECT. III.

Containing Deſcriptions of TERRA MAGELLANICA, or PATAGONIA, BRAZIL, AMAZONIA, and GUIANA; their firſt Diſcovery, Boundaries and Extent, Soil, Climate, Produce, Inhabitants, Animals, &c.

TERRA Magellanica received its name from Ferdinand Magellan, a Portugueſe officer; who likewiſe gave name to thoſe ſtreights which lead from the ſouth to the north ſea, he being the firſt who ſailed through them. The appellation of Patagonia was derived from a principal tribe of its inhabitants, called Patagons. The whole country, which goes under the name of Patagonia, extends from Chili and Paraguay to the utmoſt extremity of South America; that is, from thirty-five almoſt to fifty-four degrees ſouth latitude, being ſeven hundred miles long, and three hundred broad where wideſt. The northern parts contain an almoſt inexhauſtible ſtock of large timber, but in the ſouthern diſtricts there is ſcarcely a tree to be ſeen fit for any mechanical purpoſe. The lofty mountains, called Andes, traverſe the whole country from north to ſouth.

Here are incredible numbers of wild horned cattle and horſes, which were firſt brought hither by the Spaniards, and have increaſed amazingly; the paſturage alſo is good. Some writers tells us that freſh water is ſcarce; but were that the caſe, we cannot ſee how the preſent inhabitants, and ſuch multitudes of cattle could ſubſiſt. The eaſt coaſt is chiefly low-land, with few, or no good harbours; that called St. Julian is one of the beſt.

The inhabitants of Patagonia conſiſt of ſeveral Indian tribes, as the Patagons, Pampas, Coſſares, &c. They are a ſavage, barbarous people, of a copper colour, like the reſt of the Americans, with coarſe black hair, and no beards. They are mightily addicted to painting themſelves, and make ſtreaks on their faces and bodies. They go almoſt ſtark naked, having only a ſquare garment in the form of a blanket, made of the ſkins of ſeveral animals, and ſewed together, which they ſometimes wrap round them in extreme cold weather; and they have alſo a cap of the ſkins of fowls on their heads. Former voyagers repreſented them as monſtrous giants of eleven feet high, whereas they are no taller than the other Americans. The women, as in other places, are very fond of necklaces and bracelets, which they make of ſea ſhells. The natives chiefly live on fiſh and game, and what the earth produces ſpontaneouſly. This country abounds with an animal called camel-ſheep by ſome authors, but their true name is guanacoes. They partake of the nature of a camel, though they have no bunch on the back, and they were formerly made uſe of to carry burdens. They have alſo a bird called an oſtrich, but not ſo large, and they differ from the African oſtriches in having three toes, whereas thoſe have but two. A great number of iſlands, or cluſter of iſlands, lie on the coaſts of Patagonia.

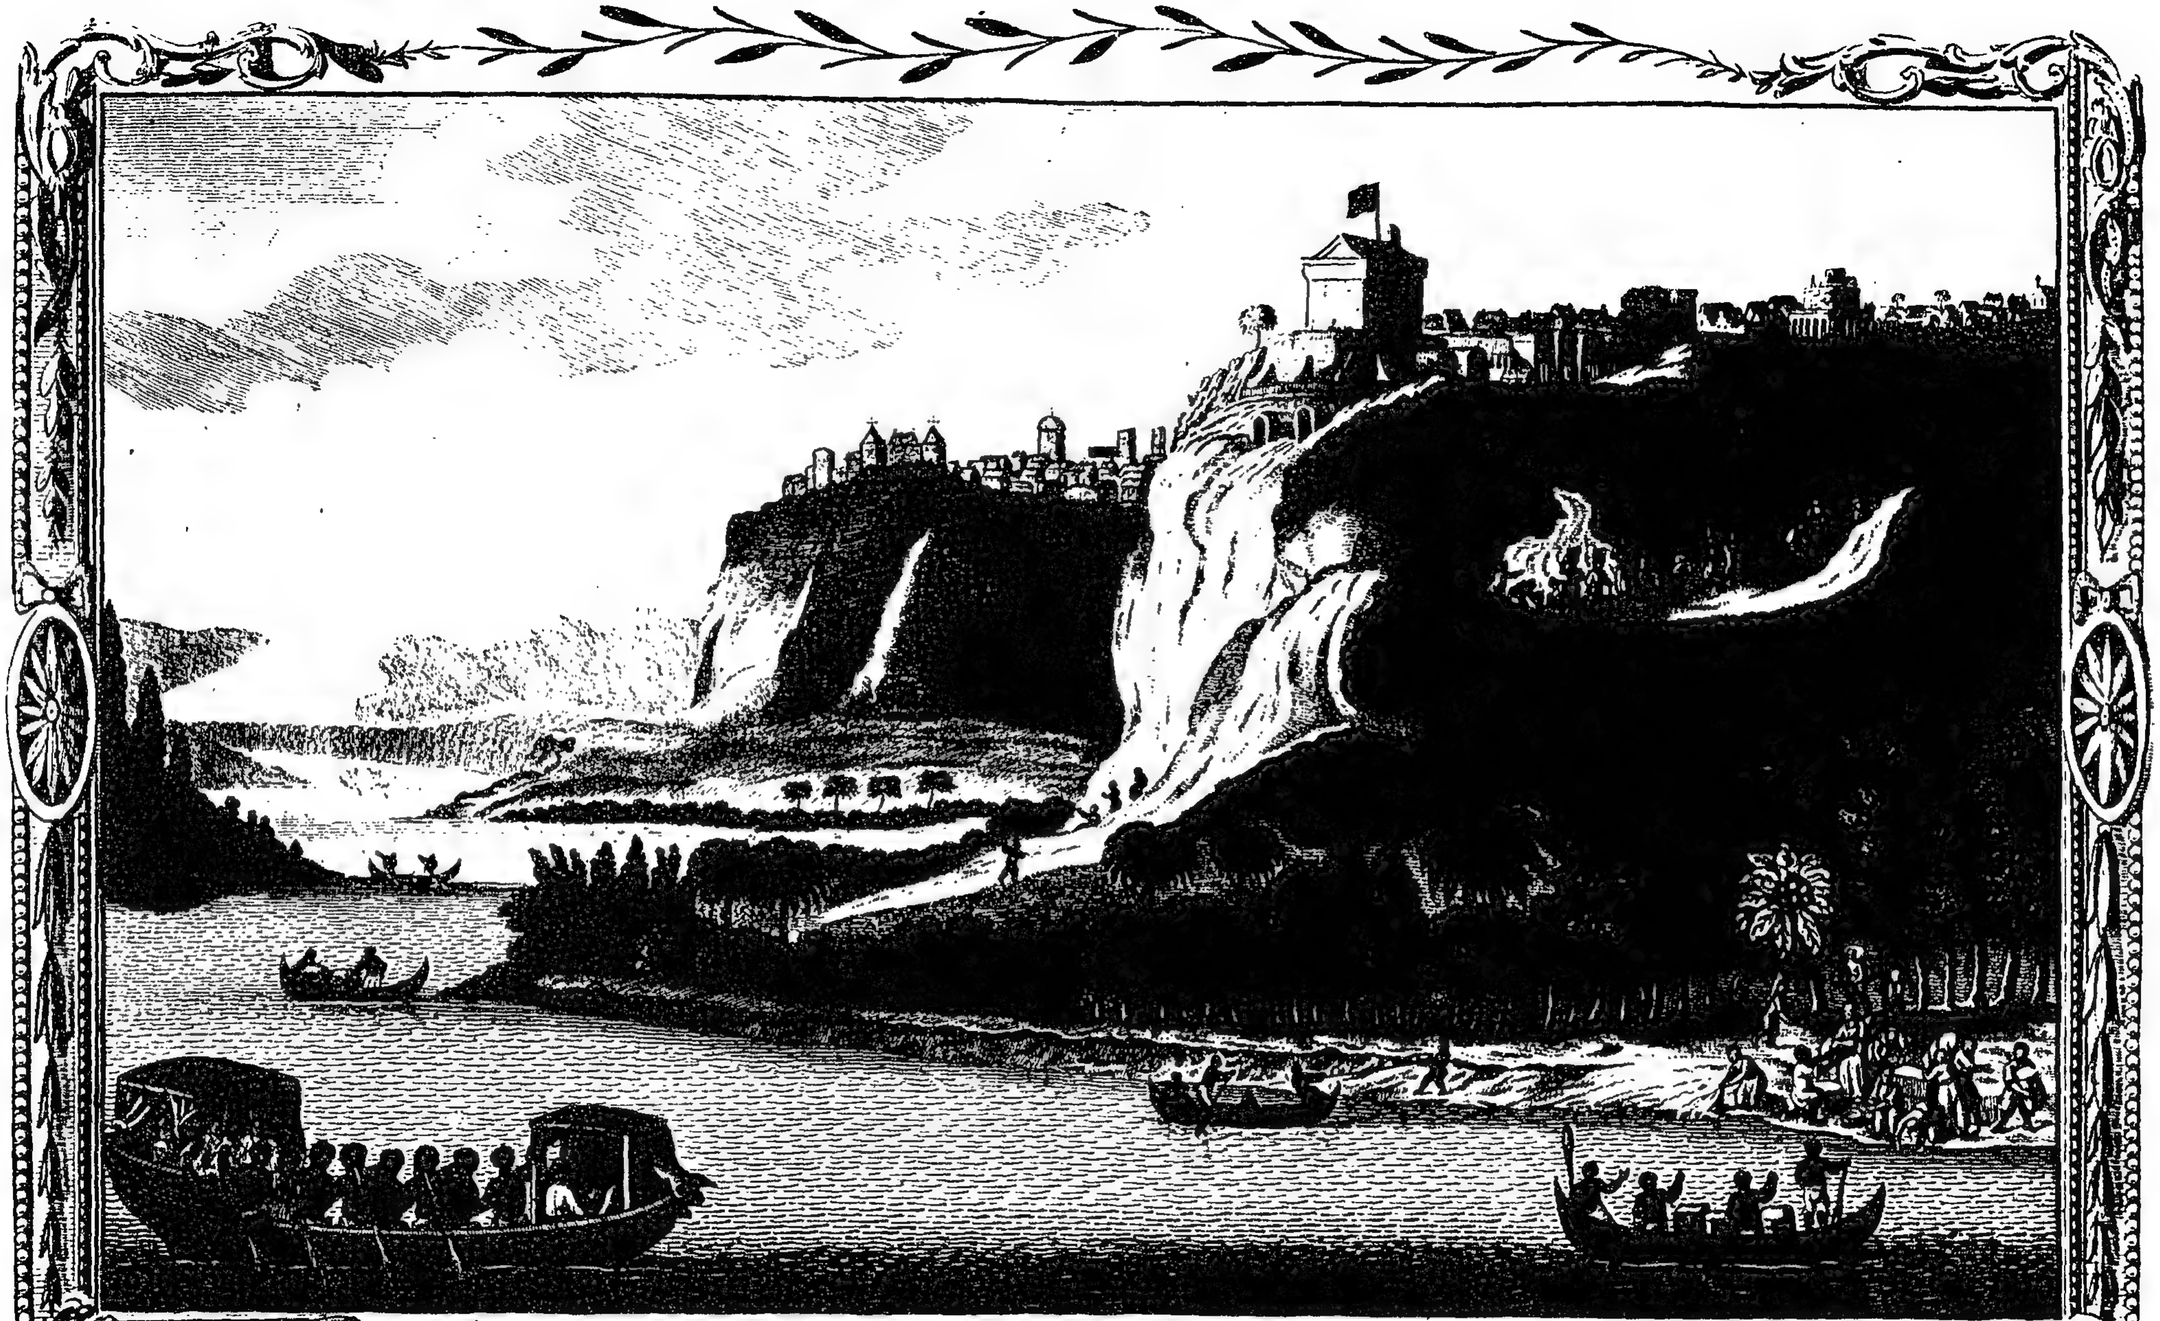
The iſland of Terra del Fuego, or the Land of Fires, as it was called by the firſt diſcoverers, on account of their having obſerved ſome great fires on it (ſuppoſed to be volcanoes) as they paſſed it in the night, is ſeparated from the continent by the Magellanic ſtreights; has a rough appearance, being very mountainous, but is interſected with deep narrow vallies, and is well watered. The natives in this country are ſhort in their perſons, not exceeding five feet ſix inches at moſt, their heads large, their faces broad, their cheek-bones very prominent, and their noſes very flat. They have little brown eyes, without life; their hair is black and lank, hanging about their heads in diſorder, and beſmeared with train oil. On the chin they have a few ſtraggling ſhort hairs inſtead of a beard, and from their noſe there is a conſtant diſcharge of mucus into their ugly open mouth. The whole aſſemblage of their features forms the moſt loathſome picture of miſery and wretchedneſs to which human nature can poſſibly be reduced. They had no other cloathing than a ſmall piece of ſeal-ſkin, which hung from their ſhoulders to the middle of the back, being faſtened round the neck with a ſtring. The reſt of their body was perfectly naked, not the leaſt regard being paid to decency. Their natural colour ſeems to be an olive-brown, with a kind of gloſs reſembling that of copper; but many of them diſguiſe themſelves with ſtreaks of red paint, and ſometimes, though ſeldom, with white. Their whole character is the ſtrongeſt compound of ſtupidity, indifference, and inactivity. They have no other arms than bows and arrows, and their inſtruments for fiſhing a kind of fiſh-gags. They live chiefly on ſeals fleſh, and like the fat oily part moſt. There is no appearance of any ſubordination among them, and their mode of living approaches nearer to that of brutes, than that of any other nation. The children go naked, and the only weapon of the men is a long ſtick generally hooked, and pointed at the end like a lance. They live in huts made of boughs, and covered with mud, branches, &c. One ſide is open, and the fire place is in the middle; and a whole family herd together in one of theſe miſerable hovels.

The above-mentioned iſlands are all very barren and mountainous; but from what Mr. Forſter ſays, in his voyage to the South ſea, the climate does not appear to be ſo rigorous and tempeſtuous as it is repreſented in Anſon's voyage. Upon the lower grounds and iſlands, that were ſheltered by the high mountains, ſeveral ſorts of trees and plants, and a variety of birds, were found. Among the trees, was Winter's bark-tree, and a ſpecies of arbutus, loaded with red fruit of the ſize of ſmall cherries, which were very well taſted. In ſome places there is alſo plenty of celeri. Among the birds was a ſpecies of duck of the ſize of a gooſe, which ran along the ſea with amazing velocity, beating the water with its wings and feet: it had a grey plumage, with a yellow bill and feet, and a few white quill-feathers: at the Falkland iſlands it is called a loggerhead duck. Among the birds are alſo plenty of geeſe and falcons. The rocks of ſome of the iſlands are covered with large muſſel-ſhells, the fiſh of which is ſaid to be more delicate than oyſters.

Brazil was firſt diſcovered by Americus Veſpucius. When meaſured along the ſea-coaſt, from the mouth of the river La Plata, in the thirty-fifth degree of ſouth latitude to the river of Amazons, under the equator, it is two thouſand five hundred miles in length, and ſeven hundred in breadth where wideſt. The aſpect of the country, from the ſea, is not inviting, as it appears mountainous and rough; but, when entered, nothing can be more delightful, as the mountains are covered with woods of ever-greens, and the vallies are cloathed with verdure; and, among the inland mountains are various ſprings and lakes, which diſembogue themſelves into the great river Paraguay, and the river of Amazons.

The climate of this vaſt country varies in different parts. In the northern provinces, towards the equator, great rains and variable winds are frequent; and the former ſometimes overflow the country, and occaſion the air to be very unwholſome. But as to the ſouthern provinces, there is no country between the tropics where the air is more ſalubrious, or the heats more tolerable.

The wild beaſts of Brazil are, ant-bears, tygers or madilloes, porcupines, jananveras, a very fierce ravenous animal, ſomewhat like a greyhound, armadilloes, various ſorts of monkies, ſome of which are very large; that called by Europeans the ſloth, or lazy beaſt, and the toperaſſon, a creature between a bull and an aſs, but without horns, and very harmleſs. The fleſh of the toperaſſon is good, and taſtes like beef. They have great plenty of deer, hares, and other game, and a variety of other tame and wild animals.



Serpents and venomous creatures are very numerous here: among which are, the Indian ſalamander, a kind of four-legged inſect, whoſe ſting is mortal; the ibibaboka, a kind of ſerpent, about ſeven yards long, and half a yard in circumference, whoſe poiſon is inſtantaneouſly fatal to the human kind; the rattle ſnake, which grows here to an enormous ſize; the liboya, or roe-buck ſnake, which is able to ſwallow a roe-buck whole, with its horns, being between twenty and thirty feet in length, and two or three yards in circumference; ſcorpions, one ſort of which are between four and five feet long; lizards of three or four feet long; millipedes, both venomous and dangerous, and many others. The piſmires here are very numerous, deſtructive, and large.

There are a prodigious number of birds in this country; ſome of which are remarkable for their beauty, and others for their taſte. Of the firſt ſort is the humming-bird, ſo called from the noiſe he makes with his wings, when he ſucks the juices of flowers. The anhima hath a horn two or three inches long growing out of his forehead, and is therefore called by the Europeans the unicorn bird. The toucan is of the bigneſs of a wood-pigeon, and of a perfect jet-black all over, except under the breaſt and belly, which is of a fine yellow, and a ſmall circle of red about the neck: but what is moſt extraordinary in this bird, is, that its bill is bigger than its body, yellow without and red within, and about a ſpan long. The guira, called by the Europeans the ſea-curlew, and the ſame with the numo-

Mr. Penguilly beheaded by order of Sir Francis Drake, at Port St. Julian on the Coast OF PATAGONIA.

View of St. SALVADOR, a City of South America.

Sherwin sculp.

nius Indicus and renata conconca of the Latin authors, is remarkable for its often changing its native colour, being at firſt black, then aſh-coloured, next white, afterwards ſcarlet, and laſt of all crimſon, which laſt grows richer and deeper the longer the bird liveth. The cocoi, a very beautiful bird; paraquets, parrots, cockatows, mackaws, and variety of others, are very common here. Their bats are of a prodigious ſize: they will go into houſes in the night, and if they find any perſons aſleep and uncovered, they will faſten on them, and ſuck their blood. Their eatable fowls are turkies, very large and delicious; a ſort of white hens, and other poulty; ducks, and other ſuch water fowl.

Great plenty and variety of fiſh are on the ſea-coaſts, and in the lakes and rivers; among others, is the globe-fiſh, called by the Latins orbis minor, from its orbicular form, which is ſo beſet all round with ſharp pikes, like thoſe of a hedge-hog, that it bids defiance to all fiſhes of prey. But the moſt remarkable of all the living creatures in the ſea is the ſea-bladder, ſo called becauſe it greatly reſembles one, and ſwims on the ſurface of the waves. The inſide is only filled with air, except about a ſpoonful of water that ſerves to poiſe it. The ſkin is thin and tranſparent, and reflects a great number of colours, like a bubble raiſed in the water.

Timber is very plentiful in this country, but that which is termed brazil-wood is the principal ſpecies. The palm-trees of Brazil are of five different kinds; beſides which, here are woods of ebony, maſtic, cotton-trees, citron, &c. and many others, which diffuſe around a moſt delicious fragrancy from the admirable fruits and balſams they produce.

Some of the principal commodities of this country are, ambergris, balſams, ſugar, ſweetmeats, tobacco, roſin, indigo, gold, pebbles, diamonds, jaſper, emeralds, &c. The gold and diamond mines were firſt opened in 1681, and have ever ſince been computed to yield five millions of pounds ſterling, a fifth of which belongs to the king. The diamond mines are farmed at much inferior value to what they really produce. The Brazil ſugar is remarkably fine and white, and the tobacco admirable. Of the laſt article, great exports are made to Africa, where they not only diſpoſe of it to the natives, but even ſupply the veſſels of other nations, who are obliged to purchaſe it for the convenience of carrying on the gold-duſt and ſlave trade with any tolerable advantage. The north and ſouth parts of Brazil abound with horned cattle, which are hunted for their hides, of which no leſs than twenty-thouſand are exported to Europe annually.

There has of late years been ſo great an increaſe of the Portugueſe trade hither, that inſtead of twelve ſhips formerly employed in the Brazil commerce, there are never leſs than one hundred ſail of large veſſels going to and returning from thoſe colonies.

With reſpect to the government of Brazil, it is divided into fifteen provinces, called capitaneas or captainries, the whole being a principality, which gives title to the preſumptive heir of the crown of Portugal: of theſe captainries, eight only are annexed to the crown. Some late writers have computed that the royal revenue ariſing from this colony amounts to two hundred thouſand pounds ſterling in gold, beſides the duties and cuſtoms on merchandize imported from thence.

The principal city is St. Salvador, alſo called the city of Bahia, which is in the province of the ſame name, and was thus called from the commodiouſneſs of its harbour. It is ſeated on a hill, and is populous, magnificent, and the moſt gay and opulent city in all Brazil. The trade carried on here is prodigious; the gentry are polite; but the vulgar, who have acquired wealth, are intolerably inſolent and brutal. In this city are no leſs than twelve or fourteen thouſand Portugueſe, with three times that number of negroes. The harbour is capable of receiving ſhips of the greateſt burthen, and its entrance is guarded by a ſtrong fort called St. Anthony's. There are other ſmall forts that command the harbour, one of which is built upon a rock about half a mile from the ſhore.

In this city are about two thouſand houſes, which are handſomely built, moſtly of brick or ſtone. The churches, convents, and hoſpitals, are not only built in the moſt ſumptuous manner, but adorned with every thing rich and coſtly, particularly with fine paintings. The upper town has many ſplendid ſtructures, particularly the cathedral of St. Salvador. The church, which lately belonged to the jeſuits college, is very magnificent, and built of marble brought from Europe; and the college is a fine edifice. The viceroy's palace is a moſt ſumptuous building, as is alſo the palace of the archbiſhop, the courts of judicature, the hoſpitals, &c.

The principal ſtreets are large, and all of them paved: there are alſo ſeveral ſquares, and many gardens, both within the city and its neighbourhood, in which are a great variety of fruit-trees and flowers, ſallading, and plants for the kitchen. Moſt of the ſtreets are, however, ſo ſteep, as to be impaſſable for coaches or chairs; to ſupply which defect, the rich cauſe themſelves to be carried out in a kind of cotton hammock, called ſerpentines, which are borne on the negroes ſhoulders by the help of a bamboo, about twelve or fourteen feet long.

The lower claſs of people here are inſolent, and the ſoldiers given to all manner of vice; and ſome of them are dangerous aſſaſſins. The women are more ſtrictly watched than in Portugal, yet ſometimes find means to elude the vigilance of their keepers. However, the huſbands make no ſcruple to ſtab or poiſon their wives, if they find them falſe. The chief mechanic trades in this city are hatters, ſmiths, ſhoe-makers, ſawyers, carpenters, coopers, taylors, and butchers. All theſe buy negroes, whom they train up to their ſeveral employments.

The town of Fernambuco, capital of the province to which it gives name, is a very conſiderable place. It is alſo called Rerief, or Arrarife, from a neighbouring harbour of that name, which is now the ſtrongeſt in all Brazil, a number of forts being erected all round, and the acceſs naturally ſo intricate and dangerous, by reaſon of the concealed rocks, ſands, and little iſlands about it, that the aſſiſtance of a ſkilful pilot is abſolutely neceſſary in order to avoid them. The name Fernambuco ſuppoſed to be a contraction of Inferno Boco, or the Mouth of Hell, ſeems to have been given it from this circumſtance.

The rich and populous city of Rio de Janeiro, is ſituated on a river of the ſame name, about two leagues from the main ocean. It has a moſt admirable port, well guarded; which is very much reſorted to by the Portugueſe, on account of the gold and diamonds found in the neighbourhood.

The little republic of St. Paul lies about thirty miles north of the province of St. Vincent, which is the moſt ſoutherly of Brazil. This ſtate is ſurrounded by lofty mountains and thick foreſts; it was originally compoſed of outlaws from all the neighbouring colonies, Spaniards, Portugueſe, Creoles, Meſtizoes, Mulattoes, and Negroes, who took refuge on this ſpot, and lived at firſt without order, ſociety, faith, honour, or religion; preying upon each other, and ſubſiſting by mutual rapine, and the plunder of their neighbours; but the inconveniencies attending this way of life, and the danger to which it expoſed them, ſoon drove them into confederacies, and theſe, at laſt, produced a regular democracy.

The iſland of St. Catherine's is ſituated in twenty-ſeven degrees thirty-five minutes ſouth latitude, and is one of the moſt delightful ſpots imaginable, being about twenty-ſeven miles long, and ſix broad. The convicts from Brazil are tranſported hither.

The moſt conſiderable tribes of the native Brazilians are the Tapuyers and Topinamboys; of whom the former inhabit the northern, and the other the ſouthern parts. The former are men of good ſtature, of a dark copper colour, their hair black, and hanging over their ſhoulders; but they ſuffer no hair on their bodies or faces, and go almoſt naked. Their ornaments are, glittering ſtones, hung upon their lips or noſtrils, and bracelets of feathers upon their arms: the men have alſo a cap or coronet of feathers. The complexions of the Topinamboys are not ſo dark as that of their northern neighbours, who live nearer the line; and neither the one nor the other, as thoſe of the Africans, who lie under the ſame parallels.

The native Brazilians are partly freemen, and partly ſlaves; but the negro ſlaves are much more valuable, being of a more robuſt conſtitution, and fitter for labour. Some writers have repreſented the Brazilians as a ſavage people, devoid of all principles of religion, cruel in war, and canibals or devourers of human fleſh; but theſe ſtories are generally looked upon as fictions of the Portugueſe, to juſtify their cruel and inhuman treatment of them. They believe in certain inviſible beings, the diſpenſers of good and evil, the rewarders and puniſhers of virtue and vice; and their notion with reſpect to a future ſtate, is, that after death they ſhall viſit their anceſtors, dwelling beyond the Andes; but they have no temples. Their prieſts make them believe, that if they bring them offerings, thoſe inviſible beings, who give them food and all the good things they enjoy, will proſper their affairs; but if they neglect this, ſome terrible misfortune will befal them. Their towns are without walls. Their mode of carrying on war is by ambuſcades; and their weapens are bows, arrows, ſhields, and wooden clubs. They have caciques, who rule them in peace, and lead them in war.

The country of Amazonia was firſt diſcovered by Gonzola Pizarro, brother to the marquis Pizarro, who conquered Peru. It is bounded, on the north, by Terra Firma; on the ſouth, by La Plata; on the eaſt, by Brazil and the Atlantic ocean; and, on the weſt, by Peru. It is one thouſand two hundred miles in length, and nine hundred and ſixty in breadth; but this vaſt extent of country is but little known, except along the banks of the great river Amazons, and towards the Brazilian frontiers. The river of Amazons is the largeſt in the world; ſeveral other rivers, particularly the Negro, Xauxa, and Maranhon, fall into it. It riſes in the Cordilleras, and increaſes

in a moſt amazing manner as it proceeds towards the Atlantic, into which it diſembogues itſelf by eighty-four channels. It winds five thouſand miles, is ſeveral miles broad, and near forty fathoms deep.

None of the Europeans have planted colonies in this country, though they have often viſited it. The air is cooler here than could be well expected near the equator; which proceeds from the heavy rains that occaſion the rivers to overflow their banks one half of the year; and from the cloudy weather, and ſhortneſs of the days, which never exceed twelve hours. A briſk eaſterly wind alſo cools the air, which blows from the Atlantic ocean quite through the country, ſo ſtrong, that veſſels are thereby enabled to ſail againſt the ſtream, and perform a voyage up the river of Amazons almoſt as ſoon as down it, which requires eight or ten months. During the time of the rains here are terrible ſtorms of thunder and lightning.

The ſoil is fertile, producing cocoa-nuts, ananas or pine-apples, guavas, bananas, and other tropical fruits; cedar, iron-wood, ſo called from the weight and denſity, red wood, oak, ebony, logwood, and many other ſorts of dying woods and drugs; caſſava root, ſarſaparilla, canala or ſpurious cinnamon, tobacco, cotton, ſugar, maiz, yams, and potatoes.

Here are great numbers of tigers, wild boars, buffaloes, &c. and in the woods are wild fowl and veniſon. They have alſo ſtore of excellent honey and balm. The honey is exquiſite, and the balm good againſt all wounds. Parrots are as numerous here as pigeons in England. They have vaſt numbers of fiſh of all ſorts in the rivers and lakes; and, among others, manatees or ſea-crows, that are amphibious, and feed on the banks; and tortoiſes of a large ſize, and delicate taſte; but the fiſhers muſt be upon their guard againſt crocodiles, alligators, and water-ſerpents, which infeſt the coaſts.

With reſpect to the natives, they are, like almoſt all the Americans, of a good ſtature, have handſome features, long black hair, and copper complexions. They have a taſte for the imitative arts, eſpecially ſculpture and painting, and are good mechanics. Their cordage is made of the barks of trees, their ſails of cotton, their hatchets of tortoiſe-ſhells, or hard ſtones; their chiſſels, planes, and wimbles, of teeth and horns of wild beaſts, and their canoes are hollowed trees. They ſpin and weave themſelves cotton garments; and their houſes or huts are of wood, thatch, and clay. Their arms in general, are darts and javelins, bows and arrows, with targets of cane and fiſh-ſkins. They are ſuch good archers, that they kill fiſh in the water with their arrows, which they eat without bread or ſalt. Their ſeveral nations are governed by their chiefs or caciques; for it is obſervable, that the monarchical form of government hath prevailed almoſt univerſally, both among the antient and modern barbarians, as requiring a leſs refined policy than the republican ſyſtem. The regalia by which the chiefs are diſtinguiſhed are, a crown of parrots feathers, a chain of lions teeth or claws about their middle, and a wooden ſword in their hand.

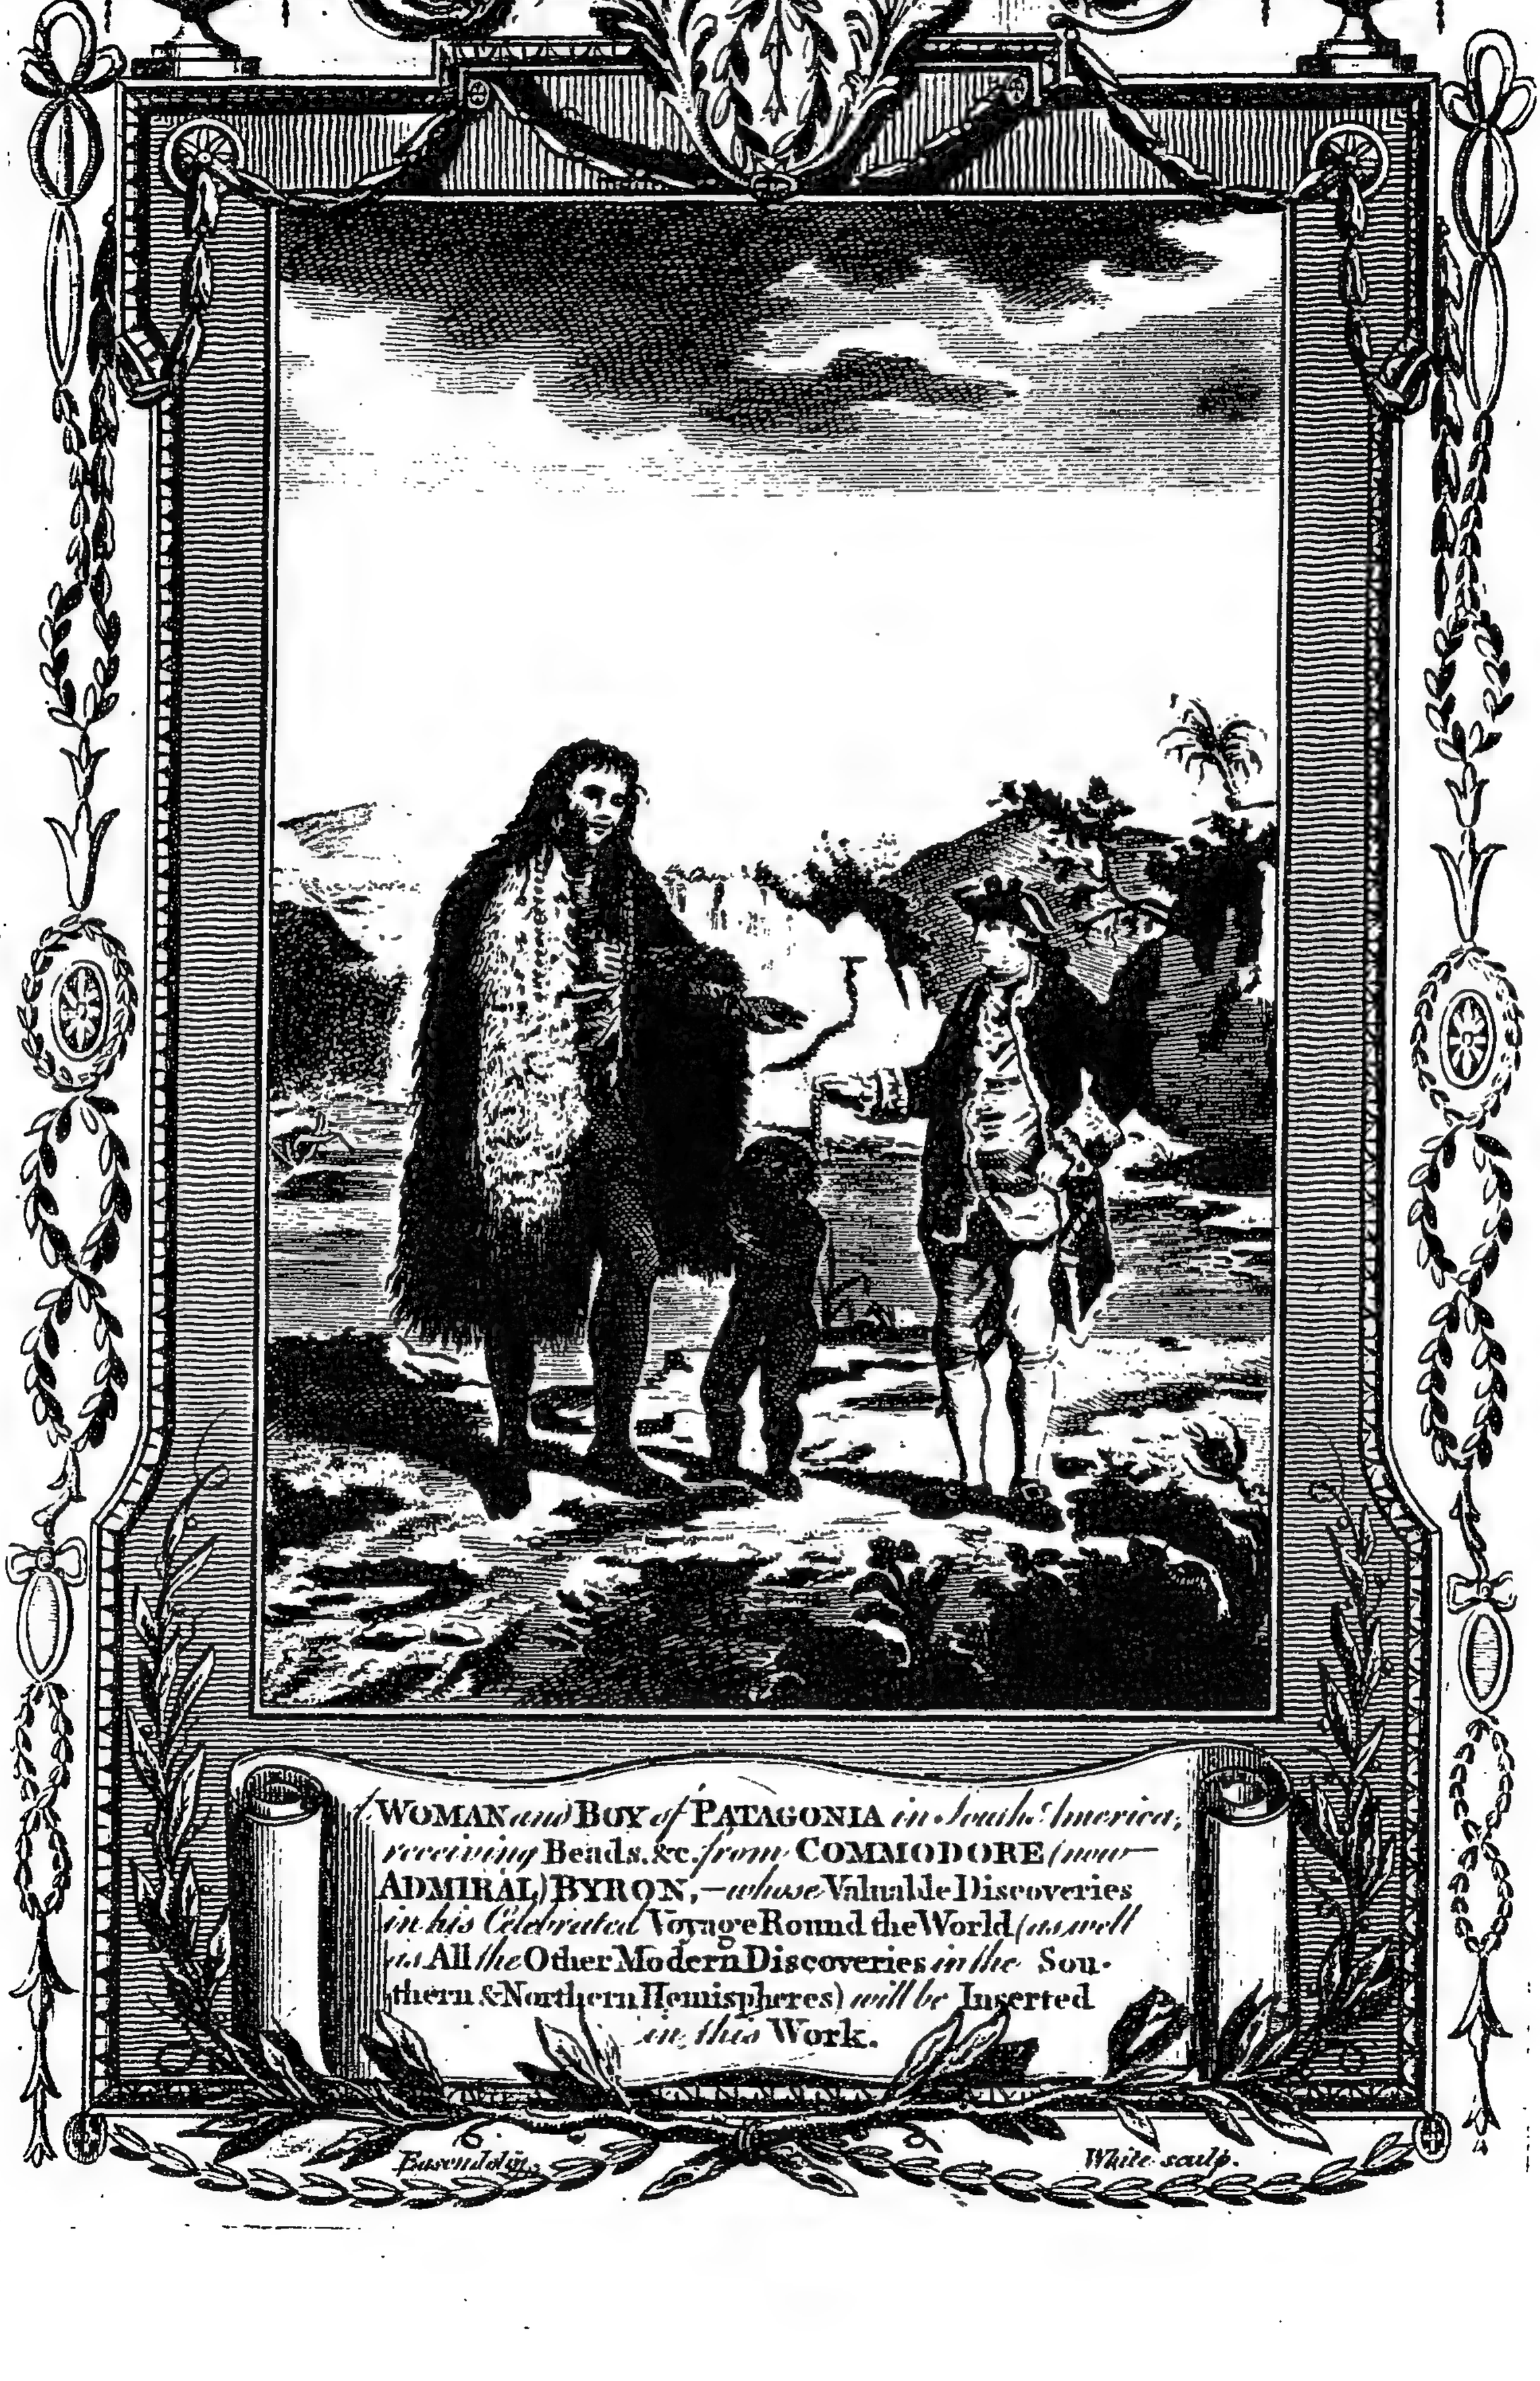
All theſe nations allow of polygamy, or a plurality of wives and concubines; and the women here, as in the other American nations, do the moſt laborious work. They worſhip the images of their antient heroes, or ſubordinate deities; but have no temples, or orders of prieſts among them. Both ſexes ſometimes wear mantles of the ſkins of beaſts, or cotton, but generally go naked. In ſome diſtricts the men thruſt pieces of cane through their ears and under lips, and hang glaſs beads at the griſtles of their noſes, which bob to and fro when they ſpeak; but in others, they wear plates of gold at their ears and noſtrils.

Guiana, or Caribeana, which has Amazonia on the ſouth; Terra Firma on the weſt; and the Atlantic ocean on the north and eaſt; its length is ſeven hundred and eighty miles, and its breadth four hundred and eighty. It is uſually divided into two parts, that is, the ſea-coaſts and adjacent diſtricts denominated Caribeana Proper, and the interior country called Guiana Proper.

The Portugueſe, French, and Dutch, have all ſettlements along this coaſt, which is low and marſhy, and ſubject to inundations in the rainy ſeaſons. The principal French ſettlements in Guiana are in the iſle of Cayenne, which lies one hundred miles weſt of Cape Orange, at the mouth of the river of the ſame name. It is ſeventeen leagues in compaſs, well wooded and watered, and excellently cultivated. At the eaſtern part of it is the town and fort of St. Lewis. The town contains upwards of two hundred houſes; the fort has a good garriſon, and near it is a tolerable harbour. The French firſt eſtabliſhed themſelves here in 1635. The place was afterwards alternately poſſeſſed by the Engliſh, then by the French again, to whom ſucceeded the Dutch; but the French finally prevailing, ſtill keep it in their poſſeſſion.

The diſtrict called Dutch Guiana was formerly the property of the Engliſh, who made ſettlements at Surinam, where a kind of corrupt Engliſh is ſtill ſpoken by the negroes. The Dutch took it in the reign of Charles II. and it was ceded to them by treaty in 1674, in exchange for what they had poſſeſſed in the province now called New York, in North America.

There is a perpetual ſpring in this country, which produces large quantities of ſugar canes; alſo the ſimarnba tree, eſteemed a ſpecific in dyſenteries; and the carunce, a poiſonous nut. Here are great numbers of monkies and ſerpents, and a remarkable amphibious creature called the laubba, about the ſize of a ſmall pig. They have alſo a vaſt variety of birds of different plumage. Among their fiſhes, here is the torpedo; and inſects are innumerable.



The inhabitants of Guiana are in general either natives, who are of a reddiſh brown, or negroes and Europeans, or a mixed progeny of theſe in various combinations. The natives are divided into different tribes, more or leſs enlightened and poliſhed, as they are more or leſs remote from the ſettlements of the Europeans: they have no diviſion of lands. Polygamy is allowed among them. Continence before marriage is not conſidered as a virtue; a man cares not whether the woman he marries is a virgin or not; but no injury is ſo ſurely revenged as the infidelity of a wife. The men go to war, hunt, and fiſh; the women look after domeſtic affairs. The arms are bows, arrows, clubs, and poiſoned darts blown through a reed. They go almoſt naked, excepting upon particular occaſions, when they adorn their heads with feathers. They are chearful, humane, and friendly, but timid, and addicted to drinking. Their houſes are quadrangular, conſiſting of four ſtakes with croſs poles, and are covered with leaves. They ſet them up, pull them down, and carry the whole with them at pleaſure, as their dwellings are light, and their lives ambulatory. Their wants, which are but few, are eaſily ſupplied. They believe in a ſupreme God, a miſchievous ſpirit or devil, and have ſome notions of a future ſtate. They bury their dead naked, and get drunk at the funeral to bury their ſorrows. When the body has been interred a ſufficient time for the fleſh to be rotten, they take up the bones, diſtribute them among the relations and friends of the deceaſed, and again get drunk to teſtify their reſpect to the memory of the defunct. The natives cultivate nothing but plantains, caſſava, and yams, and one month's cultivation is ſufficient for all theſe. The men are all hunters, and they can always find game or fiſh, if they prefer it, without danger or toil. They live together, as a blameleſs and happy people, upon terms of perfect equality, having no diſtinction but of age or perſonal merit; neither have they diviſion of property, each amicably participates the ample bleſſings of a delightful and extenſive country; envy, fraud, and violence are precluded; natural deſires are immediately and innocently indulged, and government rendered wholly unneceſſary. In all their traffic with each other, or with Europeans, they eſtimate every thing by their preſent want of it; they will at one time demand a hatchet for what they will exchange for a fiſh-hook at another.

The colony of Surinam is the joint property of the Weſt India company, the city of Amſterdam, and the lord of Sommelſdyk, but the ſovereignty is inveſted in the ſtates general. Accordingly five directors of this colony are choſen by the city of Amſterdam, four by the Weſt India company, and one by the lord of Sommelſdyk, but the governor muſt be approved by the ſtates general, as well as by the directors. The whole colony is at preſent in a very flouriſhing condition, and carries on a conſiderable trade in ſugar, cotton, gums, tobacco, coffee, flax, ſkins, wood for dying, &c.

The principal town, called alſo Surinam, gives name to the adjacent diſtrict one hundred miles round. It ſtands on a river of the ſame name, which is navigable for near one hundred miles up the country, and commanded by ſeveral forts, particularly Zelandria, about ſix miles from the entrance, near which fortreſs the ſmall town of Paramairambo now ſtands, which contains about four hundred houſes. There are no leſs than ſeven or eight inland towns, all of which are rich, populous, and commercial.

Before we conclude our deſcription of South America, it will be neceſſary to add, that the exiſtence of a ſouthern continent was firmly believed, until the contrary was indiſputably proved in the years 1772, 1773, and 1774, by that moſt conſummate ſeaman Captain James Cook, whoſe extraordinary merits, his country, and the whole world, unite in celebrating. In the Reſolution, a ſhip fitted out for the purpoſe of making diſcoveries, he three times penetrated within the antarctic circle, a region which till then had been impervious to all navigators. He proceeded amidſt floating ice iſlands of vaſt height, many of which were two or three miles in circumference, the ſhip, and all on board perpetually expoſed to deſtruction, whilſt appalling ſcenes of horror and deſolation preſented themſelves to the ſixty-ſeventh degree five minutes ſouth latitude, being then in the thirty-ninth degree thirty-five minutes eaſt longitude from London. The next year, approaching the pole on the weſtward, he reached ſeventy-one degrees ten minutes ſouth latitude,

A WOMAN and BOY of PATAGONIA in South America, receiving Beads, &c. from COMMODORE (now ADMIRAL) BYRON, — whose Valuable Discoveries in his Celebrated Voyage Round the World (as well as All the Other Modern Discoveries in the Southern & Northern Hemispheres) will be Inserted in this Work.

Fascendolin. White scalp.

latitude, in longitude one hundred and ſix degrees fifty-four minutes weſt from London. A ſolid field of ice, which entirely filled the expanſe to the eaſt, weſt, and ſouth, rendered it impoſſible to make any farther advances. During his ſtay in the Frigid Zone in the months of December and January, no night intervened; ſo that within a few minutes of midnight the light of the ſun was ſufficient to read or write by, and the ſun's ſtay below the horizon was ſo very ſhort, that a very ſtrong twilight continued all the time of his diſappearing.

The reſult of theſe attempts to penetrate towards the ſouth pole is, that either the ice extends quite to the pole, or elſe joins ſome land to which it has been fixed from the very earlieſt times. To determine whether it is land or ice that encircles the pole, is beyond the power of human exertion, and has no tendency to gratify any rational curioſity.

In July 1776, the ſame indefatigable navigator ſet ſail in the Reſolution, accompanied by another ſhip named the Diſcovery, on his third voyage round the world; the principal object of which voyage was to explore the northern parts of the South Sea towards Kamchatka; in which attempt this truly great man loſt his life on a newly diſcovered iſland, called O-why-hee, near Kamchatka, in February, 1779, being ſlain in a ſkirmith with the natives, as the reader will find in the following account.

The diſcoveries made in this voyage are leſs brilliant than thoſe made in the preceding ones. The impoſſibility of communicating with Europe, by proceeding from the South Sea to the northward, which has been pretty generally ſuppoſed, is now proved, ſo as to render all future attempts unneceſſary, and indeed removes every motive for ſuch undertakings. The coaſts of that immenſe country, known by the name of New Holland, which, although an iſland, is equal in extent to Europe, have now been fully traced: on the ſouth-eaſtward of this vaſt, but almoſt uſeleſs diſtrict of the globe, have been found iſlands abounding with ſpices, which might by attention be ſoon rendered equal in value to thoſe which the Dutch poſſeſs in the Moluccas. The ſpirit for diſcovery, which has lately prevailed, particularly in this country, under the auſpices of his preſent majeſty, has brought us acquainted with many large, rich, fertile, and delightful iſlands, ſituated in the South Sea, which the reader will find a copious deſcription of, from p. 201 to 219 of this work, beginning with New Holland above-mentioned.

It may not be improper in this place to ſubjoin, agreeable to our promiſe, a particular account of the events and circumſtances immediately previous to and attending the unfortunate death of that celebrated and able navigator Captain Cook, which happened on the 14th of February, 1779, at the iſland of O-why-hee, when on their return to Europe.

On January 17, 1779, with great difficulty they found and anchored in a convenient harbour at O-why-hee, after beating about the coaſt near two months. The ſhips were immediately viſited by the young prince (ſon to the Orono or great king) who was abſent at a neighbouring iſland. The viſit was returned, and no ſtrangers were ever more hoſpitably received. Land was appropriated to their uſe, the ſick were lodged, trade was carried on, the ſhips repaired, &c. The king, on his arrival, treated Captain Cook with great ſubmiſſion and reſpect, and paid him the ſame honours that are paid to the great E-a-thu-ah-nu-eh, or good ſpirit, cloathing him in the ſame mantle, and aſſigning him a place of worſhip which the ſailors called Cook's altar. A very high mountain of ſnow was ſo rare a ſight between the tropics, that five of the gentlmen, with a guide, ſet out to explore it, but after two days and nights fatigue, they were obliged to return without reaching it. After a heiva, or play, had been performed by moſt of the royal family, and ſome fireworks had been exhibited by the Engliſh, the ſhips ſailed on the 5th of February, ſtored with hogs, fowls, &c. but the Reſolution having unfortunately ſprung her foremaſt, and being very leaky, they were obliged on the 11th to return to their old birth to repair. The king viſited them as before, but the natives aſſembling, gathering ſtones, and rolling them from the hills, in order, as was ſuppoſed, to annoy the ſhips, the captains, on the 13th, ordered the guns to be fired among them, (ſurely with too much precipitancy) by which two of them were killed, and of which the king next day juſtly complained, intimating that they had no hoſtile intentions. From this time they became very unruly and miſchievous, and firing only enraged them. The prince, before very friendly, aſſumed another countenance, and the temper of the Indians was totally changed.

On the 14th the great cutter was miſſing from its moorings, and the boat's painter was found cut two fathoms from the buoy, theſe audacious rogues having contrived to carry it off in the courſe of the night without being perceived. This was a theft which could not be overlooked on any account, as the loſs of ſo capital a boat might prove of great conſequence to them in the remaining part of their voyage. Captain Clerke waited upon Captain Cook and informed him of what had happened. After ſome deliberation, the beſt method that could be thought of (a method which, in other iſlands, had often been tried, and always met with ſucceſs) was to ſecure the king; and the only way to do this was to invite him on board, and then place centinels over him, after which they would make their own terms with him. It was alſo thought adviſeable to ſend boats to different parts of the bay, to prevent any of the natives from making their eſcape in their canoes.

Things being thus far ſettled, the Reſolution's great and ſmall cutter, attended by the Diſcovery's ſmall cutter and jolly boat, all well manned and armed, were diſpatched to the various parts of the bay, with orders to ſtop all canoes that ſhould attempt to make their eſcape, and if they proved refractory to fire at and kill ſome of them, as Captain Cook was determined to let them ſee he was not to be trifled with any longer. In the interim the captain, with the lieutenant of marines, went in his pinnace, attended by the launch (in which were the marines and ſome of the officers, all well armed) to the north-weſt point of the bay, where the king reſided. The natives, ſuſpecting poſſibly that ſome enquiry would be made relative to the boat, had aſſembled there in greater numbers than uſual. The marines upon landing were drawn up in a line upon the beach, with the ſerjeant at their head, and Captain Cook with Mr. Philips proceeded to the king's houſe; but not finding him there, enquired of the natives where he was, who told them, he was at a houſe not far diſtant. They walked on, and found him, and after ſome little time the captain invited him to go on board, which he very readily was going to do, but ſome women, and others of his attendants, who probably were apprehenſive of ſome deſign, earneſtly begged and entreated that he would not. Almoſt at this inſtant three Indians in a canoe arrived from the other ſide of the bay, with an account of one of their principal arees being ſhot by our people. They had been to both ſhips, where they told their ſtory in very lamentable terms; but not meeting with that pity and redreſs which they probably thought they had a right to expect, they proceeded to the ſhore, where their tale was received in a very different manner.

A general murmur of diſcontent was heard to prevail, and many of them began to arm themſelves with ſpears and daggers. This circumſtance was obſerved by Mr Philips, and he communicated his apprehenſions to captain Cook, who was at this time in the midſt of a crowd, and of courſe was not able to watch their motions. The ſerjeant of marines alſo, who was at ſome diſtance, ſaw them arming; and as the tumult rather increaſed, called ſeveral times to the captain to warn him of his danger; but there ſeemed to be a degree of infatuation attending him, which rendered him deaf to every thing. The mob now preſſed upon him, and he was ſeen to puſh them back, exclaiming at the ſame time, "get away---get away." At length one of them behaved very inſolently, and threw ſtones at him: the captain, having his double barreled gun, fired, but miſſed him, and ſhot the next man to him. The marines, hearing the report of the gun, imagined that ſome miſchief had been done, and without orders began to fire alſo: this rendered matters ſtill worſe; and Captain Cook now ſeeing his danger, was making to the boats as faſt as the crowd would permit him, but received a ſtab between his ſhoulders from a chief who was behind him; the man was going to repeat his blow, but was ſhot by the ſerjeant of marines.

The marines had no ſooner fired, than the people in the launch from the ſame reaſon fired likewiſe, and now the uproar became general: the captain did not fall in conſequence of the wound, but ſtill preſſed forwards towards the boats; the Indians, however, ruſhed upon him, and with clubs and ſtones, ſoon put a period to his exiſtence. The commanding officer of the Reſolution (which was at leaſt half a mile nearer the ſpot than the Diſcovery) alarmed at the report of the guns, gave orders for the great guns to be pointed and fired at them, which appeared to create much ſlaughter and confuſion. Mr Philips and his party of marines were obliged to jump into the water: but ſome of them not being able to ſwim, were dragged on ſhore by the natives, who ſoon diſpatched them. The remaining number with difficulty reached the boats: the ſerjeant of marines was wounded in the neck, and received a ſevere blow on the head from a ſtone; one of the private men had the point of a ſpear, which broke off, fixed under his left eye; Mr Philips was wounded in the ſhoulder, and a corporal and three private men were killed. The Indians behaved with great reſolution and intrepidity, and notwithſtanding a ſevere fire was kept up for ſome time afterwards, they maintained their ground, and as ſoon as one fell another ſupplied his place. Finding it impoſſible to recover the captain's body, the boats ceaſed firing, and made the beſt of their way on board; and ſoon after Mr. Williamſon, the third lieutenant of the Reſolution, waited upon Captain Clerke with the above melancholy news.

Thus

Thus ended the life of the greateſt navigator that this or any other country could ever boaſt, after having ſucceſsfully led his crews of Britiſh ſeamen thrice round the world; who had reduced to a certainty the non-exiſtence of a ſouthern continent, about which the learned of all nations were in doubt; had ſettled the boundaries of the earth and ſea, and ſhewn the impracticability of a north-weſt paſſage from the Atlantic to the great ſouthern ocean, for which our ableſt navigators had contended, and in purſuit of which vaſt ſums had been ſpent in vain, and many valuable mariners had miſerably periſhed. The natives certainly had no intention at firſt of deſtroying Capt. Cook or any of his party. The cauſe firſt originated in the death of the arce who was ſhot by our people: it was this circumſtance which alarmed them, and in conſequence of this it was that they armed themſelves. At this period Captain Cook might have returned on board with ſafety: but he was unfortunate in miſſing the man who behaved inſolent to him, and ſhooting another—he was unfortunate in the firing of the marines—and equally ſo in the firing of the people in the launch; all which happened in the ſpace of a minute. In ſhort, the whole ſeems to have been cauſed by a chain of events which could neither be foreſeen or prevented. His death was, however, univerſally regretted, not only in Great Britain, but in other parts of Europe, by thoſe to whom his merits and public ſervices were known.

Captain Cook, in his laſt voyage, had explored the coaſt of America, from forty-two degrees twenty-ſeven minutes to ſeventy degrees forty minutes fifty-ſeven ſeconds north. The command, after his death, devolved on Captain Clerke, who died at ſea on his return to the ſouthward on the 22d day of Auguſt, 1779. The two ſhips, namely, the Reſolution and Diſcovery, returned home by the Cape of Good Hope, and anchored at the Nore on the 5th of October, 1780.

CHAP. II.

THE NEW HISTORY AND DESCRIPTION OF

NORTH-AMERICA.

SECT. I.

Of NORTH and SOUTH CAROLINA, GEORGIA, VIRGINIA, MARYLAND, PENNSYLVANIA, the JERSEYS, and NEW YORK; their Extent and Situation, principal Towns, Soil, Produce, Inhabitants (both Natives and Coloniſts) their Trade, Manufactures, Manners, Cuſtoms, Dreſs, Religion, &c.

NORTH America, which conſtitutes a grand diviſion of this vaſt continent, is ſeparated from the ſouthern part by the iſthmus of Darien, and extends from that iſthmus to within a few degrees of the north pole; but geographers have not yet been able to aſcertain the limits of this northern extremity.

The ſituation of the countries which compoſe North America, and other particulars relative to each, are exhibited in the following table:

Countries and Col.	Length	breadth	Chief Towns.	Belongs to
N. Carolina, S. Carolina, Georgia	700	380	Wilmington, Charles Town, Savannah	United States.
Virginia	750	240	Williamſb.	Ditto.
Maryland	140	135	Anapolis	Ditto.
Pennſylvania	300	240	Philadelphia	Ditto.
The Jerſeys	160	60	P. Amboy	Ditto.
New York	300	150	New York	Ditto.
New England	550	200	Boſton	Ditto.
Nova Scotia, or New Scotland	350	250	Halifax	Great Britain.
Quebec	800	200	Quebec	Ditto.
Old Mexico, or New Spain	2000	00	Mexico	Spain.
New Mexico and California	2000	1600	St. Fé	Ditto.
Louiſiana			New Orleans	Ditto.
Eaſt and Weſt Florida	500	440	St. Auguſtine, Penſacola	Ditto.

The provinces of North and South Carolina, and Georgia, extend ſeven hundred miles in length, and three hundred and eighty in breadth. The two Carolinas are bounded by Virginia on the north, Georgia on the ſouth, the Apalachian mountains on the weſt, and the Atlantic ocean on the eaſt. The face of the country is level, the climate temperate, and the ſoil fertile. It produces moſt kinds of vegetables, but abounds more particularly in honey and rice. Beſides the latter, the Carolinians cultivate ſome tobacco, but their chief trade lies in proviſions, for they ſupply Jamaica, Barbadoes, and the Leeward iſlands with beef, pork, grain, peas, butter, ſuet, raw hides, and leather. They likewiſe ſend to the ſame iſlands tar, turpentine, timber, maſts, and furs; but the laſt are of an inferior kind.

Maize, or Indian corn, thrives here exceedingly; but, in ſome other reſpects, the product has not been anſwerable to the expectation from the ſoil and climate. Though many parts of Carolina, eſpecially on the ſea coaſt, abound with vines, yet no progreſs worth mentioning has been made in producing wine. Cochineal is found here; but the inhabitants ſeem to neglect the profits ariſing from that inſect, their attention having for ſome years been chiefly turned towards making indigo. Their manufactures of ſilk, notwithſtanding the great quantities of mulberry-trees they have, are not yet conſiderable, but, from ſome ſamples that have been brought over, it appears equal in quality to any we purchaſe from foreigners. Here are great quantities of cattle, wild and tame, and many fine rivers. The chief capes are, Cape Hatteras, Cape Carteret, and Cape Fear. In South Carolina are the harbours Winyaw, or George Town, and Port Royal.

The inhabitants of Carolina import all kinds of woollen and linen drapery, hard-ware, ſtrong beer, cyder, raiſins, potters earth, tobacco pipes, paper, coverlids, mattraſſes, hats, ſtockings, gloves, tin-ware, powder and ſhot, gun flints, cordage, looking-glaſſes and glaſs-ware, thread, haberdaſhery, and ſmall wares. From Jamaica, Barbadoes and the Leeward iſlands, they have ſugar, rum, molaſſes, cotton, chocolate, negroes, and ſilver. From New England, New York, and Pennſylvania, wheat flour (wheat being very backward in the Carolinas) and hard-wares and wine from Madeira, and the other iſlands in the weſtern ocean.

For ſettling in this pleaſant country, the method has hitherto been to pitch upon a void piece of ground, and either to purchaſe it at the rate of twenty pounds for one thouſand acres, or elſe pay a penny an acre quit-rent yearly to the proprietors without purchaſe money; the former method is the moſt common, and the tenure a freehold.

There are in North Carolina the counties of Albemarle, Bath, and part of Clarendon county, but not any town of conſequence. They chuſe to live ſeparately on their plantations and farms, as in Virginia, and, like that colony, chiefly cultivate tobacco; but the ſea coaſt being exceeding ſhallow, and not a good port in it, they are forced to ſend their produce either to Virginia or South Carolina to be ſhipped for Europe.

South Carolina is divided from North Carolina by an imaginary line drawn from Cape Fear, at the mouth of Clarendon river, to the weſtward, as far as the Britiſh plantations extended, in which diviſion is the county of Clarendon in part; Craven county, Berkeley county, and Colleton county; the chief towns being Charles-town and Port Royal, the metropolis of South Carolina. Charles-town is ſituated in ſeventy-nine degrees weſt longitude, and in thirty-two degrees north latitude, on a

peninſula formed by Aſhley and Cowper rivers; the former of which is navigable for ſhips twenty miles above the town, and in it is a moſt ſecure and commodious harbour. The ſtreets are wide and ſtraight, interſecting each other at right angles; thoſe running eaſt and weſt extend about a mile from one river to the other. Its harbour is good in every reſpect but that of a bar, which hinders veſſels of more than two hundred tons burthen from entering. The town is regularly and pretty ſtrongly fortified by art and nature. Here are two very handſome churches built with brick, beſides ſeveral other edifices for public worſhip belonging to different ſects of diſſenters. Near the centre of the town is a neat market-houſe, and at a ſmall diſtance is the ſtate-houſe, a handſome and commodious brick building. In the neighbourhood of the town are convenient barracks ſufficient for a thouſand men. Charles-town contains about a thouſand dwelling-houſes, four thouſand male inhabitants, and ſix thouſand negro ſlaves: it is the ſeat of the governor, and the place of meeting of the aſſembly. Several handſome equipages are kept here; for the planters and merchants are rich and well bred, the people expenſive in their dreſs and way of living, and every thing conſpires to render this one of the livelieſt and politeſt places in North America. However, great part of the town was burnt down on the twenty-firſt of February, 1711, by which much valuable merchandize was entirely deſtroyed. It has alſo frequently ſuffered by inundations and unhealthy ſeaſons.

At the breaking out of the American war in 1776, Charles-town was attacked by a ſquadron of ſhips commanded by Sir Peter Parker, and a body of land forces under general Clinton. The ſhips attacked the fort which commands the entrance of the harbour, but not being at all ſeconded by the army which had been landed, they were obliged to retire with great loſs, after a very obſtinate conteſt.

The town of Beaufort is ſeated on the iſland of Port Royal, on the borders of Georgia, in the thirty-firſt degree forty minutes north latitude, and an hundred miles ſouth of Charles-town, the iſland and continent forming a fine capacious harbour of ſuch depth, that is capable of containing the whole royal navy of England. The iſland on which the town is ſeated conſiſts of near a thouſand acres, and is navigable all round for boats and periaguas, and one half of it for ſhipping, where large veſſels may load and unload from the ſhore. The town, however, is not yet conſiderable, but bids fair in time for becoming the firſt trading town in this part of America.

The number of inhabitants in the whole province of South Carolina amounts to about ſixty thouſand whites, and above double that number of blacks. The roads are as good as in moſt parts of the world, and travelling as pleaſant, they being made broad and convenient for all ſorts of carriages.

The colony of Georgia abounds with all kinds of fleſh, and fowl wild and tame, vegetables, fiſh, &c. In 1742 about five or ſix thouſand Spaniards and Indians from St. Auguſtine invaded this country in about fifty veſſels of all kinds, but were repulſed by general Oglethorpe at the head of the Engliſh forces, and a ſmall body of Indians under Tomo Chichi's ſon. Whatever might be the cauſe, it is certain this infant colony drooped and languiſhed from the year 1742 till Mr. Ellis was appointed governor; but under his adminiſtration it became again of ſuch importance, that his late majeſty George II. upon removing him to another government, rewarded him with a handſome preſent of money for the improvements made during his adminiſtration here.

On the coaſt of Georgia there are ſeveral iſlands, the chief of which are, Amelia, Cumberland and St. Simon's iſland. The firſt, lying ſeven leagues to the north of St. Auguſtine, is about two miles broad, and thirteen long. The ſecond, lying about twenty-one miles ſouth of Frederica, forms the inlet of Amelia Sound, which it commands, by means of a fort called Fort William, and has fine ſprings of water. The third, lying near the weſtern mouth of the Alatamaha, is about three miles in breadth, and forty-five in length. Frederica ſtands in the middle of this iſland.

Savannah town lies ten miles up the river of that name, where it forms a half moon, and where ſhips, that draw ten or twelve feet water, may ride for a mile within ten yards of the bank. Oppoſite to it is an iſland of very rich paſturage. The river is pretty wide, and the water freſh; and from the quay of the town you ſee the whole courſe of it towards the ſea, with the iſland Tybee, which forms the mouth of the river, and the other way you ſee the river for about ſixty miles up into the country.

The town of Wilmington, ſituated on Clarendon river, is the largeſt town in the province, and has much the greateſt trade; Neuborn is ſituated on the Neuſe, and Edenton, on the Albemarle; at which three places the general aſſembly of North Carolina ſit alternately for making laws; but the planters being diſperſed over the country, none of thoſe towns are worth mentioning.

The moſt conſiderable of the Indian natives behind the Carolinas are the Creeks and Cherokees, of whom the men are generally tall, but the women little. They are a generous, good-natured people, and very humane to ſtrangers; patient in want and pain, ſlow to anger, and not eaſily provoked; but when they are thoroughly incenſed, they are implacable; very quick of apprehenſion, and gay of temper; their public conferences ſhew them to be men of genius, and they have a natural eloquence. They anoint their bodies with oil, and expoſe them to the ſun, which occaſions their ſkins to be of a dark brown: the men paint themſelves of various colours, red, blue, yellow, and black: they generally wear a girdle, with a piece of cloth drawn between their legs, and turned over the girdle, both before and behind, which looks ſomething like breeches. The women wear a kind of petticoat to their knees: both men and women, in the winter, wear mantles two yards ſquare, which they wrap round their bodies, as the Romans did their toga, generally keeping their arms bare. They are very healthful, and have hardly any diſeaſes, except thoſe occaſioned by drinking rum, and the ſmall-pox; they who do not drink, are extremely long-lived. Their food, inſtead of bread, is Indian corn, boiled and ſeaſoned, like haſty-pudding; and this is called hommony: they alſo boil veniſon, and make broth of it, and eat all manner of fleſh.

After his late Majeſty had purchaſed the property of Carolina, orders were iſſued for building eleven towns near the Savannah and in Carolina; each of which was to have a diſtrict of twenty thouſand acres of land ſquare, to be divided into ſhares of five acres for each man, woman or child of one family, which was to be augmented, as the planters ſhou'd be in a condition to cultivate a larger quantity: each town was alſo to be formed into a pariſh, the extent whereof was to be about ſix miles round; and, as ſoon as the pariſh contained one hundred maſters of families, it was qualified to ſend two members to the aſſembly of the province, and to enjoy the ſame privilege as the reſt.

The principal manufactures in Carolina are indigo, turpentine, roſin, tar, and pitch. The inhabitants of Georgia carry on a conſiderable trade with the Creeks, Chickſaws, and Cherokees, for ſkins; they alſo deal with them for a few furs: the town of Auguſta is commodiouſly ſituated for the Indian trade; it alſo ſtands on a very fertile ſpot, and has ever ſince its firſt eſtabliſhment been in a very flouriſhing condition.

The province of Virginia, which is the antient of the American colonies, was firſt diſcovered by Sebaſtian Cabot, a native of Briſtol; though the firſt attempts to ſettle a colony were not, ſtrictly ſpeaking, made in Virginia, but in that part of North Carolina which immediately borders upon it. When the fruitfulneſs of Virginia was better known, and the dangers incident to an infant ſettlement were over, people in good circumſtances went thither with their families, either to improve their eſtates, or avoid perſecution at home; and particularly at the time of the grand rebellion, when ſeveral families attached to the royal family retired thither, as ſome of thoſe on the other ſide did, upon the reſtoration of Charles II. but moſt of the latter went to New England, Virginia having diſtinguiſhed herſelf by her loyalty, in adhering to the king's party.

This province has the Apalachian mountains, on the weſt; the Atlantic ocean on the eaſt; Carolina on the ſouth; and the river Patowmac, north. It is ſeven hundred and fifty miles long, and two hundred and forty broad; has a tolerable ſoil, and a ſharp, but wholſome air. The face of the country is generally low and flat towards the ſea coaſt, and for one hundred miles up the country; ſo that there is hardly a hill or ſtone to be ſeen, except here and there ſome rocks of iron ore, and ſome banks of a kind of petrified oyſter-ſhells. The whole country, before it was planted, was one continued foreſt, interſperſed with marſhes, which in the Weſt Indies they call ſwamps.

There are in Virginia thirty-five counties, in which are above fifty pariſhes; but the only places that deſerve the name of towns, and worth mentioning, are Williamſburgh and James Town. The former ſtands in James county, between James and York rivers, and is the ſeat of the government, aſſembly, and chief courts. The latter, namely James Town, ſtands about twenty-ſix miles above the river of that name, on the north ſide, in a peninſula, but is little better than a village.

Here is a college, called William and Mary college, having been founded by king William, who gave two thouſand pounds towards it, and twenty thouſand acres of land, with power to purchaſe and hold lands to the value of two thouſand pounds a year, and a duty of one penny per pound on all tobacco exported to the other plantations. There is a preſident, ſix maſters or profeſſors, and other officers, who are named by the governors or viſitors. The honourable Mr. Boyle made a very large dona-

donation to the college, for the education of Indian children.

The practice of tranſporting criminals to this province, or to any of the territories belonging to the United States, being now prohibited, the convicts are for the future to be ſent either to Nova Scotia or Canada.

No country produces greater quantities of excellent tobacco than this; and yet the ſoil is generally ſo ſandy and ſhallow, that after they have cleared a freſh piece of ground out of the woods, it will not bear tobacco paſt two or three years, unleſs cow-penned, and well dunged. Virginiaalſo yields rice, hemp, Indian corn, plenty of paſture, with coal, quarries of ſtone, and lead and iron ore. The foreſts yield oaks, poplars, pines, cedars, cypreſſes, ſweet myrtles, cheſnuts, hickery, live oak, walnut, dog-wood, alder, hazle, chinkapins, locuſt trees, ſaſſafras, elm, aſh, beech, with a great variety of ſweet gums and incenſe, which they diſtil from ſeveral trees; pitch, tar, roſin, turpentine, plank-timbers, maſts, and yards.

Their trees are much loftier than ours, and no underwood or buſhes grow beneath; ſo that people travel with eaſe through the foreſts on horſeback, and never want a fine ſhade to defend them from the ſummer heats. Silk graſs grows ſpontaneouſly in many places; the fibres of which are as fine as flax, and much ſtronger than hemp. Here is alſo a great variety of ſpontaneous flowers, particularly the fineſt crown imperial in the world, and the cardinal flower, ſo much extolled for its ſcarlet colour; the plains and vallies are adorned almoſt the year round with flowers of one kind or another. In this country is likewiſe found the tulip-bearing laurel tree, which has the pleaſanteſt ſmell in the world, and keeps bloſſoming for the ſpace of ſeveral months.

Beſides the animals tranſported from Europe, ſuch as horſes, cows, ſheep, and hogs, which are now extremely multiplied, thoſe natural to the country are elks; red deer in great plenty, a ſort of panther or tyger; bears, wolves, foxes, beavers, and racoons. Here is likewiſe that ſingular animal called the opoſſum, which ſeems to be the wood rat mentioned by Charlevoix, in his hiſtory of Canada. It is about the ſize of a cat; and, beſides the belly common to it with other animals, it has another peculiar to itſelf, and which hangs beneath the former. As for reptiles, they have lizards, with ſeveral kinds of ſnakes, particularly the rattle ſnake.

Of birds, they have ſeveral ſorts of eagles, hawks, and owls. The white owl is very beautiful, all the feathers of the back and breaſt being white as ſilver, except a black ſpot immediately below the throat: their turkeys are very large, ſome of them weighing forty pounds: they have alſo abundance of other fowls, geeſe, ducks, &c. Their partridges are ſmaller than ours, but very well taſted. They have likewiſe the Virginia nightingale, whoſe plumage is crimſon and blue: the mocking bird, of two ſorts, grey and red, is thought to excel all others in his own note, and imitates that of all others; they have here alſo the humming bird, the ſmalleſt of all the winged creation, and by far the moſt beautiful, being all arrayed in ſcarlet, green, and gold.

We learn from the accounts of thoſe who have lived among the Americans of the frontiers of Virginia, that they are of a middling ſtature, ſtraight, and well proportioned, with the fineſt limbs in the world; nor is there a dwarf or miſ-ſhapen perſon among them. Their colour is that of copper rendered darker by greaſing themſelves, and being expoſed to the weather. They have black eyes, and their hair is coal-black, which the men cut into ſeveral ſhapes, and both men and women greaſe it ſo that it ſhines. Their cloaths are a large mantle, careleſsly wrapped round their bodies, and ſometimes girt cloſely with a girdle. The common ſort only paſs a piece of cloth or ſtring round their middles, and put a piece of cloth or ſkin between their thighs, which turns over the ſtring at each end. Their ſhoes, when they wear any, are made of an entire piece of buck-ſkin. The dreſs of the women differs little from that of the men; only the richer ſort have more beads and bracelets. They commonly go naked as far as the navel downwards, and upwards to the middle of the thigh; their breaſts are round and ſmall, and never hang down, as thoſe of the black women on the coaſt of Guinea. The better ſort wear a kind of coronet four or five inches broad, and open at top, compoſed of a ſort of beads, and ſome a wreath of dyed furs; they have alſo bracelets on their necks and arms; but the common people go bareheaded, only they ſtick large ſhining feathers in their hair.

Their food is Indian corn, ſoaked and boiled in water, beavers, turtle, ſeveral kinds of ſnakes, broth made of deer-humbles, peas, beans, &c. Inſtead of keeping their children warm, they dip them over head and ears in cold water. When the Engliſh firſt came among them, they had no iron tools; their knives were ſharpened reeds or ſhells, and their axes ſharp ſtones. They felled trees by laying fire to their roots; and by fire they alſo hollowed them, and made canoes of them. Their way of producing fire was, by rubbing one ſtick againſt another that was ſofter. They reckon their years by winters; and divide them into five ſeaſons, the budding-time, the earing of the corn, the ſummer, the harveſt, and the winter. The months they count by the moon. They divide the days into three parts; the riſe, power, and lowering of the ſun. They keep their accompts by knots on a ſtring, or notches on a ſtick.

The province of Maryland was diſcovered in the year 1606, when Virginia was firſt planted; and for ſome time was eſteemed a part of Virginia, till king Charles I. in 1632, granted all that part of Virginia which lay north of Patowmac river, to the lord Baltimore, of the kingdom of Ireland, and his heirs. The Baltimore family were deprived of the government of this province during the civil wars in England, but recovered it again at the Reſtoration; and they well deſerved to be ſo, for they eſtabliſhed a perfect toleration in all religious matters: the colony increaſed and flouriſhed; and diſſenters of all denominations, allured by the proſpect of gain, flocked into Maryland.

The tyrannical government of James II. again deprived this noble family of their poſſeſſion, acquired by royal bounty, and improved by much care and expence. At the Revolution, however, lord Baltimore was again reſtored to all the profits of the government, though not to the right of governing, which could not conſiſtently be conferred on a Roman catholic. But after the family changed their religion, they obtained the power as well as the intereſt. The government of this country exactly reſembled that in Virginia, except that the governor was appointed by the proprietors, and only confirmed by the crown. The cuſtoms too were reſerved to the crown, and the officers belonging to them were independent of the province. So far is Maryland at preſent from being a popiſh government, that the proteſtants, by far more numerous, have excluded them from all offices of truſt and power. They even adopted the penal laws of England againſt them. The church of England was by law eſtabliſhed here: and churches have not only been built, but pariſhes allotted to them with annual ſtipends to the miniſters; every chriſtian male ſixteen years old, and negroes male and female, above that age, paying forty pounds of tobacco, which is levied by the ſheriff, among other public burdens, and yields to each about one hundred pounds ſterling at a medium.

Maryland lies between thirty-ſeven degrees fifty minutes, and forty degrees, north latitude, extends in length one hundred and forty, and in breadth one hundred and thirty-five miles; has the Apalachian mountains to the weſt; Delaware bay to the north; Patowmac river to the ſouth; and the northern ocean to the eaſt.

The parts next the ſea are very low, but the interior diſtricts are hilly. The air is exceſſive hot in the ſummer, and intenſely cold in the winter; but the latter is not of above three months duration. The principal bays are thoſe of Cheſapeak and Delaware, and the moſt noted cape that of Henlopen, at the entrance of Delaware bay. The bay of Cheſapeak divides the province into two parts, of which one lies on the eaſt, and the other on the weſt. It is watered by innumerable ſprings, forming a great many fine rivers, of which the chief are Patowmac, Pocomoke, Patuxhent, Severn, Cheptouk, Saſſafras, and Wicomoca rivers, and that of St. George. Theſe and other rivers, capable of receiving large ſhips, with the numerous bays and creeks that indent the land on every ſide, give the ſeamen an opportunity of bringing their veſſels up to the planters doors.

Tobacco is the chief commodity here, of which the province exported annually, many years ago, upwards of thirty thouſand hogſheads, each hogſhead ſeven hundred pounds weight. This article forms the medium of currency of Maryland, being received in debts and taxes; and the inſpectors notes for tobacco, delivered to him, are transferrable. An induſtrious man can manage ſix thouſand plants of tobacco, and four acres of Indian corn. The tobacco of this province, called Oroonoko, is different from that of Virginia; and, though not much liked in England, yet, in the eaſtern and northern parts of Europe it is preferred before the ſweet ſcented tobacco of James and York rivers in Virginia. Another conſiderable commodity of Maryland is pork, of which large quantities are exported, ſalted and barrelled; the woods containing vaſt droves of wild ſwine, which are generally of ſmall ſize. Great quantities of hemp and flax are raiſed in this province, and the mountains yield abundance of iron ore, which is run into pigs, and refined into iron. Maryland oak is not greatly eſteemed for building large ſhips, but is very proper for ſmall craft and ſtaves. Good land here yields about fifteen buſhels of wheat an acre, or thirty buſhels of Indian corn; but the grain is very ſubject to the weevil.

There are but few towns in the province as yet, the Engliſh living at large in their ſeveral plantations. Indeed each plantation is a little town in itſelf, and can ſubſiſt itſelf with proviſions and neceſſaries, every conſiderable planter's warehouſe being

being like a ſhop, where he ſupplies inferior planters, ſervants, labourers, and has commodities to barter for tobacco, &c. money being as little uſed as wanted here.

The few Indians near Maryland live on the eaſt ſhore, where they have two or three little towns. They are employed in hunting for deer by the Engliſh. The cauſe of their diminiſhing proceeded from their perpetual diſcords and wars amongſt themſelves. It is remarkable, that though they are very timorous and cowardly in fight, yet when taken priſoners and condemned, they die apparently undaunted, ſinging all the time they are on the rack, and braving the moſt inexpreſſible tortures.

Maryland conſiſts of two diviſions; viz. the eaſtern and weſtern. The eaſt diviſion contains ſeven counties and ſix towns; and the weſt diviſion has the ſame number of counties and towns. The principal town is Annapolis, formerly called Severn, but it received its preſent appellation in 1694, when it was made a port town, the reſidence of a collector, and naval officer. The county court was removed thither in 1609, and ever ſince it has been the chief ſeat of juſtice, and is deemed the capital of the province. Baltimore town contains only ſome ſcattered buildings, and is therefore too inconſiderable to merit particular deſcription.

Pennſylvania, under the name of the New Netherlands, was originally poſſeſſed by the Dutch and Swedes. When theſe nations, however, were expelled from New York by the Engliſh, admiral Penn, who, in conjunction with Venables, had conquered the iſland of Jamaica, being in favour with Charles II. obtained a promiſe of the grant of this country from that prince. Upon the admiral's death, his ſon, the celebrated quaker, availed himſelf of this promiſe, and, after much court ſolicitation, obtained the performance of it. Though as an author and a divine, Mr. Penn be little known but to thoſe of his own perſuaſion, his reputation in a character no leſs reſpectable is univerſal among all civilized nations. The circumſtances of the times engaged vaſt numbers to follow him into his new ſettlement, to avoid the proſecutions to which the quakers, like other ſectaries, were then expoſed; but it was to his own wiſdom and ability that they are indebted for that charter of privileges which placed this colony on ſo reſpectable a footing.

This great man eſtabliſhed, in the utmoſt latitude, civil and religious liberty, as the great and only foundation of all his inſtitutions. Chriſtians of all denominations might not only live unmoleſted, but have a ſhare in the government of the colony. No laws can be made but by the conſent of the inhabitants. Even matters of benevolence, to which the laws of few nations have extended, were by Penn ſubjected to regulations. The affairs of widows and orphans were to be enquired into by a court conſtituted for that purpoſe. The cauſes between man and man were not to be liable to the delay and chicanery of the law, but decided by wiſe and honeſt arbitrators. His benevolence and generoſity extended alſo to the Indian nations; inſtead of taking immediate advantage of his patent, he purchaſed of thoſe people the lands he had obtained by his grant, judging that the original property and eldeſt right, was veſted in them. In ſhort, had William Penn been a native of Greece, he would have had his ſtatue placed next to thoſe of Solon and Lycurgus.

Mr. William Penn's laws, founded on the ſolid baſis of equity, ſtill maintain their force; and as a proof of their effects, it is only neceſſary to mention, that land was lately granted at twelve pounds an hundred acres, with the quit-rent of four ſhillings reſerved; whereas the terms on which it was formerly granted, were at twenty pounds the thouſand acres, with one ſhilling quit-rent for every hundred. Near Philadelphia, before the commencement of the late war with the mother country, land rented at twenty ſhillings the acre, and even ſold at twenty years purchaſe ſeveral miles diſtance from that city.

An ingenious author obſerves, that the noble charter of privileges by which Mr. Penn made the inhabitants of this ſettlement as free as any people in the world, has ſince induced vaſt numbers of various perſuaſions and countries to put themſelves under the protection of his laws. He ſtaid in the country two years, till he had ſettled every thing to his own and the people's ſatisfaction; during which he behaved in ſuch a manner to the Indians, that he inſpired them with the moſt extraordinary love and eſteem both for him and his people. Their deſcendants received from them the ſentiments of this benevolent man, and ſtill ſpeak of him with the greateſt gratitude and affection; and whenever they would expreſs an extraordinary regard for any Engliſhman, they ſay, "We eſteem and love you as if you were that good man William Penn himſelf."

This province is three hundred miles long, and two hundred and forty broad; being bounded, on the eaſt, by the Delaware river, and the Atlantic ocean; on the ſouth and weſt, by Maryland; and, on the north, by the country of the Iroquois or Five Nations: the whole territory towards the coaſt is flat, but riſes gradually to the Apalachian mountains. It enjoys a clear air, and is very cold during winter. The river Delaware is often frozen over. The heats would be intolerable in autumn, if they were not mitigated by frequent ſea-breezes.

The ſeveral rivers, with the numerous creeks and harbours in Delaware bay, capable of containing the largeſt fleets, are extremely favourable to the trade of this province. The principal rivers are, Delaware, Suſquehannah, and Scoolkil. The Delaware, riſing in the country of the Iroquois, takes its courſe ſouthward, and, after dividing this province from that of New Jerſey, falls into the Atlantic ocean between the promontories or capes May and Henlopen, forming, at its mouth, a large bay, called, from the river, Delaware bay. This river is navigable above two hundred miles. The Suſquehannah riſes alſo in the country of the Iroquois, and, running ſouth through the middle of the province, falls into the bay of Cheſapeak, being navigable a great way for large ſhips. The Sculkil has its ſource in the ſame country as the other two, and alſo runs ſouth almoſt parallel to them; till at length, turning to the eaſtward, it falls into the Delaware at the city of Philadelphia: it is navigable for boats above one hundred miles.

The ſoil, produce, and traffic of Pennſylvania, are much the ſame as thoſe of the Jerſeys and New York, of which we ſhall preſently treat. They have ſome rice here, but no great quantities; and ſome tobacco, but it is not equal to that of Virginia. From the premiums offered by the Society of Arts, &c. in London, it appears, that the ſoil and climate of this province are looked upon as proper for the cultivation of ſome ſpecies of vines. The trade carried on from hence, and the other colonies, to the French and Dutch iſlands and Surinam, was never at all to the advantage of Great Britain, and very hurtful to the ſugar-colonies; for they take molaſſes, rum, and other ſpirits, with a great many European goods, from theſe foreigners; carrying them horſes, proviſions, and lumber in return, without which the French could not carry on their ſugar manufacture with equal advantage.

Pennſylvania, before the late diſputes, was one of the moſt flouriſhing colonies in North America. The people ſeldom had any quarrels with the Indian natives; the latter, however, roſe in their demands for land in proportion as European ſettlers ſeemed eager to purchaſe. We find that upwards of twenty years ago the proprietaries, who alone can purchaſe lands here from the natives, had bought ſeven hundred thouſand acres for no more than ſeven hundred and fifty pounds ſterling, which the proprietaries afterwards ſold at the rate of fifteen pounds for every hundred acres. The Indian council at Onandago, however, diſapproved of their deputies parting with ſo much land: and in the year 1755, obliged the proprietaries to reconvey to the Indians great part of the ſame.

There happened, about the year 1704, ſome alterations in the conſtitution of the province, by inveſting a governor, council, and aſſembly, each with the ſame power and privileges as in the neighbouring colony of New York; the lieutenant-governor and council being, with his Majeſty's approbation, appointed by the proprietors, the Penns.

This province is divided into ſeven counties, four of which are called the upper, and three the lower. The upper are Buckingham, Philadelphia, Cheſter, and Lancaſter; the lower, Suſſex, Kent, and Newcaſtle.

Philadelphia, the capital of this province, is ſeated in the county of the ſame name. It is built upon one of the fineſt plans that ever was formed, laid out by Mr. Penn himſelf, and far excels any other city in North America. It is ſeated between two navigable rivers, the Delaware on the north, and the Schoolkil on the ſouth, which join each other a few miles below, and is near a hundred miles above the bay, into which the river diſcharges itſelf. It is an oblong of near two miles in length, extending nearly to each of thoſe rivers, where the front facing each is a mile in length. The ſtreets are wide and ſpacious, with a dry defended walk on each ſide, and are exactly ſtrait and parallel to each other: the houſes are, in general, well-built, and make a handſome appearance, eſpecially ſeveral of the public buildings, which are not exceeded by any in the country. The High ſtreet, which runs the whole length of the city, is a hundred feet wide, parallel to which run eight ſtreets, that are croſſed by twenty more at right angles, all of them thirty feet wide. Every owner of a thouſand acres has his houſe in one of the two fronts facing the river, or in the High-ſtreet, running from the middle of one front to the middle of the other. In the centre of the city is a ſquare of ten acres, encompaſſed by the town-houſe and other public buildings, and in each quarter of the city is a ſquare of eight acres. Several canals are let into the town from each river, which add to the beauty and convenience of the place. It has noble barracks for the reception of the king's troops, and the fineſt market of any on the continent, it being of a prodigious extent, well built, and as well regulated and ſupplied. Its quay is two hundred feet ſquare, to which ſhips of four or five hundred tons may come up, and

lay

lay their broad ſides cloſe to it; with wet and dry docks for building and repairing of ſhips, beſides magazines, warehouſes, and all other conveniencies for exporting and importing of merchandize. The proprietor's ſeat, which is the uſual place of the governor's reſidence, and is about a mile above the town, exceeds any private building in America, both in its magnificence and the pleaſantneſs of its ſituation. In ſhort, ſcarce any thing can appear more beautiful than the city and the adjacent country, which for ſome miles may be compared to a fine and flouriſhing garden. The city contains about four thouſand houſes, and about twenty thouſand inhabitants. The academy of literature, eſtabliſhed in this city, is the nobleſt inſtitution in the province of Pennſylvania.

The moſt conſiderable of the other towns in this province are, Briſtol, Falls Town, and Pennſbury, in the county of Buckingham; Cheſter town, Chicheſter, and Marcus Hook, in the county of Cheſter; Newcaſtle town, Haverford-weſt, Merioneth, and St. George, in the county of Newcaſtle; Dover, Cranbrook, Marden, Maſpelliven plantations, in the county of Kent; Lewes, in the county of Suſſex; Lancaſter, in the county to which it gives name; and Ephrata, fourteen miles from Lancaſter, on the frontier part of the county, and in a moſt delightful ſituation.

The unbounded latitude given to liberty of conſcience in this country, has occaſioned its being inhabited by people of almoſt every religious ſentiment, each of whom is allowed its diſtinct place of worſhip. Here are Quakers, church of England people, Lutherans, catholics, preſbyterians, independents, baptiſts; and the dumplers, or drunkards, a ſort of German ſect, who live in common in a ſmall town called Ephrata, forming a kind of religious ſociety, wearing long beards, and a habit reſembling that of friars; but marry, and live in a peaceable manner by cultivating the earth. In ſhort, the diverſity of the people, religions, nations, and languages, is here prodigious, and the harmony in which they live together is no leſs amiable than edifying.

The Jerſeys and New York being contiguous to each other, and intimately connected by a variety of other circumſtances, we ſhall therefore blend their deſcriptions together.

The boundaries and extent of theſe countries are as follow; the Jerſeys have New York on the North; the Atlantic ocean on the eaſt; Delaware river on the ſouth and eaſt; and the bay on the ſouth-eaſt: it is one hundred and ſixty miles in length, and one hundred and fifty in breadth. New York is divided from the eaſt and weſt Jerſeys, and Pennſylvania, by Hudſon's and Delaware rivers; on the eaſt and north, it joins New England; and on the north-weſt, Canada. Its extent is three hundred miles in length, and one hundred and fifty in breadth. The chief rivers, beſides thoſe of Hudſon and Delaware, are thoſe of Onandago, Mohawk, Raritan, and Maurice. The extenſive lakes of Champlain, Ontario, and Erie, lie on the frontiers of the province of New York to the north-weſt. The capes are thoſe of cape Mary, on the eaſt entrance of Delaware river; Sandy Point, near the entrance of Raritan river; and Mountang Point, at the eaſt end of Long iſland. That iſland, and another called Staten iſland, belong to the province of New York. The firſt, which the Dutch call Naſſau, is about one hundred and twenty miles long, from eaſt to weſt; but no more than ten, at a medium, in breadth. The eaſtern part of it was ſettled from New England: but two-thirds of it is a barren, ſandy ſoil. Staten iſland is about twelve miles in length, and ſix in breadth, and is inhabited by Dutch and French, as well as Engliſh. Nantucket, or Tantucket, Martha's Vineyard, and Elizabeth iſlands, formerly belonged to New York, but were annexed, by charter granted at the revolution, to the colony of Maſſachuſet's bay.

The commodities and produce of New York and the Jerſeys conſiſt of horſes, pipe-ſtaves, pork, beef, and fiſh, ſalted and barrelled up; oil of whales and ſea-calves, ſkins and furs, iron and copper; all ſorts of grain, as wheat, rye, peas, beans, oats, barley, buck-wheat, Indian-corn, Indian peas, and beans; tobacco, pot-aſhes, and wax, which they export to the Weſt India iſlands, not excepting the French and Dutch, and to England, Old Spain, Africa, and Portugal; importing, in return, rum, ſugar, molaſſes, negroes, ſalt, and wine; and from Great Britain, in particular, houſhold goods, cloathing of all kinds, hard-ware, tools, and toys. They traffic alſo with the logwood cutters in the bay of Honduras; and with the Spaniſh ſettlements, exchanging the manufactures of Europe for Spaniſh gold and dollars.

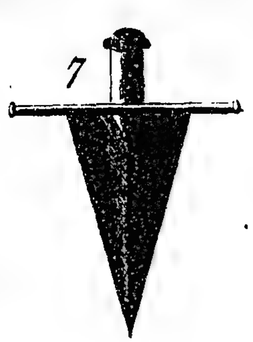
The governments of New York and Jerſey, before the late unhappy conteſt, were veſted in the crown. That of New York was adminiſtered by a governor, with commiſſion under the broad ſeal of England; the legiſlative power and authority being lodged in the governor and council, who were twelve in number, appointed by the king, but filled up by the governor, and twenty-ſeven repreſentatives elected by the people. In other reſpects, the government was perfectly conformable to the laws of England. The adminiſtration of it was in the governor and council, of whom five were a quorum; and upon the death or abſence of the governor, the firſt in nomination of the council preſided. The people choſe their repreſentatives, the numbers of whom were fixed by the crown; and theſe repreſentatives had much the ſame privileges as the members of the Britiſh parliament were inveſted with.

There were three negatives in the civil government of New York. Firſt, that of the governor, who is likewiſe vice-admiral and chancellor of the province. Second, that of the council, which, with the governor, forms a court of error and chancery. Third, of the houſe of repreſentatives, twenty of whom ſerve for counties, and the remaining four for the two towns of Perth-Amboy and Burlington. This houſe, though not a court of judicature, had the privilege of inquiring into the mal-adminiſtration of the courts of juſtice, and rectifying abuſes.

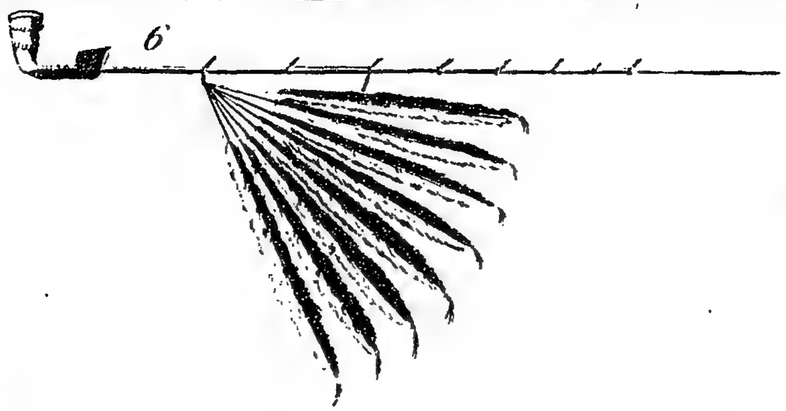
The province of New Jerſey is divided into Eaſt and Weſt Jerſey. Eaſt Jerſey is again divided into four counties, viz. thoſe of Monmouth, Middleſex, Eſſex, and Bergen. The principal towns in which are, Perth-Amboy, the capital of the county of Middleſex, and of all Eaſt Jerſey, pleaſantly ſituated at the mouth of Raritan river; and, had it been built according to the intended model, would have been one of the fineſt towns in North America; but planters have not reſorted to it as was expected, notwithſtanding it is ſo commodiouſly ſituated for trade, that ſhips of three hundred tons may come up in one tide, and lie before the merchants doors; but the town of Elizabeth, ſituated to the northward of it, flouriſhes much more, and might be deemed the moſt conſiderable town in this part of the country.

Newark ſtands in Eſſex county, and has about fifty thouſand acres annexed to it, and Middleton is twenty-ſix miles ſouth of Piſcataqua. Shrewſbury is a conſiderable town, and the moſt ſouthern in this province. On the twenty-ſecond of October, 1746, a college was eſtabliſhed at Brunſwic; and between Middleton and Shrewſbury there is an iron work.

The diviſion of Weſt Jerſey conſiſts of ſeveral counties. It has an eaſy communication with New York by the river Æſopus; and with Maryland, by another ſtream which falls into Cheſapeak bay.



The principal place is Burlington, ſituate in forty degrees forty minutes north latitude, on an iſland in the middle of the river Delaware, to the north of Philadelphia in Pennſylvania, and on the oppoſite ſide of the river. The houſes are handſomely built of brick, and laid out into ſpacious ſtreets, with commodious quays and wharfs, to which ſhips of two or three hundred tons may come up: it has alſo a handſome market-place, a guildhall or town-houſe, two good bridges over the river, the one called London-bridge, and the other York-bridge: by the river Delaware, it has an eaſy communication with Philadelphia and the ocean.



The city of New York was formerly called Amſterdam. It is ſituated in Mahamattan iſland, which is twelve miles long, and between two and three broad, lying at the mouth of Hudſon's or the Iroquois river. It is not very large, but few cities in Europe can vie with it in regularity and neatneſs. The trade of the inhabitants is carried on by water-carriage, and ſhips of five hundred tons may come up to the wharfs of the city, and be almoſt afloat. Hudſon's river, where it runs by New York, is above three miles broad, and proves a noble conveyance for the goods of the counties of Albany, Ulſter, Dutcheſs, Orange, and Kings, to that city. This place is governed by a mayor and aldermen, and ſuch other officers as our corporations. It contains ſix markets, ſaid to be better ſupplied with all kinds of proviſions than any in Europe. The town and harbour are defended by forts and batteries. Twelve years ago the horſes kept here were computed at five thouſand. The principal edifices are the town-houſe, the council-houſe, where they hold their general aſſemblies and courts of juſtice, the Engliſh church, the meeting-houſes, of all ſorts, the free-ſchool, and the public library. Here is alſo a printing-office.

The town of Albany is one hundred and forty-three miles up the river, and but five below the place where it is parted into two branches. It conſiſts of between three and four hundred families, who are moſtly of Dutch extraction, and has a ſtrong fort and garriſon for its defence, as being ſituated on the frontier of the province. It is not, however, the moſt diſtant ſettlement, for there is a place called Schenectady, ſixteen miles above, on a river that runs into Hudſon's. Kingſton is a pretty populous, well-built town, ninety miles up the river, where the Æſopus falls into it from New Jerſey.

The Iroquois, or Five Indian nations, inhabit the north-weſt part of the province of New York. One of theſe nations, or tribes, are called Mohawks, from inhabiting the country about the great Mohawk river. Theſe Indians of the Five Nations are deemed the braveſt and moſt formidable people of North America,

America, and at the ſame time as polite and judicious, as can well be conceived; which appears not only from the management of their affairs with the French and Engliſh, but with almoſt all the Indian nations of this vaſt continent. An Engliſh hiſtorian obſerves, that notwithſtanding the Iroquois live under the darkeſt ignorance, yet a bright and noble genius ſhines through thoſe black clouds. The moſt celebrated Roman heroes have not diſcovered a greater love for their country, or a greater contempt of death in the cauſe of liberty. "I think, ſays he, they have outdone the Romans, eſpecially thoſe who murdered themſelves to avoid ſhame or torment; for our Indians have not only refuſed to die unmanly by their own hands, when they thought their country's honour at ſtake; but have given up their bodies willingly to the moſt cruel torments their enemies could inflict; to ſhew that the Five Nations conſiſted of men whoſe courage and reſolution could not be ſhaken. They fully, however, theſe noble virtues by that cruel paſſion of revenge, which they think not only lawful, but honourable, to exert without mercy on their country's enemies; and in this only they deſerve the name of Barbarians." Another gentleman, of Engliſh extraction, but a native of this country, and reſident a conſiderable time among the Iroquois at Albany, ſays, "they are an exceeding hoſpitable, good-natured people, given to revenge only when they are drunk; and the inſtances that have been given of it are no evidence of a vindictive temper; for the cruelties they inflicted on ſome French priſoners, and their Indian allies, were by way of retaliation of the like cruelties firſt exerciſed by the French on their people." It is obſerved, that the French, in the firſt wars which they had with the Iroquois, when they imagined that people were not able to reſiſt the force of their arms, uſed them in a barbarous manner, which gave the Iroquois ſuch an abhorrence of that nation, as was afterwards very ſerviceable to the intereſt of the Engliſh in this country.

Theſe Five nations form as many diſtinct republics, governed by their ſachems, or civil magiſtrates, in time of peace; and by their warriors, or captains, in their wars; but their chiefs never reſolve on nor execute any thing of importance, without firſt conſulting the heads of their tribes. They acknowledge a ſupreme Being, whom they ſtile the Preſerver of the Univerſe; and they believe a future ſtate of rewards and puniſhments; but have very obſcure, indiſtinct notions of it, and ſeem to think the rewards of the good will conſiſt in the enjoyment of thoſe pleaſures they were moſt fond of in this life. They imagine dreaming to be nothing but a ſally of the ſoul out of the body, and taking a trip into that happy land; and if the dream be unpleaſant, they attribute it to ſome obſtruction, enemy, or accident, it hath met with in the way. They are very ſtrict in obſerving the oaths they take to each other, eſpecially thoſe which their warriors make of ſtanding by one another to the laſt; and which they keep ſo ſtrictly, as to hazard their lives to reſcue the bare carcaſe of their fallen brethren.

The buſineſs of the men is hunting, going to war, building their huts, felling of timber, tilling the ground, and the like. They commonly ſow a field with beans one year, and the next with Indian wheat. The women are commonly ſo prolific, that it is a wonder to ſee one from ſixteen to fifty, who is not either pregnant or ſuckling; yet they do moſt of the drudgery, as grinding the wheat, fetching of wood, water, and the like. The children are often ſo ſtubborn, that if they are found fault with, the boys will diſpatch themſelves with a gun, and the girls with ſome poiſonous weed. They commonly make a feaſt over the grave of a dead perſon, and put into it wheat, tobacco, and every thing they think the deceaſed may want in the other world.

In this country is that great water-fall, or cotoos, called the Fall of Niagara. This ſurprizing cataract, ſaid to be the greateſt in the world, is a quarter of a mile broad, and ſeventy feet deep. The water, precipitating itſelf from ſeveral rocks, which project from the reſt, falls down on every ſide in torrents, and being broken near the bottom by many ſeparate crags, riſes in a white froth. From the whole ariſes a miſty cloud, that deſcends like ſmall rain, and exhibits, when the ſun ſhines, a beautiful rainbow, that moves as the ſpectator moves, according to the angle of viſion. As the waters fall from rocks one hundred and forty feet high, a noiſe is produced like thunder heard at a great diſtance.

SECT. II.

Of NEW ENGLAND, NOVA SCOTIA, and CANADA, their Situation, Boundaries and Extent; principal Towns, Climate, Soil, Productions, Trade, Manufactures, Government, Laws, &c. together with an Account of the Riſe and Progreſs of the War between Great Britain and the Colonies, which terminated in the Independency of the American States.

THE extenſive and powerful country we are now about to deſcribe, namely, New England, comprehends Maſſachuſet's bay, Connecticut, Rhode Iſland, and Providence Plantation. It is ſituated between ſixty-ſeven and ſeventy-three degrees of weſt longitude, and between forty-one and forty-five degrees of north latitude; is five hundred and fifty miles long, and two hundred broad, and has the province of New York on the weſt; Nova Scotia or Arcadia, on the north-eaſt; Canada, on the north-weſt; and the Atlantic ocean, on the eaſt and ſouth.

The ſummer-ſeaſon here is warmer than ours, but of ſhort duration. For the ſpace of two months the ſky is perfectly clear, which renders the country ſo healthy, that it is reported to agree better with Britiſh conſtitutions than any other of the American provinces. The winters here are long and ſevere, the wind often boiſterous, and the air extremely ſharp, but not intolerable. Naturaliſts aſcribe the early approach, length, and ſeverity of the winters, to the large freſh-water lakes lying to the north-weſt of New England, which being conſtantly frozen over from the beginning of November to June or July, occaſion thoſe piercing winds which prove ſo fatal to mariners on this coaſt.

The land towards the ſea is, for the moſt part, low, and frequently marſhy; but in the country it riſes into hills, and on the north-eaſt becomes altogether rocky and mountainous. The ſoil about Maſſachuſet's bay is black, and the graſs rank; but the uplands are fruitful. The fruits of Old England come to great perfection here; and the country in general produces corn, pulſe, eſculent plants, Indian corn, and all kinds of timber. The oaks here are inferior to thoſe of Old England; but the firs are of a prodigious bulk; and they draw from theſe, and other trees, pitch, tar, roſin, turpentine, gums, and balm; the ſoil alſo producing hemp and flax, a ſhip may be built and rigged out with the produce thereof; and in this country ſhipbuilding is a conſiderable employment.

In New England there is a great abundance and variety of fowl; as geeſe, ducks, turkies, hens, partridges, wigeons, ſwans, herons, heathcocks, pigeons, &c. Quadrupeds are alſo very numerous here, and European cattle thrive and multiply exceedingly. The horſes of the province are hardy, mettleſome, and ſerviceable, but ſmall. Here are alſo elks, deer, hares, rabbits, ſquirrels, beavers, otters, monkies, racoons, ſables, bears, wolves, foxes, together with a variety of other tame and wild quadrupeds; but the moſt extraordinary of their animals is the mooſe or mouſe deer; the black ſpecies of which is about twelve feet high, with four horns, and broad palms, ſome diſtant near twelve feet from the top of one horn to the other. His body is about the ſize of a bull; his neck reſembles a ſtag's; his tail is ſomewhat longer; and his fleſh extremely grateful. The light-coloured mooſe, called wampoon by the Indians, is of a ſmaller ſtature, and much more common than the black. The rattle-ſnake is another natural curioſity of New England, though not peculiar to it. The ſurrounding ſeas, and interſecting rivers, afford abundance of fiſh; conſequently there are many fiſheries, particularly for cod and mackarel. The ſalt-works are improveable, and the iron-mines conſiderable.

They export from hence biſcuit, meal, ſalt proviſions, ſometimes cattle and horſes, planks, hoops, ſhingles, pipe-ſtaves, butter, cheeſe, grain, oil, tallow, turpentine, bark, calf-ſkins, tobacco, apples, cyder, and onions; they bring in return ſugar, cotton, ginger, and various other commodities. From Europe they import wine, ſilks, woollen cloth, toys, hardware, linen, ribbands, ſtuffs, laces, paper, houſhold furniture, huſbandry tools of all kinds, cordage, hats, ſtockings, ſhoes, and India goods. In ſhort, there is no Britiſh manufacture, that ſerves the purpoſe of luxury or ornament, which the people of New England do not import. They alſo ſend ſhips to the bay of Honduras for log-wood, which they tranſport to Europe; as they do ſugar from the Weſt Indies, and fiſh from Newfoundland. Their inland trade, beſides maſts, yards, and proviſions of all kinds, conſiſts chiefly of furs, and the ſkins of beavers and martins. The furs and ſkins are brought in by the Indians, eſpecially thoſe on the rivers Penobſcot and St. John. Their money is for the moſt part paper-currency, which has been attended with many inconveniencies in the circulation of it.

The eſtabliſhed religion in New England is that of the Independents. The church government admits of ſynods, but the ſynods have no power to enforce their own acts. The miniſters of Boſton depend entirely on the generoſity of their hearers for ſupport; a voluntary contribution being made for them, by the congregation, every time divine ſervice is celebrated. Tho' the puritans of various ſects, who firſt tranſported themſelves hither, rather than conform to the church of England, complained of their not being allowed toleration, yet they were ſo far from granting it to thoſe who differed from them, that they put to death ſeveral quakers, and would not permit people of any other ſect or denomination of Chriſtians but themſelves to have any ſhare in the governments they erected here.

Great care is taken of the education of children. Every town of fifteen families is obliged to maintain a ſchool for reading and writing; and, of one hundred families, a grammar-ſchool, for the inſtruction of youth; beſides which, there are four colleges. They have no holidays, but that of the annual election of the magiſtrates of Boſton, and the commencement at Cambridge.

A late writer obſerves, with reſpect to the government of New England, that by the new charter granted to the Maſſachuſets by king William III. the appointment of a governor, lieutenant-governor, ſecretary, and all the officers of the admiralty, was veſted in the crown; that the power of the militia was wholly in the hands of the governor, as captain-general; that all judges, juſtices, and ſheriffs, to whom the execution of the law is intruſted, are nominated by the governor, with the advice of the council; and that the governor has a peremptory and unlimited negative on the choice of counſellors; ſo that he is not obliged to give a reaſon for what he does in this particular, or reſtrained to any number; that authentic copies of the ſeveral acts paſſed by this colony, as well as others, ought to be tranſmitted to the court of England for the royal approbation: but if the laws of this colony are not repealed within three years after they are preſented, they are not repealable by the crown after that time; and that no laws, ordnances, elections of magiſtrates, or acts of government whatſoever, are valid, without the governor's conſent in writing. Notwithſtanding this, previous to the late unhappy diſturbance, the people had ſtill the greateſt ſhare of the power in this colony; for they not only choſe the aſſembly, but this aſſembly choſe the council (equivalent to our houſe of lords) with the governor's concurrence.

Three ſorts of government were originally eſtabliſhed by the Engliſh on the continent of America, viz. royal governments, charter governments, and proprietary governments. A royal government is properly ſo called, becauſe the colony is immediately dependent on the crown, and the king remains ſovereign of the colony. A charter government is ſo called, becauſe a company, incorporated by the king's charter, is in a manner veſted with ſovereign authority. A proprietary government is ſo denominated, becauſe the proprietor has a kind of regal authority, either by purchaſe or gift.

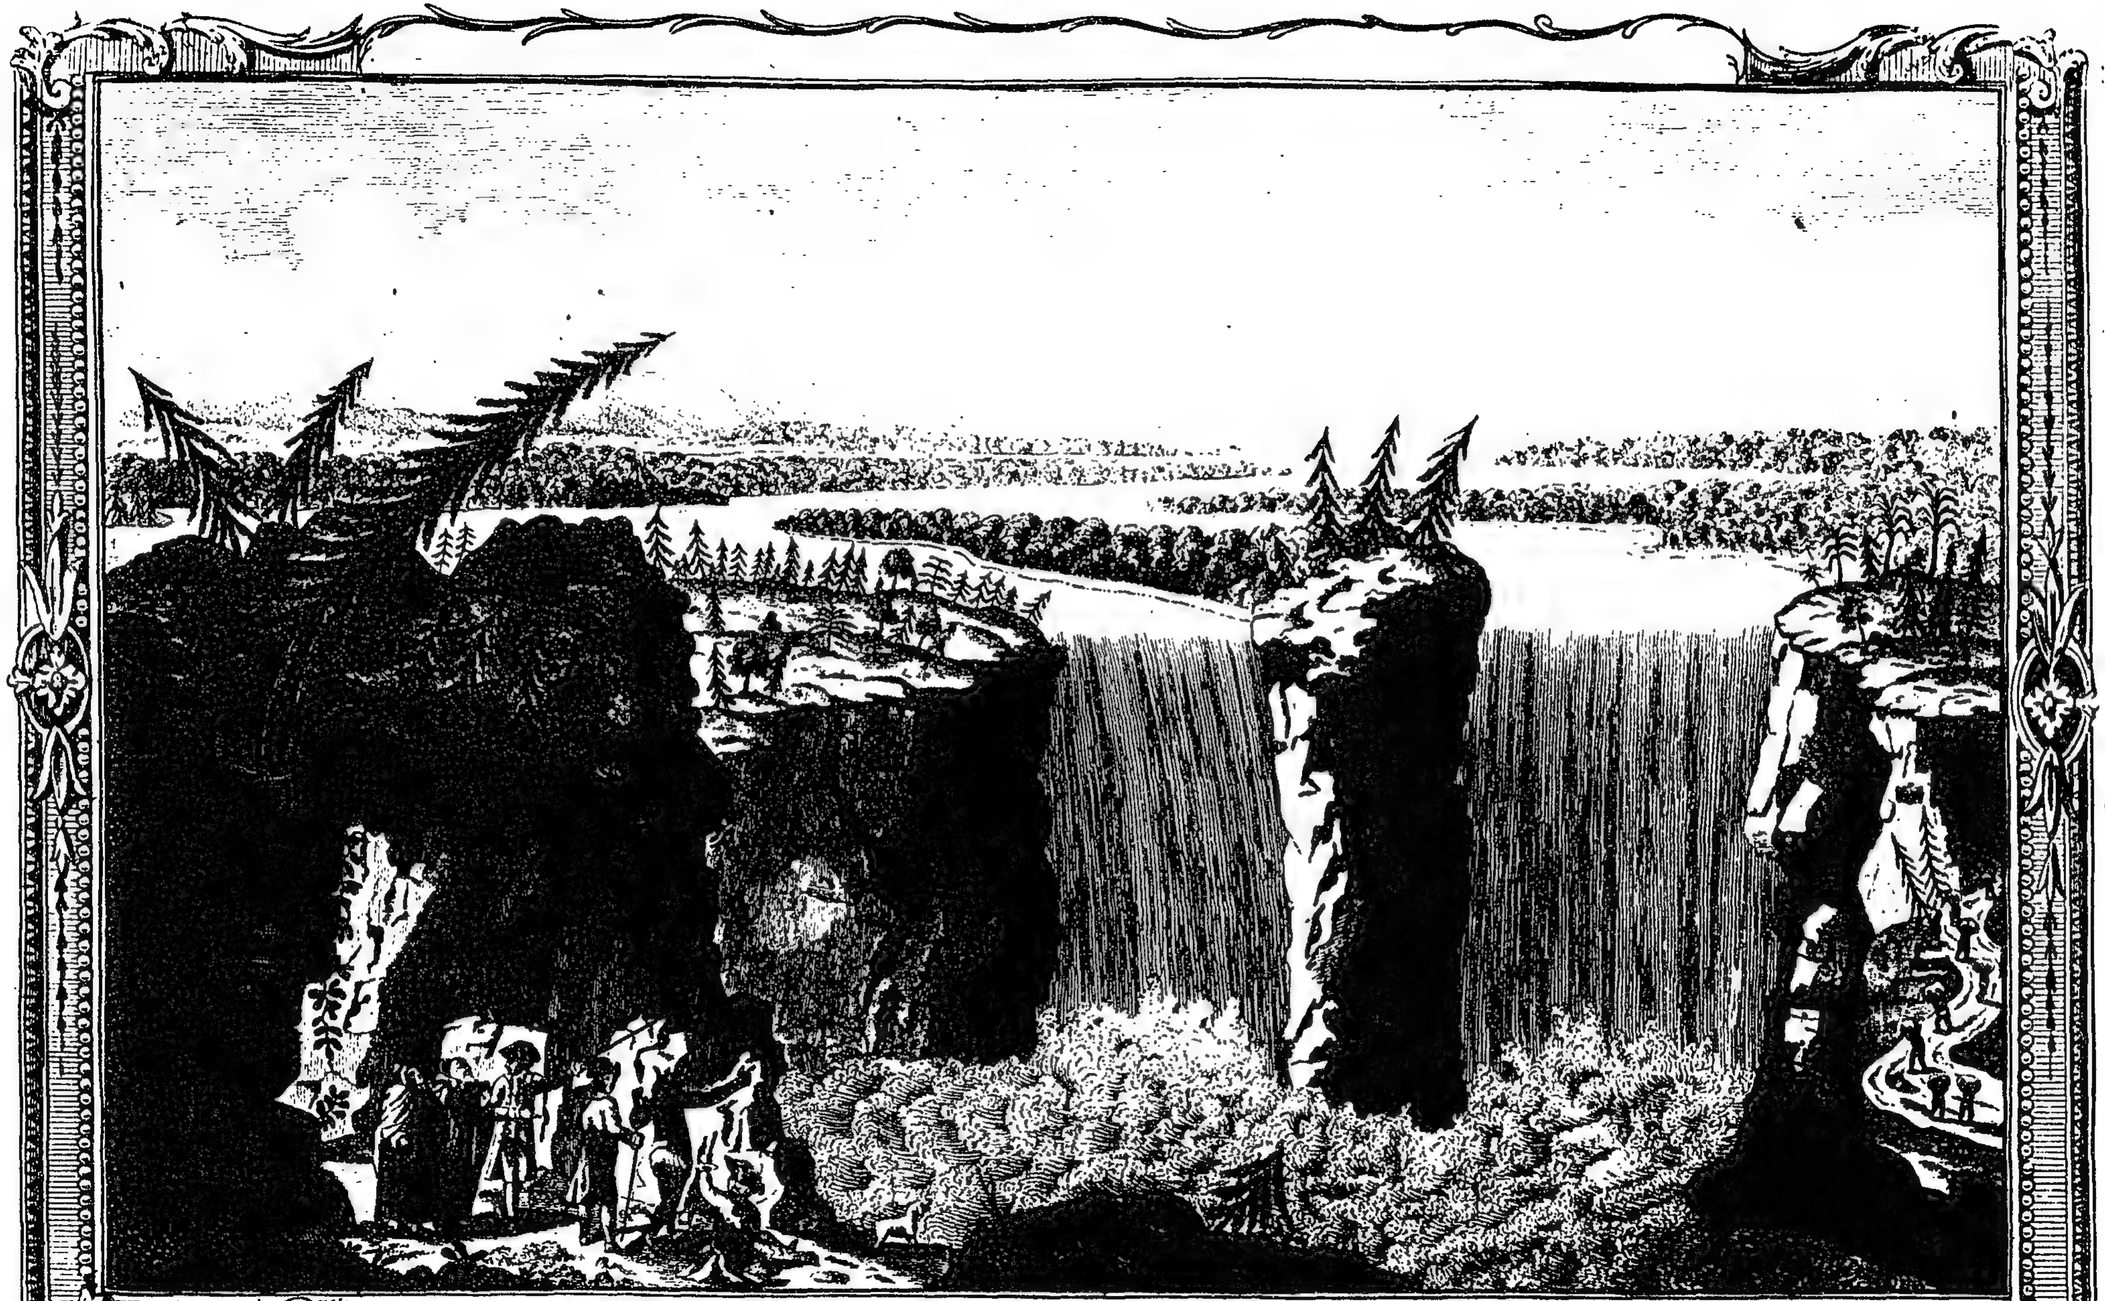
Every town in New England, if it contains thirty-two burgeſſes, can ſend two repreſentatives to parliament; if twenty, one; but Boſton nominates four. The general aſſembly, in concurrence, impoſed taxes, made grants, enacted laws, and redreſſed public grievances of every kind. It conſiſted of the magiſtrates, and a certain number of repreſentatives; who formed two chambers, ſo nearly reſembling our lords and commons, that the concurrence of the majority of both was neceſſary, before any bill could be preſented to the governor for his aſſent.

No perſon can be arreſted here, if there are any means of ſatisfaction pitched upon; nor impriſoned, unleſs there be a concealment of effects. Adultery is puniſhed with death to both parties. The laws were always very ſevere againſt Quakers. To bring one in, is a forfeiture of one hundred pounds; to conceal one, forty ſhillings an hour; to go to a quaker's meeting, ten ſhillings; to preach there, five ſhillings. If a quaker be not an inhabitant, he is ſubject to baniſhment; and if he returns, death. Vagrant quakers to be whipped, branded with the letter R on the left ſhoulder, and baniſhed; if they return, death. How far theſe rigorous laws are conſiſtent with the peaceable and paſſive ſpirit of Chriſtianity and its Divine Author, we leave the reader to judge.

The name of the Maſſachuſet's colony was given to it by the Indians who inhabited theſe parts when the Engliſh firſt came hither. It is ſubdivided into the provinces of Plymouth, Maſſachuſet Proper, and Maine; and is bounded by the colonies of Connecticut and New York, on the weſt; Merrimack river, on the north; and the ocean, on the eaſt and ſouth.

The moſt ſoutherly of theſe provinces, namely, Plymouth, runs along the coaſt one hundred miles, from cape Cod to cape Mancheſter, and is near fifty broad, from Monument bay to Sectuati. It is divided into the counties of Briſtol, Plymouth, and Barnſtable, taking their names from the chief towns of each; of which Briſtol is large and populous, having a commodious harbour, and the beſt trade in New England next to Boſton. Several iſlands lie on the coaſt of this province, particularly Rhode iſland, Elizabeth's iſland, Martha's or Martin's vineyard, in which are ſeveral towns or villages of Indians who have embraced Chriſtianity.

The province of Maſſachuſet Proper is bounded by New York, on the weſt; Maſſachuſet's bay, on the eaſt; New Hampſhire, on the north; and by Plymouth and Connecticut, on the ſouth: it contains the counties of Suffolk, Middleſex, and Eſſex, all of them ſituate on Maſſachuſet's bay. Boſton, Salem, and Cambridge, are the three capital towns of theſe counties.



The capital town of Boſton, is ſeated in the county of Suffolk, in the province of Maſſachuſet Proper, in the forty-ſecond degree twenty-one minutes north latitude, and in the ſeventy-firſt degree weſt longitude, at the bottom of a fine bay, in a peninſula about four miles in circumference. At the entrance of this bay are ſeveral rocks which appear above water, and upwards of a dozen ſmall iſlands, ſome of which are inhabited. There is but one ſafe channel to approach the harbour, and that ſo narrow that two ſhips can ſcarcely ſail through abreaſt; but within the harbour there is room for five hundred ſail to lie at anchor. The entrance is defended by the caſtle of Fort William, one of the fineſt pieces of military architecture in Britiſh America, it being ſurrounded by a covert-way, and joined by two lines of communication from a main guard to a redoubt. The caſtle is defended by an hundred guns, twenty of which lie on a platform level with the water, ſo that it is ſcarce poſſible for an enemy to paſs the caſtle. To prevent ſurprize, they have a guard placed on one of the rocks at about two leagues diſtance, from whence they make ſignals to the caſtle, when any ſhips come near it. There is alſo a battery of great guns at each end of the town, to the fire of which an enemy would be expoſed, if he ſhould be ſo fortunate as to paſs the caſtle. At the bottom of a bay is a pier near two thouſand feet in length, with warehouſes for the merchants on the north-ſide; and to this pier ſhips of the greateſt burden may come and unload without the help of boats. The greateſt part of the town lies round the harbour in the form of a creſcent; the country beyond it riſing gradually, and affording a delightful proſpect from the ſea. The town has ſeveral ſtreets little inferior to the beſt in London; the principal ſtreet runs from the pier up to the townhouſe, a handſome building, with walks for the merchants, as in the Royal Exchange in London; this edifice contains not only the courts of juſtice, but the council-chamber and the houſe of repreſentatives. The town conſiſts of between four and five thouſand houſes, which are in general well-built, and ſeveral of the public ſtructures are very ſpacious and elegant. It has ſeventeen churches, or places appropriated to divine worſhip. The epiſcopal church is handſomely built and adorned, and the congregation is ſaid to amount to about a thouſand. The church-furniture, and ſome pieces of plate, were given by king William and queen Mary; it has an organ, and there is a magnificent ſeat for the governor, when he happens to be of the church of England. The governor has alſo a very fine houſe. Among the other buildings are Fenneuil-hall, thus named from Mr. Fenneuil, who was its founder. The ſhipping of this port in the year 1760, was computed at between ſix and ſeven hundred; the inhabitants of the town then amounted to about twenty-five thouſand, and there was ſaid to be two hundred thouſand in the province; according to the computation of Dr. Franklin, the inhabitants of the northern colonies of America double their numbers in the revolution of ſixteen years. Such a rapid increaſe of population was never equalled in any part of the world.

Cambridge, the principal town in the county of Middleſex, is ſeated on the north branch of Charles river, ſix miles to the north-weſt of Boſton, and has ſeveral fine houſes and good ſtreets. It was originally called New Town, but on founding the univerſity changed its name to Cambridge, and contains two ſpacious colleges, called by the names of Haverford-college and Stoughton-hall, with a public library, ſaid to be the beſt furniſhed with books of any in that part of the world. It conſiſts of a preſident, five fellows, and a treaſurer. The governor of the povinces, deputy-governor, and all the magiſtrates of the Maſſachuſet's colony, with the miniſters of ſix neighbouring towns for the time being, are viſitors. This univerſity never conferred any degree above that of maſter of arts, till it obtained a new charter from king William and queen Mary, by which it had the power of creating doctors of divinity.

The town of Salem is ſituated on a plain between two rivers, on each of which it has a harbour eighteen miles north of Boſton. Ship-building, particularly the conſtruction of fiſhing-ſmacks, has always been the principal buſineſs carried on here.

The province of Maine is the third grand diviſion of the Maſſachuſets government. Its boundaries are, the bay of Maſſachuſet, on the ſouth-eaſt; Nova Scotia, on the north-eaſt; and the province of New Hampſhire on the ſouth-weſt and north-weſt, in which are the two counties of York and Cornwall. Several fortifications were erected on the north-eaſt part of this province in a former war, to defend the country againſt the French and Indians of Nova Scotia, particularly at Saco, Kennebeck, Saghadock, and Pemaquid. The principal towns here are, Falmouth, Saco or Scarborough, Wells, Hedeck or Newcaſtle, Edger Town, York, Ketteren, Berwick, and Biddeford.

New Hampſhire, or Piſcataqua government, is bounded by Canada on the north-weſt; Maſſachuſet colony, on the ſouth-weſt; the province of Maine on the ſouth-eaſt; and by Nova Scotia, on the north-eaſt. There are not many towns in the inland country: it ſtill remains a great foreſt, covered with excellent

The most surprising CATARACT *of* NIAGARA *in Canada.*

Page. Sculp.

cellent timber; but the ſoil does not ſeem proper either for corn or graſs. The chief towns in the province are Dover, Portſmouth, Exeter, and Hampton; all which lie near the mouth of the river Piſcataqua.

Connecticut is bounded by the Maſſachuſet's colony on the north; by Rhode Iſland, on the eaſt; by New York, on the weſt; and Long Iſland, ſeparated by an arm of the ſea, on the ſouth. It is about one hundred miles in length, and ſeventy in breadth; and abounds in metals and naval ſtores, eſpecially timber, and has many good ports. This colony is divided into four counties, and its chief towns are Newhaven, Hertford, and New London. Connecticut river, which is one of the largeſt in New England, runs through the heart of the province, and is navigable above forty miles for large veſſels, and much farther for ſmall ones.

The town of Newhaven ſtands upon the coaſt, and has a college for academical learning, called Yale-hall, pretty well endowed, and furniſhed with a good library. New London is a town of good trade, ſituated on the weſt-ſide, and near the mouth of the river called Thames. Hertford, ſituated on the banks of Connecticut river, is a handſome populous town.

Rhode iſland comprehends, beſides the iſland, a diſtrict on the continent, called Providence Plantation, which lies oppoſite to Rhode iſland, and is about twenty miles ſquare, has two large thriving towns, near the mouth of the river Patuxel, one of which is called Providence, and the other Warwick. It is inhabited chiefly by quakers, with ſome few of the church of England; and, though ſmall, is in a flouriſhing condition.

The iſland, which is about fifteen or ſixteen miles long, and about four or five broad, is called the Paradiſe of New England, from the fruitfulneſs of the ſoil, and the temperateneſs of the climate. The chief town is Newport, ſituated on the ſouth-weſt part of it, and having a good harbour, defended by a regular fort. A great trade is carried on from hence to ſugar-colonies with butter, cheeſe, horſes, ſheep, beef, pork, tallow, &c.

We are now come to the moſt eaſtern part of the continent of America, namely, Nova Scotia, New Scotland, or Acadia. It is bounded by the bay of St. Lawrence and the Atlantic ocean, on the eaſt; the ſame ocean and New England, on the ſouth; the river St. Lawrence, north; and Canada, on the weſt; being three hundred and fifty miles long, and two hundred and fifty broad. It had its name of Nova Scotia from Sir William Alexander, a Scotſman, and ſecretary to king James I. who had the firſt grant of lands in it. By the treaty of Utrecht, it was ceded to Great Britain, and a regiment was ſent over to take poſſeſſion of Annapolis, the capital; but no proviſion was made to plant the reſt of Nova Scotia, till the year 1749, when about three thouſand Engliſh families, under the command of governor Cornwallis, were ſent thither, and erected the town of Halifax, in Chebucto bay, and ſeveral other embarkations have been made ſince that time.

This is in general a fine country, the climate being tolerably temperate, though pretty ſevere in winter, when the cold is ſharp and the ſnow lies deep on the ground; but the air is there generally clear, with a bright ſunſhine and azure ſky: the ſummer is, however, hotter than in England.

The ſoil is various, in ſome places barren, and in others exceedingly pleaſant and fertile; particularly round the Bay of Fundy, and on the rivers which fall into it; there are large tracts of ground on both ſides of theſe rivers, for fifty or ſixty miles into the country, and ſeveral miles from the bay, which were once marſhy, but, by being dyked, are improved to great advantage. The eminences in this province are alſo very pleaſant and fruitful, producing wheat, rye, Indian corn, peas, beans, hemp, flax, and ſome kinds of fruit in great perfection, as gooſeberries, raſberries, and ſtrawberries, which grow in the woods. Several parts yield fine timber, and particularly excellent oak fit for building of ſhips, with fir, ſpruce, birch, &c. It abounds with all the neceſſaries of life, particularly a great number of deer and other game, with plenty of wild fowl, as teals, herons, woodcocks, pigeons, buſtards, partridges, wild-ducks, and a great number of beavers and otters. The rivers abound with ſalmon and other kinds of river-fiſh. There are alſo ſeveral fiſheries erected in the different harbours, and carried on with great ſucceſs.

On the coaſt are many commodious bays, harbours, and creeks; and the land is enriched by many rivers, ſome of which are navigated for a long courſe by the native Indians. The harbour of Chebucto, upon which is ſeated Halifax the metropolis, may be juſtly eſteemed one of the fineſt in the world, both for ſafety and convenience, it having good anchoring-ground, and water ſufficient for the largeſt men of war. This is therefore made the place of rendezvous for the royal navy in America, it having a royal dock, and conveniences for the largeſt ſhips to heave down and careen. The entrance into it is from the ſouth, with a large iſland of an irregular form, lying on the north-eaſt ſide, named Cornwallis iſland, from the firſt governor of Halifax. This iſland, as well as a ſmaller one that lies higher up the harbour, named George iſland, is very commodiouſly ſituated for a fiſhery, and has conveniencies of all ſorts proper for drying and curing the fiſh.

The town of Halifax is ſeated on the weſt ſide of this harbour. Though founded ſo lately as the year 1749, it is now a conſiderable place, conſiſting of above one thouſand houſes, laid out in handſome ſtraight ſtreets, and is the capital of the whole province.

Annapolis is ſituated on a fine bay, a little ſouth of Fundy bay, in ſixty-four degrees odd minutes weſt longitude, and forty-five degrees of north latitude. It is well fortified, but requires a ſtronger garriſon to defend it than it has been furniſhed with of late years.

There are alſo ſeveral other towns laid out round the bay, and partly inhabited; but the moſt conſiderable ſettlements are upon the Bay of Fundy, and the rivers that fall into it.

About two miles up the harbour of Chebucto is a river on the ſouth-weſt ſide, with a ſmall harbour at its entrance. This river, which was called by the firſt ſettlers of Halifax, Sandwich-river, is at the mouth about as wide and deep as the Thames at London-bridge, and is ſalt water for about four or five miles up, when it terminates, where a ſmall freſh water rivulet falls into it from the north. From the mouth of Sandwich-river to the oppoſite ſide of the harbour, is about two miles, with good anchoring-ground for the largeſt ſhips in any part of it, and a fine watering-place on the north-eaſt ſide: the land on both ſides is exceeding high, but covered with wood. Four or five miles to the north of the above river, is a narrow entrance of half a mile, into Bedford-bay, which is about twelve miles in circumference, and has ſeveral creeks at the bottom of it, abounding with the fineſt ſalmon in the greateſt plenty: there are alſo ſeveral iſlands in it, and on the weſtern ſide of it grow a great number of pines fit for maſts. This bay, with the harbour, and Sandwich-river, divide the peninſula from the mainland.

There are ſeveral large rivers on the oppoſite ſhore, among which that of St. John is the moſt conſiderable. It is ten leagues diſtant from the Gut of Annapolis, and has a very long courſe; but has two prodigious cataracts near its mouth, one of them no leſs than thirty fathoms deep, which is ſuppoſed to be chiefly occaſioned by the great head of water above, and the channel being pent up between two ſteep mountains.

The inhabitants may be computed at about twenty thouſand, who export to other parts lumber, as planks, ſtaves, hoops, and joiſts, together with fiſh. The latter is, indeed, the ſtaple commodity, and employs a conſiderable number of hands.

The king of Great Britain, who is ſovereign of the ſoil, appoints the governor, the lieutenant-governor, and council, who form the upper-houſe; and the lower-houſe is formed of the repreſentatives of the people, who are choſen by the freeholders.

The province of Canada, which is the largeſt upon the continent, is bounded, on the north-eaſt, by the gulf of St. Lawrence and St. John's river; on the ſouth-weſt, by lands inhabited by the Indians; on the ſouthward, by the province of New York, New England, and Nova Scotia; and, on the weſtward, by lands claimed by the Indians. It is deemed five hundred miles in length, and two hundred in breadth.

The climate and ſoil vary; the parts beſt known, which lie towards the great river St. Lawrence, are cold to an exceſs in winter, though rather warm in ſummer. The reſt of the country, as far as it is known, is full of large woods, marſhes, lakes, mountains, and rivers, which render it ſtill colder. The lands, however, eſpecially in the interior parts, and about the lakes and rivers, are generally fertile, and capable of producing wheat, barley, rye, with many ſorts of grain, fruits and vegetables; tobacco, in particular, thrives exceedingly, and is much cultivated.

Here are plenty of ſtags, elks, bears, foxes, martins, ferrets, weazles, ſquirrels, hares, rabbits, and other animals. The wild-cats are great enemies to the elk; and, notwithſtanding their being much inferior in ſize, often make a prey of him: for he has no other way to diſengage himſelf from them, but by plunging into the water. The ſkunk, which has been improperly called the pole-cat, but which it no ways reſembles, is called by the Indians the ſtinking beaſt, on account of its emitting a diſagreeable ſmell to a conſiderable diſtance, when purſued or diſturbed. It is about the ſize of a ſmall cat. The fur of this animal, with that of the ermin, otter, and martin, make up what is called the ſmall peltry. The ermin is about the ſize of the ſquirrel; its fur is extremely white, its tail long, and the tip of it as black as jet. The martin, or ſable, lives principally among the mountains, is as long as a common cat, but very ſlender; its fur is very fine and valuable. The muſk rat reſembles the beaver in every part, except its tail, which is round like that of a rat. One of theſe animals weighs about

five

five or six pounds. During the ſummer ſeaſon the male and female keep together, but ſeparate at the approach of winter, and each ſeeks a ſhelter in ſome hollow tree, without laying up any proviſions. The foxes here are of various colours, as black, grey, red, and white, who, by their craft and cunning, make great havock among the water-fowl in the lakes and rivers. Here are three ſorts of ſquirrels; that called the flying ſquirrel will leap upwards of forty feet from one tree to another. The hares and rabbits differ little from thoſe in Europe, only they turn grey in winter. The mountains abound with mines of coal and ſome metals.

The lakes are large and numerous: the chief are, Lake Superior, which is one hundred leagues in length, ſeventy broad, and contains ſeveral iſlands; the lakes Michiganor Illinois, Hurons, Ontario, Frontenac, Champlain, &c. Of the rivers, which are very numerous, the three principal are, the great river St. Lawrence, St. John's, Trois Rivieres. The bay of St. Lawrence is entered between Cape Retz, in Newfoundland, and Cape Breton, and after doubling Cape Roſe, you ſteer into the river of the ſame name. Towards the ſouth lie the bay and Point of Gaſpey; below this bay is a Steep, called the Pierced Iſland, from an aperture in its middle, through which a ſloop may paſs with her ſails up.

At a league diſtance from the Broad iſland lies the iſland Bonaventure, and at a league diſtance from that the iſland Miſcon, which has an excellent harbour, and is eight leagues in circumference. A ſpring of freſh water ſpouts up to a conſiderable height in the offing, not far from this iſland.

The next object that preſents itſelf in the river St. Lawernce is the iſland Anticoſti, and the current ſetting ſtrongly in upon it, renders the navigation here extremely dangerous, in caſe of a calm, eſpecially as the iſland is lined with breakers. This iſland is narrow, but lies in the middle of the river, and extends about forty leagues from north-eaſt to ſouth weſt. After paſſing this iſland, the navigation becomes more tolerable, but ſtill great precaution muſt be uſed. The mounts Notre Dame and Louis lie on the larboard ſide; near the latter are ſome plantations. The next point is Trinity Point, which muſt be avoided with great care. A little higher are the Paps of Montani, ſo called from the appearance of the mountain, ſituated about two leagues from the ſhore. The land in the neighbourhood is not only unprofitable, but frightful, being covered with rocks, ſands, and impenetrable thickets: it contains however plenty of game.

On the other ſide the river, and advancing two leagues into its bed, lies the ſhoal of Manicoagu, which is the moſt dangerous in the river: it is named from a river that falls from the mountains of Labrador, and otherwiſe called the river of St. Barnabas, and the Black River. From this to Green Iſland the navigation is ſlow and uncertain, and the ſhores uncomfortable and uninhabited.

Somewhat higher lies the river Saguenay, which carries ſhips twenty-five leagues above its mouth, where is an excellent harbour, called Tadouſſac; in ſailing from which, great care muſt be taken to avoid the Red Iſland, or Cape Rouge, which is a dangerous rock of that color, whoſe ſurface is equal to the water, and often proves fatal to ſhipping.

Beſides a great variety of other fiſh in the lakes and rivers, particularly that of St. Lawrence, are ſea wolves, ſea cows, porpoiſes, the lencornet, the goberque, the ſea plaice, ſalmon trout, turtles, lobſters, the chaouraſou, ſturgeon, the achigau, and gilt head. The ſea wolf, ſo called from its howling, is an amphibious creature. His head reſembles that of a dog: he has four very ſhort legs, the fore ones of which have nails, but the hind ones terminate in fins. The largeſt weigh two thouſand pounds, and are of different colours. Their fleſh is good eating, but the profit of it lies in its oil, which is proper for burning and currying of leather. Their ſkins make excellent coverings for trunks, and, though not ſo fine as Morocco leather, they preſerve their freſhneſs better, and are leſs liable to crack. The ſhoes and boots made of thoſe ſkins let in no water, and, when properly tanned, make excellent and laſting covers for ſeats. The Canadian ſea cow is larger than the ſea wolf, but reſembles it in figure. It has two teeth of the thickneſs and length of a man's arm, that, when grown, look like horns, and are very fine ivory, as well as its other teeth. Some of the rivers breed crocodiles, which differ but little from thoſe of the Nile in Egypt.

There are not ſo many or ſuch varieties of birds in the foreſt of Canada, as there are fiſhes in the rivers and lakes. They contain, however, a great number of trees of different kinds whoſe appearance is both beautiful and awful.

When the French had poſſeſſion of Canada Proper, it was inhabited by one hundred and eighty thouſand people of that nation, who lived in affluence, being free from all taxes, and having full liberty to hunt, fiſh, fell timber for fuel or building, and to ſow and plant as much land as they could cultivate. Their greateſt hardſhip was the cold, which is there ſo exceſſive from December to April, that the greateſt rivers are frozen over, and the ſnow commonly lies two or three feet deep on the ground in the winter ſeaſon.

Montreal and Trois Rivieres are the principal places in this province. The former ſtands on an iſland in the river St. Lawrence, which is ten leagues in length, and almoſt four in breadth, at the foot of a mountain which gives name to it, about half a league from the ſouth ſhore. The French improved it ſo well, that the whole iſland was become a moſt delightful ſpot, and produced every thing that could adminiſter to the conveniences of life. When the town was reduced by general Amherſt, it was of an oblong form, well peopled, and ſurrounded by a wall, with eleven redoubts, which ſerved inſtead of baſtions. The ſtreets are regular, the houſes good, the ditch eight feet deep, and the batteries of the fort command the ſtreets of the town.

The inland trade is with the Indian natives; and there is a ſpecies of traders, called Coureurs des bois, who carry on trade with nations unknown to all the world beſides. A fair is held in June at Montreal, to which Indians reſort from the diſtance of one hundred miles with peltry, and the other Indian commodities. This fair ſometimes laſts for three months. The reſort of ſavage nations to it is incredible; and great diſorders and tumults often happen, the Indians being ſo fond of brandy, that they ſometimes for a dram give the Coureurs des bois all they have in the world.

In the neighbourhood of this iſland, on which the town ſtands, is a great number of others, particularly that called the Iſle of Jeſus, which is about eight leagues in length and two in breadth: there are alſo ſeveral lakes; among others that of St. Louis, and that formed by the opening of the river Des Outaonais, or the Great River, into the river St. Lawrence. On the banks of the laſt of theſe rivers likewiſe, not far from Montreal, are two villages of Iroquois Chriſtians; one called La Montagne, and the other Sault St. Louis.

Trois Rivieres, or the Three Rivers, has its name from three rivers, which join their currents about a quarter of a mile below it, and fall into the great one St. Lawrence. This town gives name to a diſtrict, and ſtands about thirty leagues up the river St. Lawrence from Quebec. It is much reſorted to by ſeveral nations that come down thoſe rivers to it, and trade with it in various kinds of furs, and the country about it is pleaſant, and fertile in corn, fruits, &c. A great number of handſome houſes ſtand on both ſides the rivers.

There are ſeveral other places of note in this province, the chief of which are, Gaſpé, Jean Iſle, Miſcon Iſle, Richelieu Iſles, Iſle Conti, St. François, Notre Dame des Anges, St. Alexis, St. Michael, St. Joſeph, Forts Frontenac, Detroit, Michilacinimenac and Niagara, near which is the famous cataract above deſcribed.

Saguenay province takes its name from a river ſo called, and contains Quebec, the capital of Canada, ſeated about three hundred miles north of Boſton in New England. This is a handſome and large city, ſtrongly fortified. The harbour is flanked with two baſtions, which at high tides are almoſt level with the water. A little above one of them is a demi-baſtion, which is partly taken out of the rock; and above it, on the ſide of the gallery of the fort, is a battery of twenty-five pieces of cannon; above this a ſquare fort called the citadel, and the ways from one fortification to another are difficult to paſs. To the left of the harbour, on the ſide of the road, are large batteries of cannon, and ſome mortars. It is encompaſſed with walls, and has a caſtle on the brow of a hill, about forty fathoms above the town; but it is irregularly built, and fortified with only two baſtions, and no ditch towards the town. It has alſo another fort at Cape Diamond of ſolid rock, four hundred fathoms high, and therefore owes its greateſt ſtrength to nature.

The firſt place taken notice of upon landing here is a ſquare of an irregular figure, with well built houſes on one ſide; on the back of which is a rock; on the left it is bounded by a ſmall church, and on the right has two rows of houſes parallel to each other: there is another betweeen the church and the harbour; as alſo another long row on the ſide of the bay. This is called the Lower Town, and is moſtly inhabited by merchants, but it is too much crouded. Between this and the Upper Town is a very ſteep aſcent, in which are ſteps for the foot paſſengers to go up. This has noble edifices, and between two large ſquares is a fort in which the governor reſides. Oppoſite the fort the Recollects have handſome houſes, and on the right is the cathedral, which is built in a mean ſtile, but has a large, high, and well built tower, that may be ſeen at a great diſtance. Over-againſt this is the Jeſuits college, which is a fine building, and between the cathedral and the college are well built houſes. The houſe of the knights hoſpitallers is a ſtately ſtructure, with two fine pavilions. In the ſecond ſquare are two deſcents to the river of St. Charles; an hoſpital called Hotel-Dieu is in the mid-way, and from thence are ſmaller houſes, which reach to that

A View of QUEBEC the Capital of Canada, in North America.

Roberts sculp.

that of the intendant. On the other ſide of the jeſuits college is a pretty long ſtreet, in which is a nunnery. Almoſt all the houſes are built of ſtone, and there are above ſeven thouſand inhabitants. Beſides the Lower and Higher towns, there is another beyond the latter, on the banks of the river St. Charles, along which are ſeveral noble country ſeats In 1711 the Engliſh fitted out a fleet with a deſign to reduce Quebec; but the expedition failed from the raſhneſs of the admiral, who, contrary to the advice of his pilot, ſailed too near the Seven Iſles, and thus loſt his largeſt ſhips, with three thouſand of his beſt ſailors. But it was attacked with much better ſucceſs in 1759, when the brave general Wolfe, who commanded the Britiſh forces, and M. de Montcalm, the French general, were both ſlain. After the battle, in which the French loſt near two thouſand men, killed and taken priſoners, the place ſurrendered to the Engliſh, and has been ever ſince that time in their poſſeſſion.

Between Quebec and Montreal, in ſailing up the river St. Lawrence, the eye is entertained with beautiful landſcapes, the banks being in many places bold and ſteep, and ſhaded with lofty trees, and in others crowded with villages, of which there are alſo many on the iſlands, wherewith the channel of the river is interſperſed. After paſſing the Richlieu iſlands, the air becomes ſo mild and temperate, that the traveller thinks himſelf tranſported into a different climate.

The moſt conſiderable of the Canadian tribes of Indians at preſent are, the Iroquois, the Hurons, Miamis, Nokes, Outamanis, Outagamis, Sakis, Illinois, Oubaches, Otters or Loutres, Savannois, Sionx, Aſſiniboils, and Chriſtinaux. The ſeven laſt live towards the north weſt, about the rivers Miſſouri and Oubache, and about Lake Superior and Aſſiniboil. To the north of the iſland of Montreal the country is thinly peopled; but a few villages belonging to the inhabitants are to be met with, among which are thoſe belonging to the Nepiſſings, ſo called from a lake of that name; theſe are the true deſcendants of the Algonquins, and ſtill preſerve the purity of that language. The French eſtabliſhed ſome ports on the banks of Lake Superior, where they traded with the Chriſtinaux and Aſſiniboils. In ſhort, a traveller can know very little more of this country than a man may learn by an inſpection of the map. He may wander one thouſand miles on the banks of the fineſt lakes and rivers in the world, without meeting with a human creature, and thoſe he does meet with are generally ſo ſtupid, cruel, barbarous, or ſhy, that they ſcarcely deſerve that denomination. Moſt of them ſubſiſt by fiſhing and hunting, and appear to be void of all notions of agriculture.

In this northern corner of America are ſome almoſt unknown diſtricts, which go under the name of New Britain, or the country of the Eſquimaux, comprehending Labrador, New North and South Wales, &c. It is bounded on the ſouth by the bay and river of St. Lawrence and Canada, on the weſt by unknown lands, on the eaſt by the Atlantic ocean and Baffin's bay, and on the north by unknown lands towards the north pole.

In this country the mountains are very high towards the north, which being perpetually covered with ſnow, and the winds blowing from thence three quarters of the year, are the chief occaſion of that exceſſive cold which is found on this continent under the ſame parallels of latitude. The winter generally commences in September, and continues till June; during moſt of that time the ſnow lies very deep upon the ground, and the rivers are frozen eight or nine feet thick. The country about fort Nelſon is a low marſhy ſoil, producing juniper, birch, poplar, a ſmall wood of the ſpruce, &c. The lands near the ſouth end of the bay produce large timber, and plenty of herbage, and no doubt would produce corn, if cultivated.

Terra de Labrador is ſituated on the ſouthern coaſt of Hudſon's ſtraights: the ſoil here is much of the ſame nature as that on the weſtern ſide of the bay. This country is of a triangular form, extends from the fiftieth to the ſixty-third degree of north latitude, and from the fifty-firſt to the ſeventy-ninth degree of weſt longitude, and is inhabited by ſome tribes of Eſquimaux Indians, who have neither towns, villages, or ſettled habitations, but are numerous, miſchievous, treacherous, and cowardly. They exchange furs for kettles, pots, knives, and other kinds of hard-ware. They ſubſiſt chiefly by hunting and fiſhing, as their country abounds in great variety of wild and tame quadrupeds, fowls, &c. and the ſeas and rivers afford plenty of fiſh. The Indians of all ſorts, inhabiting the country about Hudſon's bay, lead a wandering life, ſeldom remaining more than a week or two in a place.

The Engliſh Hudſon's bay company have ſeveral forts and ſettlements on this coaſt, the principal of which at preſent are, Forts Churchill, Nelſon, New Severn and Albany, on the weſt ſide of the bay: and they had formerly Forts Charles and Rupert at the bottom of the bay. The Engliſh, in theſe factories, kill beef, pork, mutton, and veniſon at the beginning of the winter, and theſe are preſerved by the froſt ſix or ſeven months free from putrefaction; geeſe alſo, partridges, and other fowls killed at the ſame time, are hung up with their feathers and entrails, yet hold good all the winter. In lakes and ſtanding waters, which are not ten feet deep, the water is frozen to the bottom, and the fiſh killed; but in waters of greater depth, and in rivers near the ſea, the fiſh are caught all the winter by cutting holes in the ice, to which they come for air. As ſoon as they are taken out of the water, they are immediately frozen and ſtiff, but may be thawed again by being immerſed in cold water; and thus the ſalt proviſions are thawed and freſhened here: the meat is let down through a hole in the ice into the water, and in a little time it becomes ſoft and pliable, as if it never had been frozen, and eats very well; whereas roaſted or boiled, while frozen, it will be ſpoiled, and eat as if it was rotten.

There is no want of food about Hudſon's bay at any time of the year. In April come the geeſe, buſtards, and ducks, of which they kill as many as they pleaſe. About the ſame time they take great numbers of rein deer, and theſe do not return to the north till July or Auguſt. In ſummer they alſo take pike, trout, carp, and other fiſh; and all manner of wild fowl return again in the beginning of winter.

There have been ſometimes a thouſand Indian men, and ſome women, who have come down to Port Nelſon in ſix hundred canoes to trade with the Engliſh: many of them come from far diſtant countries. Theſe Indians are of a tawny complexion, and not ſo fair as thoſe in Labrador, nor of ſuch large robuſt bodies, but much more gentle and tractable.

In ſummer they wear ſcarcely any cloaths, but anoint themſelves with bears greaſe, or the oil of ſeals, which, it is ſaid, prevents their being ſtung by muſquetoes, or bit by bugs or other inſects; but thoſe in Labrador go always cloathed. In winter the ſouthern Eſquimaux Indians cloath themſelves with beaver ſkins, which they oil and greaſe in the ſame manner as they do their own ſkins in ſummer, which prevents the cold penetrating them, and have a kind of buſkins on their legs, and ſhoes of deer ſkins: they uſe alſo beaver ſkins and furs for their beds and coverings in the night.

We ſhall now give ſome account of the riſe and progreſs of the diſſentions which unhappily ſubſiſted between England and America. Theſe originated in New England, on the Britiſh parliament impoſing ſtamp duties on all papers and parchments made uſe of in law proceedings, and in money tranſactions between man and man in the year 1765. This act being repealed the following year, cauſed the general ferment to ſubſide; but in the year 1769 it revived with accumulated force, on freſh internal taxes being laid, particularly a duty of three-pence per pound on all teas.

The provincial aſſembly had for ſome years been on ill terms with Mr. Barnard, the governor of the province, and he being now recalled, was ſucceeded by general Gage; and a body of forces, amounting to about two thouſand men, which ſailed from Ireland and Halifax, arrived ſoon after. But neither the new governor, who was known and reſpected in the province, was capable of allaying the ferment, nor the appearance of the troops could overawe that ſpirit of oppoſition which was gone forth. A general confederacy of all the old colonies, from New England to South Carolina, took place, and aſſociations were every where entered into, for the purpoſe of breaking off all commercial intercourſe with the mother country.

A general congreſs, compoſed of deputies from each independent county, met at Philadelphia, which the authority of the governors of the reſpective colonies was not able to controul. The right of Great Britain to levy internal taxes on that continent was denied, and the ſecurity of every man's property was conſidered as loſt by the Britiſh parliament claiming ſuch a power. Petitions, remonſtrances, and addreſſes were tranſmitted to England, couched in the moſt reſpectful terms of allegiance, expreſſive of their earneſt wiſhes to be allowed to levy money for the uſes of government by their reſpective provincial aſſemblies, and not by taxes levied in an aſſembly to which they ſent no repreſentatives, and in which they had no weight of intereſt.

About the middle of December, 1773, ſome ſhips laden with tea being at Boſton (as a duty was to be paid) the people would not ſuffer it to be landed. The ſhips being refuſed a clearance by the governor, unleſs the cargoes were landed, and properly diſpoſed of, a mob, dreſſed like Mohawk Indians, entered the three ſhips which contained the tea, and emptied their cargoes, conſiſting of three hundred and forty-two cheſts of tea, into the water. This and other outrages occaſioned the Boſton port bill, paſſed April 4, 1774, by which the town of Boſton was proſcribed and blocked up.

Much time was afterwards ſpent in fruitleſs negotiation; but in 1775 open hoſtilities commenced: the American congreſs declared the Britiſh ſettlements independent ſtates, and the province of Georgia, acceding to the alliance, they aſſumed the title of the Thirteen United Colonies of America. They for

ſome time made head againſt a powerful army ſent out from Great Britain, which was ſtrengthened by a large body of Heſſians, the whole under the command of general Howe, whilſt between eighty and ninety frigates of different ſizes were ſtationed along the coaſt, and ſome ſhips of the line rendezvouſed at New York.

The firſt blood that was drawn in this unhappy quarrel was in a ſkirmiſh at Lexington, about three miles from the town of Cambridge, in the year 1775, when the king's troops were driven back to Boſton with conſiderable loſs. The next action was that of Bunker's Hill, in the ſame year, when the Britiſh troops had upwards of one thouſand men killed and wounded; among the former was more than a proportionable number of officers.

In 1776, Sir William Howe made a deſcent on Long Iſland, which he ſubdued, and which the king's troops retained poſſeſſion of till the concluſion of the war.

In October, 1777, a combined army of Britiſh and Heſſians, amounting to three thouſand five hundred men, ſurrendered priſoners of war to the Americans under general Gates at Saratoga, a ſmall fort ſituated about fifty miles north of Albany, on the eaſt ſide of Hudſon's river.

Early in 1778, theſe newly erected ſtates entered into a treaty of commerce, and another of defenſive alliance with the French king, who thereby acknowledged their claim of independence.

The war was proſecuted with various ſucceſs till October, 1781, when the Britiſh army, under lord Cornwallis, being in want of neceſſaries, much harraſſed by fatigue, weakened even by victories, and reduced to the ſmall number of three thouſand five hundred effective men that were fit for duty, were obliged to ſurrender on the 30th of the ſame month to the arms of France and America. This proved a fatal ſtroke to the Britiſh arms and intereſt in America, and caſt ſuch a gloom over the ſtate of affairs in that quarter of the world, as to occaſion an addreſs, petition and remonſtrance from the city of London, requeſting his majeſty "to relinquiſh entirely, and for ever, the plan of reducing their American brethren by force." This was ſucceeded by a vote of the houſe of commons on February 27, 1782, for an addreſs to his majeſty to the ſame effect; the prayer of which was complied with, and his majeſty was empowered by parliament to conclude a peace with the revolted colonies.

Accordingly, at the enſuing ſeſſions, on the 5th of December in the ſame year, his majeſty, in a ſpeech delivered from the throne, announced the offer he had made, to declare America independent, and that proviſional articles were agreed upon; which being ſigned on the part of France, were followed by the preliminaries of a peace between Great Britain, France and Spain, dated January 20, 1783, and on the 14th of February next enſuing, a ceſſation of hoſtilities was declared between all the belligerent powers. By the treaty of peace propoſed to be concluded between the crown of Great Britain and America, "his Britannic majeſty acknowledges the United States, viz. New Hampſhire, Maſſachuſet's Bay, Rhode Iſland, and Providence Plantations, Connecticut, New York, New Jerſey, Pennſylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina and Georgia, to be free, ſovereign, and independent ſtates; treats with them as ſuch; and for himſelf, his heirs, and ſucceſſors, relinquiſhes all claim to the government, propriety, and territorial rights of the ſame, and every part thereof. The United States are alſo by the ſaid treaty allowed to take fiſh on the Banks of Newfoundland, the gulf of St. Lawrence, &c. as heretofore. Though America rejected the idea of a ſeparate peace, ſhe acceded to the terms which admitted her independency, whereby the antient and valuable colonies were diſſevered from Britain for ever. Such was the ever-to-be-regretted concluſion of this unfortunate conteſt, that coſt ſo much blood and treaſure to theſe kingdoms. A judicious writer obſerves, that the American debt makes forty millions of dollars, at four ſhillings and ſixpence each, being nine millions four hundred and fifty thouſand pounds; the annual intereſt of which, at ſix per cent. is five hundred and forty-three thouſand ſix hundred pounds; ſo that the Americans have obtained their purpoſe of independence, and gone through the whole ſeven years war for about one half the ſum of money that one year of the ſame war coſt England.

SECT. III.

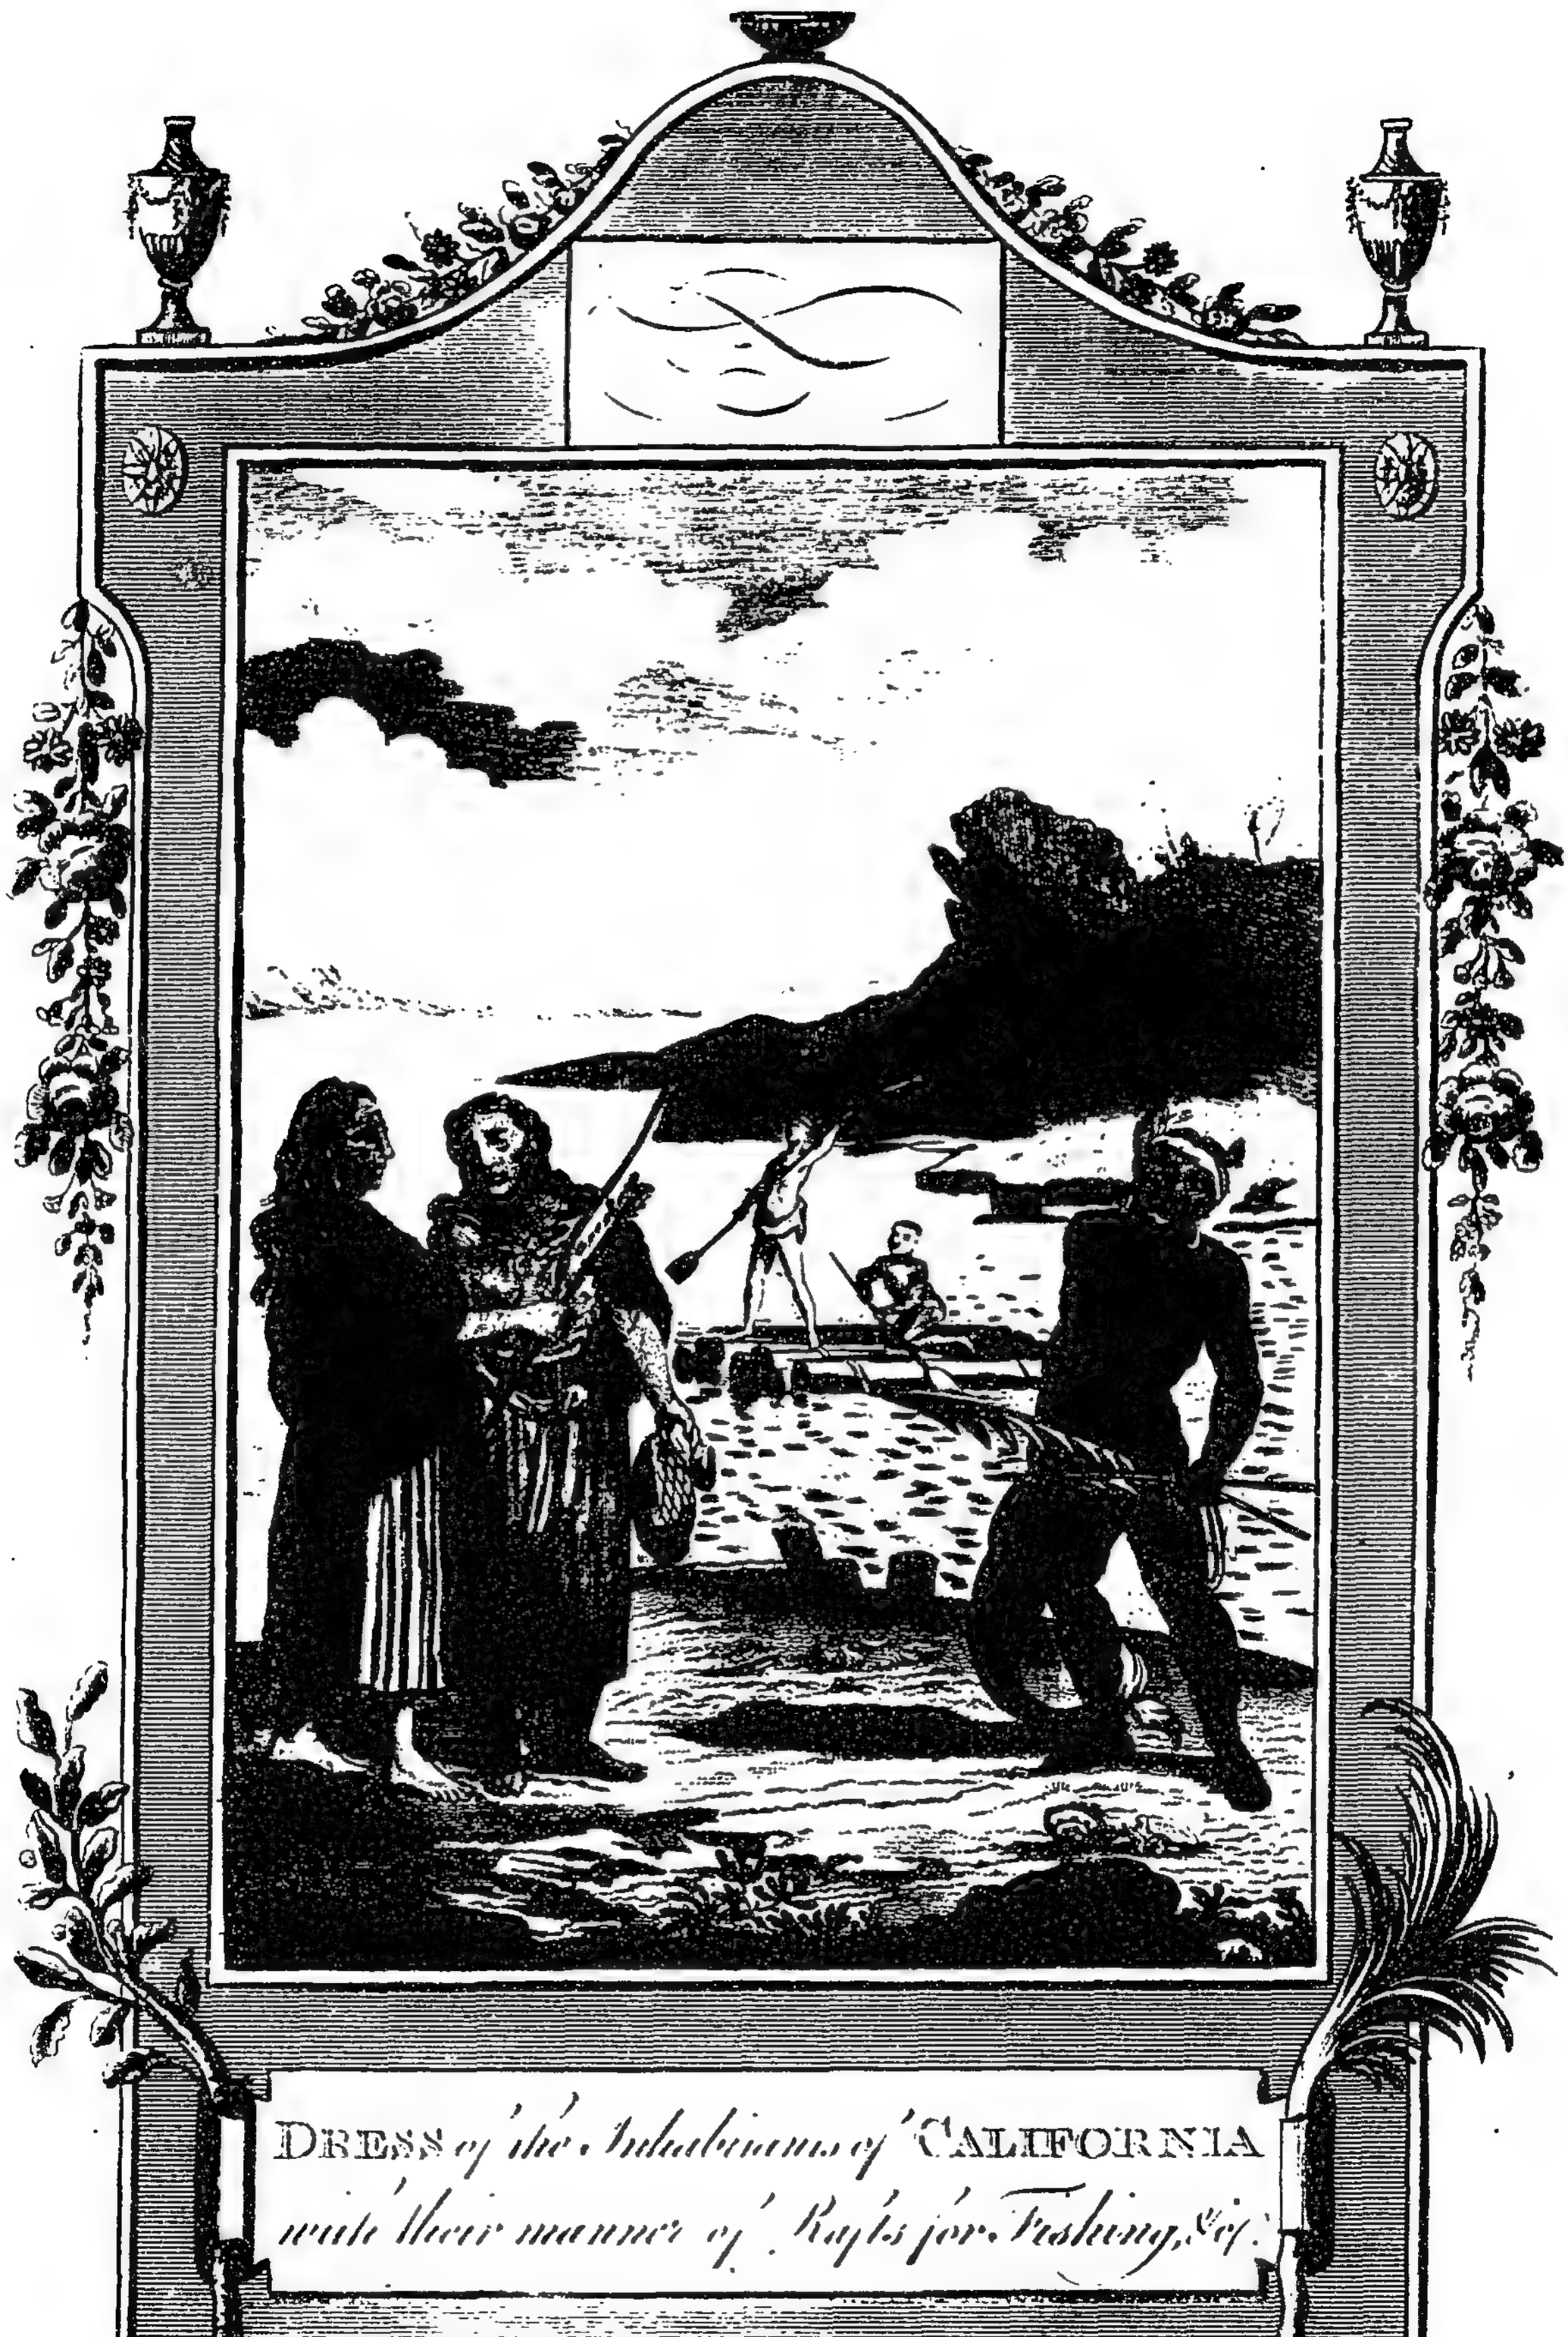
Containing Deſcriptions of OLD and NEW-MEXICO, CALIFORNIA, LOUISIANA, and EAST and WEST FLORIDA; their Situation, Boundaries, Extent, Climate, Produce, Inhabitants, &c.

THE rich and extenſive country of Old Mexico, or New Spain, was once a mighty empire, ruled by its own monarchs, till the Spaniards, by whom it was firſt diſcovered in 1598, afterwards conquered it under the command of Fernando Cortez. It lies between ſeven degrees thirty minutes, and thirty degrees forty minutes north latitude, is two thouſand miles long, ſix hundred broad where wideſt, has the iſthmus of Darien on the ſouth, New Mexico on the north, the gulf of Mexico on the eaſt, and the ocean on the weſt. It is divided into the audiences of Guadalajara, Mexico and Guatimala, and is governed by a viceroy.

Mexico, conſidering its ſituation in the torrid zone, enjoys a temperate air. The rainy ſeaſon begins at the latter end of April, and continues till September, being preceded by terrible ſtorms, which are ſo variegated, that the wind blows from almoſt every point of the heavens, increaſing daily in fury till the month of June, at which time the rain falls as if a ſecond deluge were to enſue.

No country under heaven abounds more with grain, delicious fruits, roots, and vegetables; many of which are peculiar to it, or at leaſt to America. Of theſe the moſt remarkable are, bamboos, mangroves, and logwood, which grow on the coaſts; red and white cotton trees, cedars, blood wood, and maho, of which the natives make ropes and cables; light wood, of which they make floats, being as light as cork; whitewood, the cabbage tree, the calabaſh, cacao, and venella, which the Spaniards call beſuco or bainilla; plantains, bananas, pine-apples, ſapadillo, avogato pear, mammee, mammee-ſapota, grape, prickle, babby, and other curious fruit trees; beſides which the Spaniards have introduced moſt of the European fruits. This country alſo produces the poiſonous manchineel apple, gourds of a prodigious ſize, melons, ſilk graſs, tamarinds, and locuſt trees, the little black, white, and borachio ſapotoe trees, the laſt of which takes its name from the inebriating quality of the fruit. Here are alſo the grenadillo de chine, creeping plant, and the may-hey, which furniſhes the natives with thread for linen and cordage; and alſo a balſam and liquor, which, when fermented, is as pleaſant and ſtrong as wine; a ſtrong liquor, not unlike brandy, is alſo diſtilled from this.

There is alſo found in Mexico balſam of Peru, guaiacum, china root, ſarſaparilla, and the root mechoacan, which are well known to druggiſts and apothecaries, and of excellent uſe in a variety of diſtempers. Other valuable productions of New Spain are, copal, aninie, tacamahaca, caranica, liquid amber, and oil of amber. Beſides the maiz or native grain of Mexico, the Spaniards have introduced the uſe of barley, wheat, peas, beans, and other grain.



The beaſts, birds, inſects, reptiles, &c. are much the ſame as in Peru.

On the weſtern coaſt of New Spain, near the Pacific Ocean, are ſome high mountains, moſt of which are ſaid to be volcanoes. Several rivers riſe in theſe mountains, and fall, ſome into the gulf of Mexico, and ſome into the South Sea, on both of which there are ſeveral capes and bays. The bays of Campeachy and Honduras are among thoſe on the gulph.

In the rocky, barren parts of the country are the gold and ſilver mines. There are, it is ſaid, ſeveral of the former, and no fewer than one thouſand of the latter. Gold is alſo found in grains or duſt in the ſands of rivers and torrents. Whoever diſcovers a mine of gold or ſilver, is at liberty to work it, paying the king a tenth of the product, and limiting himſelf within fifty yards round the place upon which he has fixed. All the ſilver and gold dug, or found in grains, is entered in the royal exchequer; and it is reported, that notwithſtanding great quantities are run and concealed, no leſs than two millions of ſilver marks, weighing eight ounces each, are entered yearly, out of which they coin ſeven hundred thouſand marks into pieces of eight, quarter pieces, ryals, and half pieces, the latter being about three-pence ſterling value.

Their chief commodities are gold and ſilver, exquiſite marble, porphyry, jaſper, precious ſtones, pearls, amber, ginger, tobacco, hides, tallow, ſalt, dying woods, drugs, balſams, honey, feathers, chocolate, cochineal, ſilk, ſugar, cotton, wool. The whole of the trade between Old Spain and the Spaniſh American dominions, is by means of a fleet, called the Flota, which is fitted out at Cadiz, and deſtined to La Vera Cruz. The ſhips are not permitted to break bulk on any account, till they arrive there. When all the goods are landed and diſpoſed of at La Vera Cruz, the fleet takes in the plate, precious ſtones, cochineal, indigo, cocoa, tobacco, ſugar, and hides, which are the returns for Old Spain. From La Vera Cruz they ſail to the Havannah, which is the place of their rendezvous, where they meet the galleons. There is another fleet, which carries on all the trade of Terra Firma by Carthagena, and of Peru by Panama and Porto Bello, in the ſame manner as the Flota ſerves for New Spain. When the flota arrives at the Havannah, and joins the galleons and regiſter ſhips, which aſſemble at the ſame port from all quarters, ſome of the cleaneſt and beſt ſailing veſſels are diſpatched to Old Spain with advice of the contents of theſe ſeveral fleets, as well as with treaſure and goods of their own, that the court may judge what convoy is neceſſary for their ſafety, and what indulto or duty is proper to be laid on them.

The merchants at Cadiz and Seville ſend out regiſter ſhips, when

when they judge that goods muſt be wanted at any particular ports in the Weſt-Indies. Their way is, to petition the council of the Indies for a licence to ſend a ſhip of three hundred tons burden or under, to that port: they pay for this licence forty or fifty dollars, beſides preſents to the officers, in proportion to the connivance neceſſary for the deſign; for though the licence runs only to three hundred tons at moſt, the veſſel fitted out is ſeldom leſs than ſix hundred. This ſhip and cargo are regiſtered at the pretended burden: it is required too, that a certificate be brought from the king's officer at the port to which ſhe is bound, that ſhe does not exceed the ſize at which ſhe is regiſtered. The trade of Spaniſh America has been carried on for ſome years paſt by theſe veſſels, called regiſter ſhips.

The inhabitants of this country are at preſent a mixed people, conſiſting of Indians, Spaniards, and other Europeans; and the Creoles, Meſtichoes, or iſſue of the Spaniards by Americans; the Meſtiches, or the iſſue of ſuch iſſue; the Terceroons dez Indies, or the children of the laſt, married to Spaniards; and the Quarteroons dez Indies, whoſe deſcendants are allowed the ſame privileges as true Spaniards. The negroes are likewiſe pretty numerous, being imported from the coaſt of Africa for various purpoſes, and many of them admitted to their freedom. The iſſue of an European and a negro conſtitutes another diſtinction, called Mulatto; beſides which, there is a mixed breed of negroes and Indians, which is generally deemed the loweſt rank.

Some tribes of Indians, both in the open country and the mountains, ſtill preſerve their freedom; but moſt of them are ſubject to the Spaniards, and have embraced the popiſh religion. Among the free Indians are thoſe on the Muſquito ſhore, where the Engliſh have ſome ſettlements, and a governor; theſe Indians being implacable enemies to the Spaniards, but firm friends and allies to the Engliſh.

The native Indians are in general tall, clean, well proportioned, and handſome: their complexion is a deep olive, and both ſexes have long, black, lank, coarſe hair on their heads; but they ſuffer none on the other parts of their bodies: ſome tribes eſteem flat noſes as a great beauty. Almoſt all the Mexicans paint their bodies with the figures of various birds and beaſts, and anoint them with oil or fat. Some tribes are cloathed; but the men of others go almoſt naked. The Mexicans, in general, have their noſes, lips, ears, necks, and arms, adorned with pearls, and other jewels or trinkets, made of gold, ſilver, or ſome other metal. The free Indians are ſaid to be a brave, generous, humane people, except in the article of humane ſacrifices; but the others are become cruel, treacherous, cowardly, mean, thieviſh, and altogether vicious. Beſides all the domeſtic offices, the women ſpin, weave, and dreſs cotton and linen cloths, for their own and their huſbands apparel. Though the free Indians diſcover a great veneration for the ſun and moon, they have no image of them, but a great many of human form. They cultivate but little ſoil, and live chiefly by hunting and fiſhing.

With reſpect to the Spaniards of Mexico, we are told, that the clergy, both ſecular and regular, rival the quality in their dreſs and luxurious way of living: they drink, game, ſwear, wench, and make a jeſt of their vows of poverty, many of them getting money enough to return to Old Spain, and purchaſe biſhoprics. A prieſt, who has but an ordinary cure in Mexico, frequently lays up ten or twelve thouſand crowns in ten years; is able to live plentifully all the time, while he is highly reverenced by the common people. The laity are repreſented to be an extremely bigotted and lewd people; a preſent to the church wipes off the odium of the greateſt crimes; and the people are inſtructed in their religion here by plays and theatrical entertainments in the churches, as in old Spain.

The principal places are, 1. Mexico, which ſtands in the middle of a great lake of its own name, in latitude nineteen degrees forty minutes; about one hundred and ſeventy miles weſt of the gulf of Mexico. This city, in point of regularity, exceeds all others in the univerſe; the ſtreets being ſo ſtrait, and exactly diſpoſed, that from any part, the whole is viſible. The want of gates, walls, and artillery, together with the five great cauſe-ways leading to the city, renders Mexico extremely remarkable. All the buildings are convenient; but the public edifices, eſpecially the churches and convents, are magnificent. The income of the grand cathedral amounts to near eighty thouſand pounds ſterling per annum, out of which the archbiſhop has fifteen thouſand pounds, beſides vaſt ſums ariſing from perquiſites. The number of the inhabitants is computed at three hundred thouſand, who are ſaid to draw annually from the mines above ten millions of money, without reckoning the vaſt ſums ſecreted, in order to defraud the king of his rights; yet, with theſe almoſt incredible treaſures, the people may be reckoned poor, as moſt of them live beyond their fortunes, and terminate a life of profuſion in the moſt wretched indigence. A prodigious quantity of jewels, gold and ſilver plate, and toys, together with the moſt valuable commodities of Europe and Aſia, are expoſed to ſale in the ſtreets.

2. The town of Acapulco is ſituated about two hundred and ten miles ſouth-eaſt from Mexico, in ſeventeen degrees north latitude on a bay of the South Sea. The haven is large and commodious, and the entrance ſecured by a flat iſland running acroſs, at each end of which is a deep channel, ſufficiently broad for the greateſt veſſels. The only inconvenience is, that ſhips muſt enter by the ſea-wind, and go out by the land-breeze, which ſeldom fail to ſucceed each other alternately, ſo that they are frequently blown off to ſea, after repeated attempts to make the harbour. The town is large, but ill built; a part of it conſiſts of warehouſes. During the fair, after the arrival of the Lima and Manilla ſhips, the town is ſo exceſſively crowded, that great numbers are obliged to pitch tents in the neighbourhood for their accommodation. It is ſuppoſed that the Manilla galleon carries off from Acapulco at leaſt ten millions of dollars, in return for the goods ſhe brings thither, and for the payment of the Spaniſh garriſons in the Philippine iſles. The climate here is unhealthy, and the earthquakes very common.

The town of Vera Cruz, or Ulva, ſtands near the gulf of Mexico, about ſeventy leagues from the capital. It is very ſtrong, both by nature and art, being the great mart of all the Spaniſh trade in the north ſea, and has a ſafe commodious harbour. Few Spaniards of diſtinction reſide here, on account of the inſalubrity of the air.

The province of New Mexico, including California, is two thouſand miles long, and one thouſand ſix hundred broad; it is bounded on the eaſt by Louiſiana, on the ſouth by New Spain, on the weſt by the gulf of California, and on the north by high mountains. This country, though pleaſant and healthy, is but little cultivated, and thinly inhabited. It has ſeveral rivers, many ports and creeks; and the Indian tribes, who inhabit it, live diſtinct from each other. Many of the natives are Chriſtians.

The town of Santa Fé ſtands near the ſource of Rio del Norte, in thirty-ſix degrees north latitude, and about one hundred and thirty leagues from the gulf: it is a well built, handſome, rich town, and the ſeat of a biſhop, ſuffragan of Mexico, as well as of the governor of the province, who is ſubordinate to the viceroy of Mexico.

The peninſula of California, the moſt northern of all the Spaniſh dominions on the continent of America, extends from the north coaſts of America into the Pacific ocean eight hundred miles from cape Sebaſtian, in forty-three degrees thirty minutes north latitude, towards the ſouth-eaſt as far as cape St. Lucar, in twenty-two degrees thirty-two minutes north latitude. The eaſtern coaſt lies nearly parallel with that of Mexico, oppoſite to it; and the ſea between is called the lake or gulf of California. Its breadth is very unequal; towards the north it is near two hundred miles, but at the ſouth extremity it tapers away, and is ſcarcely fifty miles over. The more ſouthern part was known to the Spaniards ſoon after the diſcovery of Mexico; for Cortez diſcovered it in 1535; but they did not till lately penetrate far into it, contenting themſelves with the pearl fiſhery there.

Several kinds of fruit are produced here; there are two ſpecies of deer peculiar to this country; alſo a particular breed of ſheep, buffaloes, beavers, or animals much reſembling them; a peculiar ſpecies of wild dogs, lions, wild cats, and many other wild beaſts. The horſes, mules, aſſes, oxen, ſheep, hogs, goats, and other quadrupeds that have been imported hither from Spain and Mexico, multiply exceedingly. Of the two ſpecies of deer peculiar to California, that called taye by the natives is greatly eſteemed, and its fleſh as well taſted as veniſon. The coaſt is plentifully ſtocked with peacocks, buſtards, geeſe, cranes, vultures, gulls, cormorants, mews, quails, linnets, larks, nightingales, and many other ſpecies of birds. There is alſo a great multitude and variety of fiſh in the gulf of California, the Pacific ocean, and the rivers. Though inſects ſwarm here, as in moſt hot countries, yet on account of the dryneſs of the ſoil and climate, they are neither noxious nor troubleſome. There is one of the richeſt pearl fiſheries in the world on the coaſt of California, and there are ſuppoſed to be mines in the country.

In California are two conſiderable rivers, namely, Rio Collorado, and Rio du Carmel, with ſeveral ſmaller ſtreams, and fine ports, bays, creeks, and roads, both on the eaſt and weſt ſide, which is the reaſon of its having been ſo much frequented by the Engliſh privateers. There are, in the heart of the country, plains of ſalt quite firm, and clear as cryſtal.

A great variety of ſavage tribes inhabit California. Thoſe that live on the eaſt ſide of the peninſula are great enemies to the Spaniards; but, in the other parts, they ſeem to be very hoſpitable to all ſtrangers. The inland country, eſpecially towards the north, is populous. The Indians reſemble thoſe deſcribed in other parts of America. Their boats are only rafts, &c. Their arms are, bows, arrows, and jagged clubs. They have a great many abſurd, ridiculous cuſtoms, opinions, and ſuperſtitions. They go almoſt naked, and pay great defe-

rence

rence to their prieſts, who pretend to be magicians and phyſicians. All their houſhold furniture and property conſiſts of the implements uſed in fiſhing, hunting, or war, in which moſt of their time is ſpent.

The province of Louiſiana is bounded by the Miſſiſſippi on the weſt, and by Eaſt Florida, Georgia and Carolina on the eaſt, and extends from the lake of the Illinois, or rather from the ſource of the Miſſiſſippi on the north, to the gulph of Mexico on the ſouth.

This is a very pleaſant fruitful country, being watered by a number of rivers, the frequent overflowings of which contribute not a little to its fertility. Nothing is more delightful than the meadows, which are fit for ſeed of all kinds. In ſome parts the ſoil yields three or four crops in the year; for the winter conſiſts only in heavy rains, without any nipping froſts. Almoſt all ſorts of the trees of Europe are to be found here, beſides a variety of others unknown to us, and ſome of them of great value, as lofty cedars, that diſtil a gum, which is ſaid to excel all the nobleſt European perfumes; and cotton trees, which are of a prodigious height. The whole country abounds with a great variety of game, fowl, cattle, and other uſeful creatures and productions.

The town of New Orleans is ſituated between the eaſtern ſhore of the Miſſiſſippi and the Fiſh river, near the lakes Pontchaſtrain and Maurepas, and about eighteen leagues from the ſea. It is a pretty large handſome town, but ſubject to moſt ruinous inundations; beſides, the navigation between it and the ſea is ſo very difficult, that none but ſmall veſſels and flat-bottomed boats can get up to it, there being a ſhelf that lies between the mouth of the river, where there is not above ten feet water. It is ſaid that the channel of it is twice as large as that of the Seine, keeping the ſame breadth all along, and that the ſtream is rapid.

Louiſiana was ceded to the Engliſh in 1763, but as it conſtitutes the greateſt part of the government of Weſt Florida, which, by the treaty of 1783, the Spaniards are to retain; this country is conſequently now ſubject to the crown of Spain.

The laſt countries we are to deſcribe on this continent are Eaſt and Weſt Florida, which are five hundred miles in length, four hundred and forty in breadth; having the gulf of Mexico to the ſouth, the Apalachian mountains and great lakes to the north, Georgia to the eaſt, and the Atlantic ocean to the weſt. Florida was firſt diſcovered by Cabot, a Venetian mariner in the ſervice of England. It had its name from its verdure, being certainly a very fine country.

The air is wholeſome, as evidently appears from the ſize, vigour, and longevity of the Floridan Indians, in all which reſpects they far exceed the Mexicans. The ſoil, except on the ſea coaſt, is rich and fertile, producing frequently two or three crops of Indian corn in the year; and might, with proper cultivation, be brought to bear every ſort of grain. Here are all kinds of timber and fruit trees, eſpecially pines, laurels, palms, cedar, cypreſs, and cheſnut trees, which grow to an extraordinary length and ſize, and, with the oaks, afford nouriſhment to ſwine; but the wood moſt prized, and in greateſt plenty, is the ſaſſafras, of which conſiderable quantities are exported. Excellent limes and prunes alſo grow here in great abundance, with vines of various ſorts, and cotton trees, hemp, flax, pulſe, roots, and herbs; game, fowl, and fiſh, are alſo very plentiful. The root mendihoca, of which the caſſava flour and bread are made, is very common; and there is a kind of grain, like our oats, that ſhoots up ſpontaneouſly in marſhy places, and by the ſides of rivers. Here is a fruit called tuna, ſo exquiſite and wholſome when ripe, that among the Europeans it goes by the name of the ardial julep. Excellent beef, veal, and mutton, are the produce of the country, together with horſes fit for draught and carriage, ſo cheap, that they may be purchaſed for the value of a crown in European commodities. The other products of Florida are ambergris, cochineal, indigo, ſilk graſs, amethyſts, turquoiſes, lapis lazuli, and other precious ſtones; copper, quickſilver, pit-coal, iron ore, and a kind of ſtone pitch called copea, which the Spaniards uſed as tar for their ſhipping: on the coaſt pearls are alſo found.

The moſt conſiderable mountains are the Apalachian, which divide Carolina and the other American plantations from Florida. A vaſt number of noble rivers interſect this country, moſt of which riſe in the mountains above-mentioned, and fall into the gulf of Mexico, or the Atlantic ocean: the chief are the Miſſiſſippi, Ohio, Coza, or Couſſa, and the river St. John. The Miſſiſſippi, which the French call St. Louis, is in many reſpects the fineſt river in the world. It runs a very long courſe, is navigable within ſixty leagues of its ſource, and free from ſhoals and cataracts.

The principal European ſettlement in Eaſt Florida is St. Auguſtine, ſtanding on the eaſtern coaſt of the peninſula, about ſeventy leagues from the gulf of Florida and channel of Bahama, thirty ſouth of the river Alatamaha, or Alatamacha, and forty-ſeven from the town and river of Savannah. It is ſituated in latitude thirty north, and lies along the ſhore at the bottom of a hill, in the form of a parallelogram, the ſtreets cutting each other at right angles. The port is formed by an iſland and a long point of land, almoſt divided from the continent by a river, which falls into the ſea two miles ſouth of the town. The entrance into the port lies between the iſland and the point of land, and is about one mile and a quarter over, but very ſhallow, as is indeed moſt part of the coaſt of Florida. About a mile to the northward of the town ſtands the caſtle, defended by four baſtions, and is pretty ſtrong.

St. Matthio is the next place to St. Auguſtine, being ſituated fifteen leagues to the north of it towards Georgia. Mr. Rolles, a member of the Britiſh parliament, had a ſettlement on the river St. John; and at Moſquito harbour, not far from the channel of Bahama, another ſettlement was formerly eſtabliſhed here by one Dr. Trummel.

Mobille and Penſacola were the chief places belonging to the Engliſh in Eaſt Florida and Penſacola. The firſt is but a ſmall place, lying on the river of that name, about one hundred miles from its mouth, and ſeventy from the Miſſiſſippi. Penſacola, ſtands on the weſt ſide of the bay to which it gives name, about ten leagues from Dauphin iſle, at the mouth of the river Mobille. The harbour is the beſt upon all this coaſt of the gulf, being large, ſafe from all winds, with four fathom water at the entrance, and ſeven or eight farther in. A fine river enters the bay on the eaſt ſide of the harbour, which comes about one hundred miles out of the country, after being formed by the junction of two other rivers. The town is not conſiderable at preſent; but it is probable, that from the commodiouſneſs of its ſituation and harbour, it will ſoon make a better figure, if the Spaniards, to whom both the Floridas were given up by the peace of 1783, are not too indolent to improve them.

CHAP. III.

THE NEW HISTORY AND DESCRIPTION OF THE ISLANDS IN THE WEST INDIES AND AMERICA.

SECT. I.

General Deſcription of the WEST INDIAN ISLANDS, with an Account of their Situation, Climate, Produce, and Commodities, Plantations, Negroes, Trade, &c.

THESE iſlands, which are ſituated between the two continents of America, now belong to Great Britain, Spain, France, Holland, and Denmark. They lie in the form of a bow, or ſemicircle, ſtretching almoſt from the coaſt of Florida north, to the river Oroonoko, in the main continent of South America. Some call them the Caribbees from the firſt inhabitants, though this term is generally confined to the Leeward Iſlands. The geographical maps and tables diſtinguiſh them by the names of Great and Little Antilles; and ſailors by thoſe of the Windward and Leeward, with regard to the uſual courſes of ſhips from Old Spain, or the Canaries, to Carthagena or New Spain, and Porto Bello.

The Weſt India iſlands in general have nearly the ſame climate, allowing for thoſe accidental differences which the ſeveral ſituations and qualities of the lands themſelves produce. As they lie within the Tropics, and that the ſun goes quite over their heads, paſſing beyond them to the north, and never returning further from any of them than about thirty degrees to the ſouth, they are continually ſubjected to the extreme of an heat, which would be intolerable, if the trade wind, riſing gradually as the ſun gathers ſtrength, did not blow in upon them

them from the ſea, and refreſh the air in ſuch a manner, as to enable them to follow their neceſſary occupations even under the meridian ſun. On the other hand, as the night advances, a breeze begins to be perceived, which blows ſmartly from the land, as it were from its centre, towards the ſea, to all points of the compaſs at once.

By the ſame remarkable providence in the diſpoſal of things it is, that when the ſun has made a great progreſs towards the tropic of Cancer, and becomes in a manner vertical, he draws after him ſuch a vaſt body of clouds as ſhield them from his direct beams; and, diſſolving into rain, cool the air, and refreſh the country, thirſty with the long drought, which generally continues from the beginning of January till near the month of June. But though theſe rains conduce to moderate the exceſſive heat, yet they produce great inconveniences, owing to the amazing violence with which they fall. They are rather floods of water poured from the clouds with a prodigious impetuoſity: the rivers riſe in a moment; new rivers and lakes are formed, and in a ſhort time all the low country is under water. Hence the rivers, which have their ſource within the tropics, ſwell and overflow their banks at a certain ſeaſon.

When ſtorms of that kind happen, they are very violent, and the hail-ſtones are exceedingly large and heavy. The rains make the only diſtinction of ſeaſons in the Weſt-Indies: the trees are continually green; they have no cold, froſt, or ſnow, and ſeldom any hail. But in the rainy ſeaſon they are expoſed to hurricanes, the moſt terrible calamity by which the inhabitants of theſe iſlands are aſſaulted. One of theſe deſtroys at a ſtroke the labours of many years, and extinguiſhes the moſt exalted hopes of the planter. It is a ſudden and violent ſtorm of wind, rain, thunder, and lightning, attended with a furious ſwelling of the ſeas, and ſometimes with an earthquake; in ſhort, with every circumſtance which the elements can aſſemble that is terrible and deſtructive. A hurricane comes on either in the quarters, or at the full change of the moon.

Sugar is the grand ſtaple commodity here; this uſeful article was not at all known to the Greeks and Romans, though it was made in China in very early times, from whence we had the firſt knowledge of it: but the Portugueſe were the firſt who cultivated it in America, and brought it into requeſt, as one of the materials of a very univerſal luxury in Europe. It is not ſettled whether the cane, from which this ſubſtance is extracted, be a native of America, or brought hither by the Portugueſe, from India and the coaſt of Africa; but be that as it may, in the beginning they made the moſt, as they ſtill do the beſt, ſugar which comes to market in this part of the world.

The juice within the ſugar cane is the moſt lively, elegant, and leaſt-cloying ſweet in nature: and which, ſucked raw, has proved extremely nutritive and wholſome. Rum is diſtilled from the molaſſes; and a meaner ſpirit is procured from the ſcummings of the ſugar. Rum finds its market in North America (where it is conſumed by the Engliſh inhabitants, or employed in the Indian trade, or diſtributed from thence to the fiſhery in Newfoundland, and the African commerce); beſides what comes to Great Britain and Ireland. However, a very great quantity of molaſſes is taken off raw, and carried to New England, to be diſtilled there. No part of this excellent plant is without its uſe, for the tops of the cane, and the leaves which grow upon the joints, make very good provender for their cattle; and the refuſe of the cane, after grinding, ſerves for fire.

The expences of a plantation in the Weſt Indies are very great; and the profits, at the firſt view, precarious; for the chargeable articles of the wind-mill, the boiling, cooling, and diſtilling-houſes, and the buying and ſubſiſting a ſuitable number of ſlaves and cattle will not ſuffer any man to begin a ſugar plantation of any conſequence, not to mention the purchaſe of the land, which is very high, under a capital of at leaſt five thouſand pounds. Neither is the life of a planter, if he means to acquire a fortune, a life of idleneſs and luxury: he muſt at all times keep a watchful eye upon his overſeers, and himſelf muſt even overſee occaſionally. But, at the boiling-ſeaſon, if he is properly attentive to his affairs, no way of life can be more laborious, and more dangerous to the health, from a conſtant attendance day and night, in the extreme united heats of the climate and ſo many fierce furnaces; add to this, the loſſes by hurricanes, earthquakes, and bad ſeaſons; and then conſider, when the ſugars are in the caſks, that he quits the hazard of a planter, to engage in the hazards of a merchant, and ſhips his produce at his own riſk. Theſe conſiderations might make one believe that it could never anſwer to engage in this buſineſs; but notwithſtanding all this, there are no parts of the world, in which great eſtates are made in ſo ſhort a time, as in the Weſt-Indies. The produce of a few good ſeaſons generally provides againſt the ill effects of the worſt, as the planter is ſure of a ſpeedy and profitable market for his produce, which has a readier ſale than perhaps any other commodity in the world. It has been computed, that, under good management, the rum and molaſſes pay the charges of the plantation, and the ſugars are clear gain.

Planters ſupport their negroes at a very eaſy rate. They generally allow to each family of them a ſmall portion of land; and permit them, two days in the week, Saturday and Sunday, to cultivate it. Some are ſubſiſted in this manner; but others provide their negroes with a certain portion of Guinea and Indian corn, and to ſome a ſalt herring, or a ſmall portion of bacon or ſalt pork a day. All the reſt of the charge conſiſts in a cap, a ſhirt, a pair of breeches, ſtockings, and ſhoes, the whole not exceeding forty ſhillings a year, and the profit of their labor yields ten or twelve pounds. The price of men negroes, upon their firſt arrival, is from thirty-three to thirty-ſix pounds; women and grown boys about fifty ſhillings leſs; but ſuch negro families as are acquainted with the buſineſs of the iſlands, generally bring about forty pounds upon an average one with another; and there have been inſtances of a ſingle negro-man, expert in buſineſs, bringing one hundred and fifty guineas; and the number of ſlaves a planter poſſeſſes, generally aſcertains his wealth.

Though the traders in general make a very large profit upon all they ſell, yet from the numerous ſhipping conſtantly arriving from Europe, and a continual ſucceſſion of new adventurers, the Weſt India market is frequently overſtocked; ſo that goods are ſometimes ſold at prime coſt or under: but they who can afford to ſtore their goods, and wait for a better market, acquire fortunes equal to any of the planters. Phyſicians and ſurgeons even outdo the planter and merchant in accumulating riches. All kinds of handicraftſmen, eſpecially carpenters, bricklayers, braziers, and coopers, alſo meet with great encouragement.

SECT. II.

Giving a particular Deſcription of the Iſlands of JAMAICA and BARBADOES, their Extent, Climate, Soil, Produce, Inhabitants, &c.

PREVIOUS to an account at large of the Weſt Indian and American Iſlands, we ſhall preſent our readers with the following table, exhibiting, at one view, the chief of them, with their names, length, breadth, principal towns, and the nations to whom they reſpectively appertain.

WEST INDIAN ISLANDS.				
Iſlands.	Length.	Breadth.	Chief Towns.	Belonging to
Jamaica	140	60	Kingſton	Great Britain
Barbadoes	21	14	Bridgetown	Ditto
St. Chriſtopher's	20	7	Baſſeterre	Ditto

Falklands				
Juan Fernandes	14	6	Uninhabited.	
Fuera			Ditto	
Chiloe	12	17	Caſtro	

The iſland of Jamaica was diſcovered by Columbus, anno 1494, in his ſecond voyage to the Weſt Indies: he changed the name Jamaica to St. Jago. The Spaniards poſſeſſed it till the time of Oliver Cromwell, who, being ſenſible of the advantages that nation obtained by their poſſeſſions in America, ſent a conſiderable ſquadron of men of war, commanded by the generals Penn and Venables, in 1654, to take the fine iſland of Hiſpaniola. But being repulſed in that attempt, they bent their forces againſt Jamaica, which they made themſelves maſters of with little loſs. Since this time it has been in the hands of the Engliſh, and recovered its old appellation.

This is the largeſt of all the Britiſh iſland colonies, and even of any of the reſt, except Cuba and Hiſpaniola. It extends from ſeventy-five degrees fifty-ſeven minutes, to ſeventy-eight degrees thirty-ſeven minutes weſt longitude, and from ſeventeen degrees forty-eight minutes to eighteen degrees fifty minutes north latitude. It is about one hundred and forty miles in length, and ſixty in breadth, where broadeſt; but being of an oval form, it grows narrower at each end. It is ſituated about thirty-ſix leagues to the ſouth of Cuba, and thirty-nine leagues to the weſt of St. Domingo: theſe two large iſlands defend it from the winds which deſolate the Atlantic, whilſt the number and diſpoſition of its harbours put it into a condition to carry on a great trade with either theſe and the other iſlands of the Weſt Indian ſea, or with the continent. Though this ſituation may expoſe it to the inſults of its two powerful neighbours, it at the ſame time facilitates the entrance of the ſuccours frequently afforded it from the mother-country. There are about ſixteen principal harbours, beſides thirty bays, roads, or good anchoring-places.

Jamaica enjoys a pretty favourable climate, ſince there is no country between the tropics where the heat is more moderate, being conſtantly cooled with refreſhing breezes, frequent rains, and nightly dews: it is, however, particularly unwholſome on the ſea-coaſt, and exceſſively hot in the mornings all the year round, till about eight o'clock, when the ſea-breeze begins, increaſing gradually till about twelve, when it is commonly ſtrongeſt, and laſts till two or three, when it begins to die away till about five o'clock, at which time it is quite ſpent, and returns no more till the next morning. About eight in the evening begins a land-breeze, which blows four leagues into the ſea, and continues increaſing till twelve at night, after which it decreaſes till four in the morning, when it ceaſes, and returns again at night. The ſea-breeze is ſtronger at ſome times than at others, and more ſo near the coaſt than within land; whereas it is juſt the reverſe with the land-breeze. Sometimes the ſea-breeze blows day and night for a week or two. In December, January, and February, the north wind blows furiouſly, checking the growth of the canes, and all other vegetables, on the north ſide of the iſland; but the mountains cover the ſouth ſide from them. Though it often rains at other times, yet the months of May and October bring the heavieſt and moſt laſting rains; and the eaſt and weſt parts of the iſland, containing large tracts of incloſed ground, are more ſubject to ſtorms of wind and rain, and more unwholeſome, than the ſouth and north. The ſouth wind brings the moſt rain; no rains are laſting on the ſouth ſide of the iſland, that come from the land. Froſt and ſnow are never ſeen here; but ſometimes large hail, eſpecially on the mountains, where the air is always cooler than in the low lands. The land-wind blowing in the night, and the ſea-breeze in the day-time, no ſhip can come into port but in the day-time, nor go out but ſoon after day-break. The dews here are ſo great within land, that the water drops from the leaves of the trees in the morning as if it rained; but in the plain or ſandy places near the ſea, there are ſeldom any fogs.

There is a ridge of hills, called the Blue Mountains, that run through it from eaſt to weſt; the tops of which are covered with different kinds of trees, particularly cedar, lignum vitæ, and mahogany, which render them equally pleaſant and profitable to the inhabitants. Several fine rivers, well ſtored with fiſh, and navigable by canoes, take their riſe from theſe mountains. A lower ridge runs parallel to the greater; and the vallies, or ſavannahs, are exceedingly level, without ſtones, fit for paſture, and fruitful, when cleared of wood, eſpecially on the ſouth ſide of the iſland. After the rains, or ſeaſons as they are called, the ſavannahs are very pleaſant, and produce ſuch quantities of graſs, that the inhabitants are ſometimes forced to burn it; but they are quite parched and burnt up, after long droughts.

Water is very ſcarce in ſome parts of this iſland, notwithſtanding the many rivers and lakes with which it abounds; and in others, it is ſo mixed with ſand and ſediment, as not to be fit for uſe, till purified for ſome days in earthen jars; and much cattle, in ſome years, periſh for want of water. Near the ſea, as at Port Royal, the well water is brackiſh and unwholſome. There are ſeveral ſalt ſprings in the iſland, which from a ſalt river, and ſeveral lakes. Though the ſoil is in general exceedingly fertile, yet it is thought not one fourth of the ſugar-ground is cultivated; even the grounds lying near the rivers and the ſea being for the moſt part over-run with woods.

Sugar takes the precedence of the various productions in this iſland. The cane from whence it is extracted is a kind of reed, which riſes commonly about eight or nine feet, including the leaves growing out of the top; the moſt common thickneſs is from two to four inches. It requires a light, porous, and deep ſoil, and is uſually cut at the end of eighteen months. Within twenty-four hours after the canes are cut down, they break them between two rollers of iron and copper, which are put in motion by a horizontal wheel turned by oxen or horſes. The juice with which the inner part of the canes are filled, is received into a reſervoir, from whence it is ſucceſſively carried to ſeveral boilers, to reduce it into cryſtals. As ſoon as it is cold, they pour it into earthen veſſels made in the ſhape of a cone: the baſe of the cone is open, its apex is pierced with a hole, through which they let the liquor run, which will not afford any cryſtals; this liquor is called treacle or molaſſes. After the draining, they have muſcovado, or rough ſugar, which is greaſy, brown, and ſoft. This ſugar does not become white, ſhining, and hard, till it is refined, which is generally done in Europe, though there are two refining houſes at Kingſton. The molaſſes are uſually the twelfth part of the value of the ſugar; a great deal of this article is conſumed in the north of Europe and of America, where they ſupply the place of butter and ſugar to the common people: the Americans uſe them to produce a fermentation, and they give an agreeable taſte to a drink called pruſs, which is nothing more than the infuſion of the bark of a tree. A ſecret has likewiſe been diſcovered, to convert theſe molaſſes, by diſtillation, into a ſpirituous liquor called rum. The operation is performed by mixing one third of ſyrup with two thirds of water: when theſe two ſubſtances have ſufficiently fermented, at the end of twelve or fifteen days they are put into a ſtill, where the diſtillation is carried on with great facility. About one hundred thouſand hogſheads of ſugar, thirty thouſand puncheons of rum, and three hundred thouſand gallons of molaſſes, are the annual exports of Jamaica, from the produce of the ſugar-canes.

Pimento is the next moſt conſiderable production of Jamaica, ſince above three millions of pounds weight of it are exported every year. There are ſeveral kinds more or leſs ſtrong, and more or leſs acrid. The tree which produces the kind of pimento known by the name of Jamaica pepper was not cultivated in regular plantations till 1663. It commonly grows on the mountains, and riſes above thirty feet high; it is very ſtraight, and covered with a grey cloſe ſhining bark; the leaves are in all reſpects like the laurel, and at the end of the branches grow the flowers, to which ſucceed berries a little larger than juniper: they are gathered green, and laid to dry in the ſun, when they grow brown, and get that ſpicy ſmell which has given to pimento the name of all-ſpice. It is of excellent uſe for removing crudities, and ſtrengthening the ſtomach.

Ginger is alſo one of the productions of this iſland. This is the root of a ſmall plant about eighteen or twenty inches high. It was greatly in vogue about the middle of the laſt century; but now it is only a ſecondary article of trade, eſpecially ſince the conſumption of it in Germany and Ruſſia has of late years greatly diminiſhed. But this circumſtance, however prejudicial, is not ſo ſeverely felt as the almoſt total annihilation of two branches of culture of the firſt kind, namely, indigo and cacao. In 1672 Jamaica had ſixty indigo plantations, which produced yearly fifty thouſand pounds worth of indigo: they are now reduced to eight, and an injudicious parliamentary duty has nearly ruined this branch, which the French have almoſt entirely wreſted from us. At the time above-mentioned, there were in this iſland ſixty cacao walks in produce, and many new ones under cultivation; but having been ſome years afterwards all deſtroyed by a blaſt, they have never been ſince renewed, and there is hardly one left, though chocolate is in general uſe here.

The productions which promiſe to increaſe are cotton and coffee. The French, however, have maintained their ſuperiority in the manner of ſhipping coffee for Europe, ſo as to preſerve all its qualities and virtues. Jamaica exports annually eight hundred caſks of coffee of three hundred pounds each; and one thouſand bags of cotton, each weighing one hundred and eighty pounds.

Jamaica produces, beſides the articles already ſpecified, a number of trees, ſhrubs, and uſeful plants, ſome of them natives of its ſoil, others brought from the other iſlands or the continent: among theſe we may diſtinguiſh the following 1. The mahogany, which is of great uſe in Europe; there was formerly a prodigious abundance on the ſhores, but now they muſt

A beautiful VIEW *of the remarkable* CASCADE *on the* WHITE RIVER, *in* JAMAICA.

muſt go ten or twelve miles within land, and get nearer to the mountains, to find any; this diſtance rendering it more inconvenient and expenſive to tranſport, the Jamaicans get a great deal from the coaſts of Spaniſh America, not quite ſo good, but much cheaper than their own, which they ſend to Great Britain; in the year 1770 they exported to the value of fifty thouſand pounds ſterling. 2. The ſilk cotton-tree, whoſe trunk is often eighty feet high to its branches, and twelve or fourteen feet in circumference; they make of it canoes or periagas of twenty-five tons burden. 3. The dogwood, which does not yield to the Engliſh oak for hardneſs. 4. The bitterwood, much uſed by carpenters. 5. The baſtard mammea, or wood of St. Mary, whoſe height and quality make it fit for building ſhips and houſes, as well as the cedar, odoriferous and incorruptible: this beſides, ſerves to cover and wainſcot houſes, to make pencils, &c. and is much uſed by cabinet makers. 6. The lignum-vitæ, excellent for joiners and turners: its gum, called guaiacum, is of excellent ſervice in medicine.

They have alſo ſeveral trees that are uſeful in domeſtic œconomy; among which are, 1. The oil-tree, or Palma Chriſti, fifteen or ſixteen feet high, and laden with nuts affording plenty of an oil which is of great uſe, as well as that of the palm-tree; this laſt is much eſteemed by the negroes. 2. The cacao-tree and date-tree produce fruits both cooling and nutritive. 3. The cabbage-tree, a beautiful tree whoſe ſtem grows to a prodigious height, ſome having been ſeen one hundred feet high; and produces at the top a ſubſtance which has the appearance and taſte of a cabbage. 4. The tamarind-tree, whoſe fruit is well known; they procure a valuable varniſh by inciſion from the tree; and might extract an uſeful oil from the nuts. 5. The alve or ſoap tree, which afford an excellent ſoap. 6. The red mangrove, and the black olive-tree, uſed in tanning of hides, and their bark is infinitely preferable to that of the oak for this purpoſe. 7. The machioreal; a remarkable tree: all the parts of it, leaves, juice and fruit, (the latter of which much reſembles a crab-tree) are more or leſs poiſonous. Here are likewiſe various ſorts of dying woods, gums, and medicinal drugs; among the latter are guaiacum, china-root, ſarſaparilla, caſſia, venellas, aloes, and the wild cinnamon-tree, which is eſteemed of ſovereign uſe for promoting digeſtion, and diſpelling wind.

Tobacco is alſo produced here; but, being of a coarſe kind, is cultivated only for the ſake of the negroes, who are fond of it: they have alſo Indian and Guiney corn, with peas of various kinds, but none reſembling thoſe of Great Britain, except ſuch as are reared with care and tenderneſs in gardens; likewiſe yams and potatoes, together with cabbages and a variety of roots, particularly caſſava, of which they make bread.

There are various kinds of berries in the woods; but apples, and thoſe fruits that are more peculiar to cold countries, thrive but badly here. Their principal fruits are oranges, lemons, citrons, palms, pomegranates, ſhaddocks, momres, ſour-ſops, papao, melons, plantain, tamarinds, guavas, pine-apples, cuſtard-apples, ſtar-apples, prickly pears, and alicado pears.

There are but few cattle in this iſland, being chiefly ſupplied with beef from the Britiſh colonies on the continent; what they have are very ſmall, and the fleſh tough and lean. Their ſheep, however, are large and fat, and their fleſh very good; but the wool, which is long and full of hairs, is of little uſe. They have great plenty of hogs, and their fleſh is exceeding ſweet and delicious. Horſes, aſſes, and mules, are very numerous: the former are ſmall, mettleſome, and hardy; and generally ſell for thirty or forty pounds ſterling, when well made.

Fowls, both wild and tame, are found here in great variety, and particularly more parrots than in any of the other iſlands; beſides parroquets, pelicans, ſnipes, teal, Guiney hens, geeſe, ducks and turkies; the humming-bird, &c.

There is abundance of excellent fiſh in the bays and rivers; but the tortoiſe is by much the moſt valuable, both for its ſhell and fiſh, the latter being accounted the moſt delicious, and, at the ſame time, the moſt wholeſome in all the Indies. The manatu, or ſea-cow, which is often taken in calm bays, is reckoned extraordinary good eating by the Indians. The mountains breed numberleſs adders and other noxious animals, as the fens and marſhes do the guana and gallewaſp; but the latter are not poiſonous.

In this iſland are many noxious inſects, ſuch as the cirer, or chegue, which eats into the nervous, and membranous parts of the fleſh of the negroes; and the white people are ſometimes plagued with them. Theſe inſects get into any part of the body, but chiefly the legs and feet, where they breed in great numbers, and ſhut themſelves up in a bag: they ſometimes get into the toes, and eat the fleſh to the bones. As ſoon as the perſon feels them, which is not, perhaps, till a week after they have been in the body, they pick them out with a needle, or the point of a pen-knife, taking care to deſtroy the bag entirely, that none of the breed, which are like nits, may be left behind.

The ſeveral ſorts of inhabitants in Jamaica conſiſt of Engliſh, or thoſe of Engliſh extraction; Indians, negroes, mulattoes, or meſtices, or the deſcendants of them. The better ſort of the Engliſh wear wigs on Sundays, or particular days, and appear very gay in coats of ſilk, and veſts trimmed with ſilver. At other times they generally wear only thread ſtockings, linen drawers, a veſt, a Holland cap, and a hat upon it. Men ſervants wear a coarſe linen frock, with buttons at the neck and hands, long trowſers of the ſame, and a check ſhirt. The negroes (except thoſe that attend gentlemen, who dreſs them in their own livery) have once a year oſnaburghs and a blanket for cloathing, with a cap or handkerchiefs for the head. The morning habit of the ladies is a looſe night-gown careleſsly wrapped about them; and appear in a rich and becoming dreſs in the above town, when they put off their diſhabille.

Perſons in affluent circumſtances commonly drink Madeira wine mixed with water. Ale and claret are extravagantly dear; and London porter ſells for one ſhilling per bottle; but the general drink, eſpecially among thoſe of inferior rank, is rum punch, which they call kill-devil, becauſe, being frequently drunk to exceſs, it heats the blood, and brings on fevers, which in a ſhort time ſend them to their graves, eſpecially thoſe who are juſt come to the iſland.

Snakes and ſerpents, and coffi, a ſort of worms, are eaten by the Indians and negroes. Beſides the ordinary proviſions, rats are ſold here by the dozen, and, when they have bred among the ſugar-canes, are thought, by ſome people, very delicious food.

The current coin here is entirely Spaniſh, Engliſh money being ſeldom ſeen. There is hardly any place where ſilver is more plentiful, or has a quicker circulation. The common rate of boarding is three pounds per week, notwithſtanding proviſions in general are tolerably reaſonable; and a perſon cannot dine decently for leſs than a piece of eight.

Little regard is paid to learning here; and though ſome gentlemen, who are verſed in literature, ſend their children to Great Britain, to acquire a polite and liberal education, yet the bulk of the people, being engaged in trade, or immerſed in riotous diſſipation, take little care to improve their minds.

In Jamaica, and in all the Britiſh iſlands, the eſtabliſhed religion is that of the church of England; but there are yet no biſhops: the principal eccleſiaſtic in theſe iſlands is the biſhop of London's commiſſary.

The negroes in general are ſubject to great miſery and hardſhips; and though the utmoſt care is taken to make them propagate, the ill-treatment they receive ſo ſhortens their lives, that inſtead of increaſing by the courſe of nature, many thouſands are annually imported, to ſupply the place of thoſe who pine and die by the hardſhips they receive. Many of them are indeed ſtubborn and untractable, and muſt be kept under ſtrict diſcipline; but they ought not to be cruſhed with the iron rod of tyranny, or be thought a ſort of beaſts without ſouls, as many of their overſeers think them at preſent; though ſome of theſe tyrants are themſelves the dregs of England, and the refuſe of the jails of Europe. Many of the negroes, however, who fall into the hands of gentlemen of humanity, find their ſituations eaſy and comfortable; and it has been obſerved, that in North America, where in general theſe wretches are better uſed, there is a leſs waſte of negroes, who live longer, and increaſe by propagation.

On the firſt arrival of the ſlaves from the coaſt of Guiney, they are expoſed to ſale; are then generally very ſimple and innocent creatures; but they ſoon become roguiſh; and when they come to be puniſhed for their faults, excuſe themſelves by the examples of the whites. They believe every negro returns to his native country after death. This thought is ſo agreeable, that it cheers their ſpirits, and renders the burden of life eaſy, which would otherwiſe to many be quite intolerable. When a negro is about to expire, his fellow-ſlaves kiſs him, wiſh him a good journey, and ſend their hearty good wiſhes to their relations in Guiney. They make no lamentations; but, believing he is gone home and happy, inter his body with a great deal of joy.

The iſland of Jamaica is divided into three counties; viz. Surry, Middleſex, and Cornwall. Theſe contain nineteen pariſhes, over each of which preſides a magiſtrate called a cuſtos. The greater part of the inhabitants are diſperſed on their plantations, which form ſo many villages or hamlets, ſo that there are but few towns in the iſland.

The capital of this iſland is St. Jago de la Vega, commonly called Spaniſh Town, in Middleſex. It is ſmall, but pleaſantly ſituated, and contains about four thouſand inhabitants; is the reſidence of the governor, of the courts of juſtice, and the place where the aſſembly is held. The principal building is the governor's

vernor's houſe, one of the handſomeſt in America: here are alſo a handſome church, a chapel, and a Jewiſh ſynagogue. The greater part of the inhabitants are perſons of faſhion and rank, which gives it an air of ſplendor and magnificence. Between this town and that of Kingſton, in Fort Paſſage, a little village of fifteen houſes, ſo called, becauſe perſons land or embark here, who go from one town to the other land.

Kingſton, in the county of Surry, is the moſt conſiderable town in the whole iſland, being the reſidence of the merchants, and the chief place for trade. It is a mile and a half long, and half a mile broad; all the ſtreets, which are broad and regular, croſs each other at right angles; they contain near one thouſand ſeven hundred houſes, excluſive of the habitations of the negroes, and the ſtorehouſes. Its inhabitants are eſtimated at eleven thouſand, among whom are about five thouſand whites, and one thouſand two hundred free negroes or mulattoes; the reſt conſiſt of ſlaves. The Jews, who are very numerous here, have a fine ſynagogue. The houſes are much more elegant than thoſe of St. Jago de la Vega, but the air is not ſo healthy. The harbour of Kingſton, ſeated at the bottom of a deep bay on the ſouthern coaſt, will admit one thouſand ſhips at a time, and thoſe of two hundred tons come quite up to the quay.

The ſmall town of Port Royal is ſituated upon the dry and ſandy neck of land about three leagues long, that ſeparates the harbour of Kingſton from the ſea: this was the richeſt and moſt conſiderable place in the iſland at the time of the Buccaneers, whoſe diſorders it cheriſhed. Port Royal contained then two thouſand houſes, of which one thouſand ſix hundred were overturned or ſwallowed up by a remarkable earthquake that happened in 1692; they had rebuilt a great part of them, which were conſumed by a fire in 1703. The excellence of the ſituation, engaged the people to rebuild them a ſecond time, when a hurricane, in 1722, made them a heap of ruins; theſe were again raiſed, but afterwards deſtroyed, in 1744, by another hurricane; and on the third of October, 1780, another dreadful hurricane almoſt overwhelmed the little ſea-port town of Savannah-la-Mar in Jamaica, and part of the adjacent country. Very few houſes were left ſtanding, and a great number of lives were loſt: much damage was alſo done, and many people deſtroyed, in other parts of the iſland.

The harbour joining to the bay of Kingſton is very large and deep. On the extremity of the neck of land is Fort Charles, mounted with one hundred and twenty-ſix pieces of cannon, which, with the croſſed fire of ſeveral other batteries, defend the entrance of the harbour.

Public affairs in Jamaica are adminiſtered by a governor, who repreſents the king, a council of twelve, which form the upper houſe, and the forty-three repreſentatives of the people who compoſe the lower houſe, and are choſen by the pariſhes. The whole income of the governor, in time of peace, amounts to five thouſand pounds a year; the annual ſupply required from the colony may be about thirty thouſand pounds, beſides eight thouſand pounds the amount of its revenue; and the total of all the taxes, both public and parochial, is never above ſixty thouſand pounds per annum.

The number of plantations and inhabitants of Jamaica is at preſent eſtimated as follows, viz. ſix hundred and eighty plantations of ſugar, one hundred and ten cotton-works, one hundred pimento walks, thirty plantations of ginger, fifty breeding penns, ſix hundred polink and proviſion places, one hundred and fifty plantations of coffee, and eight indigo works; all which take up and employ ſix hundred thouſand acres, eighteen thouſand whites, one hundred and ſeventy thouſand blacks, and one hundred and thirty-ſix thouſand horſes, mules, or horned cattle. The above number of negroes requires a recruit of ſix thouſand every year.

Among the whites, who are all enrolled, and form a national committee, are reckoned eight or nine hundred Jews: theſe people may be ſaid to have a country here, this being the only one where they have a right to bear arms in its defence; and they juſtified the confidence of the legiſlature in an invaſion made by the French, when they behaved with a great deal of courage. They alſo poſſeſs ſeveral eſtates, and carry on an extenſive trade, eſpecially with the Spaniards. Their ſobriety and manner of living make them live to a greater age in Jamaica than the other whites.

It is computed that here are three thouſand ſix hundred free mullattoes and negroes, who are incorporated in the national militia. Among the blacks are likewiſe included about nine hundred Maron negroes: theſe form a ſavage republic divided into ſix villages in the mountains: they are the deſcendants of runaway ſlaves, who have forced the government to acknowledge their independence. Their chiefs, diſtinguiſhed by a medal hung to a ſilver chain, are under the inſpection of a white, called the ſuperintendant, without whoſe permiſſion not one of the Marons can go out of his diſtrict. By the treaty concluded with them in 1739, they poſſeſs ſome lands, with their products; and they are obliged to march for a fixed ſalary, in caſe of an invaſion, and alſo to reſtore fugitive ſlaves for a premium.

The whole of the annual exports from Jamaica is reckoned, by a mean proportion, at one million three hundred and ten thouſand pounds, while the total of the imports amount to one million and fifty four thouſand pounds. It carries on a conſiderable commerce, not only with Great Britain and Ireland, but likewiſe with Africa, North and South America, the Weſt India iſlands, and the Spaniſh main.

There are three ſmall iſlands, dependent on this, called the Caymans, which lay to the north-weſt of Jamaica. The moſt ſoutherly is diſtinguiſhed by the name of Great Cayman; the other two, which are diſtant from it about twenty leagues, are called Little Cayman, and Cayman Brack. Great Cayman, the only one that is conſtantly inhabited, is very low, and covered with high trees. It has not any harbour for ſhips of burden; only a tolerable anchoring-place on the ſouth-weſt. The inhabitants, who amount to about one hundred and ſixty, are deſcended from the old Buccaneers: they have given themſelves a ſet of laws, and chuſe a chief to ſee them executed, in conjunction with the juſtices of the peace appointed by commiſſion from the governor of Jamaica. As they have no clergyman among them, they go to Jamaica to be married.

This little colony is, undoubtedly, the happieſt in the Weſt Indies; the climate and the kind of food, which are extremely ſalubrious, render the people healthy and vigorous, and cauſe them to live to a very advanced age. Their little iſland produces plenty of corn and vegetables, hogs and poultry, much beyond what they conſume: they have, beſides, ſugar canes, and ſome ſprings of pretty good water. Being quite inured to the ſea, they are excellent pilots for the neighbouring coaſts; and their iſland, as well as their activity and humanity, have been many times a relief to ſhips which were diſtreſſed in this part of the ſea: their principal employment is fiſhing for turtle, which come to theſe iſlands, to depoſit their eggs in the ſands: a female lays about nine hundred. The inhabitants of Great Cayman carry on a great traffic with Port Royal in this article of wholeſome and delicious food.

II. Barbadoes, the eaſternmoſt of the Windward iſlands, is ſituated in fifty-nine degrees weſt longitude, and thirteen degrees north latitude. It is twenty-five miles from north to ſouth, and fifteen from eaſt to weſt. Its ſuperficial content is about one hundred and ſeventy thouſand acres. This iſland was firſt reſorted to by the Engliſh in the reign of James I. but the earl of Carliſle obtained the firſt grant of it in 1625, when he parcelled it out to ſeveral adventurers that tranſported themſelves hither. They found no inhabitants, but a good breed of hogs, ſuppoſed to have been left here by the Spaniards and Portugueſe, in their voyages to the continent of America. The adventurers applied themſelves at firſt to the planting of tobacco, which not thriving as expected, they planted cotton and indigo, which yielded a conſiderable profit; but they made little ſugar till 1647, when the colonels Modiford, Drax, and Walrond, with other cavaliers, living uneaſy under the uſurpation, converted their eſtates into money, and tranſported themſelves to Barbadoes, where they erected ſugar-works, and acquired very great poſſeſſions. In the year 1650 the white inhabitants of the iſland were increaſed to upwards of thirty thouſand, with twice that number of negroes, who conſtantly perplexed their maſters with conſpiracies, in hopes of recovering their liberty; but not ſucceeding, they were ſeverely puniſhed. King Charles II. purchaſed the property of the iſland in 1661, ever ſince which time it has been a royal government; and for the purpoſe of maintaining the forces and fortifications of the iſland, the colony granted a duty of four one-half per cent on their ſugars.

During eight months in the year, the climate is hot, but not unwholeſome; for though there are no land-breezes, others ariſe from the ſea, which increaſe as the ſun advances to, and abate as he declines from, the meridian. A temperate regimen renders it as ſafe to live in as any climate in Europe ſouth of Britain; and, according to the opinion of many, as Britain itſelf. The days are nearly equal, the ſun riſing and ſetting about ſix all the year round. The rains fall here as in other parts of the torrid zone, chiefly when the ſun is vertical. The damps or dews are ſo great in the night, that every bit of iron will ſoon be eaten up with ruſt, if it be not in conſtant uſe. The twilights are very ſhort, it being dark three quarters of an hour after ſun-ſet. They have ſometimes violent hurricanes in autumn. On the tenth of October, 1780, a dreadful one occaſioned vaſt devaſtation here, great numbers of the houſes were deſtroyed, not one in the iſland being wholly free from damage, many perſons were buried in the ruins of the houſes and buildings, and great numbers were driven into the ſea, and there periſhed.

This is, for the moſt part, a plain level country, with ſome ſmall hills; and the woods have been all cut down to make room

room for the plantations of ſugar canes, which now take up the greateſt part of this valuable iſland. The ſoil varies, being in ſome places ſandy and light, in others rich, and in others ſpongy. The moſt valuable productions are, ſugar, rum, molaſſes, ginger, indigo and cotton. The principal fruits are, pine-apples, guavas, plantains, oranges, lemons, citrons, limes, tamarinds, mangroves, prickled apples, figs, cacao and cocoa nuts, bullies, cuſtard apples, papays, pomegranates, &c. Here are few orchards or gardens; and they can procure Indian corn from North America cheaper than it could be ſold for if of their own growth.

Here are abundance of hogs, which are much finer eating than thoſe of England; oxen, cows, horſes, apes, goats, monkies and racoons, with a few ſheep and rabbets; but the mutton is of an indifferent quality.

Tame pigeons, pullets, ducks, and poultry of all kinds, bred in Barbadoes, have a fine flavour, and are accounted more delicious than thoſe of Europe. Here are alſo teals, curlews, plovers, ſnipes, wild pigeons, wild ducks, and a kind of bird called a man of war. Their ſnakes and ſcorpions never ſting, and their inſects, though numerous, have no poiſon.

Among other fiſh common here, they have the parrot fiſh, ſnappers, grey cavelloes, tarbums, coney-fiſh, and a green turtle, which is a great delicacy.

In the center of this iſland there is ſaid to be a bituminous ſpring, which emits a liquor like tar, and ſerves for the ſame uſes as pitch or lamp oil. There are alſo two ſtreams, or rivers, on each ſide of it, wells of good water all over it, beſides large reſervoirs for rain water.

Here are three claſſes of inhabitants, viz. the maſters, the white ſervants, and negroes. The white ſervants lead more eaſy lives here than the day labourers in England; but the planter is generally more careful of his black ſervants than of the white, as the former, if not made free, are, with all their poſterity, his perpetual property. Moſt of the negroes are employed in the field, but ſome of them work in the ſugar mills and ſtore-houſes, while thoſe of both ſexes, who are moſt likely and hardy, are employed as menial ſervants and houſemaids.

The negroes ſubſiſt chiefly on plantains; but they have every week, at ſtated times, an allowance of Indian corn, bread, ſalt fiſh, or ſalt pork. Every negro family has a cabbin, and adjoining to it a ſmall piece of ground for a garden: the more induſtrious plant potatoes, yams, and other roots; they alſo rear live ſtock, which they are at liberty to eat, or convert into money. They are fond of rum and tobacco, and generally lay out their earnings and ſavings in fine cloaths and ornaments. The whites are computed at twenty thouſand, but the negroes, mulattoes, and meſtices ſlaves, at one hundred thouſand.

A ſalary of two thouſand pounds ſterling is allowed to the governor, payable out of the four and half per cent. beſides a third of all ſeizures. The council conſiſts of twelve members, and the aſſembly of twenty-two, choſen yearly out of the ſeveral pariſhes, viz. two for each, by a majority of votes. Moſt of the civil officers are appointed by the governor, who alſo collates rectors to the parithes of the iſlands. The perquiſites of them are very conſiderable, and their ſtated ſalary about one hundred and fifty or two hundred pounds a year; but the rectory of St. Michael's in Bridge-town is ſuppoſed to be worth about eight hundred pounds a year. Here are ſome Jews and quakers, but very few other diſſenters. A ſurrogate of the biſhop's appointment governs the church affairs.

The military eſtabliſhment of Barbadoes is very reſpectable, conſiſting of ſix regiments of foot, two of horſe, and a troop called the troop of horſe guards: they have alſo a good train of artillery, and ſeveral forts. The whole iſland is divided into five diſtricts, and theſe again into eleven pariſhes. In each of the diſtricts is a judge and five aſſiſtants, who hold a court of common pleas every month, from January to September, and the governor is arbitrator in caſes of difficulty.

Bridge-town, the capital of the iſland, and the only place of note in it, is ſituated in Carliſle bay, in the ſouth-weſt part, and has the beſt or rather the only harbour in it. This is reckoned the fineſt and largeſt town in all the Caribbee iſlands, if not in all the Engliſh Weſt India colonies, taking its name from a bridge in the eaſt part of it, erected over the waters that come from the neighbouring marſhes after rains: it is the ſeat of the governor, council and aſſembly, and alſo of the court of chancery. The governor's houſe is about a mile out of the town, which is not reckoned very healthy on account of the neighbouring marſhes. There are ſeveral forts and batterries about the town and bay, the latter of which is large enough to contain five hundred ſail, and has twenty fathom anchorage in very clear water, but it is extremely rocky. Here is a college, founded and liberally endowed by colonel Codrington for profeſſors in the ſeveral ſciences. It is the only inſtitution of the

kind in the Weſt Indies, but it does not appear to be in a very flouriſhing ſtate.

A conſiderable trade is carried on from hence with Great Britain, North America and Africa, which is ſuppoſed to employ four hundred veſſels of all burdens. The principal articles of exportation are, aloes, cotton, ginger, ſugar, rum and molaſſes: it amounted, in 1770, to three hundred and eleven thouſand pounds to Great Britain, one hundred and twenty thouſand pounds to North America, and eleven thouſand pounds to the other iſlands, the whole being upwards of four hundred and thirty thouſand pounds ſterling.

They import timber of various kinds, bread, flour, Indian corn, rice, tobacco, ſome ſalt beef and pork, fiſh, pulſe, and other proviſions from the northern colonies, ſlaves from the coaſt of Africa, wine from Madeira, Tercera and Fyal, as alſo ſome brandy, beef and pork from Ireland, ſalt from Curaſſao, oſnaburghs, linen of all ſorts, broad cloth and kerſeys, ſilks and ſtuffs, red caps, ſtockings and ſhoes of all ſorts, gloves and hats, millinery ware and perukes, laces, peas, beans and oats, ſtrong beer, pale beer, pickles, candles, butter and cheeſe, iron ware for their ſugar-works, leaden, braſs and copper wares, powder and ſhot, and other articles.

SECT. III.

Containing a Survey of the Iſlands of St. CHRISTOPHER, ANTIGUA, NEVIS, MONTSERRAT, BARBUDA, ANGUILLA, DOMINICA, St. VINCENT, and GRANADA and the GRENADINES, with an Account of their Situation and Extent, Climate, Soil, Productions, Inhabitants, Commodities, Trade, &c.

THE iſland of St. Chriſtopher, called alſo St. Kitt's, is ſituated about fifteen leagues to the weſt of Antigua, and is about twenty miles in length, ſeven in breadth, and forty in compaſs. It was diſcovered by Columbus in his firſt voyage to America, and has given birth to all the Engliſh and French colonies in the Weſt Indies. The two nations arrived there on the ſame day (in 1625) when they divided the iſland between them, agreeing, however, that hunting, fiſhing, as well as the mines and foreſts, ſhould be in common. Three years after their ſettling, the Spaniards drove them away, but they ſoon returned, and continued to live in good underſtanding till 1666, when war being declared between England and France, St. Chriſtopher's became at different intervals the theatre of bloodſhed for half a century. The conteſt was, however, at length cloſed by the repulſion of the French in 1702, and the country being yielded to the crown of Great Britain by the treaty of Utrecht, all the French territory was ſold for the public emolument.

The centre of this iſland is occupied by a great number of high and barren mountains, interſected by rocky precipices almoſt impaſſable, from many of which iſſue hot ſprings. Mount Miſery, which ſeems to be a decayed volcano, whoſe head is hid in the clouds, is the higheſt of all theſe mountains, its perpendicular height being three thouſand eleven hundred feet: at a certain diſtance it bears ſome reſemblance to a man who carries another upon his back. The aſſemblage of theſe two mountains makes St. Kitt's appear to thoſe who approach by ſea like an huge mountain covered with wood, but as they come nearer, the coaſt and aſcent grow eaſier, and they are cultivated as high as the declivity will permit.

Conſidering the height of the country, the climate is not ſo hot as might be expected: the air is pure and healthy, but the iſland is ſubject to frequent ſtorms, hurricanes and earthquakes. The ſoil is in general light and ſandy, but very fruitful, and well watered by ſeveral rivulets, which run down both ſides of the mountains. It produces plenty of manioc root, vegetables, fruits, timber, &c. The whole iſland is covered with plantations, whoſe owners (noted for the ſoftneſs of their manners) live in agreeable, clean, and convenient habitations, adorned with fountains and groves. Moſt of their houſes are built of cedar, and the lands hedged with orange and lemon trees. The cultivation of ſugar takes up only twenty-four thouſand acres, but the whole of their plantations amount to forty-four thouſand.

The moſt conſiderable town is Baſſeterre, formerly the capital of the French part, the other is called Sandy point, and always belonged to the Engliſh. There is no harbour, nor even the appearance of one; on the contrary, the ſurf is continually beating on the ſandy ſhore at the few places fit to land, which not only prevents the building any quay or wharf, but renders the landing or ſhipping of goods always inconvenient, and very often dangerous: they have been therefore obliged to adopt a particular method to ſhip the heavy goods, ſuch as hogſheads of ſugar or rum. For this purpoſe they uſe a ſmall boat of a peculiar con-

ſtruction, called a Moſes; this boat ſets off from the ſhip with ſome very active and expert rowers: when they ſee what they call a hull, that is, an abatement in the violence of the ſurge, they puth to land, and lay the ſides of the moſes on the ſtrand, the hogſhead is rolled into it, and the ſame precautions are uſed to carry it to the ſhip. Rum, cotton, and other goods that will bear the water, are generally floated to and from the ſhip.

This iſland is divided into nine pariſhes, each of which has a handſome church. Public affairs are adminiſtered by a governor, a council, and an aſſembly choſen from the pariſhes. In 1770 the exportations of this iſland amounted to above four hundred and nineteen thouſand pounds ſterling for ſugar, molaſſes and rum, and near eight thouſand pounds for cotton. The inhabitants amount to about eight thouſand whites, and twenty thouſand blacks.

The iſland of Antigua, the moſt conſiderable of the Leeward Caribbees, is of a circular form, about twenty miles each way, and near ſixty in circumference. It is more noted for good harbours than all the Engliſh iſlands in theſe ſeas, yet ſo encompaſſed with rocks, that it is of dangerous acceſs in many parts. The climate is hotter than Barbadoes, and very ſubject to hurricanes. The ſoil is ſandy, and much of it overgrown with wood. Here are but few ſprings, and not ſo much as a brook in the whole iſland, ſo that the inhabitants depend on the caſual rains for moſt of the water they are ſupplied with.

St. John is the capital of Antigua: it is a regular well built town on the weſt ſhore, with a good harbour of the ſame name, whoſe entrance is defended by Fort James. It is the reſidence of the governor general of the Caribbee Leeward Iſlands, the place where the aſſembly for this iſland is held, and the port where the greateſt trade is carried on. The beſt port in the iſland is Engliſh harbour on the ſouth ſide: it has, with much trouble and expence, been made fit to receive the greateſt ſhips of war, who find there a dock-yard with ſtores, and all the materials and conveniences neceſſary to repair and careen. Engliſh Harbour is at a ſmall diſtance from the town and harbour of Falmouth: there are beſides, Willoughby Bay to the windward of Engliſh Harbour, Nonſuch Harbour on the eaſt point, and the town and harbour of Parham on the north ſide, and a great number of creeks and ſmaller bays; but the ſhore being in general rocky, wherever the landing would be practicable it is defended by forts and batteries; and for the defence of the iſland there is generally one regiment of regular troops quartered there.

Antigua has a governor general, a lieutenant governor, a council, and its own aſſembly of twenty-four members; beſides which, the governor general can, when he thinks proper, call a general aſſembly of the repreſentatives of the other iſlands. It is divided into ſix pariſhes and eleven diſtricts, of which ten ſend each two repreſentatives, and that of St. John four. In 1770 their exports amounted to four hundred and forty-ſix thouſand pounds ſterling to Great Britain, Ireland and America, of which ſum five hundred pounds is only for cotton, all the reſt is the produce of ſugar, molaſſes and rum. The number of veſſels that enter yearly into the harbour is reckoned at three hundred, but that of the inhabitants of the iſland is not certainly known.

The ſmall iſland of Nevis conſiſts of one vaſt mountain riſing to a very conſiderable height in the middle: it is ſituated about four miles to the eaſt of St. Chriſtopher's. The ſoil is fruitful, and the ſtaple commodity ſugar, which ſerves all the purpoſes of money. Here are ſometimes violent rains and tornadoes, as in the other iſlands, and the air is even hotter than that of Barbadoes. Here are many remarkable inſects and reptiles, particularly the flying tyger, the horn fly, and a kind of ſnail, called the ſoldier. The ſea abounds with a variety of excellent fiſh, as groupers, rock fiſh, old wives, cavallies, welſhmen, mud-fiſh, wilks, cockles, lobſters, &c. land crabs are very common here; they are ſmaller than ſea crabs, and make little burrows, like rabbets, in the woods, towards the tops of the mountains. The only venomous creatures are ſcorpions and centipedes. Here are ſprings of freſh water and a hot bath, much of the ſame nature as thoſe of Bath in England.

Their ſheep have no horns nor wool, but are cloathed with ſmooth hair, and generally full of ſmall red or black ſpots reſembling thoſe of a fine ſpaniel. They breed twice a year, if not oftener, and generally bring two, three, or four lambs at a time, and, what is more extraordinary, ſuckle them all. The rams are of a pale red colour, with a thick row of long ſtrait red hair hanging down from the lower jaw to their breaſt as far as the fore-legs. The hogs, being fed with Indian corn, Spaniſh potatoes, and ſugar cane juice, are exceeding ſweet food, white and fat, and ſo are the turkies, which are fed with the ſame diet. The ground doves here are about the ſize of a lark, of a chocolate colour, ſpotted with dark blue, their heads like that of a robin-red-breaſt, and their eyes and legs of a moſt pure red. Here are excellent game-cocks and fine bull-dogs, which retain their ſpirit, beſides large cur-dogs, but no ſpaniels or hounds.

Here are great quantities of aſparagus: likewiſe a tree called diddle-doo, which bears a lovely bloſſom of the fineſt yellow and ſcarlet colours, and is eſteemed a ſovereign remedy againſt the green ſickneſs. The liquorice runs wild along the ſtone walls of common fields, like the vine; but here is no lignum vitæ or iron wood. The butter of this iſland is not good, and new cheeſe far worſe.

Charles-town, the capital, has a fort, called Great Fort, that defends the anchoring place, where the governor, council and aſſembly meet; the laſt is compoſed of five members for each of the three pariſhes into which the iſland is divided. Here are three tolerable roads or bays, on which are as many little towns, viz. Newcaſtle, Littleborough on Moreton bay, and Charles-town above-mentioned.

The king gives twenty pounds out of the exchequer to the clergy, who are ſent hither by the biſhop of London to vacant pariſhes to defray the charges of their voyage. The fees for every chriſtening, marriage, and burial, are one ſhilling and ſixpence, and for a funeral ſermon three pounds, or five hundred pounds weight of ſugar.

They have three public annual faſts to implore the divine protection againſt hurricanes; and if none happen in July, Auguſt or September, they have in October a public thankſgiving.

If a negro in this iſland ſtrikes a white man, he is puniſhed with the loſs of his hand; and if he ſhould draw blood, with death. A negro cannot be evidence againſt a white man: but if a white man kill a negro, he cannot be tried for his life for the murder; all that he ſuffers is, a fine of thirty pounds currency to the maſter for the loſs of his ſlave.

Before the revolution Nevis contained thirty thouſand inhabitants; but the invaſion of the French about that time, and ſome epidemical diſorders have greatly diminiſhed the number, ſince they only reckon at preſent two or three thouſand whites, and ſix or ſeven thouſand negroes. In 1770 their exportations to Great Britain, in cotton and ſugar, amounted to near forty-four thouſand pounds; thoſe to North America, where they ſend a great deal of molaſſes, rum, and a prodigious number of lemons, exceeded fourteen thouſand pounds. About twenty veſſels are employed annually in trade to and from this iſland.

The iſland of Montſerrat is ſituated twenty-five miles almoſt ſouth-eaſt from Nevis, twenty weſt-ſouth-weſt from Antigua, forty north-weſt from Guadaloupe, and two hundred and forty from Barbadoes. It is of an oval figure, about three leagues in length, the ſame in breadth, and eighteen in circumference. Columbus firſt diſcovered this iſland in 1493. It was ſettled in 1632 by Sir Thomas Warner, and taken in the beginning of the reign of Charles II. by the French, who reſtored it to the Engliſh at the peace of Breda. The firſt ſettlers were Iriſhmen, and the preſent inhabitants are principally compoſed either of their deſcendants or of natives of Ireland; ſo that the uſe of the Iriſh language is preſerved in this iſland, even among the negroes. The Spaniards gave it the name of Montſerrat from a fancied reſemblance it bore to a mountain of that name near Barcelona in Old Spain, where is a famous chapel dedicated to the Virgin Mary.

This iſland is well watered, and fruitful: its ſoil, climate, and produce reſemble thoſe of the other Engliſh Caribbees. The mountains yield cedars, the cypreſs tree, the iron tree, with other woods, and ſome odoriferous ſhrubs: the planters formerly raiſed a great deal of indigo. The camanture, by ſome called the ſea cow, is found near this iſland, and generally at the entrance of freſh water rivers. It is ſaid to be an amphibious animal, and to live moſtly on herbage. Its fleſh is reckoned very wholſome food when ſalted, and they are ſo large, that two or three of them load a canoe. The ſurrounding ſeas produce ſeveral hideous monſters, particularly two, which, from their remarkable uglineſs, as well as the poiſonous quality of their fleſh, are called ſea devils.

There is no harbour in this iſland, only three roads, namely, Plymouth (which is the chief town in the iſland) Old Harbour, and Ker's Bay, where the ſhipping and landing of goods is attended with the before-mentioned inconveniences.

The government of Montſerrat is compoſed of a lieutenant-governor, a council, and an aſſembly of eight repreſentatives, two for each of the four diſtricts which divide the iſland. The annual exports from hence to Great Britain and Ireland are eſtimated at ninety thouſand pounds, and to North America twelve thouſand. The number of inhabitants here is about fourteen thouſand, among whom are about one thouſand five hundred whites.

The iſland of Barbuda is only about twenty miles in length, and twelve in breadth, and is ſituated fifteen miles north-eaſt of Montſerrat. It is the property of the Codrington family, who appoint the governor. Part of the eſtate ariſing from it

(amounting, as is ſaid, to two thouſand pounds a year, with two plantations in Barbadoes) was bequeathed, in 1710, by Chriſtopher Codrington, Eſq; governor of Barbadoes, to the ſociety for propagating the goſpel, towards the inſtruction of the negroes in the Caribbee iſlands in the Chriſtian religion, and the erection of a college at Barbadoes for teaching the liberal arts.

This is a fertile iſland, though the land lies low: on the weſt ſide of it is a good well ſheltered road, clear from rocks and ſands. The inhabitants apply themſelves chiefly to the breeding of cattle, and raiſing proviſions, with which they ſupply the neighbouring iſlands. Many of the commodities produced in the other Weſt India iſlands may alſo be raiſed here. There are ſome large ſerpents on the iſland, but they are neither poiſonous nor noxious, and will deſtroy rats, toads and frogs, though the ſting or bite of others is mortal, unleſs an antidote is quickly applied.

Anguilla lies about ſeventy-five miles north-weſt of Barbuda, and about forty to the north of St. Chriſtopher's. It is very long and narrow, which induced the Spaniards to give it the name of Anguilla, or Eel. It is ſo low and flat, that the French, who firſt ſettled there, did not think it worth cultivating, or even keeping; the Engliſh adopted the ſame opinion when they took poſſeſſion of it, and the iſland was a long time in their hands before they perceived the contrary. Within a few years induſtry and the indefatigable labours of the planters of Anguilla have convinced them, that their iſland produces not only all the neceſſaries of life, but, beſides, many proviſions which they ſell to their neighbours, as well as ſugar and cotton. Before the late war, their exportations, which promiſe an increaſe, amounted, in ſugar, rum and cotton, to near ſix thouſand pounds, three thouſand eight hundred of which were for Great Britain, the reſt for North America. The climate is very healthy, and the inhabitants ſtrong and vigorous.

There are ſeveral ſmall uninhabited iſlands to the north of Barbuda, and dependant on it: the moſt remarkable of them (called Sombrero by the Spaniards from its reſemblance to a hat) lies at ſix leagues diſtance, and is about a league long.

The Archipelago of the Virgin Iſlands lie to the weſt of Barbuda and Sombrero, after having croſſed a channel of eight leagues: theſe were ſo denominated in memory of the eleven thouſand virgins of the legend. They take up a ſpace from eaſt to weſt of about twenty-four leagues long, quite to the eaſtern coaſt of Porto Rico, with a breadth of about ſixteen leagues. They are compoſed of a great number of iſles, whoſe coaſts, rent throughout, and ſprinkled with rocks, every where dangerous to navigators, are famous for ſhip-wrecks, and particularly of ſeveral galleons. Happily for the trade and navigation of theſe iſlands, nature has placed in the middle of them a large baſon of three or four leagues broad, and ſix or ſeven long, the fineſt that can be imagined, and in which ſhips may anchor land-locked, and ſheltered from all winds. Sir Francis Drake firſt entered it in 1580 in his expedition againſt St. Domingo: hence it is called the Bay of Sir Francis Drake.

Theſe iſlands are all of them exceedingly ſmall, and the greateſt part uninhabited. One of them is called the Tropic Keys, from the prodigious quantity of Tropic birds which breed there, and are about the ſize of a pigeon, but round and plump like a partridge, and very good to eat: their plumage is quite white, except two or three feathers in each wing of a clear grey; their beaks are ſhort, thick, and of a pale yellow; they have a feather, or quill, about ſeven inches long, which comes out of their rump, and is all the tail they have. Theſe birds have never been ſeen but between the Tropics, from which circumſtance they derive their name.

Dominica is ſituated about half way between Martinico and Guadaloupe, in ſixteen degrees north latitude, and ſixty-two weſt longitude. It is about twenty-eight miles in length, and thirteen in breadth, and received its name from being diſcovered by Columbus on a Sunday. The ſoil of this iſland is thin, and better adapted to the rearing of coffee than ſugar; but the ſides of the hills bear the fineſt trees in the Weſt Indies, and the whole iſland is well ſupplied with rivulets of fine water. At the north weſt end there is a ſpacious ſandy bay, called St. Rupert's, which is well ſecured from the winds by mountains on all ſides. Here, as in ſome other of the Carribbees, is a ſulphur mountain, and hot ſpring, equal in ſalubrity to thoſe of Bath in England; and the fine fruits, particularly the pine apples, are ſuperior to any that grow on the French iſlands.

The town of Roſeau, which is ſituated on a ſpacious harbour, is the moſt diſtinguiſhed place in this iſland. The houſes are low, and irregularly placed, and the town is ſheltered by the circumjacent mountains, ſome of which riſe to a conſiderable height. Ships of a conſiderable ſize ride at anchor with the greateſt ſafety in the bay or harbour, from whence there is a moſt advantageous view of the town.

St. Vincent is ſituated about fifty miles north-weſt of Barbadoes, is about twenty-four miles in length, and eighteen in breadth. It is generally allowed to be one of the beſt of all the Antilles. Out of the ridge of mountains, which croſſes it from ſouth to north, riſe a great number of rivers well ſtored with fiſh. Theſe mountains are in general of an eaſy aſcent, ſome of the vallies and plains are of a large extent, exceedingly fertile, and produce moſt of the neceſſaries of life, particularly ſugar, coffee, cacao, and anatta. When this iſland was ceded to Great Britain by the treaty of Verſailles in 1763 there was a great number of a mixed breed of the antient Caribs, and of ſhip-wrecked or run-away negroes, but none of theſe now remain.

Kingſtown is the moſt remarkable place here: it is ſituated on a bay of the ſame name at the ſouth-weſt end of the iſland. It is the reſidence of the governor, and the place where the aſſembly meet. The town of Calliagua, whoſe harbour is the moſt conſiderable in the whole iſland, ſtands about three miles from Kingſtown towards the ſouth-eaſt.

The iſland of Granada is ſituated in twelve degrees north latitude, and ſixty-two degrees weſt longitude, about thirty leagues ſouth-weſt of Barbadoes, and almoſt the ſame diſtance north of New Andaluſia, or the Spaniſh main. The iſland is about thirty miles long, and fifteen broad. The ſoil is very rich and fertile, and particularly adapted for producing ſugar, coffee, tobacco, and indigo. A lake on the top of a hill, in the middle of an iſland, ſupplies it plentifully with fine rivers, which adorn and fertilize it. Several bays and harbours lie round the iſland; ſome of theſe may be fortified with great advantage, which renders it very convenient for ſhipping, and it has the happineſs of not being ſubject to hurricanes. St. George's Bay has a ſandy bottom, and is extremely capacious, but open: an hundred veſſels may be moored with perfect ſafety in its harbour, or careening place.

The Grenadines are a ſmall cluſter of iſlands near Granada: they produce very fine timber, ſugar, indigo, tobacco, peas and millet; but the cocoa tree does not thrive ſo well in them as in the others.

The iſland of Granada was long the theatre of bloody wars between the native Indians and the French, during which the Caribbees defended themſelves with the moſt reſolute bravery. In the war of 1756, when Granada was attacked by the Engliſh, the French inhabitants, who were not very numerous, were ſo amazed at the reduction of Guadalupe and Martinico, that they loſt all ſpirit, and ſurrendered without making the leaſt oppoſition; and the full property of this iſland, together with the Grenadines, was confirmed to the crown of Great Britain by the treaty of peace in 1763, and by the late one in 1783.

SECT. IV.

Containing a Deſcription of the SPANISH WEST INDIA ISLANDS, with an Account of their Extent, Situation, Climate, Produce, Principal Towns, Inhabitants, Trade, Commodities, &c.

CUBA is about ſeven hundred miles in length from eaſt to weſt, but very narrow in proportion, not being above ſeventy in breadth: it lies ſixty miles to the weſt of Hiſpaniola, twenty-five leagues to the north of Jamaica, one hundred miles to the eaſt of Jucatan, and as many to the ſouth of Cape Florida, and extends in latitude from twenty degrees twenty minutes to the Tropic of Cancer, and from ſeventy-four degrees to eighty-five degrees fifteen minutes weſt longitude. It commands the entrance of both the gulfs of Mexico and Florida, and the Windward Paſſage.

In the months of July and Auguſt, when the ſun is vertical, the rains and ſtorms are great, otherwiſe the climate would be intolerably hot. The faireſt ſeaſon is, when the ſun is fartheſt off, and then it is hotteſt in the morning; for towards noon a ſea breeze ſprings up, which blows pretty briſk till the evening. The trade winds in theſe ſeas blow from the north-eaſt. At the full and change of the moon, from October to April, there are briſk winds at north and north-weſt, which in December and January often turn to ſtorms, though this is called the fair ſeaſon. The whole iſland is well watered, and agreeably diverſified with woods, lawns and vallies.

The ſoil is capable of producing, in the greateſt plenty, every thing that grows in the other American iſlands; but the Cuba (commonly called the Havannah) tobacco is thought to excel that of all the world, and their ſugar would equal their tobacco in goodneſs, had they hands to cultivate the canes. They have two ſorts of fruit, called camilor and guanavana, the firſt like a china orange, and the other ſhaped like a hart, with a juice between ſweet and acid. The other products are plantains, bananas, ananas, guavas, lemons, cocoas, ginger, long pepper, and other ſpices; caſſia, maſtic, aloes, large cedars, and other odoriferous trees; oaks, pines, palm trees, plenty of large vines and fine cotton trees.

Gold

Gold duſt is found in the ſands of the rivers; but it is uncertain whether there are any gold or ſilver mines, the hopes of which occaſioned the butchery of all the antient inhabitants, who were either unable or unwilling to diſcover them: if there are any, they are not worked. The copper mines here furniſh the Spaniſh plantations with a ſufficiency of that metal for all their braſs guns. A chain of hills runs through the middle of the iſland; but the land near the coaſt is generally a level, champaign country. The interior parts lie quite uncultivated and uninhabited. Here are many good harbours; but there are ſcarce any navigable rivers. Both the coaſts and rivers abound with fiſh, and alſo with alligators. There are great conveniences for making ſalt; but the inhabitants avail themſelves very little of them.

The cattle brought hither by the Spaniards have multiplied exceedingly, vaſt numbers now running wild in the woods, of which many are killed, chiefly for their hides and tallow, that are ſent to Spain. Their fleſh alſo, being cut in pieces, and dried in the ſun, ſerves to victual ſhips. Theſe cattle are often ſo fat, that they die through the burden of their greaſe. Here are likewiſe abundance of mules, horſes, ſheep, wild boars, and hogs, together with wild and tame fowl, parrots, partridges, blue heads, large tortoiſes: ſeveral fountains of bitumen, which is uſed inſtead of pitch, as well as for medicinal purpoſes; here are alſo quarries of flint.

Cuba is pleaſant, and in its preſent ſtate flouriſhing, as the Spaniards are now continually improving it. Formerly its exportations never equalled thoſe of the ſmall Britiſh iſland of Antigua. The reaſon of this, next to the indolence of the Spaniards, was the great facility with which the inhabitants got their money by means of the galleons and flota, and the very great contraband trade carried on here in defiance of their laws, and by connivance of the government.

This iſland is divided into ſeven provinces, the civil government of which is dependant on that of St. Domingo, or Hiſpaniola: its biſhop, whoſe ſee is at St. Jago, though he commonly reſides at the Havannah, is ſuffragan to the archbiſhop of St. Domingo. The eaſt part of the iſland is under the governor of St. Jago, and the weſt of the governor of the Havannah. There are ſeveral large towns in the iſland; but the two abovementioned are the moſt conſiderable.

On the north-weſt coaſt of the iſland ſtands the Havannah, the capital, in twenty-three degrees twelve minutes north latitude, and in the eighty ſecond degree thirteen minutes weſt longitude. The town itſelf, diſtinct from the fortifications, is about two miles in circuit, and contains about twenty-ſix thouſand ſouls. Its port is ſaid to be the moſt frequented, as well as the beſt in all the iſlands, and one of the fineſt in the world; it being ſo large, that a thouſand ſail of ſhips may commodiouſly ride in it with the utmoſt ſafety, without either anchor or cable, no wind being able to hurt them; and is ſo deep, that the largeſt veſſels anchor at a ſmall diſtance from the ſhore. The entrance, which has no bar to obſtruct it, is by a channel about three quarters of a mile in length, but ſo narrow, that only one ſhip can go in at a time. The harbour into which it leads at the north-weſt corner, is a long ſquare lying north and ſouth; the other three corners forming three creeks or bays.

This city ſtands in the moſt fertile part of the iſland, on the weſt ſide of the harbour, in a delightful plain that extends along the ſhore, and backwards it is waſhed by two branches of the river Lagida. The city is of an oval form, and begins about a quarter of a mile from the mouth of the harbour. The buildings, which are of ſtone, are very handſome, but not lofty, and the ſtreets are narrow, but clean. Here are eleven churches and monaſteries, two handſome hoſpitals, and a fine ſquare in the middle of the town, encompaſſed with uniform buildings.

The city on the land ſide is encompaſſed with a wall defended by baſtions, and a caſtle on the ſide towards the harbour; at the harbour's mouth are alſo two other ſtrong caſtles to defend its entrance: the ſtrongeſt of theſe has lines, which extend to the caſtle firſt mentioned, and is called the Moro fort: it is built on a rock at the foot of two hills, in which is cut a deep ditch, filled with ſea water. The ſecond caſtle is called the Puntal, and is fortified with four baſtions well planted with cannon. The third is called El Fuerto, or the Fort, and has ſixty large heavy braſs cannon belonging to it; there are alſo two other ſmall forts, called Coxemar and Bariavans. Theſe forts, all together, have one hundred and twenty guns.

This city is of more importance to the Spaniards than any other in America, it being the place of rendezvous for all their fleets in their return from that quarter of the world to Spain; and from its lying at the mouth of the gulf of Florida, through which they are obliged all to paſs, it has been called by the Spaniards, the key of the Weſt-Indies. Here rides the navy of the king of Spain; and here meet in September the merchants ſhips from ſeveral Spaniſh ports, both of the continent and iſlands, to the number of fifty or ſixty ſail, to take in proviſions and water, in order to return to Spain in a body. Within the city is a continual fair till their departure, which is generally before the end of the month, when proclamation is made, forbidding any that belong to the fleet to ſtay in the town on pain of death, and upon firing a warning gun, they all go on board.

St. Jago is ſeated in the twentieth degree two minutes north latitude, and in the ſeventy-fifth degree forty-ſeven minutes weſt longitude, at the bottom of a ſpacious bay, on the ſouth-eaſt ſide of the iſland, about ſix miles from the ſea. The entrance to the bay is narrow, and within it are ſmall iſlands, which ſhelter it from ſtorms, and form a commodious harbour. It is a biſhop's ſee, and has a cathedral; it had once alſo a good trade, which is now removed to the Havannah, and though the city has juriſdictions over half the iſland, it has dwindled almoſt to nothing.

The other principal towns in the iſland are Santa Cruz, which is ſeated ſixty-three miles to the eaſt of the Havannah, on the ſame coaſt, and has a very good harbour. Porto del Principe, on the ſame coaſt, ſtands about three hundred miles ſouth-eaſt of the Havannah; it was formerly a rich town, and was taken by the Buccaneers, after a ſtout reſiſtance: near it are ſome ſprings of bitumen. Baracoa is ſituated on the north-eaſt part of the iſland.

The iſland of Hiſpaniola, or St. Domingo, is ſituated about thirteen leagues to the eaſtward of Cuba, and was called Aitti by the antient inhabitants. It is about four hundred miles in length, one hundred and fifty in breadth; and the coaſt, including the circumference of all the bays and creeks, near five hundred leagues.

The climate, though hot, is not reckoned unwholſome, being refreſhed by breezes and rains. This iſland is agreeably diverſified with hills and vallies, woods and rivers, producing ananas, bananas, grapes, oranges, lemons, citrons, toronias, limes, dates, and apricots, fairer and better taſted than thoſe of the other iſlands, together with whole foreſts of cabbage-trees, elms, oaks, pines, acajou, and other trees, large and lofty. The other commodities are ſugar, hides, indigo, cotton, cocoa, coffee, ginger, tobacco, ſalt, wax, honey, ambergris, and various kinds of drugs and dyeing woods. There are plenty of tortoiſes on its coaſts and in the rivers, which are alſo infeſted with crocodiles and alligators.

The Spaniards and French poſſeſs this iſland in common, though the latter formerly occupied the whole. Columbus diſcovered it in 1492, and called it the Spaniſh Iſland; a denomination it has preſerved under the name of Hiſpaniola, along with that of St. Domingo. They found here ſome exceeding rich gold mines. The greater part of the male Indians periſhed in theſe mines; and almoſt all the females, by the exceſſive labour of cultivating the fields of maiz for the uſe of the conquerors; the others were maſſacred either in cold blood, or in ranged battles, for ſo they called thoſe kinds of ſavage chaces which the Spaniards, covered with iron, and followed by bull-dogs, made to a multitude of theſe unhappy wretches, quite naked, and flying with all their might: we are told, that no leſs than three millions of men, women, and children, were murdered in cold blood by theſe inhuman butchers. The quick extermination of the natives, and conſequently the difficulty of working the mines; the bloody quarrels of the conquerors among one another; the diſcovery of Mexico, ſoon after that of St. Domingo, drawing thither all the invaders; laſtly, the pillaging of the capital by Drake, in 1586; all theſe things made the new colony fall to decay a few years after its eſtabliſhment. The Spaniards, ſcattered about this large iſland, having become unable to hinder the Buccaneers from ſeizing the weſtern parts, and ſettling themſelves there, retired on the eaſtern ſide, which they have occupied ever ſince. Their part both for culture and commerce, is much the beſt; it has large fruitful plains; and the ſituation of its coaſt is much more favourable to navigation than that of the French.

The ſoil is but little cultivated by the Spaniards, who are no leſs indolent here than at Cuba: their chief employ is, to breed cattle, or to hunt thoſe which have multiplied in the woods. They get from their neighbours ſtockings, hats, linen, guns, iron ware, and ſome cloaths; and give them horſes, horned cattle, hogs, hides, and ſmoaked beef, in return.

The moſt conſiderable town belonging to the Spaniards is San Domingo, the capital; this is a large and well-built city, ſituated on a ſpacious harbour on the ſouth ſide of the iſland, containing about thirty thouſand inhabitants, and defended by a caſtle and other works. Here is an univerſity and a college, with a revenue of four thouſand ducats, a Latin ſchool, ſeveral convents, a magnificent cathedral, an hoſpital, having a revenue of twenty thouſand ducats, and a fine market-place in the centre of the city; which is alſo the reſidence of the governor-general of the Spaniſh Indies, and of an archbiſhop, and court of royal audience. The archbiſhop's ſuffragans are the biſhops of

of Conception in this iſland, St. John's in Porto Rico, St. Jago in Cuba, Venzuela in New Caſtile, and of the city of Honduras. The juriſdiction of the court of royal audience extends to all the Spaniſh Weſt-Indian iſlands. A fine navigable river falls into the ſea a little to the weſt of the city which owes its preſent ſupport to the lawyers and eccleſiaſticks, whoſe profeſſions oblige them to reſide on it.

The town of Conception ſtands twenty leagues north of San Domingo. It is a large place, and the ſee of a biſhop. Porto la Plata, or the Haven of Silver, ſtands on an arm of the ſea, thirty-five leagues north of St. Domingo. Monte Chriſto is at the mouth of the river Yaguey, ten miles weſt of Porto de la Plata, and forty north-weſt from St. Domingo. St. Jago de los Cavalieros lies ten leagues north-weſt of Conception, and enjoys a fine air.

The chief towns belonging to the French are, 1. Cape St. François, ſituate on the north ſide of the iſland: it is in a flouriſhing condition, having a fine harbour, a briſk trade, and about eight thouſand inhabitants. 2. St. Louis, or Port Louis, which ſtands on a ſmall iſland on the ſouth-weſt coaſt, and has a good harbour with a fort, but labours under a ſcarcity of freſh water. 3. Port Paix, a place of conſiderable ſtrength, lying oppoſite the iſland of Tortuga, on the north-weſt coaſt of the iſland. 4. Port Guaves and Leogane, on Donna Maria Bay near Cape St. Nicolas, at the weſt end of the iſland. Leogane is the reſidence of the French governor-general, and of the royal judicature, with that of the ſupreme council, whoſe juriſdiction extends from Cape Mougon to the river Artibonite: the other is the oldeſt French ſettlement in the iſland, and a place of conſiderable trade.

Two other ſmall places, viz. La Petite Riviere, and L'Eſterre, the latter of which ſtands a little within land, alſo belong to the French.

Tortuga, the iſland above-mentioned, had its name from the turtles with which it formerly abounded. It is about ſix leagues long from eaſt to weſt, and three where broadeſt. The French have a populous flouriſhing ſettlement, called Cavona, with a harbour, in the ſouth part of this iſland: it yields all the commodities found in the other Weſt Indian iſlands, together with wild boars; but has little or no freſh water. Savona and Mena are the other moſt conſiderable iſlands on this coaſt: theſe belong to the Spaniards.

The iſland of Porto Rico, is ſituated between ſixty-four and ſixty-ſeven degrees weſt longitude, and in eighteen degrees north latitude, lying between Hiſpaniola and St. Chriſtopher's. It is about one hundred miles in length, and forty in breadth. Moſt of the country is diverſified with woods, vallies, and plains, is extremely fertile, and produces the ſame fruits as the other iſlands. It is well watered with ſprings and rivers; but the air is exceſſive hot, and very unwholeſome during the rainy ſeaſons. In the north part of the iſland, which is the moſt barren, there were formerly ſeveral rich gold and ſilver mines; but there is not any conſiderable quantity found in it at preſent.

A breed of dogs, which the Spaniards brought over to hunt and tear in pieces the defenceleſs natives, are ſaid to run wild in the woods near the ſea-ſhore, and ſubliſt upon land crabs that burrow in the ground. The woods are ſtored with parrots, wild pigeons, and other fowl. European poultry is found here in plenty, and the coaſt abounds with fiſh. Their pork is excellent, as is likewiſe the fleſh of their kids; but their mutton is very indifferent. They have good ſhip timber and fruit trees, with rice and Indian corn. The principal commodities here are, ſugar, ginger, hides, cotton, thread, caſſia, maſtic, &c.

Great pains have been taken by the Spaniſh government, to prevent an illicit trade being carried on at this place; but all the ſeveral edicts iſſued againſt it have been ineffectual; owing to the convenience of its ſituation for that traffic.

The capital town, Porto Rico, is ſituated on a ſmall iſland on the north coaſt. This iſland forms a capacious harbour, and is joined to the chief iſland by a cauſeway. It is defended by forts and batteries, which render the place almoſt inacceſſible. This town is well built and populous; is a biſhop's ſee, and the reſidence of a governor.

Beſides the capital, here is a place called Boraba d'Infernes, remarkable for having an excellent turtle fiſhery; and Port del Agnada, where the flota provide themſelves with water, and other neceſſaries, in their voyage to Spain.

There is a ſmall place on the coaſt of Porto Rico, called Crabs Iſland, from the great number of crabs found there.

Sir Francis Drake took Porto Rico from the Spaniards. It was afterwards conquered by the earl of Cumberland, in the reign of queen Elizabeth; but he was obliged to abandon it, having loſt moſt of his men by ſickneſs in the latter-end of the ſummer, which is a very unhealthy ſeaſon in all places in theſe latitudes.

The iſland of Trinidad lies between Tobago and the Spaniſh main, from which it is ſeparated by the ſtraights of Paria. It is about ninety miles long, and ſixty broad; and is an unhealthy, but fruitful country. Its principal productions are, ſugar, fine tobacco, indigo, ginger, variety of fruit, ſome Indian corn, and cotton-trees.

This iſland was taken by Sir Walter Raleigh in 1505; and by the French in 1676, who plundered it, and laid the inhabitants under contribution.

Margarieta, two hundred miles weſt of Trinidad, is about forty miles in length, and fifteen in breadth. The continual verdure renders it very pleaſant; but it has not been conſiderable ſince the Spaniards retired from thence to Terra Firma. The inhabitants now are Mulattoes, and the original natives. It was taken by the Dutch in 1626, who pillaged and demoliſhed it.

SECT. V.

Treating of the French and Daniſh WEST-INDIA ISLANDS, their Situation and Extent, Climate, Soil, Produce, Animals, Inhabitants, Commodities, Trade, &c.

MARTINICO is the moſt conſiderable Weſt-India iſland belonging to the French, being about ſixty miles in length, and thirty in breadth. It is ſituated about one hundred and twenty miles north-weſt of Barbadoes, between the fourteenth and fifteenth degree of north latitude. A ridge of mountains runs through its whole length; they are paſſable in ſeveral places, though their centre is only a heap of craggy rocks. This ridge is ſuch, that it makes the iſland appear to the navigators like three diſtinct mountains; from hence run above forty rivers, and a great many leſſer ſtreams, which create a humidity very noxious to the conſtitution. The coaſts abound with turtles, but the French are not ſo expert as the Engliſh in fiſhing for them.

The ſoil is very unequal; ſome grounds alternately ſuffer by dryneſs and rain; there are ſome marſhy, and almoſt entirely drowned by the ſea; others are ſtony, as to baffle all attempts of the planters, but the greateſt quantity of land between the ſhore and the mountains is capable of being ſucceſsfully cultivated, and rendered as fruitful as poſſible, if proper meaſures were uſed by the inhabitants. The chief productions are ſugar, tobacco, cotton, ginger, indigo, cacao, aloes, pimento, cocoas, plantains, and other tropical fruits.

Before this iſland was ſubdued by the Engliſh in the war of 1756, it could raiſe ten thouſand white inhabitants fit to carry arms, and above forty thouſand negroes or ſlaves; beſides which ſome companies of regulars were always quartered in the iſland.

The governor-general and intendant, as likewiſe a ſovereign council, which ſuperintends all their other iſlands, and even their ſettlements of St. Domingo and Tortuga, reſide in Martinico. The governor-general and intendant, and lieutenant-governor, are paid out of the finances of Old France. The governor of Martinico, as well as Guadalupe, is paid in ſugar, as indeed are all the other officers of the iſland, except ſome inconſiderable ſums that iſſue from the treaſury of Old France. The governors are allowed ſixty thouſand pounds weight of ſugar, with a penſion of one thouſand crowns paid in Old France. The lieutenant-governors have twenty thouſand pounds weight, and five thouſand livres ſalary. The king's judges, attornies, and other officers, have each an allowance of ſix thouſand weight; but the counſellors of the ſovereign's council have no more than twelve thouſand weight, or twelve of their negroes exempted from the capitation tax; which tax is paid by the white men and free negroes who are hired ſervants, and conſiſts of one hundred weight of coarſe ſugar a year, for each domeſtic or negro who is employed in manufacturing it: and of ſix livres for every other. The hundred weight of ſugar is rated at four livres ten ſols.

The iſland owes its flouriſhing ſtate to the French government having tranſported thither, by way of puniſhment, great numbers of its proteſtant ſubjects, ſome of whom voluntarily ſettled there. All proviſions imported into it are ſubject to a duty of one per cent in ſpecie; and the third of all forfeitures and fines goes to the crown.

There are in Martinico twenty-eight pariſhes or diſtricts, which contain about the ſame number of towns or villages, and two principal towns, For Royal and St. Pierre or St. Peter's. The firſt is the ſeat of government: its ſtreets are regular, the houſes agreeable, and the inhabitants very much given to all kinds of luxury; they are the Pariſians of the Weſt-Indies. To the eaſt of the town, on a neck of land, is an irregular fort, badly built, and worſe deſigned, which gives name to the town it poorly defends. The French have ſince built a citadel upon Monte Garnicei, an eminence higher than the moſt elevated points of Monte Patate, Tartanſon, and Cartſuche,

which all command Fort Royal: this citadel has coſt upwards of three hundred and twenty-five thouſand pounds ſterling.

Fort Royal, as well as the reſt of the iſland, fell under the power of the Engliſh in the war of 1756; but they reſtored it at the peace. The harbour of Fort Royal, where the men of war anchor in winter, is one of the beſt of the Windward iſles, and its ſecurity againſt the hurricanes generally acknowledged: it is ſuppoſed that the inner part has been ſpoiled by ſinking the hulks of ſeveral ſhips as a fence againſt the Engliſh.

St. Pierre, or St. Peter's, is five leagues to the leeward of Fort Royal, in a round bay of the weſtern coaſt. This town, the firſt built in the iſland, is the place of communication between the colony and mother country; it is the reſidence of merchants, and the centre of buſineſs. Notwithſtanding the fires which have reduced it four times to aſhes, it ſtill contains upwards of one thouſand ſeven hundred houſes: a part, ſituated along the ſea-ſide on the ſtrand itſelf, is called Le Monillage (the anchoring-place) a very unhealthy place of abode; the other part, ſeparated from this by a river, is built upon a low hill; they call it the Fort, from a ſmall fortreſs which defends the road. This road is very convenient for the loading and unloading the ſhips, and the facility of coming in or going out; but they are obliged to take ſhelter at Fort Royal in the winter ſeaſon.

At preſent, the productions of this iſland amount to twenty-eight million weight of ſugar, three million weight of coffee, ſix hundred thouſand pounds of cotton, and forty thouſand pounds of cacao. Foreigners carry off privately about a twelfth part of the goods of the iſland; the reſt goes to the mother country. In 1766, the merchants of France fitted out for this exportation, one hundred and forty-three veſſels, of which one hundred and one landed at the town of St. Pierre, thirty-five at Fort Royal, five at La Trinita, and two at Cul de Saes, or the gulf of the iſland.

The iſland of Guadalupe is ſituated about thirty leagues north-weſt of Martinico, in ſixteen degrees north latitude. It is about forty-five miles in length, and thirty-eight in breadth; and is cut in two by a channel called the Salt River; alſo by a deep gulf, or bay on each ſide. The air of Guadalupe is more ſalubrious and leſs ſultry than that of Martinico.

The products of this iſland are ſugar, coffee, cotton, baſtard cinnamon, indigo, ginger, and many other vegetables, particularly the capau-tree, from which is extracted a moſt excellent balſam; the milk ſhrub, ſo called from its yielding a ſubſtance like milk when preſſed, which falls little ſhort of the capau balſam: the moubane-tree, which bears a yellow plum, with which the natives fatten their hogs; and the corbary-tree, the gum of which, when hardened in the ſun, becomes ſo tranſparent, that it is formed into beads and bracelets by the Caribs.

Guadalupe abounds with mountains, many of which are covered with wood: and nothing can be more verdant, or more beautifully variegated, than the large fruitful plains which lie beneath them. One of the mountains is ſaid to emit a continual ſmoke, and to communicate a ſulphureous taſte to the neighbouring ſtreams. However, ſuch is the fertility of Guadalupe, that it hath been aſſerted, that if it was as well peopled and cultivated as Barbadoes, it would yield ſugar enough for all Europe. Before the war of 1756, when it was reduced by the Engliſh, we are told that one hundred thouſand hogſheads were exported yearly from it.

On this iſland is a very remarkable bird called the devil, which is found only here and at Dominica: it is a bird of paſſage, of the ſize of a pullet, and all its plumage coal black: it lives on fiſh, which it catches in the ſea at night, being unable to bear the light in the day-time, when flying; ſo that they often run againſt interpoſing objects, and fall down After their fiſh-hunting in the night, they repair to a mountain, called the Devil's mountain, where they lodge by pairs in holes, like rabbets. Their fleſh, though of a fiſhy taſte, is good nouriſhing food.

They have a troubleſome inſect here called a ravet, ſhaped like a cock chafer, of a ſtinking ſmell, and preying upon books and furniture, and whatever they do not gnaw, is diſcoloured by their ordure, but great numbers of them are deſtroyed by a kind of ſpiders, ſome of which are as big as a man's fiſt. The bees of Guadalupe are very different from thoſe of Europe, being black, ſmaller, and without ſtings. Inſtead of making combs, they lay their honey in bladders of wax, about the form and ſize of a pigeon's egg. The honey is of a thicker conſiſtence than olive oil; and the only uſe made of their wax, which is of a dark purple colour, is to ſecure the corks of bottles.

About the iſland are ſeveral gulfs, called by the French Culs de Sacs, which abound with various kinds of fiſh, and alſo with turtle, ſharks, and land crabs.

Grand-terre is one of the two diviſions of this iſland; the other conſiſts of Capes-terre or Cabes-terre, and Baſſe-terre, which laſt is alſo the name of the capital, a large, well fortified town, ſituated on both ſides of Bailiff river.

The iſland of Tobago lies forty leagues ſouth by weſt from Barbadoes, about thirty-five ſouth-eaſt from St. Vincent, forty eaſt from Granada, and between thirty and forty from the Spaniſh main. It is thirty-two miles in length, about nine in breadth, and ſeventy in circumference; ſo that it is rather larger than Barbadoes, or indeed any of our Leeward iſlands; a ſmall iſland, two miles in length and one in breadth, lies near the north-eaſt extremity.

With reſpect to the climate, Tobago is far more temperate than could be expected in an iſland that is but eleven degrees ten minutes north from the Equator, for the force of the ſun is diminiſhed by the ſea breezes. The ſpice and gum trees, with which it abounds, contribute to its ſalubrity. This iſland has another favourable circumſtance to recommend it; namely, its lying out of the track of the hurricanes. The north-weſt extremity is mountainous, but the reſt of the iſland agreeably diverſified with riſings and fallings. Here are many ſprings, together with commodious bays and creeks.

The ſoil, in general, is a rich black mould proper for producing, in the greateſt plenty, whatever is raiſed in other parts of the Weſt Indies. But the valuable trees which grow here are, perhaps, its greateſt riches; for, beſides the different kinds of wood that are found in the other Weſt India iſlands, it is ſaid that the true nutmeg and cinnamon trees, with that which produces the real gum-copal, are found on this iſland. The fig trees of Tobago are reckoned equal to thoſe in Spain and Portugal. India and Guiney corn, French beans, various kinds of peas, the cuſtom apple, that is both meat and drink, and yields an excellent lamp oil; the prickle apple, the banana, pomegranate, pine apple, ſweet and bitter orange, lemons, ſugar, tobacco, indigo, ginger, ſarſaparilla, ſempervivum, citrons, vanelloes, limes, guavas, plantains, tamarinds, grapes, cuſtard apple, the ſour apple, the papau apple, mammie apple, the yellow plumb, cherries, the cocoa tree that yields both meat, drink, and cloathing; muſk, cucumbers, water melons, pomkins, gourds, potatoes, yams, carrots, turneps, parſneps, onions, caſſada root, natural balſam, ſilk graſs, five different ſorts of pepper, the long, the cod, the bell, the round, and the Jamaica. It is ſaid teas may be raiſed here by cultivation, though ſome conſider them as the ſpontaneous production of the iſland.

In different parts of this iſland are found green tar, ſoap-earth, with many curious ſhells, ſtones, marcaſites, and minerals. As for animals, here are wild hogs, pickerees, which reſemble a hog, armadilloes, guanoes, which are of the alligator kind, Indian conies and badgers, horſes, cows, aſſes, ſheep, deer, goats, and rabbets. No iſland in the world, we are told, can boaſt ſuch a variety of fiſhes, both ſhell and others, particularly mullets and turtle, of a moſt delicious taſte. Here is alſo a great variety of the feather'd ſpecies.

The expenſive and formidable armaments which have been ſent to this iſland by European powers, in ſupport of their different claims, denote the value and importance of it. It was heretofore chiefly poſſeſſed by the Dutch, who defended their pretenſions againſt both England and France with the moſt obſtinate perſeverance. By the treaty of Aix-la-chapelle, in 1748, it was declared neutral; but by that in 1763 it was yielded up to Great Britain, who formed this iſland, St. Vincent, and Granada, into one government. Tobago was ceded by Great Britain to France by the late treaty of 1783.

The Daniſh Weſt Indian iſlands conſiſt of St. Thomas and St. Croix, or Santa Cruz.

The iſland of St. Thomas is ſituated to the eaſt of Porto Rico, and is the chief of thoſe called the Virgin Iſlands. It is about fifteen miles in circumference, and has a ſafe, ſtrong and commodious harbour, which, by being open to traders of all nations, enriches the inhabitants.

The ſoil is in general very ſandy, notwithſtanding which it produces moſt of the Weſt Indian commodities, but it is greatly infeſted with muſquetoes. The principal advantage of this iſland conſiſts in a very good harbour on the ſouth ſide, where fifty ſhips may lie in ſafety. It is defended by a fort, whoſe batteries at the ſame time protect the ſmall town built round the ſhore. This harbour is much frequented by merchant ſhips: when they are chaced in time of war, they find here a ſafe protection, and in time of peace a vent for their goods, by the clandeſtine trade which is continually carried on with the Spaniſh coaſts by the boats of St. Thomas.

The iſland of St. John is ſituated two leagues to the ſouth of St. Thomas, and is about the ſame ſize. This is the beſt watered among the Virgins, and its harbour has not only the reputation of being better than that of St. Thomas, but paſſes alſo for the beſt to the leeward of Antigua: the Engliſh give it the name of Crawl Bay. But notwithſtanding theſe advantages, there is ſo little good land in the iſland, that its planting and exportations are very inconſiderable.

The

The iſland of St. Croix, or Santa Cruz, is the moſt conſiderable Weſt India iſland belonging to Denmark. It is ſituated out of the groupe of the Virgins, five leagues to the ſouth of St. John's, being about thirty miles in length, and ten in breadth. It is tolerably fertile, producing moſt of the neceſſaries of life, together with oranges, citrons, granates, lemons, the manioc root, and the papau tree, the fruit of which makes a moſt excellent ſweet-meat. Here are alſo a variety of dyeing woods, and thoſe uſed for building houſes and ſhips.

Moſt of the inhabitants of Santa Cruz conſiſt of Engliſh, from the iſland of Nevis and Antigua, of Iriſh papiſts, a ſmall number of Danes, and German Moravians.

SECT. VI.

Containing a Deſcription of the AMERICAN ISLANDS, viz. Newfoundland, Cape Breton, St. John, the Bermudas, the Bahamas, Falkland Iſles, Juan Fernandez, Fuera or Maſa Fuero, and Chiloe; their Situation, Extent, Climate, Produce, Animals, Inhabitants, Commodities, Trade, &c.

NEWFOUNDLAND is of a triangular form, about three hundred and fifty miles long, and two hundred broad, is ſituated between forty-ſix degrees forty minutes, and forty-two degrees ſeven minutes north latitude, and between forty-one degrees fifty-two minutes, and fifty-ſeven degrees forty minutes weſt longitude, and has many excellent harbours and bays all round the coaſt, being bounded to the eaſtward and ſouthward by the Atlantic ocean, on the north by the ſtraights of Belleiſle, which divide it from New Britain, and on the weſt by the gulf of St. Lawrence. The coaſts are extremely ſubject to fogs, occaſioned by the vapours exhaled from the lakes and ſwamps with which the iſland abounds, yet the air is ſalubrious, and agreeable to moſt conſtitutions. The winters are ſevere, attended with almoſt continual ſtorms of ſnow and ſleet, the ſky being uſually overcaſt.

The ſoil is generally ſuppoſed to be barren, except only the banks of the rivers, which are tolerably fertile. There are however woods of different kinds throughout almoſt all the country for ſeveral miles from the coaſt, which contain abundance of timber fit for ſhip and boat building, as well as for erecting ſtages for curing and drying fiſh; and beyond theſe woods, where the lands are cleared, are in many places good paſturage. The inland parts of the country riſe into high hills, and ſink into bogs and ſwamps; where ſuch parts as are not covered with water, afford only ſhrubs, ſpruce, and white moſs. This iſland however contains many fine rivers, lakes and rivulets, which abound with beavers, otters, and the like, and afford great plenty of ſalmon, and other fiſh. The foreſts are ſtored with deer, mooſe, bears, wolves, and foxes in great plenty; but here are few cattle, ſheep, or horſes; inſtead of the latter, the inhabitants make uſe of dogs for drawing of wood and other neceſſaries. Theſe they manage with great dexterity, fixing them in leather collars, and yoking together what number they pleaſe. Here are great plenty of wild fowl, but the ſtaple commodity of the iſland is cod fiſh, which are larger and in greater abundance than in any other part of the world yet diſcovered; and a conſiderable part of Europe is chiefly ſupplied with this article. From hence upwards of three thouſand ſail are annually employed by Great-Britain and America in this fiſhery; on board of which, and on ſhore, to cure and pack the fiſh, are not leſs than ten thouſand hands; ſo that it is at the ſame time not only a very profitable branch of trade to the merchant, but a ſource of livelihood to ſo many thouſands of poor people, and a moſt excellent nurſery to the royal navy, which is hence ſupplied with a great number of able ſeamen: it might ſtill be much enlarged; for notwithſtanding the great trade carried on by the Engliſh here, the French are ſaid to have a conſiderable ſhare.

There are alſo taken on theſe coaſts a great number of whales, ſeals, porpoiſes, &c. whence above five thouſand barrels of oil, beſides a great quantity of whale-bone, ſeal-ſkins, &c. are annually exported from hence to different parts of the world; all which ſufficiently ſhew the importance of the iſland, notwithſtanding the roughneſs and barrenneſs of the ſoil, and ſeverity of the climate.

The number of Engliſh inhabitants on the iſland is uncertain and fluctuating. They are indeed very inconſiderable, if compared with its extent; but there are not half the number in winter that there are in ſummer. Placentia, the capital of the iſland, which is ſeated on the ſouthern point, contains no more than between three and fourſcore houſes.

The veſſels employed in the fiſhery are ſmall ſhallops, which come to ſhore every day, where the fiſhermen throw the cod they have taken upon a ſtage prepared for that purpoſe. One of them, who is called the cut-throat, opens the fiſh with a two-edged knife, and cuts off his head; a ſecond hands the fiſh to the carver, who ſtands oppoſite to him at a table erected upon the ſtage, who with a ſingle-edged knife, ſix or eight inches long, and very thick on the back, to increaſe its weight, ſplits the fiſh open, when it is conveyed to the ſalter, who places it with the ſkin undermoſt in a barrel, and then very ſlightly covers it with ſalt, laying the fiſh regularly one upon another. After leaving the cod in ſalt three or four days, and ſometimes twice as long, according to the ſeaſon, they put it into a tub, waſh it well, make it up in piles, and, in fair weather, ſpread it out with the ſkin undermoſt on a kind of ſtage raiſed with wattles about two feet from the ground; before night they turn the ſkin uppermoſt, which they alſo do whenever it rains.

When the fiſh becomes a little dry, it is raiſed into larger piles, where it reſts a day or two; after which it is again expoſed to the air, and turned according as there is occaſion, before they again raiſe it into larger piles, where, after this is done, it ſometimes remains fifteen days without being moved; after which it is once more expoſed to the air, and, when almoſt dry, gathered together again in order to ſweat, which takes up twenty-four hours or more, according to the ſeaſon: it is then opened and expoſed to the air for the laſt time, and, when thoroughly dried, houſed. Fiſh cured in this manner are not only more fair to the eye, but more grateful to the taſte, than thoſe which are perfectly prepared for the ſea; and thoſe fiſh are generally the beſt which are cured in the ſpring before the great heats.

The principal towns are Placentia, Bonaviſta, and St. John. The Indians of this iſland are ſaid to be a gentle, mild, tractable people, eaſily gained by civility and good uſage. They paint their bodies, and are clad in ſkins and furs in winter.

The iſland of Cape Breton is ſituated between forty-five and fifty-ſeven degrees north latitude, and between ſixty-one and ſixty-two degrees weſt longitude, being one hundred miles long, and eighty broad. It is ſituated about twenty leagues ſouth-weſt from Newfoundland, and is ſeparated by the ſtraight of Canſo from Nova Scotia. The north coaſt is high, and almoſt inacceſſible; but the ſouth coaſt contains ſeveral excellent harbours, particularly that of Louiſbourg, which is very ſpacious and commodious.

In this iſland, the climate is much the ſame with that of Quebec, only more ſubject to fogs; the air, however, ſeems to be pretty wholeſome. Here are many lakes and rivers, and great quantities of coal and lime-ſtone; and though there are many barren ſpots in it, apples, pulſe, wheat and other corn, flax and hemp, are or may be raiſed in it. The moſt common of the timber-trees are oaks of a prodigious bigneſs, pine fit for maſts, aſh, maple, plane, and aſpin trees. The coal is procured here, without digging deep, or draining the waters.

Here are great numbers of horſes, oxen, hogs, ſheep, goats, and poultry, but game is ſcarce. The partridges are almoſt as big as pheaſants, and not unlike them in the colour of their feathers. On the coaſt are many whales, ſea-wolves, porpoiſes, and ſeals, beſides great quantities of cod and other fiſh.

The Engliſh took this iſland from the French, in 1745; but reſtored it by the treaty of Aix-la-Chapelle, in 1748. They again took it in the beginning of the war of 1756; Louiſbourg, its fortreſs, with the iſland of St. John, and its other appurtenances, having been ſurrendered by capitulation on July 26, 1758. All the fortification of the town have been ſince demoliſhed, in order to avoid expence, and prevent the French from again ſettling there.

The iſland of St. John lies very near to Cape Breton: it is ſixty miles long, thirty broad, and the produce is nearly the ſame as that of Cape Breton, but the ſoil is much better. The laſt is now a ſeparate government, in which Charlotte town hath been lately built.

The cluſter of iſlands called the Bermudas are about four hundred in number, but moſt of them are ſmall, barren, and uninhabited. They are ſituated in the Atlantic ocean, in thirty-two degrees twenty minutes north latitude. They obtained their name, Bermuda, from John Bermudez, a Spaniard, who firſt diſcovered them; but they took that of Summer iſlands from Sir George Sommers, who was ſhipwrecked here in 1709. They have a pretty clear and temperate air, with plenty of fleſh, fiſh, poultry, fruits, herbs, roots, &c.

Theſe iſlands belong to England, and have a governor. Cedars grow here; ambergris is found on the ſhores; and whales and turtles are caught on the coaſt. Here is a breed of black hogs which are much valued; white chalk-ſtones and tobacco are exported; oranges, and palmettoes abound, and here is plenty of many other things; but the inhabitants have no water but what drops from the clouds.

The chief iſland is that of St. George; which name it takes from George town; and is a pleaſant place ſixteen miles long, and three broad. Sir Edmund Waller, beſides his fine of ten thouſand pounds, being baniſhed, choſe his retreat hither, where he continued till Oliver Cromwell prevailed over the long parliament.

The

The Bahamas are ſituated in the Atlantic ocean, to the north of the iſland of Cuba, and not far from the coaſt of Florida, ſtretching from the north-weſt to the ſouth-weſt, between twenty-one and twenty-ſeven degrees of ſouth latitude. They are very numerous, and twelve of them pretty large; and belong to Great Britain.

The largeſt, called Bahama, is about fifty miles in length, though very narrow, and gives name to the reſt; it lies twenty-five leagues from the continent of Florida, is every where well watered with ſprings and rivulets, and enjoys a ſerene temperate air, with a fruitful ſoil.

Theſe iſlands were the firſt places diſcovered by Columbus in America, yet the Spaniards never thought of ſettling in them. The Engliſh knew nothing of them till 1667, when captain William Sayle, being bound to Carolina, was forced among them by a ſtorm, which gave him an opportunity of examining them careſully, particularly that which is at preſent known by the name of Providence. At his return, he repreſented the benefit they might be of to the ſtate; whereupon grants of them we made out to proprietors; but the government was reſerved in the hands of the crown. None of them, however, are yet ſettled, except Providence, Lucays, and Harbour iſland; which ſeems ſurpriſing, as ſome of them would certainly prove of the greateſt advantage to Great Britain, if properly cultivated. They are ſuppoſed to amount, altogether, to about five hundred. The ſtraights of Bahama, which the Britiſh fleets ſo happily cleared in their laſt ſucceſsful expedition againſt the Havannah, are, by reaſon of the dangers and difficulties that attend the paſſing of them, well known to navigators.

The Bahama iſlands lie near to Hiſpaniola, and to the noted part of the Havannah, in the iſland of Cuba, where the Spaniſh galleons and flota always rendezvous before they return to Europe, having the gulf of Florida to the weſt, and the windward paſſage to the eaſt of them. In time of peace, they are capable of great improvement with reſpect to trade; and have always been a good retreat for diſabled ſhips, blown from different parts of the continent of America. In times of war, the Britiſh cruiſers and privateers, ſtationed at theſe iſlands, are more able to obſtruct and annoy the Spaniſh trade homeward-bound, than any that are ſtationed at the reſt of the Britiſh colonies in America. Accordingly, New Providence, which is a very thriving colony, was of great benefit to the Britiſh trade in the late war. Naſſau is the chief town of the iſland.

Falkland's iſlands were firſt diſcovered in 1594, by Sir Richard Hawkins, who named the principal of them Hawkins' Maidenland, in honour of queen Elizabeth. The preſent name Falkland was probably given them by captain Strong, in 1689, and afterwards adopted by Halley.

The late lord Egmont, firſt lord of the Admiralty in 1764, then revived the ſcheme of a ſettlement in the South ſeas; and commodore Byron was ſent to take poſſeſſion of Falkland's Iſlands, in the name of his Britannic Majeſty; and in his journal repreſents them as a valuable acquiſition. On the other hand, they are repreſented by captain M'Bride, who in 1766 ſucceeded that gentleman, as the outcaſts of nature: "We found (ſays he) a map of iſlands and broken lands, of which the ſoil was nothing but a bog, with no better proſpect than that of barren mountains, beaten by ſtorms almoſt perpetual. Yet this is ſummer; and if the winds of winter hold their natural proportion, thoſe who lie but two cables length from the ſhore, muſt paſs weeks without any communication with it." The herbs and vegetables which were planted by Mr. Byron's people; and the fir-tree, a native of rugged and cold climates, had withered. In the ſummer-months, wild celery and ſorrel are the natural luxuries of theſe iſlands. Goats, ſheep, and hogs that were carried hither, were found to increaſe and thrive as in other places. Geeſe of a fiſhy taſte, ſnipes, penguins, foxes, and ſea lions, are alſo found here, and plenty of good water.

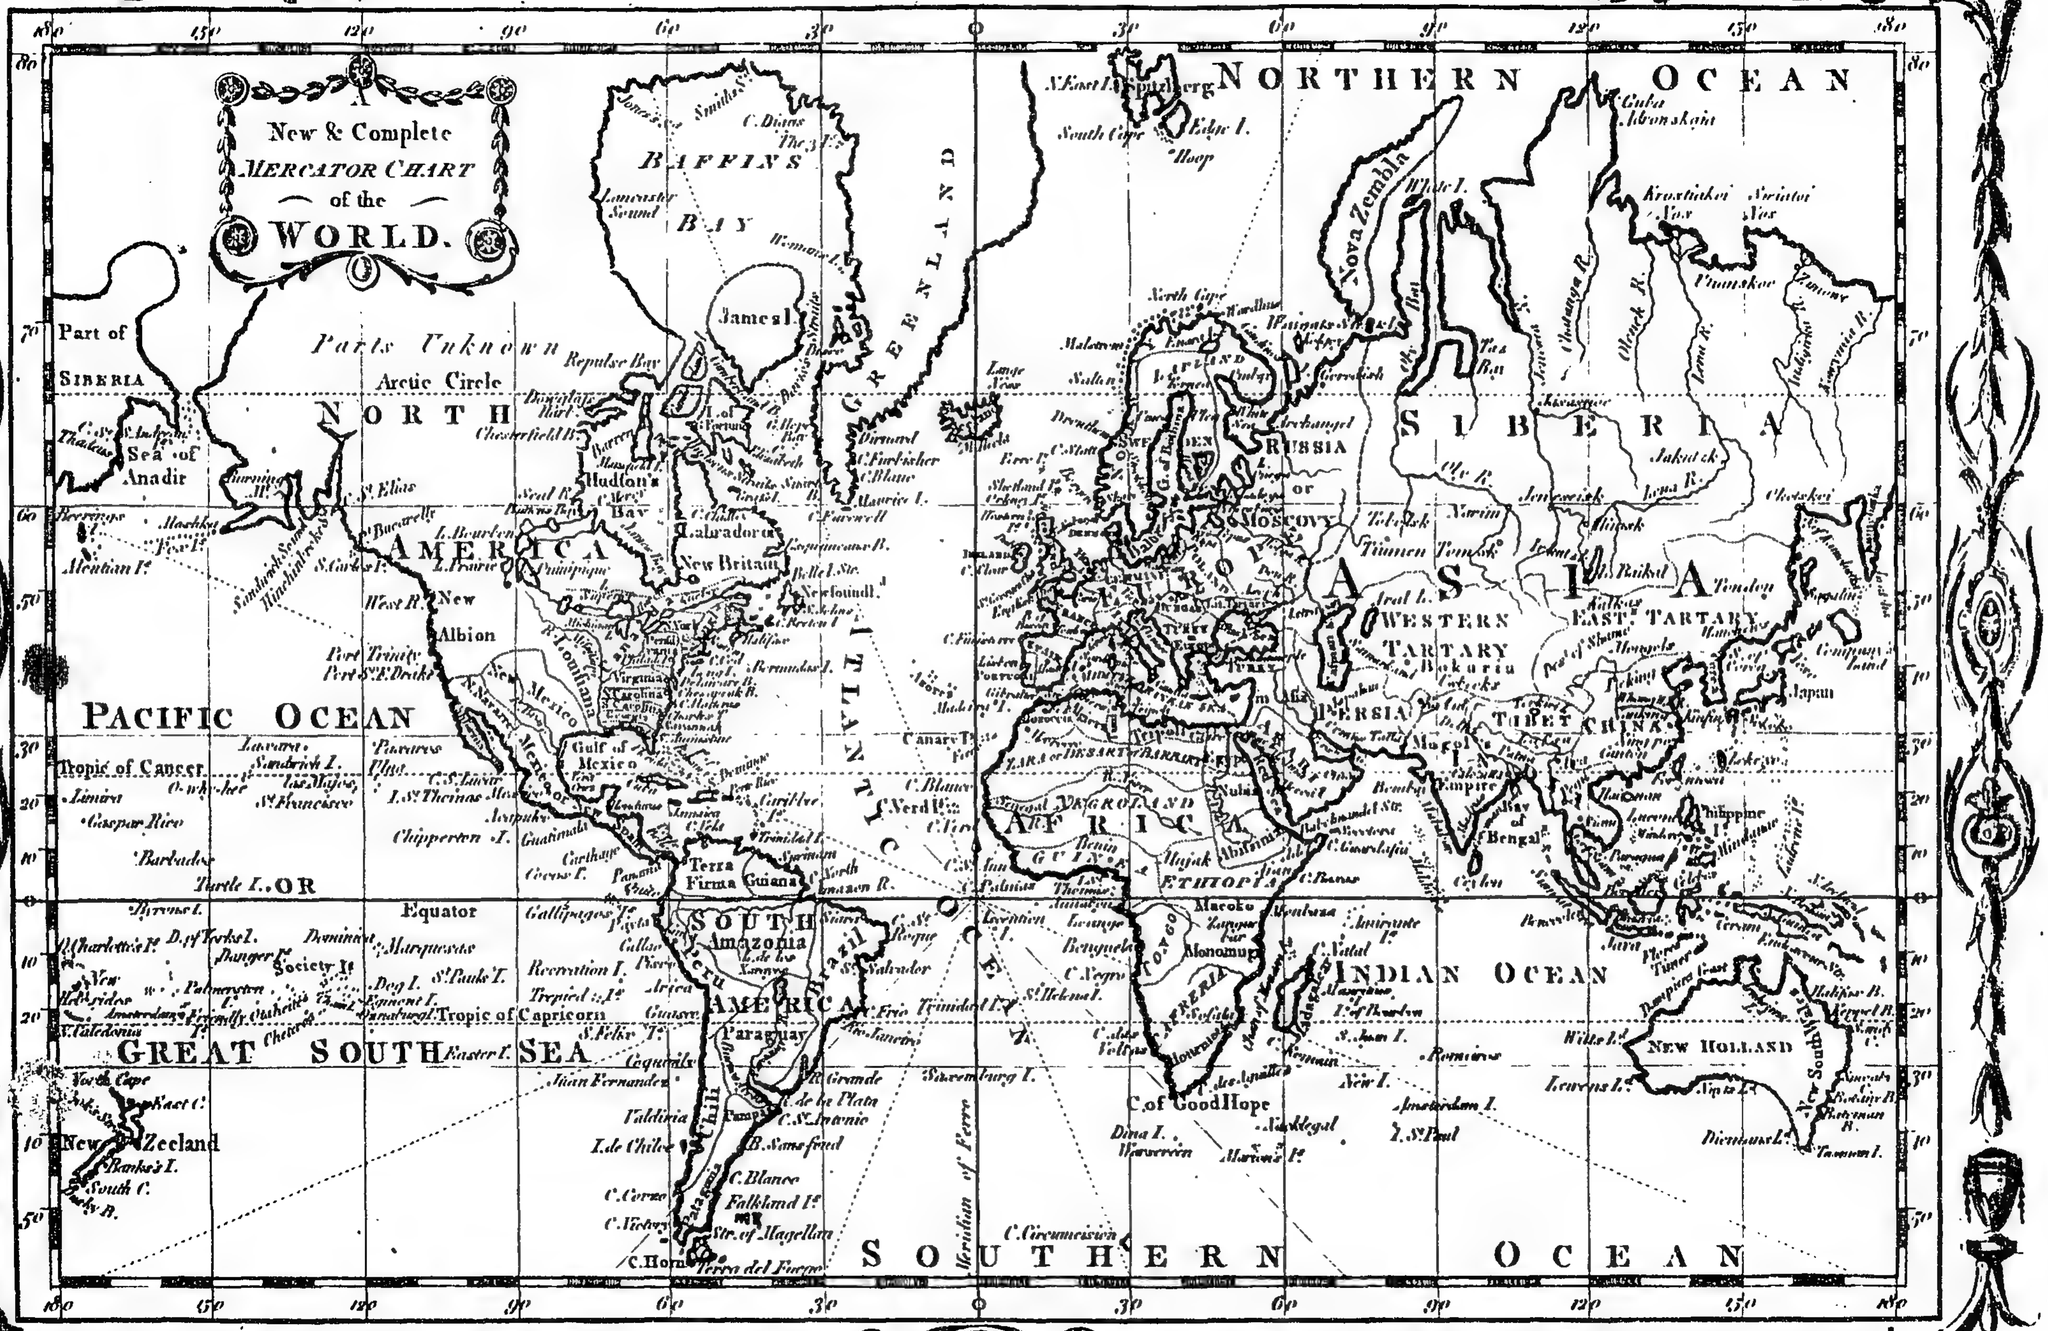
Though the ſoil be barren, and the ſea tempeſtuous, an Engliſh ſettlement was made here, of which we were diſpoſſeſſed by the Spaniards in 1770. That violence was, however, diſavowed by the Spaniſh ambaſſador, and ſome conceſſions were made to the court of Great Britain; but in order to avoid giving umbrage to the court of Spain, the ſettlement was afterwards abandoned.

The iſlands of Juan Fernandez and Fuera or Maſa Fuero are diſtant from each other about thirty-one leagues: they were firſt diſcovered in 1575 by Juan Fernandez a Spaniard, from whom they take their name. The Spaniards diſtinguiſh them by the greater and leſs Juan Fernandez, but the ſmaller iſland is more generally known by the name of Maſa-Fuero.

The greater Juan Fernandez lies to the eaſtward, in latitude thirty-three degrees forty minutes ſouth, and ſeventy-eight degrees thirty minutes weſt longitude from London. It is uninhabited, but has good harbours, and was formerly a place of great reſort for the buccaneers who annoyed the weſtern coaſt of the Spaniſh continent. It is alſo found extremely convenient for the Engliſh cruizers to touch at and water; and here they are in no danger of being diſcovered, unleſs when, as is generally the caſe, their arrival in the South Seas, and their motions, have been made known to the Spaniards by our good friends in Brazil. This iſland is famous for having given riſe to the celebrated romance of Robinſon Cruſoe. The ingenious author, Daniel Defoe, derived many hints for writing his hiſtory from the papers of one Alexander Selkirk, a Scotchman, who was left aſhore in this ſolitary place by his captain, where he lived ſome years, till he was diſcovered by captain Woodes Rogers, in 1709; when taken up, he had forgotten his native language, and could ſcarcely be underſtood, ſeeming to ſpeak his words by halves. He was dreſſed in goats ſkins, would drink nothing but water, and it was ſome time before he could reliſh the ſhip's victuals. During his abode in this iſland, he had killed five hundred goats, which he caught by running them down; and he marked as many more on the ear, which he let go. Some of theſe were caught thirty years after, by lord Anſon's people. But the Spaniards, in order to deprive the Engliſh of the nouriſhment they formerly procured from the multitude of goats here, have tranſported thither a conſiderable number of dogs, which have almoſt exterminated the ſpecies.

This iſland is not quite fifteen miles long, and about ſix broad; its only ſafe harbour is on the north ſide. It is ſaid to have plenty of excellent water, and to abound with a great variety of eſculent vegetables highly antiſcorbutic; beſides which, commodore Anſon ſowed a variety of garden ſeeds, and planted the ſtones of plums, apricots, and peaches, which he was many years afterwards informed had thriven greatly, and now doubtleſs furniſh a very valuable addition to the natural productions of this ſpot. There are but few birds here, and thoſe few are of a ſpecies well known and common; but vaſt ſhoals of fiſh of various kinds frequent the coaſt, particularly cod of a prodigious ſize, and it is ſaid in not leſs abundance than on the banks of Newfoundland.

The iſland of Fuera, or Maſa Fuero, lies in thirty-three degrees forty-five minutes ſouth latitude, and eighty degrees forty-ſix minutes weſt longitude from Greenwich. It is of a triangular form, and ſeven or eight leagues in circumference; is very high and mountainous, and at a diſtance appears as one hill or rock.



In this iſland there are ſuch plenty of fiſh, that a boat, with a few hooks and lines, may catch as much as will ſerve one hundred people. Here are coal-fiſh, cavilliers, cod, hallibut, and cray-fiſh. Captain Carteret's crew caught a king's fiſher that weighed eighty-ſeven pounds, and was five feet and a half long. The ſharks here were ſo ravenous, that in taking ſoundings one of them ſwallowed the lead, by which they hauled him above water, but he regained his liberty by diſcharging his prey. Seals are ſo numerous here, that if many thouſands of them were killed in a night, they would not be miſſed the next morning. Theſe animals yield excellent train oil; and their hearts and plucks are very good food, having a taſte ſomewhat like thoſe of a hog: their ſkins are covered with very fine fur. Here are many birds, and ſome very large hawks. The crew of the Swallow caught in one night ſeven hundred of the pintado bird.

The iſland of Chilo, on the coaſt of Chili, in the diſtrict of Imperial, lies in ſouth latitude forty-four, or from forty-two to forty-four, being about one hundred and fifty miles long, and twenty-one broad. The ſouth part of it is divided from the continent by a narrow ſea, and the continent there makes a bay. This coaſt is ſubject to tempeſtuous weather, eſpecially in March, when winter begins. The Spaniards have but one little fort in this iſland, called Chacao, always ill provided with warlike trees. Excepting wine, this iſland produces all neceſſary refreſhments and proviſions; and much ambergris is found here. Caſtro is the principal town. About this iſland are forty more, all taking name from it. Ovalle tells us theſe iſlands are reputed barren; but their ſoil is not really ſo, only the exceſſive rains choak the ſeed, and prevent the growth of corn; ſo that they are without wheat, wine, or oil, and other plants which need much ſun. The nature of the climate of this cluſter of iſlands is ſuch, that it rains almoſt all the year; ſo that only maiz, or other ſuch grains, can ripen, that want not ſo much ſun. The diet of the natives is moſtly of a root called papahs, which grows bigger here than in any other place. The manufactures are cloathing for the Indians, who have a kind of veſt which they call macun, without ſleeves; over which they wear a garment called choni, that ſerves for a cloak, and is like that which painters give to the apoſtles in their pictures. They raiſe another manufacture from their woods, particularly planks of cedar, of which they have vaſt woods of prodigious large trees, ſo as hardly to be incompaſſed by a rope of ſix yards long.

FINIS.

To our SUBSCRIBERS, and the PUBLIC in General.

THE *great* and *increaſing Sale* of this UNIVERSALLY APPROVED WORK, (in conſequence of its being more *Complete* than any other Work of the Kind whatever, and the *continued Recommendations* of the *Subſcribers* to their *Friends* and *Acquaintance*) having occaſioned a freſh Impreſſion of the beginning Numbers on new Types, &c. the Public are hereby reſpectfully informed, that Perſons may *now* begin *with Number* I. and be ſupplied with *One* or *more Numbers at a Time*, price only Six-pence each, including the elegant *Copper-Plates*, *Maps*, *Charts*, *Plans*, &c. Thoſe Perſons who are inclined to purchaſe MILLAR's NEW, COMPLETE, and UNIVERSAL SYSTEM of GEOGRAPHY, complete at once, may be ſupplied with it, handſomely bound in Calf, and Lettered, in One Large Handſome Volume, Price only 2 *l.* 8 *s.*

N. B. THIS WORK *having exceeded the Quantity propoſed*, our numerous *Subſcribers will* obſerve, that we have (agreeable to our *Promiſe* in our *Propoſals*) delivered the *Overplus*, GRATIS, although it has occaſioned a conſiderable Expence to the Proprietor; in order that we might be ſufficiently full in our Account of America, in which we have totally rejected all thoſe vain conjectures, ridiculous ſuppoſitions, fabulous ſtories, and palpable falſities, which have ſo long been impoſed on the Public in former Works of this kind; contenting ourſelves with giving our Subſcribers ſuch intereſting information reſpecting that Part of the Globe, which is ſtiled the New World, as we have deduced from the moſt authentic and undeniable Evidences of Truth. Indeed the late Revolution in the Northern Diſtrict has rather impeded our reſearches, and rendered the Hiſtorical Part leſs circumſtantial than we wiſhed; but ſtill our Hiſtory and Deſcription are unqueſtionably the moſt complete and authentic now extant; and certain it is, that ſtill ſome time muſt elapſe (owing to the unſettled ſituation of Affairs in that Quarter) before a more full account of North America can be collected from documents ſupported by authenticity.

DIRECTIONS to the BOOKBINDERS

FOR PLACING THE CUTS TO

MILLAR's NEW, COMPLETE and UNIVERSAL SYSTEM of GEOGRAPHY.

*** Place the *Introduction* to the SCIENCES of GEOGRAPHY and ASTRONOMY at the End of the *Preface*.

N. B. This WORK muſt be beat before the COPPER-PLATES are placed, in order to prevent the Letter Preſs from ſetting off, and thereby ſpoiling the Engravings, which are to be placed as follow:

No.		Page

Mr. Thomas Yelvington, Lambeth

☞ The PUBLISHER of this Work returns his moſt reſpectful Acknowledgements to the SUBSCRIBERS for their kind Encouragement, and gs Leave to ſolicit a Continuance of their Favours, with reſpect to ſome of his other NEW PUBLICATIONS, aſſuring them that nothing ſhall be anting to render all the Periodical Works, in which he ſhall be engaged, deſerving the Public Patronage. Notwithſtanding Printed Notices given r the Purpoſe ſeveral Weeks ago, and other neceſſary Steps taken for collecting the Whole, we have not been able to procure the Names of many our numerous Subſcribers. Thoſe whoſe Names are not in the Liſt, will therefore, of courſe, excuſe the Omiſſion; and ſuch as find any Error in elling, will pleaſe to obſerve, that the Fault is not chargeable on the Publiſher, as he has ordered the Names, Places of Abode, &c. to be carefully d literally tranſcribed from the Notes, as delivered in by the reſpective Bookſellers, Stationers, Newſmen, &c. &c.

*** Juſt Publiſhed, and may be had (GRATIS) of the Bookſellers and Newſmen, Mr. HOGG's CATALOGUE of NEW PUBLICATIONS.

The juſt Preference which is generally given by the Public to them in Preference to all others, is a flattering Teſtimony in Favour of their genuine Merit and perior Excellence. Indeed, Mr. HOGG *has gone out of the common beaten Track, and conducted the Works which he has undertaken with a Degree of Credit d Reputation, hitherto unattempted by his Predeceſſors and Competitors in the ſame Line: in Conſequence of which, the Public at large can unreſervedly depend on the honourable and punctual Execution of any Work of which he is Publiſher.*

e Publications *which are now particularly Recommended to his* Subſcribers, *and which are honoured with a moſt rapid and extenſive Sale in all Parts of the Kingdom—are New and Improved Editions of the following Works, with Elegant Copper-Plates:*
